CARBON MONOXIDE POLLUTION

Although carbon monoxide pollution is less widespread than ozone, over 80 million Americans still live in areas that experience unsafe levels of this pollutant. This week's fact sheet explores carbon monoxide and its health effects.

WHAT IS CARBON MONOXIDE?

Carbon monoxide (CO) is a colorless, odorless gas. It is primarily a by-product of incomplete fuel combusion in cars, buses, and trucks. These transportation sources account for 70 to 90 percent of carbon monoxide emissions in most urban areas. Other sources are fuel combustion and industrial processes.

The geographic and seasonal factors that promote carbon monoxide pollution contrast sharply with those that promote ozone formation. While ozone is largely a warm-weather problem, CO levels are generally highest during cold weather. CO problems are especially exacerbated at high altitudes. Cold weather and high altitudes dramatically increase the level of carbon monoxide pollution from motor vehicle exhaust, especially during "cold starts," because they reduce combustion efficiency.

HEALTH EFFECTS

Carbon monoxide pollution reduces the ability of blood to deliver oxygen to the body's tissues. It is a "mimic" of oxygen. When inhaled, CO binds with hemoglobin that would otherwise transport oxygen through the blood stream.

Because it reduces oxygen levels in the blood stream, carbon monoxide pollution can be especially hazardous to fetuses. The fetus cannot breathe on its own, and so relies on oxygen delivered through the mothers's blood stream. The blood passing through the placenta to the fetus is naturally poorly oxygenated, because some of the oxygen in the blood has already been used by the mother. Any further reduction in oxygen levels threatens the development of the fetus. The fetal brain, which has high oxygen requirements, is particularly susceptible to carbon monoxide damage. Based on the results of animal studies, health experts believe that exposure to modest levels of carbon monoxide pollution (20 parts per million) pose risks of permanent brain damage.

The 5 million Americans suffering from heart disease are also especially vulnerable to carbon monoxide pollution, because their circulatory systems have a limited capacity to transport oxygen to the body. Angina victims experience heart pains when oxygen levels reaching the heart are lowered. According to health studies, they experience the onset of angina pain earlier when breathing carbon monoxide. Some experts believe that elevated levels of carbon monoxide pollution trigger heart attacks.

Carbon monoxide exposure also poses risks for otherwise healthy individuals. As levels of CO in the blood stream rise and oxygen levels in the brain decline, people lose visual perception, manual dexterity, and learning ability. Reduced mental alertness can lead to increased vehicular accidents. At extremely high levels (such as those that can form by running a car in an enclosed garage), CO causes death by asphyxiation.

AREAS IN NONATTAINMENT

EPA has established two ambient air quality standards for carbon monoxide: a one-hour standard of 35 parts per million and an eight-hour standard of 9 ppm.

There are 52 areas in the country that violate one or both of these standards, according to the latest figures from EPA. These areas are listed in Table 1. Their combined population is 87 million.

"HOTSPOTS"

Carbon monoxide pollution reaches its highest levels in areas where motor vehicle traffic is heaviest, such as busy intersections. Poor air circulation, such as in or near tunnels, also raises CO levels. These areas are called "hotspots." In many urban areas, however, carbon monoxide pollution causes violations of the federal health standard over broad portions of the urban areas.

Unlike ozone pollution, CO pollution generated in one urban area is not transported downwind to other areas.

CONTROLS ON CARBON MONOXIDE POLLUTION

Efforts to reduce CO pollution levels focus mainly on the motor vehicles responsible for the lion's share of emissions. The current Clean Air Act's motor vehicle standards, which were adopted in 1970, require cars to emit no more than 3.4 grams per mile of carbon monoxide. These standards apply during the federal test procedure (FTP), which evaluates carbon monoxide emissions exclusively under warm weather conditions. No standard exists to govern emissions levels at colder temperatures when emissions are typically about 60% higher.

Legislative proposals to reduce CO pollution include revising the Federal Test Procedure to include a cold weather test to resemble real-world driving conditions more closely. They also include proposals for tighter tailpipe standards for CO emissions from cars, trucks, and buses. In addition, some have suggested more effective local auto inspection and maintenance programs to assure the maximum effectiveness of pollution controls already in place on motor vehicles, as well as better transportation control programs to reduce the mileage traveled by motor vehicles. Another proposal expands the use of "oxygenated" fuels. These "blends" contain additives that allow gasoline to burn more efficiently, producing less CO. They have been used successfully in Denver to bring down high CO levels there.

SMOG CONTROL BILLS IN THE 100TH CONGRESS

During the 100th Congress, two smog control proposals (H.R. 3054 and H.R. 5469) received most of the focus in the House. This Fact Sheet describes the general philosophies of both approaches and notes their similarities and differences. It is not intended to provide a technical section-by-section analysis of either bill. It also gives a brief overview of the development of clean air bills during earlier Congresses in the 1980s.

BACKGROUND

One of the most persistent misconceptions about clean air legislation is that Congress has been deadlocked over the smog issue throughout the 1980s. While it is certainly true that acid rain and toxic air pollutant bills have been controversial and have not moved forward, bills proposing new smog control measures emerged only in the 100th Congress.

In fact, the 1981–82 clean air fight—which has been written about extensively—wasn't over nonattainment problems at all. The goal of the Reagan Administrations' proposed legislation, H.R. 5252 (the Dingell-Broyhill bill), was regulatory relief from pollution control requirements. H.R. 5252 assumed all polluted areas would meet the Act's standards not only without any new control measures, but even with significantly relaxed requirements. It would have, for example, doubled the amount of emissions from cars and allowed substantially more pollution in our national parks. This bill was opposed by Rep. Waxman and others and was never approved by the House Energy and Commerce Committee.

In 1983–84, legislation was proposed and considered on acid rain and toxic air pollutants. No smog legislation was proposed. The primary acid rain bill, H.R. 3400, was defeated in the House Health and the Environment Subcommittee by a 10–9 vote.

Acid rain and toxic air pollutant legislation were again proposed in the 99th Congress (1985–86). The acid rain bill, H.R. 4567, was approved by the Health and the Environment Subcommittee by a 16–9 margin, but was not considered by the full Energy and Commerce Committee. Again, no smog legislation was proposed.

Smog became an issue during the last Congress because the deadlines for meeting the health-based standards of the Clean Air Act were to expire on December 31, 1987. Since many cities continued to violate the Act's health-based air quality standards, Congress passed the Conte Amendment and extended the deadlines to August 31, 1988. However, comprehensive legislation was not enacted before adjournment. As a result, many areas still violate the law's requirements.

H.R. 3054 (THE WAXMAN-LEWIS BILL, INTRODUCED ON JULY 29, 1987)

By 1987 it was clear many cities would not meet the Clean Air Act's ozone and carbon monoxide health standards by the December 31, 1987, deadline. H.R. 3054 addressed this problem and adopted a new philosophy for dealing with these nonattainment areas. Instead of requiring the same control measures for all areas, the bill divided nonattainment areas into three categories: moderate, serious, and severe.

Moderate nonattainment areas, which are cities very close to attaining the standards (e.g., Memphis), would have been given a three-year extension and would not have faced additional control requirements, other than complying with existing law.

Serious nonattainment areas, which include cities with more difficult air pollution problems (e.g., St. Louis, Dallas), would have been given a five-year extension. These areas would have had to tighten requirements for new facilities and implement more effective automobile inspection and maintenance programs.

Severe nonattainment areas, which are cities with the worst air pollution problems (e.g., Los Angeles, Houston) would have received a ten-year extension. In order to receive this additional time, these areas would have to meet the bill's most stringent requirements and adopt new control measures (e.g., vapor recovery during automobile refueling, emission limits for small sources). These areas would also have been required to implement an aggressive and effective alternative fuels program.

The Waxman-Lewis bill's overriding philosophy was that cities with different problems, like Los Angeles and Memphis, should be treated differently. Accordingly, the bill tried to tailor control programs to specific pollution problems.

H.R. 3054 also would have modified the Clean Air Act's sanction policy by eliminating the law's construction ban and ensuring that sanctions would not apply for failure to meet standards so long as areas took the required pollution control steps. Instead, nonattainment areas that acted in good faith would simply move to the next control category (e.g., serious to severe) and implement tougher control requirements. Sanctions would have applied to areas that failed to implement control measures, however.

The Waxman-Lewis bill also relied on tighter controls on new cars and other mobile sources. These measures included tighter tailpipe standards for cars produced in the early 1990s (.4 grams per mile (gpm) for $NO_x$, .25 gpm for hydrocarbons), onboard canisters to control refueling emissions, and regulation of nonroad vehicles (e.g., trains, construction equipment).

H.R. 5469 (GROUP OF 9 BILL, INTRODUCED ON OCTOBER 5, 1988)

After Congress adopted the Conte Amendment extending the Act's deadlines, nine members of the Energy and Commerce Committee began meeting to draft their own acid rain and nonattainment proposals. Although these members—known as the Group of 9—were not able to reach a consensus within the group on an acid rain bill before the adjournment, they did introduce their own nonattainment bill.

This proposal was first released in preliminary draft in March 1988. Overall, it adopted the basic structure of the Waxman-Lewis bill. The country was divided into different nonattainment regions, although the sponsors opted for four categories—with longer deadlines—instead of the three categories used in H.R. 3054. H.R. 5469's categories and deadlines were as follows: Moderate 1 (1992), Moderate 2 (1996), Serious (1998), severe (2006).

The proposal was subsequently modified in June 1988. Although many of the differences between the two drafts were minor, some represented significant changes in control requirements. For instance, the first draft would have tightened the current 1.0 gpm $NO_x$ standard for cars to .4 gpm. The second draft replaced the .4 gpm standard with a .7 gpm level. This version—with some additional changes—was eventually introduced as H.R. 5469.

Although the bill's framework was similar to H.R. 3054, it contained two fundamental differences. First, H.R. 5469 placed a much greater emphasis on planning. The bill required a comprehensive identification of pollution sources (inventories) and better reporting on emissions from sources (emissions statements). H.R. 5469 also called for the use of state-of-the-art air models to develop effective pollution control strategies. In order to provide more time for the development of these plans and inventories, H.R. 5469 allowed states four years before they would have to put their plans into effect. Some control measures, however, would have to be implemented immediately.

The second major difference was the treatment of cars and trucks. Although H.R. 5469 contained some new requirements, it had far fewer mandated control measures than H.R. 3054. In addition, the bill weakened how the current law's in-use provision, which is one of the fundamental principles of mobile source control, would apply to new tailpipe standards. The Act now requires cars to meet tailpipe standards both when they leave the factory and after driven on actual road conditions for 50,000 miles. H.R. 5469 would not have required its new tailpipe standards to be applied in-use until 1998.

THE 101ST CONGRESS

H.R. 5469 has been reintroduced in the 101st Congress as H.R. 99. H.R. 3054 will be reintroduced—with several significant changes—in April.

---

[From the Clean Air Facts, Apr. 13, 1989]

CONTROL STRATEGIES FOR MOBILE SOURCES

Mobile sources, principally cars and trucks, are the largest single source of ozone and carbon monoxide pollution. Nationally, they are responsible for roughly 50 percent of all volatile organic compound (VOC) emissions, also called "hydrocarbons" (HC), and 45 percent of all nitrogen oxide ($NO_x$) emissions. As described in Issue 2, these compounds react in the presence of heat and sunlight to form ozone. Mobile sources are responsible for an even higher percentage—over 90 percent—of the carbon monoxide pollution in urban areas.

This Fact Sheet discusses strategies for controlling ozone and carbon monoxide pollution from mobile sources. It divides mobile source controls into general categories, such as tailpipe standards and inspection and maintenance programs. Then for each category of controls, it discusses a menu of specific control options. This menu is drawn from bills introduced in the 100th Congress, from proposals put forth by environmental and industry groups, and from other sources.

I. OVERVIEW

The very persistence of widespread ozone and carbon monoxide pollution illustrates the difficulties of controlling these air pollutants. In many cities, VOC emissions must drop 40 percent to 60 percent from today's levels before the ozone standard will be attained. Nonattainment areas must use dozens of measures—each producing small incremental gains—to achieve the federal health standards.

Controls on emissions from mobile sources will be an important part of these efforts for a simple reason: mobile sources are the largest source of ozone and carbon monoxide pollution.

Ozone forms when precursor emissions—VOCs and $NO_x$—released into the atmosphere react photochemically. Mobile sources generate the largest single share of the national inventory of these precursor pollutants: 50 percent in the case of VOC emissions and 45 percent in the case of $NO_x$ emissions. The table below identifies the principal sources of VOC and $NO_x$ emissions from mobile sources.

TABLE 1.—PERCENT OF EMISSIONS OF OZONE PRECURSORS FROM MOBILE SOURCES

[Percent of national inventory from all sources in parentheses]

| Source: | VOC | $NO_x$ |
|---|---|---|
| Passenger cars | (25) 50 | (17) 38 |
| Light-duty trucks | (8) 16 | (7) 16 |
| "Nonroad" vehicles (e.g., trains, construct. equip.) | (7) 14 | (9) 20 |
| Gasoline refueling | (7) 14 | NA |
| Heavy-duty trucks | (3) 6 | [1] (9) 20<br>[2] (2) 4 |

[1] Diesel. [2] Gasoline.

In the case of carbon monoxide (CO), mobile sources are an even more significant source of pollution. They cause over 90% of CO pollution in most urban areas.

There is no single approach that can eliminate the pollution from mobile sources. Rather, achieving significant reductions in VOC, $NO_x$, and CO emissions will require using a host of measures, including tighter tailpipe standards, enhanced inspection and maintenance programs, controls on fuel volatility, controls on evaporative emissions and running losses, and measures promoting alternative fuels, among others. These measures will have to be applied to a wide range of mobile sources. They are discussed below.

II. TAILPIPE STANDARDS

*A. History and Current Status*

The 1970 Clean Air Act forced technological innovation on the automobile industry. It requried the U.S. EPA to set tailpipe standards that reduced hydrocarbon, nitrogen oxide, and carbon monoxide pollution in automobile exhaust by 90%. No technology existed at the time to meet the Act's standards. The theory was that the standards would force the development of brand-new technology.

The theory worked. EPA set an exhaust of 0.41 grams per mile (gpm) for HC emissions. It set a standard of 0.40 gpm for $NO_x$, which was subsequently relaxed in the 1977 Clean Air Act Amendments to 1.0 gpm. And it set a standard of 3.4 gpm for CO. The automobile industry responded by developing the "catalytic converter," which fits on the end of the tailpipe and converts HC, $NO_x$, and CO into carbon dioxide, water vapor, and nitrogen gas. The original standards, as amended in 1977, remain in effect today.

Unlike its treatment of cars, the Act did not set standards for trucks and buses. Instead, it gave EPA rulemaking authority to set appropriate standards. The most recent truck and bus standards were promulgated in 1985. They vary according to the weight of the vehicle and are still in the process of being phased in for some vehicle classes.

The federal standards preempt state standards except in California, which is authorized under the Act to adopt more stringent standards. California has used its independent authority to tighten the federal standards in two important ways. California is phasing in a new $NO_x$ standard for passenger cars of 0.40 gpm, sixty percent lower than the federal standard. In addition, unlike EPA, California requires many light trucks and vans to meet the same standards it applies to passenger cars. The Act permits other states to adopt the complete package of standards for vehicles—something that several states have recently indicated that they intend to do.

Both the federal and the California standards must be met by cars at "certification," when the vehicle comes off the assembly

line, and "in-use" for the "useful life" of the vehicle. The Act defines the useful life of a car as five years or 50,000 miles of use. EPA has defined useful life as 11 years or 110,000 miles in the case of light-duty trucks and as even longer (up to 285,000 miles) in the case of some heavy-duty trucks. As a practical matter, the in-use standard is controlling. In order to meet the in-use standard, new vehicles regularly certify at levels well below the relevant standards.

When vehicles fail to meet the relevant tailpipe standards throughout their useful life, two things happen. The Clean Air Act requires automobile manufacturers to warrant that their vehicles are free from defects that cause violations of the standards during the vehicle's useful life. As a result, if the failure to meet the standards can be attributed to a defect in the vehicle, the vehicle will be subject to repair under warranty. In addition, if EPA determines that a substantial number of vehicles of a certain class violate the standards during their useful life, EPA can require the manufacturer to recall the class for repairs. After a vehicle's useful life ends, the manufacturer's responsibility for its emission performance ends.

*B. Levels of Exhaust Emissions*

Tailpipe standards control "exhaust emissions," the pollutants emitted out the tailpipes of vehicles. The best data currently available show that exhaust emissions account for about one third of the VOC emissions from passenger cars. The remaining VOC emissions from passenger cars are "evaporative emissions" and "running losses," which occur when gasoline evaporates from parked and running cars. The design of light-duty trucks minimizes evaporative and running losses, because the relatively large distance between the engine and the gas tank keeps the gas tank cool and reduces evaporation. Exhaust emissions make up about half (46 percent) of the VOC emissions from light-duty trucks.

$NO_x$ and CO emissions are exclusively a by-product of combustion, so all $NO_x$ and CO emissions from mobile sources are exhaust emissions.

In the absence of new standards, the turnover of the fleet will reduce exhaust emissions from highway vehicles because cleaner new vehicles will replace older vehicles. Over time, however, increases in the number of vehicles on the road and the number of miles driven will erode the benefits from fleet turnover. The best estimates are that in comparison to today's levels—and in the absence of any new standards—VOC exhaust emissions from highway vehicles (cars, trucks, and motorcycles) will drop about 30 percent by the late 1990s and then turn upwards. The level of future increases will ultimately depend on overall growth in vehicle miles travelled (VMT), which is expected to average about 2.5 percent each year.

$NO_x$ and CO exhaust will follow a similar pattern without new controls, but with fewer emission reductions. By the late 1990s, for example, $NO_x$ emissions from highway vehicles should drop about 15 percent and then turn upwards.

*C. Proposals for Reductions*

An array of proposals have been put forward for reducing exhaust emissions from highway vehicles. In each case, because it takes about ten years for a new generation of vehicles to replace an existing generation, the full benefits of adoption of the proposal would not be obtained in practice until about ten years after the proposed standard went into effect.

1. Hydrocarbon Standards for Passenger Cars

The current HC standard for passenger cars is 0.41 gpm. It must be met at both certification and in-use for 50,000 miles.

The proposals for tightening this standard are usually expressed in terms of total hydrocarbons emitted ("HC"), as is the current standard. Sometimes, however, they are expressed in terms of "nonmethane hydrocarbons" (NMHC) emitted. Methane constitutes about 15 percent of the hydrocarbons in the exhaust of a typical gasoline-fueled passenger car equipped with a catalyst. It is a relatively inert gas, so it has low photochemical reactivity and does not contribute significantly to ozone formation. However, methane is a "greenhouse gas" that does contribute to global warming.

The proposals for reducing the HC exhaust emissions from passenger cars range from a NMHC standard of 0.25 gpm that would apply at certification, but not in-use, to a standard that would require zero emissions of hydrocarbons in-use for 100,000 miles. The 0.25 NMHC standard at certification would produce few reductions in HC emissions. In fact, over 80 percent of the passenger car fleet already certifies at 0.25 NMHC standard in order to comply with the current HC standard of 0.41 gpm in use. As the standard tightens from this point, important reductions in the pool of HC emissions begin to be obtained.

Intermediate standards that have been proposed include applying the 0.25 NMHC in-use for 50,000 miles, applying a 0.25 HC standard in-use for 50,000 or 100,000 miles, and applying a 0.125 HC standard in-use for 50,000 or 100,000 miles.

The 0.25 NMHC standard at certification is demonstrated technology. Experts debate whether current technology exists to meet a 0.25 NMHC or HC standard in-use for 50,000 miles. Extending a 0.25 HC standard in-use to 100,000 is a technology-forcing standard in the sense that it would require auto manufacturers to use more durable pollution control devices than are currently available. More stringent standards than this are also technology forcing. Achieving the 0.0 HC standards than this are also technology forcing. Achieving the 0.0 HC standard would require replacing the internal combustion engine on passenger vehicles with engines using a different technology, such as battery-powered electric engines.

2. $NO_x$ Emissions from Passenger Cars

The current $NO_x$ standard for passenger cars is 1.0 gpm. It must be met both at certification and in-use for 50,000 miles.

The proposals for tightening this standard range from a standard of 0.7 that would apply at certification only to a standard that would eliminate all $NO_x$ emissions from passenger cars. The most lenient 0.7 standard, like the most lenient HC standard, would produce minimal reductions in emissions because it is already being met by over 80 pecent of the fleet.

Intermediate standards that have been proposed include a 0.4 standard that would apply at certification, a 0.4 standard that would apply in-use for 50,000 or 100,000 miles, and a 0.2 standard that would apply in-use for 50,000 or 100,000 miles.

A standard of 0.4 applied in use for 50,000 miles is demonstrated technolgoy. It has been adopted by California and will be met by 40 percent of the new cars there this year (it will be fully phased in by 1991). More stringent standards are technology forcing to varying extents. As in the case of HC emissions, achieving a 0.0 standard would require eliminating the internal combustion engine.

3. CO Emissions from Passenger Cars

The current CO standard for passenger cars is 3.4 gpm. It must be met both at certification and in-use for 50,000 miles.

Because CO is a problem especially during cold weather, most legislative proposals for tightening the standard limit CO emissions under these conditions specifically. One proposal would require that passenger cars achieve an emission rate of 40 degrees Fahrenheit that is 50 percent of the rate achieved at that temperature by cars manufactured between 1981 and 1985. A more conservative standard would require that the 50 percent reduction be achieved at 20 degrees Fahrenheit. And a third would require that cars be able to comply with the existing 3.4 gpm standard even when operating at 20 degrees Fahrenheit.

It is technologically feasible to reduce CO emissions by 50 percent from the levels obtained by 1981–85 cars at either 40 degrees or 20 degrees Fahrenheit. More stringent standards are technologically forcing to varying extents.

4. Light-Duty Truck Standards

Federal regulations define a light-duty truck as a truck or van weighing less than 8,500 pounds. The emission standards are 0.80 gpm for HC, 1.2 gpm for $NO_x$ (1.7 gpm for $NO_x$ for trucks weighing over 3,750 pounds), and 10.0 gpm for CO. The standards must be met at certification in-use for 120,000 miles.

The proposals for tightening these standards generally follow the same approach as the proposals for tightening the standards from passenger cars. They range from a proposal that would tighten just certification requirements (to 0.50 NMHC and 0.80 $NO_x$) to standards that would eliminate all emissions of HC, $NO_x$, and CO by eliminating use of the internal combustion engine. As is the case with the standards for passenger cars, the more lenient propoals do not obtain significant emissions reductions, but are achievable with demonstrated technology. In contrast, the most stringent ones do obtain significant reductions, but are technology forcing.

A different type of approach is to redefine some light-duty trucks as passenger cars. Many of these trucks have essentially the same engines as passenger cars. This is the approach taken in California, where light-duty trucks and vans below 3,750 pounds are required to meet the state's 0.39 NMHC and 0.4 $NO_x$ standards in use for 50,000 milies.

5. Other Tailpipe Standards

There are also a variety of proposals being considered to tighten exhaust emissions from heavy-duty trucks and motorcycles.

Emission standards for heavy-duty vehicles are measured in grams per brake-horsepower hour (g/bhp-hr), which is a measurement of grams of emissions per unit of work. They vary according to the weight to vehicle, and according to whether the vehicle is fueled by gasoline or diesel fuel. Current standards for gasoline-fueled heavy-duty engines are 1.1 g/bhp-hr for HC (1.9 g/bhp-hr for vehicles weighing over 14,000 pounds), 6.0 g/bhp-hr for $NO_x$ (dropping to 5.0 g/bhp-hr by 1991), and 14.4 g/bhp-hr for CO (37.1 g/bhp-hr for vehicles weighing over 14,000 pounds). For diesel-fueled heavy-duty engines, the HC standard is 1.3

g/bhp-hr, the $NO_x$ standards are the same as for gasoline-fuelded vehicles, and the CO standard is 15.5 /bhp-hr. All the standards apply at certification and over the useful life of the vehicle, which is defined as 110,000 to 290,000 miles depending on the weight of the vehicle.

Proposals for tightening the standards for heavy-duty vehicles include lowering the $NO_x$ standard to 4.0 or 1.7 g/bhp-hr and lowering the CO standard to 5.6 to 14.4 g/bhp-hr, depending on the type of vehicle.

The current motorcycle standards are 5.0 grams per kilometer (gpk) for HC and 12.0 gpk for CO. Proposals for tightening the standards include lowering the HC standard to 2.0 or 3.6 gpm depending on the type of motorcycle and lowering the CO standard to 17.6 gpm.

### III. THE FEDERAL TEST PROCEDURE AND THE SELECTIVE ENFORCEMENT AUDIT

The reductions in emissions produced by tailpipe standards are sensitive to the conditions under which compliance is tested. This procedure is called the Federal Test Procedure (FTP). The FTP is supposed to be representative of "real-world" driving conditions. During the FTP, a vehicle is driven over a 7.5 mile course, at various speeds (averaging 19.6 mph) and with a prescribed number of starts and stops. If the emissions rate of the vehicle during the FTP is below the relevant federal standard, the vehicle passes the test.

Because of changes in engine design and other factors, however, the FTP no longer is fully representative of actual conditions. For example, cars have much more rapid acceleration today than they did when the FTP was developed. This ability bears upon the exhaust emissions of the vehicle, because the stress of rapid acceleration reduces combustion efficiency and increases HC emissions. Yet the FTP does not include episodes of rapid acceleration in its prescribed course. Another problem with the FTP is that it requires vehicles to use gasoline with a lower volatility than is common today, thereby again underestimating real-world emissions. And another problem is that the temperature range of the FTP (68 to 86 degress Fahrenheit) is lower than the temperatures prevailing on many hot days when ozone levels reach their peaks.

Revising the FTP to reflect real-world conditions more accurately would eliminate these discrepancies and thereby reduce HC, $NO_x$, and CO emisssions from vehicles.

The selective enforcement audit (SEA) is related to the FTP. During the SEA, EPA pulls vehicles randomly from the assembly line to test whether they comply with federal tailpipe standards during the FTP. Under current SEA procedures, a vehicle class is deemed to meet federal requirements even if 40 percent of the cars evaluated in the SEA fail to pass the FTP.

Tightening the SEA to require that 90 percent of all vehicles tested pass probably would not reduce emissions from current levels significantly, because manufacturers generally have a better than 90 percent compliance rate anyway. However, it would close a protential loophole in the regulations and prevent its exploitation in the future.

### IV. INSPECTION AND MAINTENANCE PROGRAMS

Inspection and maintenance programs work to ensure that cars achieve low emission levels in use. They require periodic testing of vehicles for compliance with a "cut point," which is a state-selected measure of permissible exhaust emissions during idling. When a vehicle fails the inspection, the owner is required to repair the vehicle, unless the repair costs exceed a specified limit. When the costs exceed the specified limit, the owner's repair obligation is waived.

The 1977 Clean Air Act Amendments required that all areas seeking to extend the attainment deadline for ozone or carbon monoxide pollution to December 31, 1987, implement I&M programs. Although every nonattainment area now has or is in the process of implementing an I&M program, the programs in many areas have been criticized as inadequate. Two of the major problems are the poor quality of testing instruments, which allow too many vehicles to pass the inspection, and abuse of the repair-cost waiver by inspectors. "Decentralized" programs, which allow I&M testing to be conducted at private service stations throughout the area, have proven to be substantially less effective than ones that centralize the testing.

"Improved" or "enhanced" I&M programs have been proposed to address the deficiencies of existing programs. Such programs could include any or all of the following measures: (1) a requirement that the program cover all light-duty vehicles operating in the program area, not just passenger cars, (2) expansion of the coverage of the program to include the entire metropolitan area, (3) annual testing, (4) direct inspection of emission control components, (5) centralized and computerized testing, and (6) an increase in the repair cost waiver to $200.

### V. EVAPORATIVE EMISSIONS AND RUNNING LOSSES

#### *A. Background*

The exhaust emissions discussed so far cause nearly all of the $NO_x$ and CO emissions produced by highway vehicles. They cause only a portion of the VOC emissions, however. Evaporative emissions and running losses are also responsible for large VOC losses, especially during warm weather. (The third important source of VOC emissions from highway vehicles—refueling emissions—are discussed below.)

Evaporative emissions are the emissions produced by evaporation from the fuel tank and fuel lines in parked cars. EPA regulations require manufacturers to install small charcoal canisters in their vehicles to capture these emissions. But these canisters are frequently overwhelmed by the level of evaporation on hot days.

"Running losses" are similar to evaporative emissions, except that they occur when the vehicles are in operation. The combination of hot weather and hot engines can cause massive amounts of evaporation from the fuel tank. On some days, the running losses per mile can be an order of magnitude higher than exhaust emissions.

In combination, evaporative emissions and running losses can account for two thirds of the VOC emissions from passenger cars.

As mentioned earlier, evaporative emissions and running losses are lesser problems in light-duty trucks. The design of these vehicles places the gas tank away from the engine, where it keeps cool, thereby reducing evaporation. On average, running losses account for about half of the VOC emissions from light-duty trucks.

#### *B. Controls on fuel volatility*

A major factor affecting the rate of evaporative emissions and running losses is the "volatility" of gasoline. Volatility is a measure of the evaporative potential of a fuel. The higher its volatility, the more readily a fuel evaporates into the air.

In the past 10 to 15 years, gasoline volatility has risen from an average summertime Reid Vapor Pressure (RVP) of 9.0 pounds per square inch to an RVP of 11.5. The RVP increase has occurred because petroleum refiners have added butane to fuels to reduce costs and increase performance. The increased volatility has led to substantially higher levels of VOC pollution from motor vehicles and service stations.

Sone states have acted on their own initiative to lower fuel volatility. Since the early 1970s, Southern California has limited volatility to 9.0 RVP. A number of Northeast states adopted regulations that would have reduced volatility levels to 9.0 for the first time this summer. In March 1989, however, EPA issued nationwide regulations setting an RVP limit of 10.5 for most states. This action may preempt the Northeastern states' volatility regulations (but not California's, due to special provisions in the Clean Air Act). EPA has said it will consider further restrictions in a later rulemaking.

Adoption of lower volatility standards is one of the most cost-effective control strategies available. Lowering the standard from 11.5 to 10.5 as EPA has done, however, achieves only about half of the reductions that lowering the standard to 9.0 would achieve.

#### *C. Other measures*

Restrictions on fuel volatility alone cannot eliminate evaporative emissions and running losses. To achieve this goal, some sort of on-board controls, such as enlarged charcoal canisters or systems to burn off excess vapors, are needed.

### VI. REFUELING EMISSIONS

A related issue is how to control gasoline vapors that are displaced from the fuel tank when automobiles are refueled at gasoline service stations. These emissions currently account for about 7% of the national VOC inventory.

Two strategies are under consideration. One would mandate that gas stations in nonattainment areas install "stage II" control technology, which is, in essence, a series of hoses that recycle escaping fumes back to the storage tank. This approach is already in place in D.C. and Southern California and has recently been adopted by New York and New Jersey. The second approach is termed "on-board" technology. This approach would require auto-makers to place a canister to recapture fuel vapors in the gas tanks of cars.

After more than a decade of analysis, EPA has concluded that stage II would achieve ozone pollution reductions more rapidly, because it would not be necessary to wait for the turnover of the auto fleet to achieve reductions. On the other hand, it has concluded that on-board technology would be more effective once eventually in place, and would encounter less consumer resistance. EPA proposed requiring on-board technology in an August 1987 rulemaking, but its proposal has recently been rejected by the White House Office of Management and Budget.

### VII. ALTERNATIVE FUELS

#### *A. Background*

Ultimately, one of the best prospects for reducing ozone levels in severe nonattainment areas is switching to alternative or "clean" fuels that produce less pollution than does gasoline. The leading alternative fuels are methanol, which is currently made

from natural gas (methanol can also be made from coal); ethanol, which is made from grains; and compressed natural gas (CNG).

These fuels have a tremendous capacity to reduce the contribution of motor vehicles to ozone formation. When they are burned, they produce exhaust gases that are far less photoreactive than the gases in the exhaust of gasoline-fueled motor vehicles. As a result, according to some estimates, use of "neat" (100 percent pure) alternative fuels can reduce ozone formation from motor vehicles by as much as 90 percent.

The emission-reduction gains are lower when methanol is blended with gasoline. In the case of "M85," a common blend of 85 percent methanol and 15 percent gasoline, the emission reductions are about 30 percent. Blends can increase the safety of methanol, because pure methanol is odorless and burns invisibly. Research is being conducted into other additives that would enhance the safety of methanol without compromising its potential to reduce emissions as significantly.

Alternative fuels have been used on demonstration vehicles for several years. Methanol bus programs are operating or planned for San Francisco, Los Angeles, Jacksonville, Seattle, Denver, and New York. A fleet of methanol-fueled Ford Escorts has logged over 20 million miles in California. Brazil's transportation system runs predominantly on fuels containing ethanol.

The alternative fuels are more efficient than gasoline in the sense that less of their energy content is wasted during combusion; however, one drawback is that their energy content is less, so fuel tanks must be larger to give vehicles equivalent range. Another potential drawback is that vehicles fueled with methanol and ethanol emit more formaldehyde than gasoline-fueled cars. However, these emissions can be controlled through catalytic converters. If coal becomes a commmercial source of methanol, its production could aggravate global warming by increasing carbon dioxide emissions, unless a carbon dioxide emissions standard is placed on the coal plants.

Centrally fueled fleets are in especially attractive place to begin to phase in alternative-fueled vehicles. Fleets of ten or more vehicles drive about 15 percent of all miles traveled. When they are refueled at a central facility, as is often the case, they can convert to alternative fuels without waiting until private gas stations begin dispensing alternative fuels. In addition, they often have mechanics on hand who can be specially trained to maintain alternative-fueled vehicles.

#### B. ALTERNATIVE FUEL PROGRAMS

As with tailpipe standards, there are an array of alternative proposals for lowering ozone pollution through the use of alternative fuels. These range from requiring new additions to federally owned fleets to use alternative fuels, to requiring new additions to all centrally fueled fleets to use alternative fuels, to requiring all new vehicles to use alternative fuels.

### VIII. TRANSPORTATION CONTROL PLANS

#### *A. Background*

A final way to reduce pollution from highway vehicles is to reduce the number of miles that the vehicles travel. This approach relies on the development and implementation of transportation control plans (TCPs). These plans reduce vehicle miles travelled (VMT) through measures such as high-occupancy vehicle lanes, improved public transit, carpooling programs, tolls, and parking fees and restrictions. Broadly conceived, TCPs can also include land-use measures, such as encouraging the development of housing close to jobs to reduce commuting distances.

The 1970 Clean Air Act required states to include TCPs in their implementation plans to the extent necessary to achieve compliance with the federal health standards. When states failed to include TCPs in their plans, EPA proposed federal ones. This provoked a backlash against federal assumption of a traditionally local function. The 1977 amendments restricted EPA's ability to engage in transportation planning. It allowed EPA to approve implementation plans containing measures such as parking surcharges, but prohibited the agency from imposing such measures itself.

To promote transportation planning at a local level in nonattaiment areas, the 1977 amendments did, however, require highway and other transportation projects funded by the federal government to "conform" with the area's air pollution plan. EPA interprets this requirement to mean that a federally funded highway project must include measures to prevent emissions growth attributable to the new highway from worsening the area's air pollution problem. The Department of Transportation, which awards the federal funding, takes a more restrictive view of "conformity," however: it finds projects in conformity so long as they do not interfere with the adoption pollution control measures identified in the implementation plan.

#### *B. Legislative options*

There is a large menu of options for transportation control planning. These include (1) requiring EPA to issue TCP guidelines for use by states, (2) requiring that projects funded by federal highway funds do not increase emissions, (3) redirecting federal highway funds to projects that reduce VMT, and (4) placing a cap on VMT growth.

### *IX. "NONROAD" vehicles*

A related source of VOC and $NO_x$ emissions are "nonroad" vehicles, such as construction equipment and trains. These sources are responsible for 7 percent of the inventory of VOC emissions and 9 percent of the $NO_x$ emissions from mobile sources (3.5 percent and 4 percent of the national inventory of VOC and $NO_x$ emissions).

One option for controlling emissions from nonroad sources is to require the greatest reduction in emissions from the sources that is "technologically achievable" as determined by EPA. Another option—one that gives less discretion to EPA—is to apply emission standards to the nonroad sources that are equivalent to the emission standards that apply to highway vehicles of equivalent horsepower.

---

[From the Clean Air Facts, Apr. 19, 1989]

## CLEAN AIR GLOSSARY

This Fact Sheet provides a list of acronyms and a glossary of terms used in the debate over the reauthorization of the Clean Air Act. Each of the acronyms—plus over 100 other terms—is defined in the glossary.

### CLEAN AIR ACT ACRONYMS

BACT: Best available control technology.
BTY: British thermal units.
CARB: California Air Resources Board.
CASAC: Clean Air Scientific Advisory Committee.
CMSA: Consolidated metropolitan statistical area.
CNG: Compressed natural gas.
CO: Carbon monoxide.
$CO_2$: Carbon dioxide.
CTG: Control technique guideline.
EDB: Ethylene dibromide.
EKMA: Empirical kinetic modeling approach.
EPA: Environmental Protection Agency.
FIP: Federal implementation plan.
FMVCP: Federal motor vehicle control program.
FTP: Federal test procedure.
G/bhp-hr: Grams per brake-horsepower-hour.
GPM: Grams per mile.
HC: Hydrocarbons.
HDT: Heavy-duty truck.
HOV: High occupancy vehicle.
I&M: Inspection and maintenance.
LAER: Lowest achievable emission rate.
LDT: Light-duty truck.
M85: Blend of 85 percent methanol, 15 percent gasoline.
MIC: Methyl isocyanate.
MSA: Metropolitan statistical area.
MTBE: Methyl tertiary butyl ether.
NAAQS: National ambient air quality standard.
NESHAP: National emission standards for hazardous air pollutants.
NMHC: Nonmethane hydrocarbons.
$NO_2$: Nitrogen dioxide.
$NO_x$: Nitrogen oxides.
NSPS: New source performance standard.
$O_3$/Oz: Ozone.
PM-10: Particulate matter less than 10 microns in diameter.
POTW: Publicly owned treatment work.
RACT: Reasonably available control technology.
ROM: Regional ozone model.
RVP: Reid vapor pressure.
SCR: Selective catalytic reduction.
SEA: Selective enforcement audit.
SIP: State implementation plan.
$SO_2$: Sulfur dioxide.
SOCMI: Synthetic organic chemical manufacturing industry.
$SO_x$: Sulfur oxides.
STAPPA: State and Territorial Air Pollution Program Administrators.
TCP: Transportation control plan.
TRI: Toxic Release Inventory.
TSDF: Treatment, storage, or disposal facility.
TSP: Total suspended particulates.
VMT: Vehicle miles traveled.
VOC: Volatile organic compound.

### GLOSSARY OF CLEAN AIR ACT TERMS[1]

*Acid Deposition:* The deposition of acidic pollutants in any of many different forms, including rain, snow, fog, mist, and dry deposition. Acid deposition is caused by emissions of sulfur dioxide (from the combustion of fossil fuels containing sulfur) and nitrogen oxides (from the combustion of fossil fuels). These pollutants form solutions of sulfuric, nitric, and other acids in the atmosphere, which can be carried by winds as small particles or droplets of water for hundreds of miles.

*Acid Rain:* A form of Acid Deposition. Any precipitation having a pH value of less than that of normal rain, which generally ranges from 5.0 to 5.6.

*Air:* Pure air is a mixture of gases, including about 78 percent nitrogen, 21 percent

[1] The Environment and Natural Resources Policy Division of the Congressional Research Service and the Environmental and Energy Study Conference provided assistance in the preparation of this glossary.

oxygen, and less than one percent carbon dioxide and other inert gases, with varying amounts of water vapor.

*Air Toxics:* See Hazardous Air Pollutants.

*Alternative Fuels:* Substitutes for traditional, liquid, oil-derived motor vehicle fuels, such as gasoline or diesel fuels; includes methanol, ethanol, compressed natural gas (CNG) and others.

*Ambient Air:* The air that is in the troposphere, and is subjected to meteorological and climatic changes.

*Architectural Coatings:* Coverings such as paint and roof tar that are used on exteriors of residential, commercial, and industrial structures.

*Area Source:* An air pollution source that is neither a major stationary source nor a mobile source; e.g., residential furnaces, gas stations, and dry cleaners.

*Aromatic:* A term applied to organic compounds derived from benzene.

*Arsenic:* A heavy metal found to be poisonous to animals and humans; emitted by smelters, among other sources. One of the seven hazardous air pollutants for which a national emission standard (NESHAP) has been promulgated.

*Asbestos:* The fibrous form of several silicate minerals. Asbestos fibers are used for making incombustible or fireproof materials. The manufacture, use, and disposal of asbestos-containing materials is strictly regulated because respiratory damage may result if asbestos fibers are inhaled. One of the seven hazardous pollutants for which a national emission standard (NESHAP) has been promulgated.

*Attainment Area:* A region that meets the National Ambient Air Quality Standards for a criteria pollutant under the Clean Air Act.

*Baghouse:* An air pollution abatement device used to trap paticulates by filtering gas streams through large fabric bags usually made of glass fibers.

*Benzene:* The simplest aromatic hydrocarbon; found in coal tar and used as an industrial solvent, as a gasoline additive, and in some paints and varnishes; a known carciogen. One of the seven hazardous pollutants for which a national emission standard (NESHAP) has been promulgated.

*Beryllium:* A hard, poisonous, metallic element used in the production of corrosion-resistant alloys. One of the seven hazardous polutants for which a national emission standard (NESHAP) has been promulgated.

*Best Available Control Technology (BACT):* This is a basic technology requirement of the Clean Air Act. New facilities contructed in "clean air" areas must install best available control technology to control polution. BACT is determined by states on a case-by-case basis, and must be at least as rigorous as industry-wide "new source performance standards." Costs must be considered in determining BACT. Compare Lowest Achievable Emission Rate (LAER), Reasonably Available Control Technology (RACT).

*British Thermal Unit (Btu):* The quantity of heat absorbed by one pound of water to produce an increase in temperature of one degree Fahrenheit.

*Bubbling:* A type of emissions trading under the Clean Air Act. Under the Clean Air Act, existing sources in nonattainment areas are required to use reasonably available control technology. Bubbling allows a source to avoid this requirement by obtaining equivalent reductions from another source. Compare Netting.

*California Air Resources Board (CARB):* Air quality control agency for the State of California.

*Carbon Dioxide ($CO_2$):* A colorless, odorless, tasteless gas about 1.5 times as dense as air; released by plant and animal respiration and consumed by photosynthesis. Also a product of combustion of carbon-containing materials, such as fossil fuels.

*Carbon Monoxide (CO):* A colorless, odorless, poisonous gas produced by incomplete fossil-fuel combustion. One of the six pollutants for which there is a national ambient standard. See Criteria Pollutants.

*Carcinogen:* A substance that causes cancer.

*Catalytic Converter:* A device placed in the exhaust system of a motor vehicle, whose purpose is to convert hydrocarbons, nitrogen oxides and carbon monoxide to water vapor, carbon dioxide and nitrogen gas.

*Certificate of Conformity:* A certificate issued to an automobile manufacture after a new model of motor vehicle passes the Federal Test Procedure. The Clean Air Act prohibits the sale of new motor vehicles that lack a certificate of conformity.

*Chlorofluorocarbon (CFC):* A stable nontoxic chemical compound whose primary uses include refrigeration, manufacture of insulation and packaging, air conditioning, and cleaning of electronic parts; in the troposphere, CFCs release free atoms of chlorine which contribute to the chemical destruction of ozone in the Earth's stratosphere.

*Class I, II, and III Areas:* Under the Clean Air Act, clean air areas are divided into three classes. Very little pollution increase is allowed in Class I areas, some increase in Class II areas, and more in Class III areas. National parks and wilderness areas receive mandatory Class I protection. All other areas start out as Class II. States can reclassify Class II areas up or down, subject to federal requirements.

*Clean Air Scientific Advisory Committee (CASAC):* A committee of the Science Advisory Board, which is a group of independent scientists who review and evaluate EPA studies of regulatory significance.

*Clean Coal Technology:* An innovative process in which coal burns with reduced emissions and produces less waste than by existing technologies. For power production, these technologies may be applied in two basic ways—retrofitting existing powerplants to improve emissions performance, and repowering plants with technologies that reduce emissions and increase efficiency.

*Coal Cleaning:* A precombustion process by which coal is physically or chemically treated to remove some of its sulfur in order to reduce sulfur dioxide emissions.

*Coal Gasification:* The conversion of coal to a gaseous product by reaction with air, oxygen, steam, carbon dioxide, or mixtures of these. Of the dozen existing coal gasification technologies the most advanced is the integrated gasification-combined-cycle (IGCC) method, which removes more than 95 percent of the sulfur in the coal.

*Co-fire:* The burning of two fuels in the same combustion unit, e.g., coal and natural gas, or oil and coal.

*Combustion Modification:* A method to decrease $NO_x$ emissions from a powerplant during the combustion process. The combustion temperature is regulated through delayed mixing of fuel and air or by modifying the fuel-air ratio. Major $NO_x$ combustion modification techniques include low excess air (LEA), low-$NO_x$ burners, staged combustion (off-stoichiometric firing), overfire air, flue-gas recirculation, low air preheat, and water injection.

*Compressed Natural Gas (CNG):* An alternative fuel used in motor vehicles; considered one of the cleanest alternative fuels because of low hydrocarbon emissions that are relatively non-ozone producing. However, it does emit a significant quantity of nitrogen oxides.

*Consolidated Metropolitan Statistical Area (CMSA):* A statistical area defined by the Office of Management and Budget that contains one million people or more in addition to other criteria. There were 21 CMSAs in the U.S. as of 1986.

*Construction Bans:* Section 110 of the Clean Air Act requires, upon EPA disapproval of an area's planning requirements for nonattainment, a ban on the construction or modification of any major stationary source of the pollutant for which the area is in nonattainment. It is uncertain whether construction bans must be applied to nonattainment areas that fail to meet the statutory deadlines for attainment.

*Consumer Solvents*: A volatile liquid capable of dissolving or dispersing one or more other substances used in consumer products, such as household cleaning fluids and paint thinner.

*Control Technique Guidelines (CTGs)*: Documents issued by EPA to assist state and local pollution control authorities to achieve and maintain air quality standards for certain sources through reasonably available control technologies (RACT). Approximately 22 CTGs have been developed for specific sources that emit volatile organic compounds; e.g., a specific CTG was written to control organic emissions from solvent metal cleaning, known as degreasing.

*Criteria Document*: A detailed review of the health and environmental impacts of a criteria air pollutant, prepared by EPA and expert advisors.

*Criteria Pollutants*: The Clean Air Act required the Environmental Protection Agency to set air quality standards for common and widespread pollutants after preparing "criteria documents" summarizing scientific knowledge on their health effects. Today there are standards in effect for six "criteria pollutants": sulfure dioxide, carbon monoxide, particulates, nitrogen dioxide, ozone, and lead.

*Cyclone Boiler*: A water-cooled, horizontal cylinder in which fuel is fired and heat is released at extremely high temperatures; more $NO_x$ emissions are produced than in other boiler configurations.

*Diesel Particulate Trap*: A device located in the exhaust stream of a diesel vehicle that filters a certain percentage of exhaust particulates. It includes some means by which accumulated particulate can be burned, thus regenerating the trap and making the trap available for continued particulate filtration.

*Design Value*: The monitor reading used by EPA to determine an area's air quality status. The design value for ozone is the fourth highest reading measured over the most recent three years. The design value for carbon monoxide is the second highest nonoverlapping 8-hour concentration for one year.

*Desulfurization*: Removal of sulfur from fossil fuels to cut pollution.

*Dynamometer*: A device for simulating real-world driving conditions; measures or simulates loads, engine torque, and driving forces on vehicles or engines.

*Electrostatic Precipitator (ESP)*: A device which removes dust or other fine particles from a gas by charging the particles with an electric field, and then removing them from

the gas by attracting them to highly charged collector plates.

*Emission Cap*: A limit designed to prevent projected growth in emissions from existing and future stationary sources from eroding any mandated reduction, and thereby maintaining total emissions at or below a mandated level. Generally, such provisions require any emission growth from facilities restricted by the cap be offset by equivalent reductions at other facilities controlled by the same cap.

*Emission Factor*: The relationship between the amount of pollution produced and the amount of raw material processed. For example, an emission factor for a blast furnace making iron would be the number of pounds of particulates per ton of raw materials.

*Emission Inventory:* A listing, by source, of the amounts of air pollutants discharged daily into the atmosphere of a community. It is used to establish emission standards.

*Empirical Kinetic Modeling Approach (EKMA):* An air quality model, widely used by the states in the 1980s, which factors in the effects of sunlight, chemical reactivity, and ozone transport. However, it uses simplified meteorological conditions and can analyze only maximum concentrations of a pollutant. Compare Urban Airshed Model.

*Enhanced Inspection and Maintenance Program:* A more thorough and comprehensive inspection and maintenance program. It includes requirements that expand the geographic area and vehicle classes covered, that increase the rate and quality of the inspections, and that raise the repair-cost waiver.

*Environmental Protection Agency (EPA):* The independent federal agency, established in 1970, that regulates environmental matters and oversees the implementation of environmental laws.

*Ethanol:* A type of alternative fuel used in some prototype vehicles; derived from agricultural commodities such as grain and corn; usually blended with gasoline to form gasohol.

*Ethylene Dibromide (EDB):* A gasoline additive used with leaded fuels to scavenge lead; a suspected carcinogen.

*Evaporative Emissions:* The emissions of volatile organic compounds that are caused by evaporation from the fuel tank and fuel lines of a parked vehicle.

*Federal Implementation Plan (FIP):* A federally-imposed air quality plan required by the Clean Air Act. It supersedes a state implementation plan, if the state does not adequately plan to attain and maintain the national ambient air quality standards.

*Federal Motor Vehicle Control Program (FMVCP):* All federal actions aimed at controlling pollution from motor vehicles, e.g., establishing and enforcing tailpipe standards and evaporative emission standards, developing test procedures, providing guidance on inspection and maintenance procedures to the states.

*Federal Test Procedure (FTP):* The test procedures under which the compliance of a motor vehicle with federal emission standards is determined. In the case of a passenger car, during the federal test procedure a vehicle is "driven" on a dynamometer over a 7.5 mile course, at various speeds (averaging 19.6 mph) and with a prescribed number of stops and starts.

*Flue Gas:* The air coming out of a chimney after combustion. It can include nitrogen oxides, carbon oxides, water vapor, sulfur oxides, particles, and many chemical pollutants.

*Flue-Gas Desulfurization (FGD):* A post-combination sulfur dioxide control technology in which a scrubber is placed in the emission stream between the electrostatic precipitator (or baghouse) and the smokestack. In the operation, the exit gas containing the acidic $SO_2$ reacts with limestone (or lime) to create a calcium by-product. Commonly known as scrubbing; FGD systems can be wet, dry, or regenerable, although wet systems are most widely used.

*Fluidized Bed Combustion:* A process to remove sulfur dioxide during combustion, where crushed coal is fed into a "bed" mixed with limestone or dolomite. The resulting mixture of coal and limestone is held in suspension by air, or fluidized, and the $SO_2$ formed during combustion reacts with the limestone or dolomite to form solid calcium sulfate, which is then removed. Also, because the process operates at a lower combustion temperature than a conventional boiler, nitrogen oxide emissions are lower.

*Formaldehyde:* A reactive, toxic, organic compound; formed in small quantities in all fuel combustion processes, but in larger concentrations in exhaust fumes from methanol-fueled vehicles; used as an embalming fluid; also found in dry-cleaned clothing, particle board, and carpet glues, among others; a possible carcinogen.

*Fossil Fuels:* Combustibles, like coal, oil, and natural gas, derived from the remains of ancient plants and animals.

*Fuel Switching:* A precombustion process whereby a lower sulfur coal, oil, or natural gas is used in place of a higher sulfur coal in a power plant to reduce emissions of sulfur dioxide.

*Gasohol:* A mixture of gasoline and ethanol derived from fermented agricultural products containing at least nine percent ethanol. Five to ten percent of the motor fuel sold is gasohol. Emissions result in less carbon monoxide than gasoline.

*Grams Per Brake-Horsepower-Hour (g/bhp-hr):* A measure of allowable tailpipe emissions of carbon monoxide, hydrocarbons, and nitrogen dioxide for heavy-duty gasoline and diesel-powered trucks and buses.

*Grams Per Mile (gpm):* A measure of allowable tailpipe emissions of carbon monoxide, hydrocarbons, and nitrogen dixoide for passenger cars and light-duty trucks.

*Greenhouse Effect:* The phenomenon in which the sun's energy, in the form of light, passes through the air and is absorbed by the Earth, which then reradiates the energy as heat that the air absorbs. The air thus behaves somewhat like glass in a greenhouse, allowing the inward passage of light but not the outward passage of heat. Carbon dioxide, methane, chlorofluorocarbgons, and other pollutants contribute to the process. The Greenhouse effect will lead to a general warming trend and subsequent climactic changes.

*Hazardous Air Pollutants:* An air pollutant other than a criteria air pollutant that causes or may reasonably be anticipated to cause an increase in mortality or serious illness. See National Emission Standards for Hazardous Air Pollutants (NESHAP).

*Heavy-Duty Truck (HDT):* Under EPA regulations, a truck weighing over 8500 pounds.

*Hotspots:* Localized areas of high air pollution levels. Example: a busy intersection that experiences high carbon monoxide levels.

*Hydrocarbons (HC):* Any of a vast family of compounds containing hydrogen and carbon. Used loosely to include many organic compounds in various combinations; most fossil fuels are composed predominately of hydrocarbons. When hydrocarbons mix with nitrogen oxides in the presence of sunlight, ozone is formed; also referred to as volatile organic compounds (VOC).

*Incinerator:* A controlled chamber where waste substances are burned.

*Increments:* Allowable air pollution increases in clean air regions are measured in increments above existing "baseline" levels. New industrial sources in clean air areas are allocated portions of the regional increment. Once the increment for the region is used up, no additional industrial growth is permitted.

*Indirect Source:* Any facility, building structure, installation, real property, road, highway or parking facility that attracts motor vehicle traffic and, indirectly, causes air pollution.

*Inspection and Maintenance (I&M):* Inspection and maintenance of auto emissions controls. In states with inspection and maintenance programs, automobiles must be checked periodically for excess hydrocarbon and carbon monoxide emissions. If excess emissions are found, the owner must have the vehicle repaired, unless the repair-cost waiver is exceeded. Compare Enhanced Inspection and Maintenance.

*Inversion:* An atmospheric condition caused by a layer of warm air preventing the rise of cool air trapped beneath it. This holds down pollutants that might otherwise be dispersed, and can cause an air pollution episode.

*Lead (Pb):* A heavy metal used in many industries, which can accumulate in the body and cause a variety of negative effects. One of the six pollutants for which there is a national ambient air quality standard. See Criteria Pollutants.

*Lifetime risk:* The probability of contracting or dying from a disease, calculated from birth or any subsequent time. EPA assumes a typical lifetime to be 70 years.

*Light-Duty Truck (LDT):* Under EPA regulations, a truck or van weighing less than 8500 pounds.

*Limestone Injection Multistage Burner (LIMB):* An emerging control technology used to alter the combustion process in coal burning power plants, whereby limestone is injected into a boiler with coal, causing sulfur dioxide to form solid calcium sulfate.

*Liming:* The application of alkaline materials, usually limestone, to lakes, streams or solids to temporarily increase the pH to compensate for the effects of acid deposition.

*Lowest Achievable Emission Rate (LAER):* A stringent level of pollution control required by the Clean Air Act for new or modified industrial facilities in nonattainment areas (areas where air pollution exceeds national air quality standards). The lowest achievable emission rate is defined as either the most stringent emission limitation contained in the implementation plan of any state for a category of sources, or as the most stringent emission limitation achieved in practice within an industrial category. In theory, the lowest achievable emission rate should be more stringent that new source performance standards. Compare Best Available Control Technology (BACT), Reasonably Available Control Technology (RACT).

*M85*: Automotive fuel that is 85 percent methanol, 15 percent gasoline.

*Major Source:* A stationary source that emits, or has the potential to emit, 100 tons per year or more of any air pollutant.

*Mercury:* Liquid metal which damages the nervous system upon inhalation or ingestion. One of the seven hazardous air pollutants for which a national emission standard (NESHAP) has been promulgated.

*Methanol:* An alcohol that can be used as an alternative fuel or as a gasoline additive. It is less volatile than gasoline; when blended with gasoline, it lowers carbon monoxide emissions but increases hydrocarbon emissions; when used as a pure fuel, its emissions are less ozone-forming than gasoline emissions.

*Methyl Isocyanate (MIC):* A toxic gas that killed over 3,000 people in Bhopal, India in 1984. Methyl Isocyanate is a frequently cited example of an air pollutant that is not currently regulated by EPA as a hazardous air pollutant.

*Methyl Tertiary Butyl Ether (MTBE):* A fuel additive containing oxygen, and made from petroleum products (methanol and isobutylene); as an additive to gasoline, it reduces carbon monoxide engine exhaust levels and does not increase HC emissions.

*Metropolitan Statistical Area (MSA):* Defined by the Office of Management and Budget; a large population center with adjacent communities which have a high degree of economic and social interaction with the center. Each MSA must include at least one city with 50,000 or more inhabitants; as of 1986, there were 265 MSAs in the U.S.

*Micron:* A unit of length equal to 1/1,000,000 of a meter.

*Mobile Sources:* Motor vehicles, including cars, trucks, buses, trains and planes. Mobile sources are subject to specific pollution controls under the Clean Air Act.

*Monitoring:* Periodic or continuous sampling to determine the level of pollution or radioactivity.

*Mutagen:* A substance that causes mutations.

*National Ambient Air Quality Standards (NAAQS):* Section 109 of the Clean Air Act requires EPA to set nationwide standards, the National Ambient Air Quality Standards, for widespread air pollutants. Currently, six pollutants are regulated by primary and secondary NAAQS—carbon monoxide, lead, nitrogen dioxide, ozone, particulate matter (PM-10), and sulfur dioxide. See Criteria Pollutants.

*National Emission Standards for Hazardous Air Pollutants (NESHAP):* Section 112 of the Clean Air Act requires EPA to set emission standards through regulatory promulgations, NESHAPs, for pollutants that may result in an increase in mortality or serious illness. Currently, NESHAPs have been promulgated for some sources of seven pollutants—arsenic, asbestos, benzene, beryllium, mercury, radionuclides, and vinyl chloride.

*Natural Gas:* A natural fuel containing hydrocarbons that occur in certain geologic formations.

*Netting:* A type of emission trading under the Clean Air Act. Under the Clean Air Act, a modification of an existing source that increases emissions more than a de minimis amount is normally subject to new source review requirements under the Act's PSD or nonattainment provisions. "Netting" allows the source to escape the new source review requirements by obtaining offset reductions from elsewhere at the source that bring the net emissions increase below the de minimis threshold. Compare Bubbling.

*Neurotoxin:* A substance that damages the nervous system.

*New Source Performance Standards (NSPS):* EPA sets minimum federal emissions limits—the new source performance standards—for all new or substantially modified sources in major polluting industries. The standards are based on the best technology currently available.

*New Source Review (NSR):* Section 110 of the Clean Air Act requires State implementation plans to include a permit review, referred to as a new source review, that applies to the construction and operation of new and modified majority stationary sources in nonattainment areas to assure attainment of the national ambient air quality standards.

*Nitrogen dioxide ($NO_2$):* Gases formed primarily from atmospheric nitrogen and oxygen when combustion takes place at high temperature. $NO_2$ emissions contribute to acid deposition. One of the six pollutants for which there is a national ambient standard. See Criteria Pollutants.

*Nitrogen oxides ($NO_x$):* Nitrogen oxides are formed primarily by fuel combustion and contribute to the formation of acid rain. Hydrocarbons and nitrogen oxides combine in the presence of sunlight to form ozone, a major constituent of smog. During 1980, some 21 million tons of nitrogen oxides were emitted in the U.S., according to the Office of Technology Assessment.

*Nonattainment Areas:* Regions that violate Clean Air Act. Primarily ambient air standards are designated as non-attainment areas. Most major cities in the United States are non-attainment areas for one or more of the criteria pollutants. These dirty air regions are subject to strict controls to bring them into compliance with the standards.

*Nonmethane Hydrocarbons (NMHC):* All hydrocarbons other than methane, which is a relatively inert hydrocarbon with low photochemical reactivity.

*Nonroad Vehicles:* Vehicles or items of machinery that use an internal combustion engine but are not regulated as motor vehicles or airplanes under the Clean Air Act. Construction equipment and trains are two examples of nonroad vehicles.

*Offset Requirement:* The Clean Air Act requires that in nonattainment areas, emissions from major new stationary sources—or increased emissions that result from modernization of existing plants—must be more than offset by reductions from existing pollution sources.

*Oil Desulfurization:* A widely applied precombustion method to reduce sulfur dioxide emissions from oil-burning power plants, whereby the oil is treated with hydrogen, which partially removes some of the sulfur by forming hydrogen sulfide gas.

*Onboard Controls:* A vapor recovery system built into automobiles and devised to capture volatile organic compounds released during refueling; reduces the formation of ozone.

*Oxidant:* A substance containing oxygen that reacts chemically in air to produce a new substance. Ozone, the primary constituents of photochemical smog, is an oxidant.

*Ozone (ground level):* The prime ingredient of smog. Ozone is produced by the combination of hydrocarbons and nitrogen oxides in the presence of sunlight and heat. Some 68 areas—mostly metropolitan areas—did not meet a Dec. 31, 1987, deadline in the Clean Air Act for attaining the ambient air quality standard for ozone.

*Ozone Layer:* The protective layer in the earth's stratosphere, about 25 kilometers above the ground; absorbs some of the ultraviolet rays of the sun and thus controls the amount of this potentially harmful radiation reaching the Earth's surface.

*Ozone Transport Region:* Interstate region across which high levels of ozone pollution are carried by prevailing winds.

*pH Value:* The pH scale, which is 0 to 14, is used to measure whether a substance is acidic (below 7) or alkaline (above 7). Because the pH scale is logarithmic, there is a tenfold difference between each number. If the pH drops from 7 to 6, the acidity is ten times greater.

*PM-10:* Particulate matter that measures ten microns in diameter or less—a size considered small enough to invade the sensitive alveolar regions of the lung. One of the six pollutants for which there is a national ambient air quality standard. See Criteria Pollutants.

*PSI:* Pounds per square inch.

*PPM:* Parts per million.

*Particulate Matter (PM):* A wide array of small pieces of solid and liquid matter found in the atmosphere, including soot, dust, organic matter and other materials. Also known as particulates.

*Percentage Reduction:* The 1977 Clean Air Act amendments added a requirement that new source performance standards for fossil-fuel-fired stationary sources (such as power plants and industrial boilers) achieve a percentage of reduction in emissions, regardless of the amount of pollution emitted. The percentage reduction requirement, together with the requirement that standards be based upon a technological system of continuous emission reduction, was intended to eliminate the option of complying with sulfur dioxide new source standards solely through use of low-sulfur fuel.

*Performance Warranty:* The requirement under the Clean Air Act that the automobile manufacturer warrant the performance of all components affecting emission levels for the first two years or 24,000 miles of use of the vehicle.

*Phosgene:* A potent neurotoxin used as nerve gas in World War I. Phosgene is a frequently cited example of an air pollutant that is not currently regulated by EPA as a hazardous air pollutant.

*Photochemical Oxidants:* Air pollutants formed by the action of sunlight on oxides of nitrogen and hydrocarbons. Ozone is a photochemical oxidant.

*Prevention of Significant Deterioration (PSD):* In the 1977 Amendments to the Clean Air Act, Congress mandated that areas with air cleaner than required by national ambient air quality standards must be protected from significant deterioration. The Clean Air Act's PSD program consists of two elements—requirements for best available control technology on major new or modified sources, and compliance with an air quality increment system.

*Primary National Ambient Air Quality Standards:* The national ambient air quality standards set to protect human health with "an adequate margin of safety."

*Production Warranty:* The requirement under the Clean Air Act that the automobile manufacturer warrant the performance of the key components of the emission control system for the first five years or 50,000 miles of use of the vehicle.

*Reasonable Further Progress (RFP):* Annual incremental reductions in emissions of an air pollutant reflected in a state implementation plan that is sufficient, according to the EPA, to provide for attainment of the applicable national ambient air quality standard by the statutory deadline.

*Reasonably Available Control Technology (RACT):* A Clean Air Act standard under which existing polluting facilities in a dirty

air area install retrofit equipment to control air emissions. Compare Best Available Control Technology (BACT), Lowest Achievable Emission Rate (LAER).

*Recall:* Requirement that an automobile manufacturer recall a class of vehicles due to their failure to comply with federal emission standards during their useful life. EPA is required under the Clean Air Act to order a recall whenever a "substantial number" of vehicles in the class fail to comply.

*Refueling Emissions:* Emissions released during vehicle refueling—as gasoline vapors in the vehicle fuel tank are displaced by incoming fuel, forced out of the tank, and escape into the ambient air.

*Regional Ozone Model (ROM):* A photochemical grid model used to simulate the effects of transport of pollutants over a broad regional area.

*Reid Vapor Pressure (RVP):* A measure of gasoline volatility. Summertime gasoline has an RVP of 11.5 pounds per square inch (psi) in many areas. A 1989 rulemaking by EPA will lower RVP to 10.5 in many areas, however.

*Repair-Cost Waiver:* Waiver that is available to a motor vehicle owner when the costs of repairing a defective emission control system exceed a fixed threshold, commonly $75. The waiver excuses the owner from the obligation to repair the control system.

*Repowering:* A substitute for new power plant construction, whereby a plant is rebuilt and most of its major components are replaced.

*Running Losses:* Evaporation of motor vehicle fuels from the fuel tank or engine while the vehicle is in use.

*Scrubber.* An air pollution control device that uses a spray of water to trap pollutants and cool emissions.

*Secondary National Ambient Air Quality Standards:* The national ambient air quality standards that are set to protect welfare, including, but not limited to, effects on "soils, water, crops, vegetation, man-made materials, animals, wildlife, weather, visibility, and climate, damage to and deterioration of property, and hazards to transportation, as well as effects on economic values and on personal comfort and well being."

*Selective Enforcement Audit (SEA):* A random sampling by EPA of new motor vehicles for the purpose of determining compliance with federal emission standards. A compliance rate of sixty percent is considered passing by EPA currently.

*SIP Call:* An EPA action requiring a State to resubmit part or all of its state implementation plan (SIP) to demonstrate attainment of the national ambient air quality standards by the statutory deadline.

*Smog:* Air pollution generated by motor vehicles, industrial activity, and other sources over urban areas. One of its major components is ozone. The term was coined by combining "smoke" and "fog," which smog often resembles. See Ozone.

*Stage II Controls:* The containment of vapors created during the filling of motor vehicle fuel tanks. Stage II emissions can be controlled either with vapor-recovery gasoline pump nozzles or with filters built into automobile fuel systems. (Stage I emissions occur when a gas station's storage tanks are filled by a delivery truck.)

*State and Territorial Air Pollution Program Administrators (STAPPA):* A professional organization of State air pollution officials.

*State Implementation Plan (SIP):* A state's detailed plan for meeting national ambient air quality standards under the Clean Air Act. SIPs must be reviewed and approved by EPA.

*Stationary Source:* Any building, structure, facility or installation which emits or may emit an air pollutant for which a national standard is in effect.

*Stratosphere:* The region of the atmosphere above the troposphere. The stratosphere is located about seven miles above the earth and contains relatively large amounts of ozone which protect the Earth from excessive ultraviolet radiation. Compare Troposphere.

*Sulfur Dioxide ($SO_2$):* A gas that is produced when fossil fuels, such as coal and oil, are burned. $SO_2$ is the main pollutant involved in the formation of acid rain. $SO_2$ also can irritate the upper respiratory tract and cause lung damage, according to EPA. During 1980, some 27 million tons of sulfur dioxide were emitted in the U.S., according to the Office of Technology Assessment. The major source of $SO_2$ in the U.S. is coal-burning electric utilities.

*Synthetic Organic Chemical Manufacturing Industry (SOCMI):* A regulatory category of stationary sources of volatile organic compounds.

*Tailpipe Standards:* Emissions limitations applicable to engine exhausts from mobile sources.

*Tampering:* Adjusting, negating, or removing pollution control equipment on a motor vehicle; considered illegal in several States, and often checked for during vehicles inspection and maintenance.

*Teratogen:* A substance that causes developmental deformities in fetuses.

*Total Suspended Particulates (TSP):* The particulate matter in the ambient air. The previous national ambient air quality standard for particulates was based on TSP levels; it was replaced in 1987 by an ambient standard based on PM-10 levels. Compare PM-10.

*Toxic Release Inventory:* Inventory of the estimated releases to the air and other media of more than 320 chemicals by large industrial facilities. The inventory is collated from release forms filed by the facilities pursuant to the Superfund Amendments and Reauthorization Act.

*Transportation Control Plan (TCPs):* Measures adopted by a locality to reduce the amount or improve the flow of traffic to improve air quality; e.g., public transit, carpools, right turn on red, bus lanes, or high occupance vehicle (HOV) lanes.

*Treatment, Storage and Disposal Facility (TSDF):* Facilities permitted under the Resource Conservation and Recovery Act to handle hazardous waste; a major source of VOC emissions.

*Troposphere:* The layer of the atmosphere closest to the Earth's surface, within which lower temperatures occur at increasingly higher altitudes. Compare Stratosphere.

*Urban Airshed Model:* A sophisticated air quality model which takes meteorological conditions into account, and can predict changes in air quality at different locations. It can demonstrate progress in terms of declining peak ozone concentrations, as well as indicate how peak ozone concentrations will change across an entire urban area. It is costly and requires much more data, computer validation, and computer capacity than other models; therefore, this approach has not been used widely by the states. Compare Empirical Kinetic Modeling Approach (EKMA).

*Useful Life:* The period of time during which a motor vehicle is subject to recall for failure to meet federal tailpipe standards. Under current law, the useful life of a passenger car is considered to be five years or 50,000 miles, whichever comes first; the useful life of a light-duty truck is considered to be 11 years or 120,000 miles.

*Vehicle Miles Travelled (VMT):* A measure of the extent of motor vehicle operation.

*Vinyl Chloride:* A flammable, explosive gas; used in adhesives. One of the seven hazardous air pollutants for which a national emission standard (NESHAP) has been promulgated.

*Volatile Organic Compounds (VOC):* A group of chemicals that react in the atmosphere with nitrogen oxides, heat, and sunlight to form ozone; most hydrocarbons, the latter category playing a major role as ozone precursors.

*Volatility:* The tendency of a liquid to evaporate.

---

[From the Clean Air Facts, Apr. 27, 1989]

CONTROLLING OZONE FROM STATIONARY SOURCES

Sources of air pollution can be divided into two basic categories: "mobile sources" such as cars and trucks, which were discussed in Issue 5, and "stationary sources," the subject of this week's Fact Sheet. These sources—which range from large factories and oil refineries, on the one hand, to small dry cleaners and print shops, on the other—account for roughtly half of all emissions of volatile organic compounds and nitrogen oxides, the two principal ozone precursors. Collectively, they cause as much ozone pollution as do the mobile sources.

This Fact Sheet describes strategies for controlling ozone pollution from stationary sources. It is organized along the same lines as Issue 5, which discusses control strategies for mobile sources. It begins with an overview of the problem and then discusses the menu of legislative options for controlling pollution from stationary sources.

I. OVERVIEW

Ozone is a secondary pollutant. As described in Issue 2, it is produced when a mixture of volatile organic compounds (VOCs) and nitrogen oxides ($NO_x$) cook on a hot day over an urban area. Stationary sources are major emitters of these two precursor compounds.

In the case of VOCs, stationary sources emit 50% of the national inventory. The emissions come from a wide array of sources. The largest single source (16%) is evaporation from solvents used in industrial processes, such as surface coating, degreasing, and wood finishing. Other important sources include evaporation of solvents in consumer and commercial products, such as household cleaners, hairsprays, and adhesives and sealants (7%); hazardous waste facilities (7%); petroleum refineries (6%); and evaporation of architectural coatings (e.g., paints) (2%). Many of the important stationary sources of VOC emissions are small sources, emitting less than 100 (or even 50) tons per year (tpy) of VOCs.

In the case of $NO_x$, stationary sources account for 55% of the national inventory. The principal stationary sources of $NO_x$ pollution are large facilities: electric utility boilers (33%); industrial boilers (13%); and industrial processes (5%).

Without new controls, emissions of VOCs and $NO_x$ from stationary sources are predicted to grow in the next decades as the country's economy grows. According to some estimates, VOC emissions from stationary sources are likely to grow by about

25% by 2005, while $NO_x$ emissions are likely to grow by 45% over the same period.

There is no single solution to curbing VOC and $NO_x$ pollution from stationary sources. Instead, a host of measures must be used to reduce emissions from both existing and new stationary sources.

II. CONTROLLING VOC EMISSIONS FROM EXISTING STATIONARY SOURCES

The Clean Air Act regulates existing stationary sources and new stationary sources in somewhat different ways. Controls on new sources are generally tighter than controls on existing sources, because it is easier to control emissions from a brand-new plant, which can incorporate the latest control technologies into its design and construction, than it is to control emissions by retrofitting an old plant. In addition, while regulation of existing sources is left almost entirely to the states, many new sources are subject to minimum federal requirements—the new source performance standards (NSPS)—so as to prevent states from bidding down their control requirements in an effort to attract new industry.

Because of these differences, the control options for existing sources (discussed below) and for new sources (discussed in part IV) also differ.

*A. The Basic Framework for Regulating Existing Sources*

In the case of existing stationary sources in nonattainment areas, the Act provides that the state must require existing sources to use "reasonably available control technology" (RACT) to control emissions. RACT is defined in EPA regulations to mean controls that are reasonably available taking into account the necessity of imposing the controls to achieve compliance with the federal air quality standards, the social, environmental, and economic impact of the controls, and alternative means of attaining the federal air quality standards.

To assist nonattainment states in identifying what technologies are reasonably available, EPA issues "control technique guidelines" (CTGs). While states are technically not required to follow these guidelines, almost all have. When EPA reviews a state implementation plan for a nonattainment area, it presumes that the CTGs identify RACT, unless the state can demonstrate otherwise.

The states are on their own when it comes to identifying reasonably available technology for source categories for which no CTGs have been issued. In many cases, such source categories remain unregulated.

*B. Control Options*

1. New and Updated CTGs

EPA's program of identifying RACT through control technique guidelines has assisted state regulation of VOC emissions from existing sources. EPA has issued 22 CTGs, for sources ranging from various surface coating facilities, to petroleum refineries, to tire manufacturers. These guidelines provide an objective basis for local RACT requirements. Plus, the national CTGs are an efficient alternative to the separate development of RACT standards in each of the states.

The CTG program has slowed to a halt in recent years, however. There have been no new CTGs issued since 1984. This has left several important sources of VOC emissions unregulated, including hazardous waste facilities and publicly owned treatment works.

To overcome these problems, several bills have proposed mandating that EPA develop new CTGs for the important unregulated sources of VOC emissions. Some bills also propose requiring that EPA review and update its old CTGs for existing sources.

2. Lowering the RACT Threshold

Expanding the number of CTGs is one way of increasing the number of stationary sources of VOC emissions that are regulated. Another option is to lower the threshold for RACT regulation. Currently, EPA requires nonattainment areas to apply RACT requirements only to sources that emit more than 100 tpy of VOCs.

The 100 tpy threshold misses many of the most important sources of VOC emissions from stationary sources. In fact, by some estimates sources above 100 tpy account for less than 10% of the national inventory of VOC emissions, while sources below 100 tpy account for 40% of the inventory. (The remaining 50% of the national VOC inventory comes from mobile sources.)

Legislative proposals have called for lowering the RACT threshold to different levels according to the severity of the ozone problem in the nonattainment area. Threshold levels of 50 tpy, 25 tpy, 10 tpy, 5 tpy, and 2 tpy have been suggested.

3. Restrictions on "Bubbling"

EPA regulations allow nonattainment areas to permit existing sources to meet RACT requirements through emissions trading, otherwise known as "bubbling." The original concept allowed a facility with several emission units subject to RACT requirements to put a fictitious bubble with a single opening over the facility. The facility's compliance with its emission restrictions would then be evaluated in the aggregate, allowing the facility to escape compliance with RACT at one unit if the facility achieved compensating reductions from elsewhere. EPA's regulations have since expanded the bubble concept to permit different sources to trade emissions reductions among themselves.

Bubbling or emissions trading has received criticism on several fronts. It is said to be inconsistent with the basic idea of RACT regulation—namely, the requirement that all existing sources install a minimum level of technological controls. In addition, it is criticized on the grounds that it is hard to administer and readily subject to abuse by sources intent on "gaming" the system. On the other hand, proponents of bubbling say that it allows emission reductions to be obtained from the most cost-effective sources.

Proposals for restricting bubbling include outright bans on emissions trading in all nonattainment areas to proposals that prohibit the use of bubbling only in areas with the most severe air pollution problems. Some have suggested eliminating bubbling in general, but retaining exemptions for small emissions trades. Another option is to permit bubbling, but require greater than one-for-one reductions from the source providing the emission reductions.

4. Market Mechanisms

Market mechanisms have also been proposed as an engine to drive emissions below RACT levels in areas with severe ozone pollution.

There are an array of available tools for providing sources with economic incentives to reduce emissions. These include fees on emissions or a system of marketable permits. A fee system gives sources an incentive to reduce emissions because the smaller the pool of emissions, the lower the total fee to be paid by the source. A system of marketable permits distributes a limited number of permits to emit VOCs and then prohibits unpermitted emissions. By adjusting the number of permits it distributes, the nonattainment area can control the aggregate volume of emissions. By trading among themselves, the sources can even use the free market to allocate the permits most cost effectively.

Other systems of economic incentives could involve local subsidization of pollution control equipment—or even outright purchase of emission reductions from sources.

III. CONTROLLING $NO_x$ EMISSIONS FROM EXISTING STATIONARY SOURCES

Historically, EPA has not required controls on $NO_x$ emissions from stationary source as a part of the control strategy for areas violating Federal air quality standards for ozone pollution. Recently, however, areas such as Southern California have had significant success with programs providing for control of both VOC and $NO_x$ pollution. $NO_x$ controls are now often considered a needed part of an effective ozone pollution control strategy.

*A. The Atmospheric Chemistry of $NO_x$ and the HC-$NO_x$ Ratio*

Nitrogen oxides are one of the two principal precursors of ozone. In the presence of sunlight, $NO_x$ and VOCs, otherwise known as hydrocarbons (HC), are both involved in reactions that form ozone. $NO_x$ is really two components, nitrogen dioxide ($NO_2$) and nitrogen oxide (NO), which continuously convert back and forth in chemical reactions triggered by sunlight. Ozone is produced when $NO_2$ reacts with sunlight, but it can be destroyed (in a process called "scavenging") when it reacts with NO.

The precise impact of $NO_x$ control on ozone levels depends on a host of factors, including total pollutant concentrations and the amount of sunlight present. One important factor is the relative amount of hydrocarbons and $NO_x$ in the air (the HC-$NO_x$ ratio). When hydrocarbon levels are relatively high, the tendency of $NO_x$ to form ozone predominates. In these circumstances, controlling $NO_x$ levels can be the most effective means of controlling ozone formation, because $NO_x$ becomes in essence a "limiting factor" for ozone formation.

Another critical factor is the distance that one measures from the $NO_x$ source. $NO_x$ settles out of the air faster than VOCs. As a result, even if $NO_x$ emissions do produce an ozone depression in the immediate vicinity of the source, they are likely to increase ozone levels in the otherwise VOC-rich areas downwind of the source. Due to this effect, $NO_x$ controls overall tend to reduce ozone levels.

*B. Control Options*

The same general measures that are available for controlling VOC emissions from stationary sources in nonattainment areas can be used to control $NO_x$ emissions, such as lower RACT thresholds or development of CTGs. Simple reasonably available control technologies include lower combustion temperatures and changing fuel/air mixtures. Such approaches can lower $NO_x$ emissions from utility and industrial boilers by 15% to 50%.

In areas with especially severe ozone pollution, more prescriptive measures have been proposed. One involves mandating the use of "selective catalytic reduction" (SCR). This technology removes $NO_x$ from the exhaust stream by injecting ammonia into the exhaust in the presence of a catalyst, which then converts the $NO_x$ to elemental nitro-

gen and water vapor. SCR is widely used in Japan and Germany and is capable of removing 80% to 90% of the $NO_x$ emissions from utility and industrial boilers.

IV. CONTROLLING EMISSIONS FROM NEW STATIONARY SOURCES

*A. The Basic Framework for Regulating New Sources*

New sources are uniformly subject to stricter technology standards than existing sources, whether in clean air areas or nonattainment areas. This leads to better air quality as older more polluting facilities are replaced by cleaner, new ones. It also serves to prevent state-shopping by new facilities seeking lenient air pollution laws.

In the case of nonattainment areas, the basic mechanism for regulating new sources is the new source review program. Through this program, states issue permits to all new major stationary sources in nonattainment areas. The "major stationary sources" covered by the new source review program are all sources that emit more than 100 tpy of an air pollutant.

There are two principal prerequisites for issuance of a permit to a new source in a nonattainment area. First, the source must comply with the "lowest achievable emission rate" (LAER). LAER is the emission rate that reflects the most stringent emission limitation for the relevant source category that is contained in any state implementation plan or is achieved in practice. LAER must be at least as stringent as any applicable new source performance standard promulgated by EPA for nationwide application.

Second, the new source must "offset" the increase in emissions it will create by obtaining emission reductions from other sources, so that the net effect is "reasonable further progress" toward attainment of the air quality standards. This has been interpreted to require at least one-for-one offsets.

The new source review program also applies to "modifications" of major existing sources that increase emissions more than a de minimis amount (which has been defined by EPA as 40 tons per year in the case of VOCs and $NO_x$). However, EPA allows sources to escape new source review for modifications under a process called "netting." Netting is closely related to bubbling. It applies to facilities with multiple emission units. These facilities can avoid new source review that would otherwise be triggered by a modification at one emissions unit, if they obtain a compensating reduction in emissions from another unit. So long as the net change in emissions is below the de minimis threshhold, the source will have "netted out" of new source review.

*B. Control Options*

1. Increasing the Offset Ratio

One approach for linking air quality improvement with new source growth is to require greater than one-for-one offsets when new sources are located in nonattainment areas. This is already being done in several nonattainment areas around the country. The range of ratios that have been proposed for legislation vary from as low as 1.1:1 to as high as 5:1.

2. Lowering the Threshold for New Source Review

A second option for controlling emissions from new sources is to lower the threshold for new source review from its current level (100 tpy) to some lower level. This approach subjects an increasingly large number of sources to new source review and the more stringent new-source emission limitations.

Proposals for lowering new source review thresholds have varied the level of the threshold with the severity of the ozone pollution afflicting an area. For the levels with the most severe problems, levels as low as 2 tpy have been proposed for sources of VOC. Other proposed thresholds include 50 tpy, 25 tpy, 10 tpy, and 5 tpy.

3. Restricting Netting

When a modified source nets out of new source review, it avoids installing technology sufficient to achieve LAER. Yet it is often cheaper and more efficient to install top-notch pollution control equipment at the outset than it is to install such equipment during a later retrofit. In addition, when the new source review requirements include greater than one-for-one offsets, netting means that the emissions from the modified source end up being offset at a lower ratio than would be the case in the absence of netting.

These problems can be avoided by banning netting in nonattainment areas. This can be accomplished by adopting a "dual source" definition of a stationary source. Under this definition, both a facility comprising multiple individual emissions units and the emissions units themselves are considered to be "sources." As a result, because an individual emissions unit is itself a source for purposes of new source review, the larger facility cannot net an increase in emissions from an emissions unit against a decrease from elsewhere at the facility.

V. CONTROLLING VOC EMISSIONS FROM SOLVENTS AND COATINGS

The measures discussed above will go a long way toward reducing emissions from stationary sources. In the case of $NO_x$, in fact, they are a relatively complete set of measures—at least in the sense that they would reach all important $NO_x$ sources. In the case of VOCs, however, they miss several important source categories.

The traditional tools of stationary source controls are designed to reach large industrial and commercial facilities. VOCs can be emitted from very small sources, however. For instance, household cleaners, hair sprays, and even underarm deodorants emit VOCs. So do small fix-it shops and the weekend housepainter. These sources would escape control even if all of the most stringent measures discussed above were adopted.

These very small sources of VOC emissions may account for as much as 10% of the VOC inventory. To reach them, new regulatory approaches are needed. One option is direct EPA regulation of the solvent content in consumer and commercial products responsible for VOC emissions. Under this approach, EPA would set standards reducing solvent contents according to a defined technological standard. One such standard might call for the lowest achievable emissions of ozone-forming compounds.

Economic incentives also hold promise as a means to reduce emissions from these small sources. An example of this kind of approach would be a system of fees on the purchase of consumer or commercial solvents that varies the rate of the fee with the contribution of the product to ozone formation.

---

[From the Clean Air Facts, May 3, 1989]

SMALL PARTICULATE MATTER (PM10)

The subject of this Fact Sheet is small particulate matter, which is commonly referred to as "PM10." Roughly 21.5 million people live in areas that do not meet the federal health standards for PM10.

WHAT IS PM10?

PM10 is a recently established EPA ambient air quality standard for very small particulate matter.

The original national ambient air quality standard for particulate matter was set in 1971. It was based on "total suspended particulates" (TSP)— in other words, any particles floating in the air. In 1987, EPA replaced the TSP standard with an ambient standard based on particles less than ten microns (millionths of a meter) in diameter. These tiny particles, called "PM10," have diameters less than one tenth the width of a human hair.

Unlike larger airborne particles, PM10 can pass through the natural filters in the nose, mouth, and throat, penetrate the upper airways, and travel deep into the lungs. It was for this reason that EPA concluded that PM10 levels better measured risks to human health than did TSP levels (which encompassed particles as large as 50 microns).

Many different substances can be components of PM10, including dust, dirt, soot, smoke, and "secondary particulates." The latter are formed by the transformation of pollutant gases such as sulfur dioxide, nitrogen oxides, or volatile organic compounds into airborne particulates.

HEALTH EFFECTS OF PM10

High levels of PM10 can produce an array of adverse health effects, ranging from temporary reductions in lung capacity, to aggravation of pre-existing respiratory diseases, to cancer and premature death.

Children are especially vulnerable to PM10 due to their high respiratory rates and small lungs. A recent study in Utah found that hospital admissions for children with respiratory disease (pneumonia, pleurisy, and bronchitis) were three times higher than normal during months in which the federal PM10 standards were exceeded. Other vulnerable populations include the elderly, asthmatics, and victims of respiratory disease.

Certain types of PM10 pose special health risks. One especially dangerous component of PM10 is the carbon-based particles that result from incomplete combustion in diesel engines. EPA has concluded that these particulates—which are emitted in the exhaust of diesel trucks, buses, and other vehicles—may cause as many as 860 cancer cases annually. Particulates from wood stoves have similar hazardous characteristics.

Sulfates and nitrates, also called acid aerosols, are another dangerous type of particulate. These are secondary particulates that form from emissions of sulfur dioxide and nitrogen oxides. Acid aerosols can sear sensitive lung tissues when inhaled. According to the Office of Technology Assessment, they could cause thousands of excess deaths each year.

Even small dust particles can be hazardous, because they build up in the lungs over time and impair breathing capacity.

ENVIRONMENTAL AND WELFARE EFFECTS

PM10 pollution—especially PM10 pollution less than 2.5 microns in diameter—impairs visibility. Along the East Coast, summer used to be the season of best visibility, but over the past 30 years it has become the season of worst visibility. EPA has linked this decline in visibility to PM10 pollution. The National Park Service has reported that particulate pollution, especially

fine sulfate particles, impairs scenic vistas within the national park system 90% of the time.

PM10 also soils materials and building surfaces. According to an EPA estimate, the damage is about $1 to $2 billion annually.

SOURCES OF PM10 POLLUTION

There are two basic sources of particulate pollution: natural sources and man-made sources. In turn, within the broad category of man-made sources, there are three major subsets of sources: fugitive emissions (e.g., dust and dirt), direct emissions (e.g., diesel particulates and wood smoke), and secondary particulates (e.g., sulfates and nitrates). The particulate pollution in any given area may come from one of these principal sources—or it may come from a combination of them—depending on the area's special circumstances.

The natural sources include wildfires, volcanoes, and windblown dust. According to EPA estimates, they generate roughly 80 million tons per year, (typ) of particulates, but much of this is particles too large to be counted as PM10. A significant portion of the natural particulate pollution is generated in isolated areas.

The man-made fugitive emissions come from sources such as roadway and construction dust. In the aggregate, fugitive emissions are an extremely large source of particulate pollution (perhaps 125 to 385 typ), but like the natural sources, a significant portion of these emissions is particles too large to be counted as PM10. Like natural sources, fugitive emissions are also frequently generated in isolated areas.

The man-made direct emissions embrace a variety of sources, including emissions from large stationary sources, such as power plants and factories; emissions from small stationary sources, such as wood stoves; and emissions from mobile sources, such as cars and trucks. The direct emissions of particulates amount to about 7 million tpy, with industrial processes (35%), fossil-fuel combustion (25%), and mobile sources (20%) being the largest contributors.

The final component of PM10 pollution, secondary particulates, come primarily from sulfur dioxide and nitrogen oxide emissions. Coal-fired electric utilities are the principal source of sulfur dioxide emissions, while electric utilities, industrial boilers, and mobile sources are the principal sources of nitrogen oxide emissions.

AREAS WITH PM10 POLLUTION PROBLEMS

There are two federal standards for PM10: a 24-hour standard of 150 micrograms per cubic meter (ug/m3) and an annual standard of 50 ug/m3. In 1987, when EPA adopted the PM10 standard, it estimated that at least 70 counties were likely to be in violation of these standards. There are 21.5 million people that reside in these "Group I" counties.

In 1987, EPA also identified an additional 110 counties, the "Group II" counties, that it said had over a 20% chance of being in violation of PM10 standards. Both the Group I and the Group II counties are listed in table 1.

TRENDS IN PARTICULATE LEVELS

There is no data showing trends in PM10 ambient concentrations, because PM10 is a newly developed standard. The data on trends in total suspended particulates shows that from 1978 to 1987, TSP levels dropped by 21%. Most of this reduction was in the early part of the decade, however, Since 1983, TSP levels have been basically flat, dropping only 1%.

CONTROL OPTIONS

There are an array of control options that could be used to reduce particulate levels below the 1983 plateau, depending on the source of the PM10 emissions.

Fugitive emissions, for example, can be reduced through measures such as paving roads or requiring dust-control plans at construction sites. A simple measure such as covering dump trucks hauling dirt or other materials can help reduce PM10 emissions.

Emissions from mobile sources can be reduced by tightening tailpipe standards, especially for heavy-duty diesel vehicles. In fact, EPA has already adopted regulations that require heavy-duty diesel buses and trucks to lower particulate emissions to 0.10 grams per brake-horsepower-hour (g/bhp-hr) by 1991 and 1994 respectively. The current standard is 0.60 g/bhp-hr.

In the case of direct emissions from stationary sources, many of the general control options discussed in Issue 7 could be adopted to reduce PM10 emissions. EPA has promulgated regulations limiting the emissions from new wood stoves. In places where further restrictions on stoves and fireplaces are needed, such as the Northwest, areas can ban wood-burning during episodes of high PM10 levels, or they can require that dry, less-polluting wood be burned. Emissions from open burning can be prevented from contributing to high PM10 levels by limiting open burning to favorable meteorological conditions.

There are also an array of controls for reducing secondary particulates such as sulfates and nitrates by controlling their precursor emissions. These measures include scrubbers, low-$NO_x$ burners, tighter tailpipe standards, and fuel-switching, among others. As the measures are the same ones that control acid rain, they will be discussed in detail in a later issue on that problem.

TABLE 1.—PRELIMINARY LIST OF GROUP I AND II AREAS FOR PM10 [10]

| State and county | Urbanized area | Group |

[1] This is a preliminary listing by EPA staff of areas with a high probability that they will not immediately attain the new PM10 standard (Group I), and insufficient data to determine whether or not they will immediately attain the standard (Group II). The remaining 3,000 counties in the United States are expected with a high degree of probability to immediately attain the standard.
[2] EPA is continuing discussions with West Virginia officials to clarify the grouping.

[From the Clean Air Facts, May 24, 1989]

ALTERNATIVE FUELS, PART I: CLEAN FUEL VEHICLES

Alternative or "clean" fuels are low-polluting alternatives to gasoline and diesel fuels. They hold tremendous potential for reducing not only ozone pollution, but also carbon monoxide pollution, particulate pollution, toxic air pollutants, and the greenhouse gases responsible for global warming.

This Fact Sheet surveys the pluses and minuses of the major clean fuels: methanol, ethanol, compressed natural gas, and liquid petroleum gas. Next week's Fact Sheet will evaluate "oxygenated fuels," which are clean fuel/gasoline blends designed to lower carbon monoxide levels.

I. METHANOL

Methanol is a liquid fuel produced from natural gas. In vehicles, it is usually used either in a mixture called "M85," which is 85% methanol and 15% gasoline, or as a "neat" fuel (100% methanol). In both cases, it offers significant environmental and performance advantages over gasoline or diesel fuels.

*A. Environmental Benefits*

Methanol is less photochemically reactive than gasoline. As a result, it contributes significantly less to ozone formation than gasoline. Current generation M85 vehicles emit roughly the same mass of evaporative and exhaust emissions of volatile organic compounds (VOCs) as do gasoline-powered vehicles. Due to the lower reactivity of the methanol emissions, however, the emissions have only 50% of the ozone-producing potential of the gasoline emissions.

The reduction in ozone formaton could be substantially greater in an optimized vehicle running on M100 (neat or 100% methanol). In such a vehicle, the ozone-production potential of the emissions would be 85% to 90% below that of current gasoline vehicles.

Methanol vehicles have other environmental benefits over gasoline and diesel vehicles. Nitrogen oxides (NOx) are the other principal precursor of ozone besides VOCs. When methanol is used instead of diesel fuel in heavy-duty vehicles, the NOx reductions can be as great as 50%. Methanol vehicles also essentially eliminate particulate emissions from diesel vehicles. And methanol vehicles emit no benzene (except for any benzene in the gasoline fraction of M85). Benezene is a carcinogen that is present in both the evaporative and exhaust emissions of gasoline-fueled vehicles.

Current-generation methanol vehicles do emit more formaldehyde than do gasoline vehicles. However, gasoline vehicles also emit hydrocarbons which are photochemically transformed in the atmosphere into formaldehyde. These emissions, when combined with the direct emissions of formaldehyde from gasoline vehicles, result in higher ambient formaldehyde levels than methanol vehicles produce. In addition, catalytic control is being developed to lower the formaldehyde emissions from methanol vehicles to levels comparable to gasoline vehicles.

*B. Performance*

Methanol has performance advantages over gasoline. It has a higher octane level and provides for faster acceleration than gasoline. As a result, it has been used as a fuel in the Indianapolis 500 since the 1970s.

Methanol is also a more energy-efficient fuel than gasoline, in the sense that less of its energy content is wasted than gasoline's. A disadvantage of methanol, however, is that it has a lower energy density, so a gallon of methanol will take a vehicle only about 50% to 60% as far as a gallon of gasoline. This is partially offset by the better energy efficiency of methanol; it can also be compensated for by increasing the size of the fuel tank, but this adds weight to the vehicle.

M100 vehicles do not start as well in cold weather as do gasoline vehicles (although heavy-duty M100 vehicles do start better in cold weather than do heavy-duty diesel vehicles). Cold-starting is not a problem with M85 vehicles, however.

*C. Safety*

In comparison with gasoline, methanol is a safer fuel in some respects and a more dangerous one in others. Methanol is less flammable than gasoline; however, it is more toxic than gasoline upon skin contact or ingestion, burns invisibly, and lacks any odor. The latter two disadvantages can be overcome by mixing methanol with gasoline, as in M85.

Research is in progress to develop additives other than gasoline to provide for flame luminosity and odor.

*D. Experience with Methanol Vehicles*

About one thousand methanol vehicles have operated in the world to date. Most of these have operated in California, where a fleet of 600 have logged over 20 million miles.

The first commercial production of methanol vehicles is likely to occur in 1991. At that time, a new EPA particulate standard for buses take effect. This standard (.01 grams per brake-horsepower-hour) can be met most effectively by the use of clean fuels.

*E. Cost and Availability of Methanol Vehicles and Fuels*

Methanol vehicles are similar to gasoline vehicles in design and construction. The principal difference between the vehicles is that methanol is more corrosive than gasoline, which means that certain parts (e.g., the fuel tank) must be made of a corrosion-resistant material, such as stainless steel or plastic. In fact, the similarites between the vehicles are so great that "flexible fuel vehicles" (FFVs) can be built that run on methanol, gasoline, or any mixture of the two. Such FFVs could run on methanol in a non-attainment area, but then use gasoline on trips away from the area when only gasoline is available.

A recent study by the California Energy Commission predicts that by 2000 the cost of a new methanol vehicle or FFV will be equal to the costs of a new gasoline vehicle, assuming high-volume assembly-line production. In the near term (1993), the costs of the methanol vehicle or FFV may be $100 to $500 greater than the costs of a gasoline vehicle, depending on the volume of production at that time.

Estimates of the cost of methanol as a fuel vary widely. The most recent study is the California Energy Commission report. It predicts that on an energy-equivalent basis, methanol will cost 13% less than premium gasoline by 2000 (as with the vehicles themselves, the report predicts higher costs for methanol fuel in the near term).

*F. Methanol and Global Warming*

The contribution of methanol to global warming is estimated to be 15% lower than gasoline's contribution when methanol is made from natural gas. Both methanol and gasoline can be made from coal, although it is uneconomic to do so at present. These processes substantially increase emissions of carbon dioxide, which is one of the "greenhouse gases" responsible for global warming. World natural gas supplies should be sufficient to satisfy methanol demands for half a century.

II. ETHANOL

Like methanol, ethanol is a liquid alcohol fuel. It is produced by the fermentation of grains, inlcuding corn, wheat, and barley. Most ethanol manufactured in the U.S. comes from corn.

Like methanol, ethanol can be burned neat or in a mixture with gasoline, such as an 85% ethanol, 15% gasoline mixture.

*A. Environmental Benefits*

The environmental benefits of ethanol as a fuel are similar to methanol. Like methanol, ethanol can lead to substantial reductions in ozone, particulate, nitrogen oxide, and benzene levels.

Use of ethanol as a fuel does not contribute to global warming. The carbon dioxide emissions from ethanol vehicles are offset by the carbon dioxide consumption of the crops from which ethanol is produced.

Like methanol, ethanol vehicles do emit more reactive aldehydes than gasoline vehicles (in this case, acid aldehyde not formaldehyde). However, as is the case with methanol, these emissions are offset by the lower

atmospheric reactivity of the hydrocarbon emissions from ethanol vehicles. In addition, they can be controlled by catalytic converters.

*B. Performance*

Ethanol has good performance characteristics similar to methanol. Moreover, its energy density is 35% higher than methanol (although still less than that of gasoline), so that a vehicle can go farther on a gallon of ethanol than on a gallon of methanol. Ethanol is less corrosive than methanol, easing maintenance problems.

*C. Safety*

Ethanol has desirable safety features. It is not as toxic as methanol. And unlike methanol, it burns with a visible flame.

*D. Experience with Ethanol Vehicles*

Few neat or near-neat ethanol vehicles have operated in the United States. However, Brazil has had extensive experience with ethanol vehicles. Since a national program in Brazil began in 1979, over 4 million ethanol cars and trucks have been placed in service, accounting for 50% of the miles driven. Over 90% of new vehicles in Brazil are ethanol vehicles.

*E. Cost and Availability of Ethanol Vehicles and Fuel*

As is the case with methanol, flexible fuel vehicles can be built that can run on ethanol, gasoline, or any mixture of the fuels. Such vehicles could also burn methanol or methanol-gasoline mixtures. The costs of manufacturing the FFVs or dedicated ethanol vehicles should be the same as the costs of manufacturing gasoline vehicles, assuming large-scale assembly-line production.

Estimates of the costs of ethanol fuel vary. The California Energy Commission predicts that ethanol will cost more than gasoline in 2000, but could become competitively priced by 2008. By contrast, the ethanol industry maintains that ethanol can be produced at a cost competitive to gasoline before 2000.

III. COMPRESSED NATURAL GAS

Natural gas can be processed into methanol, which is a liquid fuel. Alternatively, the gas can be compressed and burned in a gaseous form in vehicles. The resulting fuel—compressed natural gas (CNG)—has several desirable attributes.

*A. Environmental Benefits*

CNG is mostly methane. Methane is a relatively unreactive hydrocarbon, although it is an important greenhouse gas. As a result, the exhaust from CNG vehicles is much less likely to contribute to ozone formation than the exhaust from a gasoline vehicle. In addition, unlike gasoline or alcohol vehicles, CNG vehicles have no evaporative emissions, because the fuel system must be enclosed and pressurized. Overall, the use of CNG can reduce the ozone-forming potential of a vehicle by 90%.

CNG has other environmental benefits as well. It burns without soot, so it reduces emissions of particulate matter. It also reduces carbon monoxide emissions by 50% to 100% in comparsion with gasoline fuel. And like the alcohol fuels, it eliminates benzene emissions.

The data is inconclusive with respect to emissions of nitrogen oxides. EPA has reported that retrofitted vehicles burning natural gas may increase Nox emissions. However, this point is disputed by the natural gas industry, which contends that properly designed CNG vehicles can reduce NOx emissions by 65%. In any event, catalytic control could be added to a CNG vehicle to ensure that NOx emissions do not exceed the levels of gasoline vehicles.

With adequate control of methane emissions, CNG vehicles would have less global warming impact than gasoline vehicles.

*B. Performance*

The performance and driveability of CNG vehicles can be as good as gasoline vehicles. Because the energy density of CNG is low relative to liquid fuels, however, the range of a CNG vehicle is significantly reduced. In addition, CNG vehicles can be heavier than gasoline vehicles, because they require pressurized fuel tanks.

*C. Safety*

Natural gas is generally considered to be a safe fuel. It is nontoxic, burns with a visible flame, and has a high ignition temperature. Ignitable mixtures occurring in the fuel tank are unlikely, because the pressure of the fuel prevents air from entering the tank during refueling. The pressurized fuel storage cylinders on CNG vehicles have safely withstood crashes, fires, and gunfire.

*D. Experience with CNG Vehicles*

Vehicles using CNG have been available since the 1920s in the U.S. Currently, there are about 30,000 CNG vehicles operating nationally. Most CNG vehicles are dual-fueled vehicles that can run on either CNG or gasoline.

*E. Cost and Availability of CNG Vehicles and Fuel*

CNG vehicles are typically more expensive than gasoline vehicles because they need heavy fuel tanks. (In the case of dual-fueled CNG vehicles, a gasoline tank is also needed.) The additional costs range from $1,200 to $3,500.

Natural gas is cheaper than gasoline on an energy-equivalent basis. Unlike a liquid fuel, however, it poses special distribution and refueling challenges. The fuel cannot be refined at a remote facility and then trucked or shipped to market. Instead, natural gas must be piped to a local station and then compressed before refueling. Because of these concerns, CNG vehicles may be best suited for use in fleets of vehicles that can be centrally refueled.

The California Energy Commission has estimated that the combined effect of increased vehicle costs and increased fuel distribution costs will make CNG vehicles somewhat more expensive than gasoline vehicles to own and operate. The cost differential is lower for fleet vehicles than for vehicles owned by individuals.

IV. LIQUEFIED PETROLEUM GAS

Liquefied petroleum gas (LPG) is propane that has been liquefied under pressure. Most LPG comes from natural gas feedstocks (6% of natural gas is propane). Some LPG is a by-product of petroleum refining.

LPG resembles CNG in many ways. Like CNG, it burns cleanly and must be stored in pressurized tanks and dispensed from special pumps. LPG's performance is also similar to CNG's, except that because LPG is stored as a liquid, its energy density is higher. This means that LPG vehicles can have a range nearly as large as gasoline vehicles. Also like CNG, LPG vehicles can be built with dual-fuel capability.

LPG's safety is similar to CNG, except that unlike natural gas, propane is heavier than air. This means that the propane could accumulate in a low-lying area and create a fire hazard.

LPG vehicles and CNG vehicles emit similar levels of particulates, carbon monoxide, and nitrogen oxides. Like CNG vehicles, LPG vehicles do not emit toxic benzene.

One difference between CNG and LPG is that most of the hydrocarbon emissions from an LPG vehicle are propane (instead of methane). The reactivity of propane appears to be greater than methane, but somewhat less than gasoline hydrocarbons. This increased reactivity reduces the ozone benefit of LPG as an alternative fuel.

LPG vehicles have been used in many applications, including newspaper delivery fleets, local government fleets, and forklifts. Millions of LPG vehicles operate worldwide, including about 370,000 vehicles in the U.S.

LPG vehicles cost more than gasoline vehicles because they need special pressurized fuel tanks. Fuel prices, however, are substantially below gasoline on an energy-equivalent basis. On the other hand, the availability of LPG fuel is limited and tends to be seasonal.

According to the California Energy Commission, fleets of LPG vehicles will be cheaper to own and operate in both 1993 and 2000 than fleets of gasoline vehicles. At the same time, private LPG vehicles will be somewhat more expensive than gasoline vehicles to own and operate, because of the added costs of the fuel dispensing systems. The limited supply of LPG fuel may restrict LPG to a small segment of the fuel market.

V. ELECTRICITY

Electric, battery-powered vehicles have many desirable attributes. They emit no air pollutants, so from an air quality perspective, they are cleaner than other alternative fuels. (The power plant that generates the electricity that charges the batteries may have emissions, but the plant will typically be located outside of the nonattainment area.)

The vehicles also have excellent driveability and can start and operate easily in cold weather. The vehicles are ideal for stop-and-go driving because unlike gasoline vehicles at idle, they use no energy when stopped. Acceleration is limited in electric vehicles, however.

One problem with electric vehicles is the status of current-generation batteries. These batteries take a long time to charge; they do not carry enough power to give a vehicle a range beyond 120 miles; and they cannot drive vehicles at speeds greater than 65 mph. In addition, the batteries have a limited lifetime and can support vehicle accessories such as air conditioning only at the cost of reduced driving range.

Electric vehicles can be cost-competitive with gasoline vehicles for those applications that can accept the limited range and performance.

VI. HYDROGEN

Another potential alternative fuel is hydrogen. Hydrogen can be produced from natural gas, petroleum, coal, or water. Its primary advantage as an alternative fuel is that upon combustion, it reacts with oxygen to form water. As a result, a hydrogen-fueled vehicle would have essentially no hydrocarbon emissions.

There are several obstacles to use of hydrogen as an alternative fuel. Hydrogen is difficult to store onboard a vehicle. Unlike natural gas, hydrogen gas cannot be effective compressed for storage because its low energy density is too low (about one third of natural gas). The most promising alternative uses metal alloys that store hydrogen by chemical reaction. Research is underway to improve such storage systems. In addition, hydrogen is an expensive fuel, costing

about seven times the price of gasoline on an energy-equivalent basis.

It is unlikely that hydrogen-fueled vehicles will be a viable transportation option in the near term.

---

[From the Clean Air Facts, May 31, 1989]

ALTERNATIVE FUELS, PART II: OXYGENATED FUELS

"Oxygenated" fuels differ from neat or near-neat alternative fuels discussed in the last week's Fact Sheet in two basic regards. First, they are gasoline blends, not gasoline replacements. This means they can be burned in today's vehicles without design changes. Second, they are used primarily to combat carbon monoxide pollution, not ozone pollution.

There are several fuels that can be blended with gasoline to form oxygenated fuels, including ethanol, ETBE (an ethanol derivative), methanol, and MTBE (a methanol derivative). They are discussed below, following a discussion of the theory of oxygenated fuels.

HOW OXYGENATED FUELS WORK

Carbon monoxide tends to be a cold-weather pollutant. When started with a cold engine, fuel combustion in the typical gasoline vehicle is incomplete. This produces elevated levels of carbon monoxide in the exhaust emissions. The addition of oxygen into the fuel mixture "leans out" the air/fuel ratio and increases combustion efficiency. As a result, carbon monoxide emissions drop.

The carbon monoxide benefit from oxygenated fuels depends on two primary factors. The first is the percent oxygen in the fuel. EPA has found that emissions reductions rise linearly as oxygen content in the fuel increases from 0% to 3.7%, the highest oxygen content used in oxygenated fuels.

The other important factor is the fuel system of the vehicle. Oxygenated fuels can reduce carbon monoxide emissions from vehicles with carburetors by up to 33%. In the case of vehicles with fuel-injection systems, the benefits are in the range of 5% to 20% reductions. Fuel-injection cars first became widely available in 1982. They were not optimized for performance at high altitudes, where carbon monoxide problems often occur, until 1984, however.

Oxygenated fuel programs have been adopted in Denver, Albuquerque, Phoenix, and other cities with carbon monoxide pollution. These programs typcially require the use of oxygenated fuels during the winter months, when carbon monoxide levels are highest. The Denver program is the oldest and has reduced carbon monoxide emissions by 12% by requiring a minimum oxygen content of 2% (Denver is now considering raising its minimum oxygen content). Albuquerque requires a minimum oxygen content of 3.1%, but gives vendors "oxygen credits" that they can use to offset sales of low-oxygen fuels when they sell fuels with oxygen contents greater than 3.1%.

"GASOHOL"

"Gasohol"—gasoline blended with 10% ethanol—is the most common ethanol blend. Gasohol is most often produced by adding ethanol to refined gasoline in a process called "splash blending." Currently about 1% of the gasoline fuel sold in the U.S. is gasohol.

Gasohol has an oxygen content of 3.7%. This is the highest of any oxygenated fuel and consequently produces the greatest reductions in carbon monoxide emissions of any oxygenated fuel.

Gasohol receives favorable federal tax treatment. The federal gasoline tax of $0.09 per gallon is reduced to $0.03 per gallon for gasohol. Many states provide similar relief from state taxes for gasohol.

ETBE

ETBE (ethyl tertiary butyl ether) is an ethanol derivative that could be added to gasoline during the refining process. A blend with ETBE would not raise the oxygen content of gasoline as much as ethanol. The highest oxygen content achievable with ETBE appears to be near 2.7%. However, ETBE blends may offer advantages in reducing ozone levels, as is discussed below.

ETBE has yet to receive EPA approval as a gasoline additive.

MTBE

MTBE (methyl tertiary butyl ether) is a methanol derivative that is added to gasoline during the refining process. It is currently the most widely used oxygenated blend.

When blended at an 11% rate, MTBE raises the oxygen content of gasoline to 2%. A 15% MTBE blend—the highest currently permitted by EPA—raises the oxygen content in gasoline to 2.7%. Because MTBE's oxygen content is lower than ethanol's, it is not as effective in blends in reducing carbon monoxide levels.

METHANOL BLENDS

Another potential oxygenated blend is a methanol/gasoline blend. Like ethanol, methanol can be splash blended with gasoline. When blended at a 10% rate, methanol raises the oxygen content of the gasoline by 3.5%.

Methanol was formerly used as a blend by ARCO in a fuel called Oxinol, but ARCO discontinued manufacturing Oxinol in 1986.

OXYGENATED FUELS AND OTHER AIR POLLUTANTS

When oxygenated fuels are used during the winter months to lower carbon monoxide levels, they have little effect on ozone levels. Unlike carbon monoxide, ozone is primarily a summertime pollutant. Research is underway, however to determine whether using oxygenated fuels during the summer could also help lower ozone levels.

In the case of ethanol and methanol, splash blending raises the volatility of the fuel mixture by roughly 1 psi and so increases evaporative hydrocarbon emissions. In addition, these oxygenated fuels appear to increase nitrogen oxide emissions. On the other hand, the exhaust emissions of hydrocarbons from ethanol and methanol blends are less reactive than gasoline exhaust emissions, so this offsets the increased evaporative emissions to some extent. There is some evidence that the overall effect is a net reduction in ozone levels.

Like blends of ethanol and methanol, blends with MTBE and ETBE also appear to increase nitrogen oxide emissions. However, as with ethanol and methanol blends, the reactivity of the exhaust emissions from vehicles using MTBE and ETBE blends is lower than the reactivity of the emissions from vehicles using unblended gasoline. Moreover, MTBE and ETBE do not increase fuel volatility, so they will not raise evaporative hydrocarbon emissions.

All the oxygenated blends have high octane levels. This raises the possibility that they could be substituted in gasoline for the aromatic hydrocarbons—benzene, toluene, and xylene. Such a substitution could have significant environmental benefits in lowering both ozone levels (when the oxygenates replace the highly reactive xylene) and the levels of toxic air pollutants (when the oxygenates replace benzene and toluene).

---

[From the Clean Air Facts, June 16, 1989]

CLEAN AIR QUIZ

1. The health standards for ___ and ___ are currently exceeded in most urban areas:

A. Lead and ozone.
B. Ozone and carbon monoxide.
C. Nitrogen oxide and sulfur dioxide.
D. Sulfur dioxide and carbon monoxide.

2. Nearly ___ Americans live in nonattaintment areas, which are those areas not meeting one or more of the Clean Air Act's health-based standards.

A. 20 million.
B. 50 million.
C. 90 million.
D. 150 million.

3. Ozone pollution is caused primarily by:

A. The release of chlorofluorocarbons (CFCs) into the upper atmosphere.
B. The release of nitrogen oxides and hydrocarbons in the presence of sunlight.
C. Both of the above.

4. Ozone pollution poses a health risk because it reacts with sensitive lung tissues, irritating and inflaming the lungs. The potential health consequences of this include:

A. Chest pains, shortness of breath, and increased susceptibility to respiratory infections.
B. Coughing, nausea, and throat irritation.
C. Scarred lung tissue, which could lead to cancer or emphysema.
D. All of the above.

5. Studies indicate that ozone pollution inflicts extensive damage on vegetation, decreasing tomato yields by 33%, beans, by 26%, soybeans by 20%, and wheat by 30%. What is the estimated annual dollar loss by this damage?

A. $1 million to $5 million.
B. $50 million to $100 million.
C. $500 million to $1 billion.
D. $2 billion to $3 billion.

6. True or False: Carbon monoxide pollution can be especially hazardous to fetuses because it reduces the amount of oxygen available through the mother's blood stream.

7. Cars and trucks (mobile sources) cause ___% of carbon monoxide pollution in most urban areas:

A. 20–30%.
B. 40–50%.
C. 60–70%.
D. 80–90%.

8. Congress set the $No_x$ tailpipe standard for cars at .4 gram per mile (gpm) in 1970. This standard was subsequently relaxed to 1.0 gpm. On average, however, 1988 cars were certified as emitting approximately:

A. 0.47 gpm of $No_x$.
B. 0.7 gpm of $No_x$.
C. 1.0 gpm of $No_x$.
D. 1.3 gpm of $No_x$.

9. Under the existing law new cars must meet emission standards for 5 years or 50,000 miles. According to EPA, extending this standard to 10 years or 100,000 miles would obtain:

A. Few reductions but would be more cost effective than many stationary source controls.

B. Significant reductions but would not be as cost effective as many stationary source controls.

C. Few reductions that would not be as cost effective as many stationary source controls.

D. Significant reductions that would be more cost effective than many stationary source control measures.

10. Match these alternative fuels to the appropriate description:

A. Methanol:

B. Ethanol:

C. Gasohol:

D. Liquefied Petroleum Gas:

1. propane that has been liquefied under pressure.

2. a liquid fuel produced from natural gas.

3. a liquid alcohol fuel produced by the fermentation of grains.

4. gasoline blended with 10% ethanol.

11. PM10 is a recently established EPA ambient air quality standard for very small particulate matter. Which of the following is true?

A. PM10 refers to particles that are less than 10 microns (millionths of a meter) in diameter (one-tenth the width of a human hair).

B. Because PM10 is so small, it penetrates deep into the lungs, thus posing more of a danger than larger particles.

C. Children are especially vulnerable to PM10 due to their high respiratory rates and small lungs.

D. All of the above.

12. Which of the following characteristics apply to PM10?

A. Created by natural sources such as wildfires, volcanoes, and windblown dust.

B. Results from incomplete combustion in diesel engines.

C. Created by wood stoves, construction sites and dirt roads.

D. Emitted as acid aerosols from coal-fired electric utilities.

E. A and C.

F. All of the above.

13. Under the Clean Air Act, all existing sources must install a minimum level of technological control (RACT) in nonattainment areas. In addition, existing sources that increase emissions more than a de minimus amount are subject to new source review requirements. These requirements can be avoided, however, through emissions trading provisions known as "bubbling" and "netting." Which of the following is true:

A. Netting applies to modifications of existing sources and allows emissions trading only within a source. Bubbling applies to RACT on existing sources and can apply to both trading within sources and between different sources.

B. The reverse of the above so that, netting applies to RACT on existing sources and can apply to both trading within sources and between different sources. Bubbling applies to modifications of existing sources and allows emissions trading only within a source.

C. Bubbling and netting are poorly understood and no one is really sure what the difference between them is.

14. CTGs are an acronym for:

A. Catalytic Tertiary Generation, which is the latest advancement in the catalytic converter used in most vehicles.

B. Control Technique Guidelines, which are documents issued by EPA to assist state and local pollution control authorities to achieve standards for certain sources, such as solvent metal cleanings, through RACT.

C. Comprehensive Technological Grids, which are innovative technological traffic systems designed to ease vehicle congestion in major cities.

D. None of the above.

15. Although 1989 vehicles emit significantly fewer emissions than cars produced in 1970, the progress in cleaning the air has been less than expected. The reason for this is:

A. The Act's health based standards were tightened in 1980, thus making it more difficult to meet the standards.

B. A record increase in the number of cars on the road and the amount of vehicle miles travelled (VMT) has offset the gains from cleaner tailpipes.

C. The depletion of the ozone layer has increased pollution levels.

C. None of the above.

ANSWERS: 1. B; 2. D; 3. B; 4. D; 5. D; 6. T; 7. D; 8. A; 9. D; 10. A2, B3, C4, D1; 11. D; 12. F; 13. A; 14. B; 15. B.

[From the Clean Air Facts, June 29, 1989]

TOXIC EMISSIONS: INDUSTRIAL SOURCES

Toxic air pollutants are air pollutants that can cause serious illness or death. In theory, they are supposed to be stringently controlled under the Clean Air Act. To date, however, only seven of the hundreds of toxic air pollutants emitted by industry have been regulated by EPA.

EPA estimates that emissions of toxic air pollutants cause some 1,600 to 3,000 cancer cases a year, as well as creating cancer risks in some cities as high as 1 in 1,000. Toxic emissions can also cause birth defects, neurological injury, and genetic mutations.

This Fact Sheet is the first in a series on the problem of toxic air pollution. It focuses on emissions from major industrial sources. Later issues will discuss toxic emissions from motor vehicles and small "area" sources, as well as the problem of "accidental releases," like the catastrophic accident at Bhopal, India, that killed more than 3,000 and injured more than 200,000 in 1984.

I. "HAZARDOUS AIR POLLUTANTS" VERSUS "CRITERIA AIR POLLUTANTS"

The Clean Air Act distinguishes between two categories of pollutants: hazardous air pollutants and criteria or conventional air pollutants. Criteria air pollutants are defined as pollutants that "endanger public health or welfare" and "result from numerous or diverse mobile or stationary sources." These pollutants tend to be more prevasive, but less potent, than hazardous air pollutants. Examples include ozone, carbon monoxide, and PM10—all of which have been discussed in earlier Fact Sheets. The Act requires EPA to set national ambient air quality standards for these pollutants, which the states have responsibility for achieving through implementation plans.

By contrast, hazardous air pollutants (also called "toxic air pollutants" or "air toxics") are pollutants that pose especially serious health risks. In the words of the Act, they are pollutants that "cause or contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness." The Act requires EPA to establish national emission standards within six months for each pollutant that the agency lists as a hazardous air pollutant.

II. SOURCES OF TOXIC EMISSIONS

Toxic air pollutants come from three basic types of sources: large industrial facilities, motor vehicles, and small "area" sources (such as electroplating operations or solvent use).

In the case of industrial facilities, data collected by EPA under the right-to-know provisions of the Superfund law show that manufacturing plants emitted 2.7 billion pounds of over 275 toxic substances into the atmosphere in 1987. Sixty of the substances were known or suspected carcinogens, with total emissions amounting to over 200 million pounds.

The chemical industry is the largest single source of industrial emissions of air toxics, emitting some 35% of the total. Other significant industrial sources are the primary metal industry (9%), the paper industry (9%), motor vehicle manufacturers (8%), and the rubber and plastics industry (5%). In total, more than 15,000 facilities reported emitting toxic chemicals into the air in 1987.

Industry in Texas emitted 240 million pounds of toxic chemicals in 1987, more than any other state. Other states with aggregate emissions over 100 million pounds were Ohio, Louisiana, Tennessee, Virginia, Michigan, and Indiana. table 1 presents a state-by-state breakdown of industrial emissions of toxic substances in 1987.

The toxic emissions reported by industry fall into five general categories: organic—carbon-containing—chemicals, such as benzene and 1,3-butadiene (58% of total emissions); halogenated organic chemicals, such as perchloroethylene, which are organic chemicals containing one or more halogens (fluorine, chlorine, bromine, or iodine) (27%); nonmetallic inorganic chemicals, such as ammonia and chlorine (7%); metals, such as mercury and chromium (5%); and acids, such as hydrochloric acid, bases, and salts (2%).

III. HEALTH AND ENVIRONMENTAL EFFECTS FROM TOXIC EMISSIONS

*A. Cancer risks from Toxic Emissions*

In an average urban area, EPA estimates that a resident's chance of contracting cancer as a result of inhaling toxic emissions over the course of a normal 70-year life is greater than 1 in 10,000. In some areas, the average risk is as high as 1 in 1,000. These are exceptionally high levels of risk. By comparison, in the hazardous waste context, EPA often regulates to protect the public from cancer risks of 1 in 1,000,000 or lower.

EPA estimates that some 1,600 to 3,000 cancer cases are caused by toxic emissions each year. On a national basis, emissions from cars and trucks account for roughly 50% of the cases. The remaining cases are caused by emissions from industrial sources (25%) or diverse "area" sources, such as small electroplating operations, woodsmoke, or solvents used for degreasing (25%). In cities with a high-level of industrial activity, however, the relative risk contributions can vary significantly from the national average. In Southeast Chicago, for example, industrial sources cause 50% of the cancer risk due to the area's high level of toxic emissions from steel mills.

The greatest cancer risks to individuals are found near major industrial sources of toxic emissions. A study by Tulane University reported that the lung cancer rate for residents living within a mile of major chemical plants is four times the national average. A similar study by the West Virginia Department of Health found cancer rates twice the national average in neighborhoods near chemical plants.

EPA has made preliminary estimates of the cancer risks created by individual plants. Although these estimates were made for the purpose of comparing relative risks (not determining precise facility-specific risks), they represent the best data available for assessing the magnitude of risks posed by industrial facilities. The estimates found 205 plants that created lifetime cancer risks to the most exposed individual greater than

1 in 1000, including 45 plants associated with cancer risks greater than 1 in 100, and one plant associated with a cancer risk greater than 1 in 10. In each case, the analyses assumed a 70-year exposure to the maximum long-term ambient concentration of the air toxic likely to be caused by the plant.

The EPA estimates evaluated the risks caused by emissions of a single toxic air pollutant from each plant. But many facilities routinely emit numerous toxic pollutants. The agency's risk assessments did not consider the combined or synergistic effects of exposure to multiple toxics, or the effect of exposure through indirect pathways (such as eating vegetables on which toxics have been deposited). The analyses also did not evaluate the cancer risks created by industrial sources of some important carcinogenic emissions, including benzene and coke-oven emissions.

*B. Other Serious Illnesses from Toxic Emissions*

Toxic emissions can cause an array of serious illnesses besides cancer. These include birth defects, damage to the brain or other parts of the nervous system, reproductive disorders, and genetic mutations. In the case of emissions of some neurotoxins, even small doses can be lethal.

There have been no quantitiative assessments of the noncancer risks created by toxic emissions. In 1987, however, EPA ranked qualitatively the noncancer risks created by over 30 environmental problems within the agency's jurisdiction. Toxic emissions ranked as the second greatest threat to human health, exceeded only by the health risks attributable to ozone and other "criteria" pollutants such as carbon monoxide and PM10.

In Louisiana, high rates of miscarriage have been detected in communities near chemical plants. Studies are underway to assess the relationship between the miscarriages and the plants' emissions.

*C. Environmental Effects of Toxic Emissions*

Toxic emissions can cause adverse impacts to the environment as well as human health. The Great Lakes in particular have been adversely affected, because their huge surface area acts as a sink for the deposition of toxics from hundreds of miles away. This problem was discovered when researchers found significant levels of airborne PCFs and pesticides on remote Isle Royale National Park, a wilderness island in the middle of Lake Superior.

* * * * *

On the other hand, some EPA actions under the Clean Air Act have unintentionally boosted toxic emissions. The phase-out of leaded gasoline reduced gasoline octane levels. To compensate for this effect, refiners increased benzene, toluene, and xylene levels in gasoline—all of which have high octane levels, but are also toxic substances.

*B. State and Local Regulatory Efforts*

In the absence of federal regulations, state and local agencies have had the principal responsibility for regulating toxic emissions. This has produced a patchwork of differing standards. Forty-five states have some kind of program for regulating toxic emissions from new industrial sources. In most cases, the state and local programs for new sources are "policy" programs that authorize the permitting agencies to consider and regulate toxic emissions, but do not specify required emission standards.

Only 18 states have programs of any kind for the regulations of toxic emissions from existing sources.

V. NEW STRATEGIES FOR CONTROLLING TOXIC EMISSIONS FROM INDUSTRIAL SOURCES

There are many proven technologies for significantly reducing toxic emissions. Measures as simple as installing flares over emission vents, for example, can reduce emissions of flammable toxic substances such as 1,3-butadiene and ethylene oxide by 98%. Another example of a simple control device is fabric filters, which can reduce emissions of metals and other toxic particulates by 99%. Under existing law, however, use of these technologices to control toxic emissions is generally voluntary.

Most legislative proposals for controlling toxic emissions have sought to require use of such available technology to control toxic emissions. They require EPA to set standards based on available technology for categories of major industrial sources of air toxics, following the model of the Clean Water Act. As a second stage, they require EPA to analyze the "residual risk" remaining after installation of technological controls and to take further action as needed to protect the public health.

The proposals differ in critical details, however. For instance, the Leland/Molinari bill, H.R. 2585, would require EPA to regulate all categories of major industrial sources of toxic emissions, while the Dingell bill, H.R. 4, and the Administration's legislative proposal would require regulation of only 50% of such categories. Another central difference in the proposals is their approach to health protection after regulated sources comply with the technology-based standards. The Leland/Molinari bill sets objective standards for determining when an unacceptably high level of residual risk remains (in the case of carcinogens and other "nonthreshold" pollutants, the standard is whether the residual risks are greater than 1 in 1,000,000). By contrast, the Dingell bill and the Administration proposal leave the decision about the need for residual risk regulation to EPA discretion. The bill introduced by 12 members of the Senate Environment Committee (S. 816) generally follows the approach of H.R. 2585.

TABLE 1.—TOXIC AIR EMISSIONS REPORTED IN THE 1987 TOXIC RELEASE INVENTORY

| Total tri air emissions rank, and State | Tri facilties reporting air emissions number | Tri forms reporting air emissions number | Total air | |
|---|---|---|---|---|
| | | | Pounds | Percent |
| 9 Alabama | 288 | 1,111 | 98,339,784 | 3.70 |
| 29 Alaska | 7 | 40 | 31,707,083 | 1.19 |
| 53 American Samoa | 2 | 2 | 56,250 | .00 |
| 35 Arizona | 118 | 342 | 16,565,691 | .62 |
| 18 Arkansas | 234 | 689 | 54,559,906 | 2.05 |
| 14 California | 1,288 | 3,863 | 82,708,429 | 3.11 |
| 40 Colorado | 144 | 386 | 11,010,395 | .41 |
| 31 Connecticut | 318 | 972 | 26,078,031 | .98 |
| 41 Delaware | 48 | 177 | 6,036,385 | .23 |
| 21 Florida | 326 | 825 | 50,196,070 | 1.89 |
| 11 Georgia | 470 | 1,412 | 93,586,285 | 3.52 |
| 50 Hawaii | 13 | 49 | 1,064,495 | .04 |
| 44 Idaho | 35 | 94 | 4,176,707 | .16 |

TOXIC EMISSIONS: MOBILE AND AREA SOURCES

Last week's Fact Sheet focused on toxic emissions from major industrial facilities, such as chemical plants and oil refineries. These facilities produce the highest cancer risks of exposed individuals, as well as contribute significantly to aggregate nationwide risks from toxic emissions. This week's Fact Sheet examines the problems caused by two other important sources of toxic emissions—mobile sources, such as cars and trucks, and small "area" sources.

Although often overlooked in the toxics debate, mobile sources are the largest single source of toxic emissions. According to EPA, cars and trucks are responsible for roughly 50% of the cancers attributable to toxic emissions in the U.S. "Area" sources—which are small, disparate sources such as electroplating shops, apartment-building cooling towers, and solvent use—are nearly as important, but are also often neglected. Collectively, area sources cause roughly 25% of the cancers attributable to toxic emissions, according to EPA.

I. TOXIC EMISSIONS FROM MOBILE SOURCES

Cars and trucks emit hundreds of compounds, including many which are known to be toxic. These emissions are estimated to be responsible for 800 to 1,500 cancer cases each year.

*A. Types of Toxic Emissions from Mobile Sources*

There are four principal toxic emissions from motor vehicles: diesel and gasoline particulates, 1,3-butadiene, benzene, and formaldehyde.

Diesel particulates form from incomplete combustion of diesel fuel. The particulates have a carbon core onto which carcinogenic bits of fuel, lubricants, and combustion products are absorbed. The particles' small diameters (90% are less than 1 micron) mean that they can be inhaled and deposit-

ed deep within the lungs. According to EPA, diesel particulates may cause as many as 50% of the cancer cases attributable to mobile source emissions.

Although gasoline vehicles emit far less particulate matter than diesel vehicles on a grams per mile basis (30 to 100 times less), in the aggregate they may pose toxicity problems similar to diesel particulates. EPA estimates that gasoline particulates may cause as many as 10% of the cancer cases attributable to mobile source emissions.

Next to emissions of diesel particulates, emissions of 1,3-butadiene from mobile sources cause the greatest aggregate health threat, according to EPA's analysis. Butadiene is one of the most potent organic carcinogens. It is emitted both in the exhaust of gasoline vehicles (butadiene is roughly 0.5% of the hydrocarbon content of the exhaust) and from tire wear. EPA attributes as many as 15% of the mobile source cancer causes to butadiene emissions. Studies by the California Air Resources Board (CARB) find that butadiene could be even more hazardous.

Motor vehicles are the major sources of benzene emissions nationally, emitting 85% of the national inventory. These emissions come from vehicle exhaust (70% of the national inventory), gasoline evaporation (14%), and refueling (1%). The benzene level of gasoline is about 1% to 2% and the benzene level in the exhaust of gasoline cars is about 2% to 5% of the hydrocarbon emissions. Most benzene in motor vehicle exhaust forms from engine combustion of nonbenzene aromatics in gasoline, not from the incomplete combustion of benzene itself. Diesel vehicles contribute 3% of the total benzene emitted from motor vehicles.

Benzene emissions from vehicles cause leukemia and other forms of cancer—up to 10% of the motor vehicle cancer cases each year, according to EPA. CARB attributes a substantially higher cancer incidence to benzene emissions.

Formaldehyde is directly emitted in the exhaust of both gasoline and diesel vehicles. It also forms in the atmosphere as a result of photochemical reactions involving other motor vehicle exhaust or evaporative emissions. Direct formaldehyde emissions from motor vehicles amount to approximately 35% of the national inventory, although in some regions the motor vehicle contribution can be much greater (60% in California, for example).

Formaldehyde emissions can cause cancer, as well as acute adverse health effects, including eye, nose, and skin irritation, headaches, nausea, and in extreme cases, death. According to EPA data, formaldehyde emissions from motor vehicles account for up to 5% of the cancer cases attributable to mobile sources.

Motor vehicles also emit a host of other toxic substances, including acetaldehyde, asbestos, cadmium, and ethylene dibromide. Collectively, these other toxic emissions may account for 5% of motor vehicle cancers, according to the EPA data.

*B. Regulatory Action to Control Toxic Emissions from Mobile Sources*

In general, EPA has not regulated the emission of toxic substances by motor vehicles directly. Some control has occurred as an incidental result of efforts to bring areas into compliance with national ambient air quality standards. For instance, benzene, butadiene, and formaldehyde are types of hydrocarbons. As a result, they are controlled at least in part by tailpipe standards limiting exhaust emissions of hydrocarbons.

In some instances, however, controls on criteria pollutants have aggravated problems of toxic emissions. For instance, as explained in last week's Fact Sheet, oil companies responded to rules phasing down the lead content in gasoline by increasing the benzene levels in the fuel.

In the special case of diesel particulates, EPA has acted to regulate emissions directly. For heavy-duty vehicles, the current particular standard is 0.6 grams per brake horsepower-hour (g/bhp-hr), tightening to 0.25 g/bhp-hr in 1991 (0.1 g/bhp-hr for urban buses) and 0.1 g/bhp-hr in 1994. The standard for light-duty cars is 0.2 grams per mile (gpm) and for light-duty trucks 0.26.

*C. Passenger Exposure to Toxic Emissions from Motor Vehicles*

Passengers riding in cars and trucks receive especially high levels of exposure to the toxic emissions from motor vehicles. Recent work in California has found that the benzene levels inside cars in congested traffic are four times higher than general ambient concentrations.

II. TOXIC EMISSIONS FROM AREA SOURCES

"Area sources" are stationary toxic sources that are too small to be regulated as major sources of toxic emissions. In several legislative proposals, including the Leland/Molinari bill (H.R. 2585), the Dingell bill (H.R. 4), and the Senate Environment Committee bill (S. 816), area sources are defined as sources that individually emit less than 10 tons of toxic substances into the air annually.

Principal area sources of toxic emissions can be identified by the contribution that they make to the annual cancer incidence attributable to toxic emissions. Under such an approach, the most important area sources are chromium emissions from electroplating operations (10% of annual cancer incidence); woodsmoke (4%); chromium emissions from apartment-building and industrial cooling towers (3%); emissions from gas stations (2.5%); and solvent use and degreasing (1%).

As is the case with motor vehicle emissions, EPA and the states have in general taken few actions to control toxic emissions from area sources directly. For instance, no regulatory controls have been imposed on chromium emissions from electroplating operations or on emissions from solvent use and degreasing. In the case of chromium emissions from cooling towers, EPA proposed banning the use of chromium as a fungicide in 1988 to remove bacteria from the cooling water. But to date the Agency has taken no final action to deal with this problem.

In certain cases, controls on toxic emissions from area sources have resulted indirectly from controls on criteria pollutants. For instance, "stage II" vapor recovery systems at gas stations, which are required in certain ozone nonattainment areas, help control toxic emissions from gasoline vapors. Another example is woodsmoke emissions from new wood stoves. EPA has acted under section 111 of the Clean Air Act to promulgate new source performance standards for new wood stoves that limit particulate emissions.

III. LEGISLATIVE PROPOSALS FOR CONTROLLING TOXIC EMISSIONS FROM MOBILE AND AREA SOURCES

Legislative proposal for controlling toxic emissions from mobile and area sources span a range of options. The Leland/Molinari bill (H.R. 2585) has the most comprehensive program. It would require EPA to promulgate technology-based regulations for controlling toxic emissions from both mobile and area sources. At the other end of the spectrum, the Dingell bill (H.R. 4) and, it appears, the Administration proposal contain no provisions requiring regulatory action to control toxic emissions from mobile or area sources. The Senate Environment Committee bill (S. 816) Calls for EPA to develop a control strategy for area sources using existing regulatory authorities.

---

[From the Clean Air Facts, Aug. 2, 1989]

TOXIC EMISSIONS: ACCIDENTAL RELEASES

Releases of toxic substances into the air can be divided into two groups depending upon whether they are routine releases, such as emissions for industrial smokestacks, or they are sudden, irregular accidental releases. The most notorious example of an accidental release is the catastrophic release of methyl isocyanate in Bhopal, India, that killed more than 3,000 people.

Routine releases were discussed in the last two fact sheets. This Fact Sheet describes the problems posed by accidental releases.

CHARACTERISTICS OF ACCIDENTAL RELEASES

Accidental releases occur with surprising frequency. EPA reports that between 1980 and 1987, 11,048 accidental releases of toxic chemicals occurred in the U.S. These releases killed 309 people and caused 11,341 injuries. They also caused the evacuation of nearly 500,000 people.

Of these releases, 4,375—or nearly two a day—produced toxic clouds. Although these releases were just 40% of the total, they represented 63% of the accidental releases causing death or injury and 75% of the releases requiring evacuations.

In one five-year period between 1982 and 1987, 37 accidental air releases killed two or more people; 46 injured 40 or more; and 37 led to the evacuation of 2,00 or more. During this period, one of the single worst events occurred at a Union Carbide chemical plant in Institute, West Virginia, where an air release of aldicarb oxide in August 1985 injured 430.

CATASTROPHIC ACCIDENTAL RELEASES

While some accidental releases may pose relatively minor threats to human health or the environment, others have the potential to be truly catastrophic. The most disastrous release ever was the accidental release of methyl isocyanate (MIC) from the Union Carbide chemical plant in Bhopal, India. On December 3, 1984, a storage tank burst open, releasing 30 tons of MIC into the atmosphere. The release killed over 3,000 people and injured more than 200,000.

The Bhopal incident is not unique, however. According to EPA, there have been 17 accidental releases of toxic chemicals in the U.S. since 1980 that had potential toxic effects greater than the Bhopal release. In each case, the "quantity/toxicity ratio" of the release, a measure of the release's potential catastrophic injury, exceeded the Bhopal ratio. Fortunately, a number of factors prevented the U.S. releases from causing Bhopal-like injuries, including favorable weather, the remoteness of the releases, and conditions that kept some of the releases from becoming airborne. Nevertheless, five deaths did occur, a number that EPA calls "surprisingly lower than might be expected."

Accidental releases are particularly dangerous when they involve substances that

form ground-hugging, toxic clouds when released. Examples of such substances include chlorine, phosgene, anhydrous.

EXISTING LAW ON ACCIDENTAL RELEASES

Existing law contains few provisions regulating the prevention, detection, or response to accidental releases. The Emergency Planning and Community Right-to-Know Act of 1986 (title III of the Superfund Amendments and Reauthorization Act of 1986) established local emergency planning commissions and directed the local commissions to develop plans for responding to chemical accidents, including those that involve releases to the air. The Act also required industrial facilities to notify the local commissions when the facilities possess toxic substances above threshold amounts and when accidental releases occur.

However, title III does not require the industrial facilities themselves to prevent, detect, or respond to accidental releases. In these areas, the actions of industry are essentially unregulated under existing laws.

STATUS OF ACCIDENTAL RELEASE PREVENTION AND RESPONSE PRACTICES

In 1988, EPA completed a survey of how industrial facilities prevent, detect, and respond to accidental releases. The survey covered 150 facilities handling 21 extremely hazardous substances.

The survey found widespread deficiencies in current industrial practices. Only ten percent of the facilities trained employees in hazard evaluation or accident prevention. More than one third of the facilities had no preventive maintenance program, while many of the other facilities had preventive maintenance programs for only a limited range of equipment and no regular maintenance schedule. Few facilities used emergency backup systems, such as emergency power or cooling systems, to prevent accidental releases. And few used release control technologies, such as scrubbers or flares, to prevent accidentally released gases from reaching the ambient air.

Fewer than half of the facilities used leak detectors. The most common method for detecting accidental releases was direct observation by employees—even though this method exposes employees to toxic gases and is ineffectual in the case of odorless and invisible gases. Less than ten percent of the facilities used perimeter monitoring to detect when accidentally released gases escape the facility boundaries.

Roughly one third of the facilities lacked procedures for determining when an accidental release justified notifying local authorities. Most facilities relied on local telephone lines to warn local authorities of accidental releases, even though the same event that causes the accidental release may render the phone lines inoperable.

LEGISLATIVE PROPOSALS FOR CONTROLLING ACCIDENTAL RELEASES

The Leland/Molinari bill (H.R. 2585) on toxic air pollutants contains the most comprehensive provisions on accidental releases. It would require EPA to identify the 100 substances that pose the most danger when accidentally released. Facilities handling more than a de minimis quantity of such substances would have to develop and implement risk management plans demonstrating compliance with EPA regulations on prevention, detection, and response. The bill would also create a chemical safety and hazard investigation board to investigate and report on accidental releases. The bill introduced by 12 members of the Senate Environment Committee (S. 816) takes a similar approach to accidental releases.

The Dingell-Lent bill (H.R. 3030) proposes creating of a chemical safety and hazard investigation board, but contains no other accidental release provisions. It would not require or authorize EPA to issue regulations to control accidental releases. Ammonia, hydrogen chloride, and hydrogen fluoride—all compounds commonly used in large quantities at industrial facilities around the country.

---

[From the Clean Air Facts, Oct. 23, 1989]

SUBCOMMITTEE MARKUP OF H.R. 3030

The House Health and the Environment Subcommittee concluded markup of clean air legislation on October 11, 1989. This issue of Clean Air Facts summarizes the markup proceedings and offers a preview of the issues likely to be debated as the bill moves toward the House floor.

The Subcommittee used the Adminstration's clean air proposal (H.R. 3030) as the markup vehicle and made important changes to it. The most significant changes involved title II of the bill, relating to emissions from cars and trucks. The Subcommittee unanimously adopted amendments that tightened tailpipe standards in two phases, required control of evaporative and refueling emissions, eliminated emissions "averaging," and established a new program for controlling toxic emissions from cars and trucks.

The progress made in resolving contentious mobile source issues was not achieved in other areas, however. A comprehensive amendment title I that would have established a system of graduated control requirements in polluted urban areas lost on a 10 to 12 vote. Several amendments to strengthen title III, relating to toxic emissions, were also defeated or withdrawn, including amendments to require regulation of all major sources of toxic emissions and to establish a comprehensive program to control chemical accidents.

In addition, an amendment that significantly relaxed the Administration's clean-fuels program passed on a 12 to 10 vote.

I. THE LENT SUBSTITUTE

At the start of the markup, Rep. Lent (R-NY) offered a substitute to the markup vehicle, H.R. 3030. The substitute left most of H.R. 3030 intact. But it did strengthen the bill in two significant areas. It deleted the provisions in H.R. 3030 that relaxed controls on the tall smokestacks that export pollution to downwind jurisdictions. And it also deleted the provisions that repealed mandatory protections for the national parks from nitrogen oxide and other pollutants.

Subsequent amendments during the markup were to the Lent substitute.

II. TITLE I: CONTROL OF URBAN SMOG

Title I of the Administration bill sets out a program for attaining ambient air quality standards for ozone, carbon monoxide, and particulate pollution. It contains several highly controversial elements. These issues were not successfully resolved during the subcommittee markup.

*A. The Waxman Smog Control Amendment*

Rep. Waxman (D-Cal) offered a substitute to title I that differed from H.R. 3030 in three key areas: it established a system of graduated control requirements in nonattainment areas; it incorporated mandatory milestones and sanctions; and it tightened federal control measures. This amendment lost on a 10-12 vote.

1. Graduated Control Requirements

H.R. 3030 classifies ozone nonattainment areas into four classifications—marginal, moderate, serious, and severe—and extends the expired attainment deadline in current law to 1996 to 2011, depending on the classification. Unlike prior smog control proposals, the bill does not link the stringency of stationary source control requirements to the length of the deadline extension or the severity of the nonattainment area's pollution. Under H.R. 3030, stationary sources such as factories or refineries in areas with severe pollution problems (e.g., Los Angeles, New York) are subject to the same control requirements as stationary sources in areas with moderate pollution problems (e.g., Nashville, Tenn.; Poughkeepsie, N.Y.). Nor does H.R. 3030 relate transportation control requirements to area classifications.

By contrast, the Waxman amendment established a graduated program of control requirements for stationary and other sources that matched the requirements to the area's nonattainment classification. The amendment was drawn largely from the "Group of Nine" bill (H.R. 99), which was introduced by nine Democratic members of the Energy and Commerce Committee, and the Waxman/Lewis bill (H.R. 2323).

The amendment established five nonattainment areas—marginal, moderate, serious, severe, and extreme. For each classification, it required progressively tighter standards for new and existing sources. It also created a special program of control requirements for Los Angeles, the only "extreme" area, modeled after the provisions in the Waxman/Lewis bill.

2. Milestones and Sanctions

H.R. 3030 establishes extremely tough sanctions for nonattainment areas that fail to submit or implement pollution control plans. These sanctions include measures such as a ban on extending drinking water to new buildings and a ban on the construction of new pollution sources. However, the bill makes application of these sanctions entirely discretionary.

The Waxman amendment substituted mandatory, but less onerous, sanctions for nonattainment areas that fail to submit or implement a pollution control plan. The new sanctions include a cut-off of local highway funds and increased ratios for new sources.

The amendment also established a new system of three-year milestones to keep areas on track toward attainment. Under H.R. 3030, states and EPA have no obligation to assess interim progress in meeting emission reduction requirements, so severely polluted areas could go as long as twenty years without having to demonstrate pollution reductions. The amendment required areas to report on their pollution reductions every three years—and to increase control requirements as necessary to maintain progress.

3. More Stringent Federal Control Measures

The Waxman amendment also substantially strengthened federal measures to control sources of ozone pollution that are not amenable to local regulation.

The amendment incorporated the provisions from H.R. 99 calling for a 50% reduction in emissions from evaporation from paints, varnishes, household cleaners, and other solvents and consumer and commercial products. These emissions account for 27% of the national inventory of hydrocarbon emissions. By contrast, H.R. 3030 au-

thorized, but did not require, federal regulation of these emissions.

The amendment also required EPA to regulate sources operating on the outer continental shelf in the same manner as the sources would be regulated if they were located onshore.

*B. Other Amendments*

Several other amendments to title I were considered by the subcommittee. Rep. Wyden (D-Or) offered an amendment, which was adopted by voice vote, establishing a technology assistance program to help small sources comply with control requirements. Rep. Nielson (R-Ut) offered an amendment, which was also adopted by voice vote, requiring the use of the best available control measures in areas with serious particulate pollution.

Finally, Rep. Dannemeyer (R-Cal) offered an amendment to eliminate inconsistencies between the planning requirements in H.R. 3030 and those adopted in California. This amendment was also adopted by voice vote.

III. TITLE II: MOBILE SOURCES

In contrast to the deadlock that characterized the debate over title I, the subcommittee made significant progress in resolving issues relating to the control of emissions from mobile sources.

*A. Conventional Gasoline- and Diesel-Fueled Motor Vehicles*

The subcommittee unanimously resolved most outstanding issues pertaining to the control of emissions from gasoline- and diesel-fueled motor vehicles. Successful amendments addressed the following issues:

Averaging. H.R. 3030 contained provisions allowing car makers to comply with emissions standards through emissions "averaging." According to a report by the Office of Technology Assessment, these provisions could allow emissions to increase by 25% above the relevant standard. The subcommittee voted unanimously to strike the averaging provisions.

Onboard canisters. The subcommittee voted unanimously to require car makers to control refueling emissions by installing onboard canisters. The amendment also provided that moderate nonattainment areas need not require gasoline stations to install "stage II" at-the-pump controls; it also provided that serious and severe nonattainment areas may lift stage II requirements after onboard canisters are in widespread use.

Control of evaporative emissions. H.R. 3030 gave EPA discretionary authority to control "running losses" and other evaporative hydrocarbon emissions from motor vehicles. The subcommittee voted unanimously to require EPA to issue regulations within 33 months controlling these emissions.

Onboard diagnostics. H.R. 3030 gave EPA discretionary authority to require the installation of onboard diagnostics to monitor the effectiveness of the vehicle's pollution control equipment. The subcommittee voted unanimously to require EPA to issue regulations within 33 months mandating onboard diagnostics.

Tailpipe standards. The subcommittee voted unanimously to require passenger cars and light-duty trucks to comply with the California tailpipe standards (0.25 NMHC, 0.4 NOx, 3.4 CO). The vehicles must comply with the standards according to a phase-in schedule that begins in 1994. By 2003, passenger cars and light-duty trucks must meet standards that are 50% below the California standards, unless EPA establishes alternative standards on the basis that the statutory standards are unnecessary, infeasible, or not cost-effective.

Extended useful life. The subcommittee voted unanimously to extend durability requirements for emission controls. Passenger cars and light-duty trucks must comply with the California standards for 100,000 miles during vehicle certification and for 75,000 miles in actual use.

Toxic emissions. The subcommittee voted unanimously to establish a new program for the control of toxic emissions from motor vehicles.

*B. Clean-Fuel Vehicles*

The centerpiece of the smog control program in H.R. 3030 is an aggressive program to promote the use of low-polluting motor vehicle fuels, such as methanol, ethanol, and natural gas. The subcommittee did not reach a consensus over this program.

In a 12-10 vote, the subcommittee adopted an amendment offered by Reps. Hall (D-Tex) and Fields (R-Tex) that substantially rewrote the clean-fuels program in the Administration bill. The amendment eliminated the mandate in H.R. 3030 that required car makers to "produce, sell, and distribute" clean-fuel vehicles. Instead, it required car makers to "certify . . . that they have the capacity to produce, distribute, and offer to sell" such vehicles.

In addition, the amendment relaxed the performance standard for clean-fuel vehicles. H.R. 3030 required clean-fuel vehicles to achieve the reductions in ozone-producing and toxic air emissions that result from the use of "clean alternative fuels formulated to provide maximum reductions of such emissions," such as methanol and natural gas.

The Hall/Fields amendment replaced this standard with one requiring clean-fuel vehicles to achieve only the emission reductions equivalent to those produced by use of "M85," an alternative fuel that is 85% methanol, 15% gasoline. Analyses by EPA, the petroleum industry, and others conclude that use of M85 reduces emissions in the range of 0% to 30% below the level emitted by gasoline-fueled vehicles. In comparison, use of pure methanol or natural gas can achieve emission levels 80% to 90% below the level emitted by gasoline-fueled vehicles.

The Hall/Fields amendment also expanded the definition of a clean fuel to include M85 and reformulated gasoline, refined requirements for oxygenated fuels, and added requirements for centrally fueled fleets to use clean fuels.

*C. Warranties*

The subcommittee also failed to resolve a controversy regarding emission control warranties. Rep. Waxman has proposed that the current 5-year/50,000 mile warranty on motor vehicle emission controls be extended to 8-years/80,000 miles for key emission control components like the catalytic converter, but reduced to 2-years/24,000 miles for other components. By contrast, Rep. Dingell has sponsored legislation that rolls back the warranty to 2-years/24,000 miles for all but the key emission control components. The Dingell proposal would not extend the warranty for any components.

No vote on the warranty issue occurred at subcommittee.

IV. TITLE III: TOXIC EMISSIONS

Several significant amendments to title III, relating to toxic emissions, were raised during the subcommittee markup. As with title I, however, the subcommittee failed to reach consensus on these issues.

*A. Sources Subject to Regulation*

H.R. 3030 defines a "major source" of toxic emissions as a source that emits more than 10 tons per year of any hazardous air pollutant. It then requires EPA to list all categories of major sources and to regulate emissions from 50% of these categories within seven years. Regulation of the remaining 50% of source categories is discretionary with EPA. The Lent substitute preserved this basic structure, but required EPA to provide an explanation for each decision not to regulate a source category.

Rep. Wyden (D-Ore) offered an amendment to require regulation of all listed categories of major sources within 12 years. The amendment was withdrawn before a vote, with the understanding that it would be pursued in full committee.

*B. Regulatory Standards*

Under H.R. 3030, regulated source categories must initially comply with emission standards based on the maximum achievable control technology (MACT). At a minimum, these MACT standards must be set at a level achieved in practice by the best controlled similar sources. An amendment by Ms. Collins (D-Ill) clarified that in determining the minimum level for MACT, costs and other economic factors cannot override the statutory MACT floor.

H.R. 3030 establishes a second phase of standards where necessary to prevent "unreasonable risk" to public health. Rep. Richardson (D-NM) announced during the subcommittee markup that he plans to offer an amendment at full committee that defines an "unreasonable risk" to be any cancer risk greater than 1 in 1 million.

*C. Accidental Releases*

According to EPA, between 1980 and 1987 there were more than 11,000 accidental toxic releases resulting in more than 300 deaths and more than 10,000 injuries. The Lent substitute directs EPA to issue "reasonable regulations" for the prevention of accidential releases of air toxics. It also called for the establishment within EPA of a board to investigate and report on chemical accidents.

Rep. Richardson (D-NM) offered an amendment at subcommittee mark-up establishing a more comprehensive program to protect against accidental releases. Drawn from the Leland/Molinari bill (H.R. 2585), the amendment required EPA to produce a list of 100 chemicals presenting serious accident risks. It also required facilities handling such chemicals to evaluate the risk of accidental releases and prepare risk management plans. The amendment also increased the independence of the accident release board by transferring the authority to appoint members from EPA to the President.

The Richardson amendment was defeated at subcommittee by a vote of 9 to 12 and is expected to be pursued at the full committee markup.

*D. Protection of the Environment*

H.R. 3030 includes no provision for protection of the Great Lakes or other environmental resources from toxic emissions. The Lent substitute, however, added provisions requiring EPA to study the effect of toxic emissions on the Great Lakes and to promulgate additional regulations as necessary.

Rep. Sikorski (D-Minn) offered an amendment to provide further protection to the Great Lakes. This amendment required EPA to regulate all significant sources of emissions of seven pollutants that bioaccu-

mulate and cause particular damage to the Great Lakes. This amendment was defeated 5 to 7 and is expected to be pursued at the full committee markup.

Rep. Sikorski also indicated that he plans to offer an amendment in full committee that authorizes EPA to list and regulate chemicals as hazardous air pollutants based on their impacts to the environment.

V. TITLE IV: PERMITS

No amendments were offered to title IV, relating to air pollution permits.

VI: TITLE V: ACID RAIN

H.R. 3030 includes an acid rain program intended to reduce sulfur dioxide emissions by ten million tons below 1980 levels by the year 2000, and to reduce nitrogen oxides emissions by two million tons below projected year 2000 levels by the same year.

Rep. Sikorski offered several strengthening amendments. One amendment increased the required reductions of nitgrogen oxides ($NO_x$) from two million tons to four million tons. This amendment offset anticipated growth in $NO_x$ emissions of three million tons. To achieve the additional reductions, the amendment authorized EPA to require $NO_x$ pollution reductions from industrial sources, in addition to the utility sources already regulated in H.R. 3030. This amendment lost on a voice vote.

Another Sikorski amendment required EPA to reduce sulfur dioxide emissions from industrial boilers and smelters by one million tons below 1980 levels by the year 2000. The President's proposal assumed that one million tons of reductions will be achieved from these sources, but established no program to assure that these reductions actually occur or are maintained. This amendment was withdrawn at the request of members seeking to develop compromise language on the issue.

Congressman Sikorski also proposed an amendment to move up the acid rain clean up deadlines from the year 2001 to the year 2000, to match the dates for clean up promised in the President's announcement of his clean air program. This amendment was defeated on a 9 to 13 vote. Rep. Sikorski indicated that he would continue to pursue his amendments at the full committee.

Other amendments to the acid rain title were discussed but not offered. Rep. Bliley (R-Va) announced his intention to pursue an amendment that adjusts the formula for allocating emission allowances in the President's proposal. This amendment would facilitate growth in low polluting areas, while keeping the overall reductions achieved under the bill unchanged.

Circulated, but not offered, were several amendments by Congressman Bilirakis to adjust the cap on growth of acid rain emissions.

While the notion of establishing a cost-sharing program to minimize the regional economic impact of acid rain control was discussed, no cost sharing proposal was offered at the subcommittee mark-up.

VII. TITLE VI: ENFORCEMENT

No amendments were offered to title VI, relating to enforcement, at subcommittee. Ms. Collins (D-Ill) indicated, however, that she would offer an amendment at full committee expanding district court jurisdiction to consider citizen suits alleging unreasonable delay.

VIII. TITLE VII: MISCELLANEOUS

No amendments were offered to title VII, containing miscellaneous provisions. Rep. Wyden (D-OR) indicated, however, that he would offer an amendment at full committee expanding protection of the national parks from air pollution.

IX. REPORTED BILL

The subcommittee adopted the Lent substitute, as amended, by voice vote. The subcommittee then voted unanimously to report H.R. 3030 to the full committee.

Markup in the full Energy and Commerce Committee may commence on November 1.

---

[From the Clean Air Facts, Feb. 2, 1990]

CAUSES AND IMPACTS OF ACID RAIN

This Fact Sheet is the first of two that will examine the acid rain issues confronting Congress this session. These issues are among the most important—and most complex—in the clean air debate.

The Fact Sheet provides an overview of the sources of acid rain, the multifaceted impacts of the pollution, and current control requirements and technologies. It will be followed by an issue that discusses the acid rain control program (H.R. 3030) that is moving through the House.

I. WHAT IS "ACID RAIN"?

Acid rain is a "secondary pollutant"—one that forms from chemical reactions in the atmosphere. It is caused by emissions of sulfur dioxide ($SO_2$) and nitrogen oxides ($NO_x$). These emissions react in the atmosphere to form tiny acidic particles, called sulfate and nitrates. The sulfate and nitrate particles can remain airborne for hundreds, or even thousands, of miles. When they are finally washed out of the atmosphere by rains, they turn into sulfuric and nitric acids—producing "acid rain."

Acid rain is an extremely widespread pollutant. In the 31 states east of the Mississippi, rain is almost always acidic. The average rain there has a pH of 4.5, three times more acidic than unpolluted rain (which has a pH of 5.0 or higher). And in the most affected areas of the country, such as parts of Pennsylvania, Ohio, West Virginia, Maryland, and New York, the rainfall is nearly ten times more acidic than normal.

Acid rain is actually only one of several forms of acid deposition. Sulfates and nitrates can be deposited from the atmosphere in acidic snows or fogs. Or they can settle out as dry particles, to turn into acids on contact with surface waters.

II. SOURCES OF ACID RAIN

*A. $SO_2$ Emissions*

Sulfur dioxide ($SO_2$) emissions cause two-thirds of the acid rain and other forms of acid deposition falling in the Eastern U.S. They cause a similar, but somewhat lower, portion of the acid deposition falling in the Western U.S.

Ninety percent of $SO_2$ emissions result from the combustion of fossil fuels, especially coal. The largest single source of $SO_2$ emissions is the utility industry, which produces 70% of nationwide emissions. Within the utility industry, old coal-fired power plants are the worst emitters; they are responsible for 90% of the utility emissions.

There are several other important $SO_2$ sources. Industrial processes (e.g., petroleum refining, pulp and paper manufacturing, iron and steel production) cause 13% of $SO_2$ emissions. Industrial boilers that burn coal or oil to generate steam or electricity account for another 11% of the national inventory. Other assorted sources—primarily residential and commercial fuel consumption and motor vehicles—emit about 4% of the national inventory.

The following table shows EPA's estimates of historical and predicted future $SO_2$ emissions, in millions of tons. The year 2000 and 2010 figures assume the continuation of current control requirements with one exception. The estimates assume desulfurization of motor vehicle diesel fuel between 1985 and 2000.

| Source cateogy | 1980 | 1985 | 2000 | 2010 |
|---|---|---|---|---|
| Utilities | 17.4 | 16.3 | 17.1–19.4 | 15.7–20.7 |
| Nonutility sources | 8.7 | 7.6 | 7.2–7.2 | — |
| Total | 26.1 | 23.9 | 24.3–26.6 | — |

Regionally, the highest concentration of $SO_2$ emissions come from utilities in Midwestern states that burn high-sulfur coal to generate electricity. Just nine states—Ohio, Indiana, Pennsylvania, Illinois, Missouri, Tennessee, Kentucky, West Virginia, and Georgia—account for 50% of the nationwide inventory of $SO_2$ emissions.

*B. $NO_x$ Emissions*

Nitrogen oxide ($NO_x$) emissions are the other major precursor to acid rain, causing about one third of the acid rain in the East and more in the West.

$NO_x$ emissions are a by-product of the combustion of fossil fuels, including coal, natural gas, oil, and gasoline. Utilities emit 33% of the national inventory of $NO_x$; industrial sources, 20%; and cars, trucks, and other "mobile sources," 43%.

The following table shows recent estimates from the Office of Technology Assessment of historical and predicted future $NO_x$ emissions, in millions of tons, assuming no additional controls.

| Source category | 1985 | 1999 | 2004 |
|---|---|---|---|
| Utilities | 6.8 | 8.6 | 9.3 |
| Industrial and other stationary sources | 3.6 | 5.1 | 6.0 |
| Mobile sources | 8.8 | 8.5 | 9.3 |
| Total | 19.2 | 22.2 | 24.6 |

III. THE IMPACTS OF ACID RAIN IN THE U.S.

Acid rain has been studied in thousands of scientific reports. It was first discovered over a hundred years ago by an English chemist. Scientific consensus about the significance of acid rain coalesced in the U.S. in 1981, when the National Academy of Sciences found "clear evidence of serious hazard to human health and the biosphere" from emissions of suflur and nitrogen oxides.

This scientific research has shown that acid precipitation causes a wide range of deleterious impacts—ranging from serious health effects, to the acidification of lakes and streams, to stunted forests, visibility impairment, and damage to man-made materials.

*A. Health Impacts*

$SO_2$ and $NO_x$ emissions rapidly transform into small acidic sulfate and nitrate particles called "acid aerosols." These acid aerosols irritate the lungs, causing constricted breathing. Epidemiological studies have found that hospital admissions for acute respiratory illnesses increase as levels of acid aerosols rise. Asthmatics and others with already impaired breathing abilities are especially vulnerable.

Epidemiological studies have also linked acid aerosols to increased incidence of chronic cough and bronchitis (as opposed to acute repiratory illness) and ultimately to

death rates. The most alarming work has been done by researchers at Harvard University. They have concluded that acid aerosols contribute to 2%-5% of the premature mortality in the U.S.—40,000 to 100,000 deaths per year.

Acid rain can also adversely affect human health indirectly by leaching toxic heavy metals, like lead and mercury, from minerals in the soil. These metals can be washed into drinking water supplies, where they are consumed by humans.

The American Lung Association has estimated that the health costs of acid rain could be as high as $432 billion annually, assuming a "worst-case" dose-response correlation between sulfate pollution and premature deaths.

*B. Aquatic Impacts*

Nationally, acid deposition has acidified over one thousand large lakes (greater than 10 acres) and thousands of miles of streams. According to the Office of Technology Assessment, thousands more lakes and streams are "extremely vulnerable" to further acidification.

1. Extent of Acidification

Acidification of lakes and streams in the U.S. is widespread—and the major cause of these impacts is acid rain. Although there are some natural acidic water bodies, "most of the acidity comes from acid deposition," according to the findings of a ten-year federal study, the National Acid Precipitation Assessment Program (NAPAP).

NAPAP has surveyed the level of acidity in lakes and streams in various regions. It classified water bodies as already acidic or as "sensitive" to further acidification due to reduced buffering capacity. The following charts summarize the results of the survey.

ACID LAKES

| Region | Percent acidified lakes | Percent acid-sensitive lakes |
|---|---|---|
| Northeast | 5 | 19 |
| Upper Midwest | 2 | 15 |
| Mountain West | 0 | 17 |

ACID STREAMS

| Region | Percent acidified streams | Percent acid-sensitive streams |
|---|---|---|
| Mid-Atlantic | 4 | 16 |
| Southeast | 1 | 5 |

Certain subregions are particularly hard-hit. In the Andirondack Mountains in the Northeast, for instance, 11% of the lakes are already acidic and 36% are sensitive. On the Michigan Peninsula in the Upper Midwest, 10% of the lakes are already acidic and 19% are sensitive.

Actually, the NAPAP data appears to underestimate the extent of acidification in the U.S. NAPAP surveyed only large lakes greater than 10 acres in size. When New York State surveyed both large and small lakes in the Adirondacks, it found that over 25% of the lakes were already acidic.

2. Biological Effects of Acidification

The waters classified as acidic by NAPAP have experienced severe biological impacts. Most acidic water bodies have a pH of 5.0 or lower. At this level, most fish die or cannot reproduce.

"Sensitive" waters also experience biological impacts. They are susceptible to episodic acidification during spring snow melt or heavy rainstorms. Episodic acidification can kill young fish and eggs.

3. Future Trends in Acidification

The vulnerability of a water body to acidification depends primarily on two factors: the "total loading" of acidity that falls within the watershed and the capability of the soil and bedrock to buffer or neutralize the acidity. With constant or increased rates of total loading, the buffering capacity of more watersheds will be consumed, which in turn will cause more acidification of water bodies. Conversely, with decreased loading, soils will gradually regain their buffering capacity, which in turn will allow the affected water bodies to recover.

EPA has examined rates of acidification under various scenarios of future acid deposition. This work shows that emissions reductions would significantly benefit aquatic resources. A 30% reduction in acid deposition, for instance, would allow 50% of the acidic lakes in the Northeast to recover.

Moreover, EPA's study shows that without reductions in acid deposition, streams in both the Southeast and Mid-Atlantic regions will continue to acidify. Currently, there are no acidic streams in the Southern Blue Ridge Mountains and less than 1% are sensitive. However, under a constant deposition scenario, 10% of the streams in the region become acidic and 15% become sensitive.

Other studies have shown potentially even greater impacts from future acidification. OTA has estimated that 3,000 lakes and 23,000 miles of streams are "extremely vulnerable" to further acid deposition.

4. Special Impacts: Leaching and Eutrophication

Besides directly acidifying surface waters, acid rain can leach heavy metals into lakes and streams. This is particularly a problem in the Great Lakes states. Biologists have found unsafe mercury levels in fish in inland lakes in Michigan, Wisconsin, and Minnesota. Acid rain is contributing to this problem by leaching mercury from the surrounding soils into the lakes.

Acid rain also injures aquatic resources by contributing to eutrophication—the gradual suffocation of a water body. Researchers studying the Chesapeake Bay have found that the nitrogen compounds in acid rain account for 25% of the nitrogen entering the Bay. This nitrogen acts as a fertilizer that causes excessive algae blooms. When the algae die and decay, they depress oxygen levels in the Bay, threatening fish populations.

*C. Forest Impacts*

Acid rain also threatens forests. Contact with highly acidified rain or fog can directly injure leaves and needles. And over the long term, acid rain stunts tree growth by altering soil chemistry, both by washing away vital nutrients, such as magnesium and calcium, and by contaminating the soil with heavy metals like aluminum that are freed from soil particles.

The red spruce forests along the crest of the Appalachian Mountains, which stretch from Maine to Georgia, have been the most damaged. These forests have suffered widespread decline, including the death of 40%-70% of the spruce on some mountaintops in Vermont, New York, and North Carolina. NAPAP has found that regular exposure to extremely acidic clouds (average pH of 3.6) is contributing to the decline.

*D. Visibility Impacts*

One of the most significant impacts of acid rain is its effect on visibility. The sulfate particles that form from $SO_2$ emissions scatter light and reduce visits. The problem is particularly great during summer months, because high humidity and temperatures promote sulfate formation.

Acid rain's visibility impacts are extremely widespread. Throughout the East Coast, summertime visibility has decreased by 50% over the last 40 years. In fact, due to these visibility impacts, the summer has changed from the season with the greatest visibility in the East to the season with the worst visibility. Sulfates cause 70% of the summertime visibility impairment in the East, according to the National Park Service.

Pristine areas, such as national parks in the West, are especially susceptible to visibility impairment. An added increment of sulfate pollution has a much greater effect on visibility in clean air than in already polluted air. According to the National Park Service, vistas in the national parks are impaired by man-made pollution 90% of the time, with 50% of the impairment being attributable to sulfates.

*E. Materials Impacts*

Acid rain also causes substantial economic impacts by eroding man-made building materials, such as steel, stones, and paint. According to some estimates, the damage in 17 Eastern states alone could be as high as $2 billion per year.

The same erosional forces also threaten historic monuments, particularly those made of marble. According to National Park Service estimates, acid rain is shortening the life span of marble statues in historical parks like Gettysburg by 25%.

*F. Acid Rain in the West*

Acid rain impacts are most acute in Eastern states, because these states are downwind from the country's largest sources of acid-rain-forming emissions—coal-fired Midwestern power plants. However, acid rain poses significant threats to the West as well.

Although no lakes in the West are currently acidic, NAPAP's survey shows that 17% are "sensitive" to acidification. These lakes can be temporarily acidified during spring snow melts and summer storms. These "acidic pulses" are already affecting salamander populations in the Colorado Rockies. The National Park Service has found similar acid pulses in California's Sierra Nevada Mountains.

Moreover, visibility impacts are especially severe in the West. As mentioned above, Western parks such as the Grand Canyon have naturally clean air that is readily degraded by small increments of sulfate pollution.

IV. THE IMPACTS OF ACID RAIN IN EUROPE AND CANADA

Acid rain is an international problem. The impacts in Europe are particularly sèvere—representing a worst-case scenario for the U.S. In Sweden and Norway, more than 30,000 lakes have been acidified, mainly due to emissions originating in Central Europe and England. And in West Germany, fully half of the trees have been damaged by acid rain, including half of those in the Black Forest.

Canada also suffers heavily from acid rain, because many of its watersheds have very little buffering capacity. The Canadian government says that 14,000 lakes in Canada have been acidified (pH of 5.0 or less) and that 150,000 lakes have suffered

some biological damage from acid rain. The government estimates that half of the acid rain in Canada comes from U.S. emissions.

V. CONTROL STRATEGIES FOR ACID RAIN

Fortunately, acid rain can be controlled. There are a number of readily available technologies that can lower $SO_2$ and $NO_x$ emissions—and thereby reverse or at least limit acid rain's adverse impacts.

*A. $SO_2$ Controls*

There are two basic strategies for reducing $SO_2$ emissions from coal-fired power plants: fuel-switching and scrubbing.

Fuel switching involves shifting the fuel source of a coal-fired power plant from high-sulfur to low-sulfur coal. High-sulfur coal contains up to 5 lbs of sulfur per million Btu of heat content. (Such coal will produce about 10 lbs of $SO_2$ per mmBtu when burned in an uncontrolled power plant.) By contrast, the very cleanest coal contains less than 0.5 lbs of sulfur per mmBtu. Switching between these fuels can cut emissions by 90%.

Fuel switching can also often be an economical way to lower $SO_2$ emissions, depending on the proximity of the nearest low-sulfur coal. Typical costs currently run about $200 to $300 per ton of $SO_2$ removed. However, fuel switching shifts jobs away from high-sulfur coal mines, with adverse impacts on employees and economies dependent on jobs in those mines.

The most effective control alternative is to install "scrubbers" on power plant smokestacks. These devices inject lime or limestone into the emissions from the plant, capturing up to 95% of the $SO_2$ emissions. Scrubbers cost $300 to $600 per ton of $SO_2$ removed, with the greatest cost-effectiveness being achieved at large plants that can take advantage of economies of scale.

Current law requires $SO_2$ controls only on "new plants"—those built since 1971. The 1971 new source performance standard required new power plants to acheive an $SO_2$ emission rate of 1.2 lbs/mmBtu. This rate could be met by any control strategy, including burning low-sulfur coal. In 1979, EPA amended the new source standard to implement the "percent reduction" requirement of the 1977 amendments to the Clean Air Act. The 1979 standard mandates that all new plants reduce $SO_2$ emissions by 70%-90%, regardless of the sulfur content of the coal being used. It has effectively required all new power plants to install scrubbers.

*B. $NO_x$ Controls*

There are also three principal control strategies for lowering $NO_x$ emissions from power plants and other major stationary sources: low-$NO_x$ burners, gas reburning, and selective catalytic reduction. (Strategies for reducing $NO_x$ from mobile sources are discussed in issue 5 of Clean Air Facts.)

$NO_x$ formation during combustion is a function of the combustion temperature. "Low-$NO_x$ burners" lower these temperatures, reducing $NO_x$ emissions by 25%-50%. The cost of this technology is about $200 per ton of $NO_x$ removed.

"Gas reburning" is another readily available control strategy. In this process, natural gas is burned in the boiler above the main combustion area, destroying as much as 40% of the $NO_x$ emissions. Its costs are depended on the price of natural gas, but are generally slightly above those of low-$NO_x$ burners.

The most effective control technology is selective catalytic reduction (SCR), which involves injecting ammonia into the smokestack to convert $NO_x$ to elemental nitrogen and water vapor. SCR can reduce $NO_x$ by up to 90%. NAPAP estimates that SCR costs $2,000 to $4,000 per ton, but new EPA estimates suggest that SCR can be accomplished for as little as $600 per ton.

Current law regulates only new plants, requiring them to meet a $NO_x$ standard of 0.6 lbs/mmBtu.

*C. "Clean Coal" Technologies*

"Clean coal" technologies refer to innovative techniques for reducing $SO_2$ and $NO_x$ emissions. Since 1984, the Department of Energy has promoted development of clean-coal technologies by partially funding demonstration projects. Forty projects have been selected under DOE's program to date.

There are two basic types of clean-coal technologies: retrofit technologies, which are designed to reduce $SO_2$ and $NO_x$ emissions from existing plants, and repowering technologies, which are designed for use when an existing plant is rebuilt from ground up. The more promising repowering technologies include fluidized bed combustion, which involves burning a coal-limestone mixture as it is suspended in midair by jets of air, and coal gasification, which involves converting coal to a gas prior to combustion. Fluidized bed combustion can reduce $SO_2$ emissions by 90% or more, about the same as a scrubber, and increase the efficiency of the power plant by 10% or more. Coal gasification can reduce $SO_2$ emissions by 99%.

According to DOE estimates, most clean-coal technologies should be commercially available by 1996 to 1998.

---

[From the Clean Air Facts, Feb. 28, 1990]

ACID RAIN LEGISLATION

The last issue of Clean Air Facts discussed the causes and impacts of acid rain. This issue discusses legislative proposals to control acid rain.

It provides an overview of acid rain legislation in the House during the 1980s and then examines in greater detail the leading acid rain legislation in the 101st Congress—the Administration's acid rain control program (H.R. 3030). The Administrations bill uses a novel market-based approach to achieve important reductions in sulfur dioxide, one of the leading precursors to acid rain. It is expected to be marked up before the full Energy and Commerce Committee in March 1990, and is also the basis of the acid rain control program in the bill reported by the Senate Environment and Public Works Committee (S. 1630).

I. THE NEED FOR NEW ACID RAIN LEGISLATION

The Clean Air Act does not effectively address the problem of acid rain. The original law was designed mainly to reduce high pollution levels that tend to occur near major pollution sources. It did not contemplate that long-distance transport of air pollutants could cause widespread adverse impacts—as is the case with acid rain.

In fact, existing clean air laws have actually aggravated acid rain problems. In an approach of dubious legality, many power plants used tall smokestacks in the 1960s and early 1970s to disperse pollution and avoid exceeding ambient standards without resorting to expensive control technologies. Little consideration was given to the possibility that even if the ambient standards weren't exceeded, the pollution might cause environmental damage when it returned to earth.

Scientists have since learned that sulfur dioxide ($SO_2$) and nitrogen oxide ($NO_x$) pollution from power plants, factories, and other sources can be carried hundreds or even thousands of miles through the atmosphere, chemically transformed in the process, and eventually returned to earth as sulfuric and nitric acids. These acids often are picked up in droplets of rain or snow, but sometimes the particles simply fall back as "dry deposition." As discussed in detail in the last Clean Air Facts, such acid pollution has been associated with a variety of harmful effects, including the acidification of lakes; the decline of forests; serious health impacts, especially to those with respiratory ailments; and damage to man-made materials, such as buildings, bridges, statuary, and car finishes.

II. ACID RAIN LEGISLATION IN THE 1980S

The generally accepted approach to reducing acid rain is to reduce emissions of the acid forming pollutants, $SO_2$ and $NO_x$. Scientists have concluded that it is the "total loading" of these pollutants that leads to environmental damage. Acid rain control proposals to date have generally looked to but fallen short of—the goal of a 50-percent (or 13-million-ton) reduction in national emissions called for by the National Academy of Sciences in 1981.

The first significant acid rain legislation in the House was introduced in the 98th Congress (1983-84) by Reps. Gerry Sikorski (D. Minn.), Judd Gregg (R. N.H.) and Henry Waxman (D. Cal.). The bill, H.R. 3400, required to ten-million-ton reduction in $SO_2$ emissions and a four-million-ton reduction in $NO_x$ emissions. To protect jobs in high-sulfur Midwestern coal fields, the bill required the 50 power plants with the largest emissions to lower emissions through technological controls—specifically, by installing flue gas scrubbers—rather than by switching fuels. And to protect the Midwestern utilities from rate hikes, the bill provided a 90% subsidy for the capital costs of installing the scrubbers. The bill funded the subsidy with a nationwide fee on electricity generation.

The bill was defeated in the Health and the Environment Subcommittee of Energy and Commerce by a 10 to 9 vote, with key Midwestern members voting against the proposal. H.R. 3400 has since proved to be the high-water mark for national "cost-sharing," by offering a larger subsidy to the Midwest than any serious legislative proposals to follow.

In the 99th Congress (1985-86), supporters of acid rain legislation took a different approach in H.R. 4567. This bill, which was introduced by Reps. Sikorski, Silvio Conte (R. Mass.), Sherwood Boehlert (R. N.Y.), Waxman and over 150 cosponsors, called for a ten-million-ton reduction in $SO_2$ emissions and a four-million-ton reduction, $NO_x$ emissions, just like H.R. 3400. Unlike H.R. 3400, however, H.R. 4567 did not specify how the reductions were to be achieved. Instead, it established the concept of a "statewide average emissions rate," in this case 1.2 lbs/mmBtu for $SO_2$ and 0.6 lbs/mmBtu for $NO_x$. States with emissions in excess of these rates were required to lower their emissions, but were given wide latitude to determine the best strategy for doing so. To ensure that no state faced excessive rate hikes, H.R. 4567 established a federal "insurance policy," promising a federal subsidy to ratepayers in any state that faced increases greater than 10%.

H.R. 4567 passed the Health and the Environment Subcommittee by a 16 to 9 margin in May 1986, but was not considered by the full Energy and Commerce Committee.

In the 100th Congress (1987-88), H.R. 4567 was reintroduced as H.R. 2666 and considered in the Health and the Environment Subcommittee together with H.R. 3054, legislation to control urban smog. The combined legislation was deadlocked in Subcommittee when the 100th Congress ended. The Sikorski-Conte bill was reintroduced in the 101st Congress as H.R. 1470.

III. THE CURRENT ADMINISTRATION PROPOSAL

Throughout its tenure, the Reagan Administration opposed enactment of legislation to control acid rain emissions. The Bush Administration reversed course in 1989, however, proposing its own version of acid rain legislation (H.R. 3030) in the 101st Congress. The Bush Administration's acid rain program calls for achievement of a ten-million-ton reduction in $SO_2$ emissions below 1980 levels by the year 2001. And it calls for a two-million-ton reduction in nitrogen oxide emissions below projected year 2000 levels by the same year. H.R. 3030 has become the leading acid rain proposal in the 101st Congress.

*A. The $SO_2$ reduction program*

To achieve $SO_2$ reductions, the Administration program relies on a novel free-market approach that grants polluters a limited number of marketable emission "allowances."

Each $SO_2$ allowance, in essence, grants a source permission to release one ton of sulfur dioxide pollution per year. Allowances can be used for current emissions, sold, or held in reserve for future emission increases. Under the program, it is illegal for any "affected source"—that is, any of the large dirty power plants covered under the program—to release pollution for which they do not have an allowance.

$SO_2$ emission reductions under the Administration proposal are to be achieved in two phases. Phase I seeks to achieve a four- to five-million-ton reduction by the year 1996. It applies to power plants that are large (greater than 100 megawatts) and especially dirty (emitting more than 2.5 pounds of sulfur per million Btu of fossil fuel consumed). During phase I, allowances can be traded to any source in the same state or the same utility system.

The balance of the $SO_2$ reductions are to be achieved by the year 2001 in Phase II. Phase II requires greater reductions from the units affected by Phase I, and covers as well all units larger than 75 megawatts that emit sulfur dioxide at a rate greater than 1.2 pounds per million Btu of fossil fuel consumed. In Phase II all of these units are given allowances representing emissions they would release if they continued to operate the same number of hours as they did between 1985 and 1987—this is called their "baseline"—and released pollution at the rate of 1.2 lbs/mmBtu. Trading rules are expanded in phase II, with the nation divided into broad geographic trading regions to be established by EPA.

An exception of the year 2001 Phase II deadline is established for sources that repower using qualified "clean coal technologies"—that is, now technologies for burning coals cleanly. These sources are allowed a deadline extension until 2004.

Clean power plants, those emitting below 1.2 lbs/mmBtu, are not given allowances or subjected to a cap. However, these sources are required to remain at or below their 1985 emission rates. Small power plants, those below 75 megawatts, are also limited to their 1985 emission rate.

*B. The cap on sulfur dioxide emissions*

The Administration bill requires that all new fossil-fuel fired, electricity-producing boilers have allowances for pollution they will emit before they can operate. This is the "greenfield cap" on emissions. The cap assures that the emissions reductions achieved by the year 2001 under the Administration proposal will not be eroded in future years as new pollution sources come on line and add to the nation's $SO_2$ emissions. Under the cap, aggregate national $SO_2$ emissions from utilities and other covered sources should remain constant, because new sources will have to secure allowances from existing sources, which will have to reduce emissions commensurate with new source growth.

The cap is especially important to the Administration program because without it the system of marketable pollution allowances falls apart over time. Under H.R. 3030, when a large electric utility closes down, that source can sell its pollution allowances, or use them for emission increases at another facility. If new sources are not required to purchase allowances, then with each passing year, as more new sources come on line and more old sources retire, there will be more and more allowances available to authorize pollution increases from existing sources. Hence, total pollution levels would increase dramatically over time, while new sources would remain beyond the coverage of the program. Also, the demand for emission allowances would be weakened dramatically if new sources don't need allowances, resulting in a less active market and less cost-effective emission reductions.

According to EPA estimates, new power plants could increase $SO_2$ emissions by as much as 2.9 million tons per year by 2010 without the greenfield cap, assuming high electricity growth rates.

*C. The allocation of allowances*

While the above description explains in general terms how the cap works, it is not possible truly understand concerns raised by some utilities and environmentalists about its impacts without a more complete picture of how the emission allowances are allocated under the Administration bill. Pollution sources are given allowances (and subjected to a cap), or subjected instead to a rate limitation (and no cap), or left entirely unregulated, depending on the pollution level and the size and type of the source. The paragraphs below explain how the pollution sources are divided up and treated.

*Large Dirty Plants.* The allowance system in the Administration bill applies only to large dirty power plants. A "large power plant" is one capable of producing more than 75 megawatts of electricity. A "dirty" power plant is one releasing pollution at a rate greater than 1.2 lbs/mmBtu. For the most part this category is limited to coal-fired power plants burning high- and medium-sulfur coal and some oil-fired power plants burning high-sulfur oil.

Plants falling within this category are allotted allowances in 2001 and after equal to the amount they would have polluted if they had burned the same amount of fuel they did between 1985 and 1987 (this is their "baseline") and operated at an emission rate of 1.2 lb/mmBtu, instead of their actual 1985 rate. These sources will in essence be required to reduce from their 1985 emission level down to 1.2 if they use about the same amount of fuel (that is, they use the same percentage of their capacity to produce electricity). To the extent that these sources reduce their emission rate to below 1.2 or reduce their operation below 1985 to 1987 levels, they can sell, keep, or use elsewhere the extra allowances they receive under the program.

Large dirty plants emitted 12.9 million tons per year of $SO_2$ in 1985. Under the Administration bill, they will be limited to 5.1 million tons after 2001.

*Clean Plants and Small Plants.* Power plants producing less than 75 megawatts of electricity, and plants emitting at below 1.2 lbs/mmBtu are not given allowances or capped under the Administration proposal. However, these sources are subjected to an emission rate ceiling equal to their 1985 emission rate. This is the so-called "class of 1985."

Both clean plants and small plants are expected to increase their emissions under the Administration bill. EPA models predict clean-plant emissions rising from 2.5 million tons per year in 1985 to about 3.0 million tons per year in 2001. In addition, clean plants that come on line after 1985 but before the enactment of the legislation are expected to emit an extra 0.3 million tons per year in 2001. The models predict that emissions from small dirty plants (plants producing less than 75 megawatts but emitting at a rate above 1.2 lbs./mmBtu) will drop somewhat, from 0.6 million tons per year in 1980 to 0.4 million tons per year in 2001.

*New Utility Sources.* All new fossil-fueled steam production units are required to secure emission allowances before they can operate. EPA estimates that a new 500 megawatt plant achieving 95 percent emission control will need about 4,000 allowances if it burns high-sulfur coal or 1,000 allowances if it burns low-sulfur coal.

*Nonutility Pollution Sources.* Nonutility sources of sulfur dioxide pollution, such as industrial boilers, refineries, and smelters, are not covered under the Administration proposal. According to EPA, these sources are assumed in the Administration bill to emit at one million tons below 1980 levels by year 2000. However, no control requirements, cap, or allowance system is established for such sources.

*Voluntary Opt-In to the Allowance System.* Sources in categories above that are not initially part of the allowance system are permitted to opt in and receive allowances if they subject themselves to a cap based on their 1985 emission rates and their 1985 to 1987 operating levels. They can sell or trade allowances if they reduce pollution below 1985 levels. These sources cannot sell their allowances when they shut down.

*D. The $NO_x$ reduction program*

The Administration bill does not use an allowance system to reduce $NO_x$ emissions. Instead, it directs EPA to establish emission rates for power plants that will bring $NO_x$ emissions two million tons below projected year 2000 emission levels. The emission rates are to be based on the rates achievable through the use of low-$NO_x$ burners. The bill does allow sources to opt into the allowance system voluntarily (see discussion above), in which case sources can trade $NO_x$ allowances for $SO_2$ allowances and vice-versa on a ratio of 1.5 $NO_x$ allowances per 1.0 $SO_2$ allowance.

The Administration proposal would actually allow $NO_x$ emissions to increase from current levels. The Office of Technology Assessment predicts that $NO_x$ emissions will grow by three million tons by 2000, more than offsetting the reductions to be

achieved under the Administration proposal.

IV. IMPACTS OF THE ADMINISTRATION PROPOSAL

*A. Health and environmental benefits*

The health and environmental impacts of acid rain are summarized in the last issue of Clean Air Facts. They include substantial health costs (perhaps as high as $432 billion per year, according to one estimate); the acidification of over a thousand lakes and thousands of miles of streams; widespread damage to high-elevation red spruce forests; impaired visibility; and erosion of man-made building materials (causing $2 billion in damages in the East annually).

These adverse impacts will be substantially reduced by the ten-million-ton reduction in $SO_2$ emissions called for under the Administration bill. Although precise quantification is impossible, EPA has concluded that the economic and other benefits of the $SO_2$ reductions far outweigh their costs.

*B. Economic costs*

The Administration estimates that its acid rain program will cost $3.5 to $4.1 billion per year when fully implemented. By 2010, it estimates the program will cost $2.5 to $5.3 billion, depending on the level of growth in electricity demand.

The utility industry (through the Edison Electric Institute) has estimated higher costs, ranging from $4.5 to $5.5 billion upon full implementation in 2001 to $5.0 to $7.1 billion by 2010. The industry estimate is higher because it assumes higher costs for scrubbing and fuel switching, no least-emissions dispatching (e.g., running a low-emissions unit more than a high-emissions one), and very limited trading of emission allowances (not trading between utility systems). According to the Energy Information Administration, the industry calculations "limited compliance options for utilities, forcing them to add more scrubbers than might be necessary otherwise."

*C. Rate impacts*

Nationally, EPA estimates that electricity rates would increase 1% to 2% under the Administration's acid rain bill. EPA estimates that a rate increase greater than 5% would be faced in only one state—West Virginia (with an increase of 6.0%).

By contrast, utility industry estimates are several times greater. The industry predicts maximum state rate increases of 16% to 20%. According to the Energy Information Administration, however, the industry estimates are based on assumptions of "high compliance costs" and "low demand growth," which are unlikely to occur in tandem because low demand reduces compliance costs as fewer new plant emissions would need to be offset.

In general, the states and utility systems facing the greatest rate increases have electricity rates below the national average, because they use inexpensive high-sulfur coal for fuel. EPA estimates that electricity rates in the five hardest-hit states (Ohio, West Virginia, Indiana, Missouri, and Kentucky) will still remain below the national average after full compliance with acid rain controls.

*D. Coal market and coal-mining employment impacts*

The market-based approach of the Administration proposal allows utilities to pursue lowest-cost compliance strategies. For many utilities, the lowest-cost strategy will be to switch fuels from high-to low-sulfur coal. EPA predicts that the Administration bill will produce a significant production shift away from high-sulfur coal, which is mined principally in Northern Appalachia and the Midwest, to low-sulfur coal, which is mined in Central Appalachia and the West. The shift is estimated to be 109-119 million tons, about one third of U.S. coal production.

EPA estimates that the Administration bill will result in a net increase in coal-mining jobs compared to no-legislation forecasts. However, it also estimates that there will be a substantial shift in employment from high-sulfur coal regions to low-sulfur regions, predicting that 15,000 to 17,000 jobs will shift between regions.

V. CRITICISM OF THE ADMINISTRATION PROGRAM

The most prominent objections to the Administration's acid rain proposal are described below. (This is not intended to be an exhaustive list of all complaints.)

*A. Environmental concerns*

*No Real $NO_x$ Reductions.* While the Administration's proposal achieves significant reductions in $SO_2$ emissions, it actually allows an increase in $NO_x$ emissions. $NO_x$ emissions account for one-third of the acid rain nationally and contribute to ozone formation and particulate pollution. Environmental groups often say that the failure to achieve real $NO_x$ reductions is the single biggest flaw in the acid rain program. They support legislation that will reduce $NO_x$ emission by four million tons below 1980 levels.

*No Regulation of Industrial Sources.* Environmentalists argue that both utility and industrial $SO_2$ emissions should be regulated. The Administration bill, however, assumes that $SO_2$ emissions from industrial sources will be one million tons below 1980 levels in year 2000, but contains no provisions guaranteeing that these reductions are actually achieved and maintained. Environmentalists say that the bill should be strengthened through provisions that insure that at least this level of reductions occurs.

*No Cap on Clean Plants in the West.* Environmentalists worry that the clean plants, which are subject only to rate limitations, can increase their emissions indefinitely. This could undermine the projected emission reductions—and poses special problems for scenic vistas in the West. Environmentalists maintain that emissions from clean plants—especially those in the West—should be capped in much the same manner as emissions from the dirty plants.

*Too Much Delay.* Finally, environmentalists argue that the Administration bill gives power plants too much time to reduce $SO_2$ emissions. They want all reductions to be achieved by 2000—not 2001—with no extension for clean-coal technologies.

*B. Utility concerns*

*The Limited Availability of Allowances in "Clean States".* Utilities in some clean states have complained that they are initially allotted relatively few allowances, and have to look elsewhere to secure those needed to allow new source growth. Clean sources argue that they are penalized for being clean, pointing out that heavily polluting sources will be awarded large numbers of allowances, many of which could be freed up relatively easily to provide for new source growth. Although EPA predicts that large numbers of allowances from high pollution sources will be available at reasonable costs, there is a fear among some in clean states that allowances will not be available because high polluting states will hoard them to accommodate future new source growth within their own states.

*The "Class of 1985".* Other complaints from clean-state utilities have focused on the emission rate limit for clean sources, which are not subject to the cap. Clean sources argue that being tied to a single emission rate, their 1985 emission level, is unfair and inflexible. They note that capped sources can emit at any rate as long as the pollution total is within the cap. Also, some argue that choosing 1985 as the benchmark for establishing an emission rate is arbitrary and inequitable.

*Dual-Fueled Boilers.* A special version of the class of 1985 complaint is the concerns of gas-fueled utilities that on occasion, when gas supplies are low or gas prices are high, burn oil. Fuel oil produces much higher levels of sulfur dioxide pollution than natural gas. Because all such sources operate at an emission level below 1.2 lbs., they are members of the "class of 1985." As it turns out, 1985 was a year of ample gas supplies. Dual-fueled utilities are worried that, if they are tied to their 1985 emission levels, they will not have the flexibility to switch to oil if there should be an interruption in gas supplies or gas prices should rise steeply.

*C. "Cost-sharing"*

One of the most controversial issues in the clean air debate is the subject of "cost-sharing." Cost-sharing refers to electricity taxes, emissions fees, or other methods of raising funds to subsidize clean-up efforts in the states targeted for the greatest emission reductions.

The Administration bill does not include any direct cost-sharing. Midwestern states, which have the highest emission rates and the biggest clean-up obligations, argue that this is unfair. They say that although nine Midwestern states are responsible for only 51% of the national $SO_2$ inventory, they will achieve 67% of the national reduction in $SO_2$ emissions. They seek compensation for what they perceive to be their disproportionate clean-up burden.

"Clean" states disagree. They maintain that they should have a lesser clean-up obligation, because they have already reduced their emissions. They point out that a clean state like New Mexico has installed scrubbers on all 11 of its powerplants other than one small unscrubbed plant), whereas a "dirty" state like Ohio has scrubbed only one of its 28 powerplants. In fact, clean states think that the high-polluting states fare too well under the Administration bill already. They say that the dirty utilities are rewarded for being dirty, because they have to reduce their emissions only to a 1.2 lbs/mmBtu rate, while clean utilities are frozen at emission rates well below that level.

---

[From the Clean Air Facts, Apr. 12, 1990]

FULL COMMITTEE MARKUP OF H.R. 3030

The House Energy and Commerce Committee completed its consideration of H.R. 3030, the Administration's clean air bill, on April 5, 1990, after a four-week markup. This issue of Clean Air Facts summarizes the markup and provides a preview of the issues likely to be debated on the House floor.

The Committee adopted compromises that strengthened H.R. 3030 in three key areas: requirements for state plans to fight urban smog; regulation of toxic emissions; and control of acid rain. The Committee also endorsed the compromise on tailpipe emissions reached last fall in the Health and the Environment Subcommittee. These compromises resolved highly controversial

disputes and received unanimous or nearly unanimous bipartisan support.

A consensus was not reached, however, on several other important issues. These outstanding issues include requirements for the use of clean-burning alternative fuels in motor vehicles, protection of visibility in national parks, and preservation of the stratospheric ozone layer from ozone-depleting chemicals. These matters are likely to be decided on the House floor.

Committee members pledged to continue negotiating on several additional issues, including permitting procedures, enforcement provisions, control of emissions from oil and gas activities on the outer continental shelf, and accidental releases of toxic emissions. If consensus compromises cannot be developed on these issues, they too will be resolved on the House floor.

I. THE MARKUP VEHICLE

The Committee used the Administration's clean air proposal (H.R. 3030), as amended by the Health and the Environment Subcommittee, as the markup vehicle. The subcommittee amendments left most of the bill intact except for title II, which establishes controls on mobile sources. As described in detail in issue 15 of Clean Air Facts, last fall the Health Subcommittee reached a compromise that significantly strengthened the regulation of conventional gasoline-powered vehicles. The Subcommittee also narrowly passed a controversial amendment that substantially weakened the clean-fuel provisions originally in H.R. 3030.

II. TITLE I: REQUIREMENTS FOR STATE IMPLEMENTATION PLANS

Title I of H.R. 3030 defines the responsibilities of states to achieve healthful air. By a 38 to 2 vote, the Committee adopted a substitute to title I of H.R. 3030 offered by Reps. Swift (D. Wash.) and Eckart (D. Ohio). The Swift/Eckart amendment significantly strengthened the provisions of H.R. 3030, but is not as stringent as H.R. 2323, the Waxman/Lewis bill.

Key elements of the Swift/Eckart amendment are summarized below:

Revised area classifications.—The Swift/Eckart amendment refined the classifications for ozone nonattainment areas by creating a new "extreme" category for Los Angeles, which has the nation's worst air pollution. New attainment deadlines were established for the five area classifications as follows: marginal areas (3 years); moderate areas (6 years); serious areas (9 years); severe areas (15 years, with an additional 2 years for especially polluted severe areas); and extreme areas (20 years).

Graduated control program for stationary sources.—The Swift/Eckart amendment established a system of graduated controls for ozone nonattainment areas under which heavily polluted areas have to regulate more sources (and do so more stringently) than less polluted areas. Under this system, marginal and moderate areas must regulate stationary sources with emissions of volatile organic compounds (VOCs) of 100 tons or more per year; serious areas must regulate sources of 50 tons or more; severe areas must regulate sources of 25 tons or more; and extreme areas must regulate sources of 10 tons or more. In addition, new source review requirements are stiffened in the more heavily polluted areas.

The amendment establishes an identical graduated control program for sources of nitrogen oxide emissions, which are also a major precursor of ozone. However, the amendment allows EPA to waive $NO_x$ controls in any area in which local atmospheric conditions would make such controls counter-productive.

Transportation controls.—The Swift/Eckart amendment establishes a system of graduated transportation control measures, much like the system of graduated controls for stationary sources. It requires all nonattainment areas to adopt transportation plans that help reduce air pollution levels. In addition, in the case of seriously polluted areas, it requires states to report on vehicle congestion and use every three years and to adopt new transportation control measures (TCMs) when levels of congestion or vehicle use exceed expectations. And in the case of severe and extreme areas, it requires that states use all reasonably available TCMs and at a minimum offset any emissions increase due to increases in congestion or vehicle use.

Milestones.—The amendment adds a new "milestone" program to H.R. 3030. Under this program, all serious, severe, and extreme ozone nonattainment areas must evaluate every three years whether they remain on track toward timely achievement of the air quality standards. When an area fails to achieve the required level of emission reductions, the area must adopt additional control measures or, alternatively, "bump up" into a higher classification. The amendment also eliminates the "cost waiver" in H.R. 3030, which would have exempted areas that fail to meet a milestone from further control efforts if EPA deemed such efforts too costly.

Mandatory sanctions and "FIPS".—H.R. 3030 established very tough sanctions (e.g., a ban on new drinking water hookups) for states that fail to submit or implement state pollution control plans, but it undermined the deterrence effect of the sanctions by making their application discretionary. The Swift/Eckart amendment establishes less onerous sanctions (specifically, a ban on new highway funds and a 2-to-1 offset ratio for new sources), but makes their application mandatory.

The amendment also restores the requirement in current law that EPA develop a federal implementation plan (FIP) when a state fails to submit or implement an adequate one of its own. H.R. 3030 had made this safeguard discretionary.

Federal controls on coatings and solvents.—The amendment tightens requirements for federal regulation of "consumer and commercial products," such as paints, coatings, and solvents. Emissions from these products account for over 25% of the smog-forming volatile organic compound emissions in most nonattainment areas. Under the Swift/Eckart amendment, EPA must regulate all of these products within four years. A second round of regulation, based on the best available controls, must be completed within 11 years for important source categories.

Stronger interstate transport provisions.—The Swift/Eckart amendment includes stronger provisions for emission controls in interstate ozone transport regions, as sought by many Northeast and Mid-Atlantic states. It establishes an interstate ozone transport region stretching from Washington, D.C., to Maine. Within this region, it requires regulation of 50-ton stationary sources enhanced inspection and maintenance, and "stage II" (at-the-pump) controls on refueling emissions at service stations or other equivalent measures.

Stronger carbon monoxide program.—The Swift/Eckart amendment strengthens the program for control of carbon monoxide emissions in carbon monoxide nonattainment areas. Among other measures, it requires more nonattainment areas to use enhanced inspection and maintence, establishes a system of graduated transportation controls, and requires areas with significant stationary source emissions of carbon monoxide emissions to adopt stationary source controls.

Stronger "PM-10" program.—The Swift/Eckart amendment strengthens the program for control of emissions of small particulates (called "PM-10") in areas in nonattainment for this pollutant. Among other measures, it requires the regulation of precursors to PM-10, such as sulfur dioxide and nitrogen oxides, unless such regulation is shown to be unnecessary, and it lowers the threshold for regulation of stationary sources of PM-10 from 100 tons per year to 70 tons per year in areas with serious PM-10 pollution problems.

III. TITLE: REGULATION OF MOBILE SOURCES

Title II of H.R. 3030 establishes requirmeents for the control of emissions from mobile sources such as cars and trucks. Mobile sources are the largest single source of air pollution in the country. They cause 50% of urban ozone pollution, 50% of nationwide toxic emissions, and up to 90% of carbon monoxide pollution.

During the markup, the Committee voted on several amendments to the title II provisions.

*A. Conventional gasoline-powered vehicles*

Unlike the clean-fuel and warranty issues (discussed below), there was no dispute in the Committee concerning the regulation of conventional gasoline-fueled vehicles.

During the markup in the Health and the Environment Subcommittee last fall, the subcommittee reached a unanimous compromise on the provisions in H.R. 3030 that pertain to conventional vehicles. Among other things, the compromise tightened tailpipe standards in two phases, required the use of onboard canisters to capture refueling emissions, made controls on evaporative emissions and onboard diagnostics mandatory, extended the durability requirements of emission controls to 100,000 miles, and established a new program to control toxic emissions from motor vehicles. (See issue 15 of Clean Air Facts for a fuller discussion.) The provisions of the subcommittee compromise were adopted without amendment by the full committee.

*B. Clean fuels*

The most controversial amendments considered during the committee deliberations concerned the role of clean or "alternative" fuels (such as natural gas, ethanol, methanol, and electricity) in motor vehicles. During subcommittee markup, these provisions were weakened significantly from the Administration's original bill. Attempts to restore a strong clean fuels program failed in the full committee.

Reformulated gasoline.—Rep. Richardson (D. N.M.) offered an amendment that would have required oil companies to clean up ("reformulate") the gasoline that they sell in any serious, severe, or extreme nonattainment area. This amendment would have lowered ozone-forming volatile organic emissions from all motor vehicles, including the oldest vehicles with the highest emission rates, by 15%. This would have produced areawide emission reductions of 7.5%—far more than almost any other control measures. The Richardson amendment would

have also significantly reduced toxic emissions. However, the amendment lost on a 22 to 21 vote.

Clean fuels in fleet vehicles.—Reps. Tauzin (D. La.) and Synar (D. Ok.) offered an amendment to strengthen the requirements for the use of clean fuels in centrally fueled fleets. This amendment would have required fleets of light- and heavy-duty vehicles in serious, severe, and extreme nonattainment areas to meet stringent performance standards. However, the Tauzin/Synar amendment was defeated on a 24 to 19 vote.

The President's passenger car program.—The President's original bill mandated the production of 1 million clean-fuel vehicles for the general passenger car market each year. However, this provision was deleted during the Health Subcommittee markup on a 12 to 10 vote.

During the full Committee markup, Rep. Richardson announced that he will offer an amendment on the floor to restore the production mandate in the President's original clean-fuel program.

The Fields/Hall amendment.—The full Committee adopted an amendment offered by Rep. Fields (R. Tex.) and Hall (D. Tex.) in lieu of the Richardson and Tauzin amendments. This amendment replaced most of the clean-fuel provisions adopted during the Subcommittee markup.

The Fields/Hall amendment significantly weakens the urban bus program in the bill. In comparison to H.R. 3030 as introduced, it delays the date on which the bus program is fully effective by two model years (to MY 1996). It provides that during the first two years of the program, "clean-fuel" urban buses can emit diesel particulates at a rate 250% higher than current law requires for all buses. And it requires that only 30% of the new urban buses achieve emission levels comparable to those achievable with natural gas, ethanol, or methanol (versus 100% in H.R. 3030 as introduced).

The Fields/Hall amendment also significantly weakens the passenger car program in the bill. In comparison to H.R. 3030 as introduced, the Fields amendment does not require automakers to produce one million clean-fuel vehicles each year for sale in the nine most polluted cities. Instead, it requires only that the new cars sold in the nine cities subject to the program be marginally cleaner than cars sold elsewhere (10% cleaner through 1999 and 25% cleaner thereafter). These standards can be met by conventional gasoline vehicles running on reformulated gasoline, thus eliminating the prospect that automakers will develop a new generation of very clean vehicles.

The Fields/Hall amendment strengthened marginally the fleet requirements in the bill reported from the Health Subcommittee. However, the fleet requirements in the amendment remain substantially weaker than those proposed in the Tauzin/Synar amendment. Key differences between the amendments involve the scope of the program (13 cities in the Fields amendment versus 40 cities in the Tauzin/Synar amendment), vehicles covered (light-duty vehicles in the Fields amendment versus light- and heavy-duty vehicles in the Tauzin/Synar amendment), and vehicle performance standards (the 75% reduction in passenger car VOC emissions called for in both amendments can be waived if "appropriate" in the Fields amendment but not in the Tauzin/Synar amendment).

*C. Repairs and warranties*

The full Committee considered two issues relating to motor vehicle repairs and warranties. By a unanimous vote, the Committee voted to require automakers to standardize access to the information stored on onboard diagnostic systems. This amendment insures that the independent motor vehicle "aftermarket" (i.e., service stations and repair shops) can perform emission-related repairs as effectively as dealers.

The Committee also approved a Dingell amendment to reduce the warranty on most emission controls from 5 years/50,000 miles in current law to 2 years/24,000 miles. Because the warranty coverage is diminished, this amendment increases significantly the number of instances in which consumers, not the vehicle manufacturers, will be responsible for replacing faulty emissions controls. (The burden on consumers is further increased because the Swift/Eckart amendment to title I raises the liability of consumers for emission-related repairs from $75 to $450.) An amendment to restore strong warranty provisions is likely on the House floor.

IV. TITLE III: REGULATION OF TOXIC EMISSIONS

The Committee made substantial progress in title III of H.R. 3030, resolving most outstanding issues related to emissions of hazardous air pollutants.

*A. Routine emissions*

By a unanimous vote, the Committee passed a compromise amendment offered by Rep. Waxman (D. Cal.) that addressed regulation of routine (as opposed to accidental) releases of hazardous air pollutants. The compromise significantly strengthened the provisions of H.R. 3030, but fell short of those in H.R. 2585 (the Leland/Molinari bill). Key provisions of the compromise are summarized below.

Regulation of 100% of major sources.—H.R. 3030 required EPA to regulate only 50% of the "major sources" of hazardous air pollutants (sources that emit 10 tons or more per year of a hazardous air pollutant). The Waxman amendment requires EPA to regulate all categories of major sources. The only exception to this rule in the case of sources with carcinogenic emissions is that EPA may exempt a source category from regulation if it determines that no source in the category presents a lifetime risk of cancer greater than 1 in 1 million to any person.

Regulation of most area sources.—Toxic emissions from "area" sources (those sources smaller than major sources) are collectively responsible for as many cancer cases as the emissions from major sources. Under H.R. 3030, regulation of these sources was entirely discretionary. The Waxman amendment requires EPA to regulate 90% of the area source emissions of each hazardous air pollutant. EPA may elect to establish controls based on "generally available control technology" in lieu of the more stringent controls based on "maximum achievable control technology" that would apply to major sources.

No "bright-line" residual risk standard.—The technology-based standards required for major and area sources under the amendment may not eliminate all health risks from toxic emissions. To address the "residual risks" that may remain, the amendment requires EPA to report to Congress on legislative alternatives within eight years. If Congress does not act on the agency recommendations, existing law (which requires "protection of the public health with an ample margin of safety") will remain in effect. The amendment does not incorporate the bright-line one-in-one-million standard of acceptable residual risk proposed in H.R. 2585.

Narrower alternative emission limitations.—H.R. 3030 allowed sources subject to emission standards to comply with alternative emission limitations upon a showing that the source poses only a "negligible risk." In the case of sources with carcinogenic emissions, the amendment restricts this provision to instances where the source establishes to the permitting authority that the alternative limitations will protect the most exposed person from a lifetime cancer risk greater than 1 in 1 million.

*B. Protection of the Great Lakes and Chesapeake Bay*

Rep. Sikorski (D. Minn.) offered an amendment to increase the protection of the Great Lakes from airborne deposition of toxic chemicals. This amendment shortened the time for EPA promulgation of regulations from five years to three years and explicitly required EPA to consider effects due to bioaccumulation and indirect exposure pathways. The amendment also extended similar protection to the Chesapeake Bay. The Sikorski amendment passed unanimously.

*C. Accidental releases*

Toxic emissions can escape into the atmosphere by accidental as well as routine releases. In fact, between 1980 and 1987, there were more than 11,000 accidental toxic releases resulting in more than 300 deaths and more than 10,000 injuries. Both Rep. Richardson (D. N.M.) and Rep. Barton (R. Tex.) offered amendments to strengthen the accidental release provisions of H.R. 3030. However, both amendments were withdrawn after the members agreed to try to work out the differences. No final agreement was reached during the markup, leaving the accidental release issue pending for resolution before or on the House floor.

V. TITLE V: ACID RAIN

The Committee passed a substitute to the acid rain title offered by Rep. Sharp (D. Ind.) by a 39 to 4 vote. The substitute achieves the same level of emission reductions promised by H.R. 3030, while striking an accommodation between the conflicting interests of "clean" and "dirty" utilities in the allocation of pollution allowances. (See issue 17 of Clean Air Facts for a detailed discussion of acid rain provisions of H.R. 3030.)

A summary of the key provisions of the Sharp substitute follows:

Expansion of the allowance system.—H.R. 3030 establishes an allowance trading system to control sulfur dioxide ($SO_2$) emissions from large "dirty" powerplants (i.e., plants with $SO_2$ emissions greater than 1.2 lbs/mmBtu and a capacity greater than 75 MWe). In the case of other plants, however, the bill limited their emission rate to their 1985 emission rate, but did not subject the plants to individual tonnage caps under the allowance system.

The Sharp amendment eliminates the dual system of regulation. It expands the allowance system to cover all electric utility powerplants. This change enhances the effectiveness of the allowance program by eliminating the potential for utilities to shift emissions from capped to uncapped plants. At the same time, it gives the rate-frozen plants the flexibility to increase their emission rates, so long as the plants meet their annual tonnage limitations.

Extra allowances for clean utilities.—H.R. 3030 contains a "greenfield cap," which provides that new powerplants must purchase emission offsets before starting operations. This poses a potential problem for existing

utilities with low emission rates. Utilities that are already clean could find it difficult to extract significant emission allowances from their existing units to transfer to new units.

The Sharp amendment preserves the greenfield cap, but provides relief to clean utilities by increasing their available pool of allowances. Currently, clean utilities emit approximately 2.5 million tons of $SO_2$ annually. Under the Sharp amendment, these utilities will be given nearly 3.5 million tons of allowances. This 1 million-ton cushion provides a 40% growth allowance for the clean utilities. (The growth cushion comes from several sources, including expansion in capacity assumed under H.R. 3030 (0.5 million tons), requirements that small high-emitting plants reduce their $SO_2$ emissions to a 1.2 lbs/mmBtu rate (0.25 million tons, and a direct transfer of allowances from big high-emitting plants (0.18 million tons).)

Fixes for the "Class of '85".—H.R. 3030 allocates allowances based on emission rates in 1985 and fuel consumption during 1985-87. For some utilities (the "Class of '85"), these periods are not representative of normal operating conditions. For instance, for some utilities, emission rates were abnormally low in 1985. The Sharp amendment adjusts the allocation formulas in H.R. 3030 to more closely reflect normal operating conditions for utilities facing a Class of '85 problem.

Incentives for scrubbing.—The Sharp amendment contains several incentives intended to encourage utilities to reduce their emissions by installing "scrubbers" on plants that continue to burn high-sulfur coal, rather than by switching fuels. The incentives include a one-year delay in the compliance date for utilities that scrub (with the lost tonnage to be recouped by the utility over the next four years) and bonus allowances awarded to utilities that scrub their emissions to a rate below 1.2 lbs/mmBtu (with the lost tonnage to be recouped by lowering every utility's emission rate by 6%). These provisions benefit mine workers and companies selling high-sulfur coal, who fear that H.R. 3030 could cause many utilities to lower emissions by switching from high-sulfur coal to low-sulfur coal, thus jeopardizing the future of high-sulfur coal mines.

The "Oxley auction".—The Sharp amendment includes a mechanism for auctioning allowances designed by Rep. Oxley (R. Ohio). Under the "Oxley auction," all utilities contribute 5% of their annual allowances to be auctioned by EPA each June. The proceeds of the auctions are then redistributed pro rata to the utilities. The intent of the auction is to insure that a market in allowances is created.

Increased $NO_x$ reductions.—The Sharp amendment requires EPA to reduce $NO_x$ emissions from utilities by at least 2.5 million tons below the levels predicted in 2000 (versus a 2.0 million ton reduction under H.R. 3030).

Incentives for conservation and renewable energy.—The Sharp amendment includes several incentives for conservation and renewable energy. The amendment prohibits utilities in a state from trading $SO_2$ emission reductions against $NO_x$ reductions (or vice-versa) unless the state has adopted ratemaking procedures that reward energy conservation. The Sharp amendment also incorporates provisions promoted by Reps. Markey (D. Mass.) and Moorhead (R. Cal.) that transfer allowances to utilities that undertake energy conservation or develop renewable energy resources in advance of regulation under the acid rain title.

VI. TITLES IV AND VI: PERMITTING AND ENFORCEMENT

Titles IV and VI 3030 contain the permitting and enforcement provisions of the bill. Although highly technical, these titles are the "nerve center" of the legislation. They translate the statutory mandates set our in other titles into site-specific requirements for individual sources and insure the enforceability of those requirements.

To expedite the bill, the Committee agreed to defer negotiations over titles IV and VI to the period between the Committee markup and floor consideration. If agreements cannot be worked out during this period, controversial votes on these titles can be expected during the debate on the House floor.

The Committee did adopt two amendments to title IV, the permitting title. By voice vote, it adopted an amendment offered by Reps. Boucher (D. Va.) and Wyden (D. Ore.) to establish special permitting procedures for small businesses. It also adopted by voice vote an amendment offered by Rep. Bliley (R. Va.) that eliminated EPA's authority to veto individual state permits.

VII. MAJOR UNRESOLVED ISSUES

In addition to the unresolved issues mentioned above, which generally involve strengthening provisions already in H.R. 3030, there are three additional major clean air issues likely to be debated on the House floor. These issues represent clean air problems not addressed in H.R. 3030.

*A. Protection of national parks*

Man-made pollution in the form of pervasive "regional haze" impairs scenic vistas in the national parks more than 90% of the time. Nevertheless, despite a congressional mandate in the 1977 Clean Air Act Amendments, EPA has never acted to protect in the national parks and other clean air areas from this haze.

Rep. Wyden announced during the full Committee markup that he will offer an amendment on the House floor to force EPA to regulate regional haze and protect visibility in the national parks.

*B. Ozone depletion*

While ozone at ground level, where people can breath it, is a dangerous pollutant, ozone in the upper atmosphere is vital to life on earth, because it shields the planet from ultraviolet radiation, Rep. Bates announced during the markup that he will offer an amendment on the House floor to phase-out the production of chemicals such as CFCs and halons that deplete the ozone layer.

*C. Air pollution on the Outer Continental Shelf*

Oil and gas activities on the outer continental shelf can cause tremendous onshore air pollution problems. In fact, a single uncontrolled facility can emit more pollution than 100,000 automobiles. An amendment is likely to be offered on the House floor that would require EPA to regulate OCS facilities in the same manner as nearby onshore facilities.

---

[From the Clean Air Facts, May 3, 1990]

TITLE IV AND TITLE VI OF H.R. 3030: PRESIDENT BUSH'S PERMITTING AND ENFORCEMENT PROPOSALS

H.R. 3030, "The Clean Air Act Amendments of 1990," deals with three major air pollution problems. Titles I and II focus on smog, Title III on hazardous air pollutants, and Title V on acid rain.

The Energy and Commerce Committee reached broad compromises on all three issues. Those agreement, which passed by overwhelming margins, create a generally sound and effective air pollution control program.

Central to this program, however, is an assumption that the legislation will contain effective permitting and enforcement provisions. Title IV of H.R. 3030 establishes a new permitting program for the Clean Air Act; Title VI clarifies the law's enforcement provisions. If either title proves ineffective, then the smog, toxic air pollutant, and acid rain programs will be seriously hindered.

For example, changes made to the enforcement title leave large sections of the Act, including provisions that control the release of CFCs to prevent ozone depletion, unenforceable in court. Moreover, EPA's central compliance tool—the Administrative Enforcement Order—is rendered ineffective and unenforceable.

Titles IV and VI received little attention during the Energy and Commerce Committee's mark-ups. Permitting and enforcement amendment will, however, be offered on the House floor. Accordingly, this Fact Sheet will describe the two titles and the problems that the Waxman-Bryant Amendment will seek to address.

I. TITLE IV: PERMITS

*A. Background*

Title IV establishes a comprehensive program for permitting stationary sources of air pollutants. This title, which is patterned after the Clean Water Act's permitting program, should strengthen the implementation and enforcement of the Clean Air Act. It is potentially H.R. 3030's most important procedural reform because it can translate the bill's abstract standards into concrete requirements for individual facilities.

Although the current Clean Air Act has no permit provisions, most other federal environmental laws—including the Clean Water Act, the Resource Conservation and Recovery Act, and the Federal Insecticide, Fungicide, and Rodenticide Act—require permits. And a substantial majority of the states (about 35 in all) already require operating permits for most air pollution sources.

An effective permit program can clearify and make more enforceable a source's pollution control requirements. Under existing law, pollution control obligations may be scattered throughout many obscure and ambiguous state and federal regulations. In many cases, sources are not required to submit periodic complicance reports to EPA or the states. It is much easier for a source to understand its obligations, and for the state to enforce them, if all of a source's obligations are combined into one permit. This is also the reason why sources should be required to file periodic reports that monitor compliance.

An effective permit program can make sources more accountable for their emissions, and can relieve much of the administrative burden from state and local agencies. It is a ready vehicle for states to take over administration, subject to federal oversight, of the significant parts of the air toxics and acid rain programs. In addition, by requiring that both the permit and the periodic compliance reports be publicly available, interested citizens will be able to review and help enforce a source's obligations under the Act.

*B. How the title IV permit program works*

Under H.R. 3030, states would be required to submit to EPA comprehensive permit programs for regulating stationary sources. The permitting requirements would extend to sources that are subject to new source performance standards, emission standards for hazardous air pollutants, requirements for preventing significant deterioration (PSD) of air quality, nonattainment new and existing source review, and acid deposition controls under Title V. They also apply to all sources of air pollution emitting over 100 tons a year.

It is illegal for any of the affected sources to violate the terms of a permit or to operate without a permit after any permit program approved or promulgated by EPA is in effect. If a state fails to submit a permit program, EPA can apply sanctions and must promulgate a federal permit program for the state.

The minimum elements of permit programs, which are to be set by EPA, include requirements for adequate state authority and permit fees. The permit fees will be used ot recoup all direct and indirect costs of administering the air pollution control program related to permitted sources.

In addition, states must have the ability to modify or terminate permits "for cause." "Cause" would include situations where the source failed to comply with a permit term, misrepresented a material fact in a permit application or report, or substantially endangered the public health or welfare.

Once a permit program is approved, sources that are required to obtain permits must submit timely and complete permit applications. In issuing permits, state agencies must set forth inspection, entry, and adequate monitoring and reporting requirements to assure compliance with regulatory requirements. Affected sources must also submit periodic compliance certifications.

EPA may object to proposed permits if they fail to meet any Clean Air Act requirements. If a state agency does not adequately respond to the objection, EPA can issue or deny the permit on its own authority.

Title IV contains special provisions to deal with small sources, temporary sources (e.g., asbestos demolition contractors), and numerous similar sources within a geographical area. This last provision is designed to reduce the administrative burden of permitting large numbers of similar sources, which may be small individually, but which in the aggregate require control.

*C. The Waxman-Bryant Amendment to Title IV*

The members of the Energy and Commerce Committee agreed to try to craft a compromise Title IV Amendment before H.R. 3030 reaches the House floor for consideration. If a consensus is not reached, several permitting amendments may be offered. The Clean Air Working Group, for instance, has indicated it would like to limit the scope of the permit program, reduce EPA's enforcement role, and restrict the certification and fee provisions, Other furdamental weakening changes may also be proposed.

These changes would not only impair the effectiveness of the new smog, toxics, and acid rain titles, but would put enormous industry pressure on state and local governments as they administer the permit program. If adopted, state agencies could find themselves mired in endless filings and exemption requests. The National Clean Air Coalition and other environmental and public health organizations strongly oppose any weakening amendments to the President's proposal.

Congressmen Waxman and Bryant will also offer a permitting amendment if no agreement is reached. The Waxman-Bryant Amendment is not an attempt to rewrite Title IV. The President's permit program is basically a sound approach to implementing the Clean Air program. There are, however, three major defects in the title that need to be fixed. These problems are summarized below.

Problem 1: Title IV Creates a "Permit Shield" to the Clean Air Act's Requirements

An obscure provision in Title IV could transform the permit from a helpful enforcement tool into a shield that violators can use to bar all enforcement actions. It provides that sources complying with their permits cannot be found in violation of any Clean Air Act requirement, even if the source is violating provisions of the Act that are not addressed in the permit. A source could, for example, violate H.R. 3030's toxic air pollutant requirements with impunity if it has a valid permit for smog-causing pollutants. The permit shield also prevents enforcement of new regulations that are adopted after the permit is issued.

The Waxman-Bryant Amendment will eliminate the permit shield. The Amendment would, however, allow sources that comply with a permit to be completely protected against enforcement actions for violating requirements that are specifically addressed in the permit.

Problem 2: EPA has Unlimited Discretion to Waive Permit Requirements

Title IV allows EPA to exempt an unlimited number of sources from the permit requirements if it finds that an exemption would be "consistent with the purposes of the Act." This effectively makes all permitting requirements discretionary.

The Waxman-Bryant Amendment will make the permit program mandatory for all major sources of air pollution, but retain (and in fact increase) EPA's discretion to tailor permit requirements for small sources.

Problem 3: Permits Can be Postponed Indefinitely

Title IV lacks any deadline for final action on permit applications. In effect, this allows the permitting agency to delay issuing permits indefinitely, thereby frustrating the intent and effectiveness of the whole permit system.

The Waxman-Bryant Amendment will require the state or federal permitting agency to act on permit applications within nine months. To avoid an initial logjam of applications, it will phase-in this requirement in the program's early years.

II. TITLE VI: ENFORCEMENT

*A. Background*

As originally introduced, H.R. 3030's enforcement provisions are intended to incorporate into the Clean Air Act some of the flexible enforcement authorities that are contained in other, more recently amended environmental statutes. However, a seemingly technical change in an amendment adopted at subcommittee adds a provision to the bill that significantly weakens current law by eliminating existing authority to enforce important provisions of the Clean Air Act.

The new and refined tools in the original H.R. 3030 can make EPA and state agencies more effective in implementing the law. Title VI makes two basic improvements in the enforcement provisions: (1) it gives EPA new authority to take enforcement action administratively, and (2) it stiffens criminal sanctions through longer imprisonment, higher fines, and double sanctions for repeate violations.

*B. Administrative Enforcement Provisions*

Administrative enforcement authority is an important adjunct to trraditional civil and criminal enforcement. It enables EPA to resolve many violations without litigation, which means faster and less costly enforcement actions. The most significant new administrative enforcement provisions in H.R. 3030 include:

**Administrative Compliance Orders*—EPA can issue administrative compliance orders, so that the Agency can resolve violations administratively while avoiding long extensions of applicable compliance deadlines. Administrative orders will not insulate sources from civil or criminal remedies. These administrative compliance orders supercede, and effectively repeal, the provisions under existing law that allow EPA and states to grant "delayed compliance orders."

**Administrative Penalties*—EPA is authorized to issue administrative penalty orders with a presumptive cap of $200,000. The penalty limit can be increased for cases that routinely involve multiple violations.

**Subpeona Authority*—EPA is given express authority to issue administrative subpeonas in support of its enforcement activities.

**Injunctions and Emergency Orders*—EPA would be able to authorize injunctive actions and emergency orders for actions threatening the environment or public welfare. Existing law limits this remedy to actions that threaten human health.

*C. The criminal provisions*

The revised criminal sanctions update and expand the current Clean Air Act provisions. These sanctions are EPA's strongest weapon against serious violations, and have been very effective in other environmental laws. The most notable changes include:

**Criminal Fines and Sentencing*—Criminal fines and sentences are increased. The maximum criminal fine is increased to $250,000 for felony violations and the maximum term of imprisonment is increased to 5 years.

**Sanctions*—New misdemeanor- and felony-level criminal sanctions are authorized for certain violations, including knowing violations and actions that place other people in imminent danger of death or serious bodily injury.

**Penalty Assessment*—The maximum statutory penalty may be assessed for each day of each violation, including each day of a multi-day averaging period. In addition, once EPA has made a prima facie case that establishes a violation, the burden of proving any intervening days of compliance rests with the source.

*D. The Waxman-Bryant amendment to title VI*

As in title IV, members of the Energy and Commerce Committee agreed to try to craft a compromise Title VI amendment before H.R. 3030 reaches the House floor for consideration. If a consensus is not reached, several enforcement amendments may be offered.

The Clean Air Working Group is interested in weakening many of Title VI's provisions. The changes they are seeking include limiting criminal and civil liability and expanding the opportunities for violators to

seek procedural delays. These changes are opposed by the National Clean Air Coalition and other environmental groups.

Despite the many sensible provisions of Title VI, there are two significant problems that need to be addressed. Congressman Waxman and Bryant will offer an amendment to fix these statutory omissions if no committee consensus is reached.

Problem 1: EPA's Clean Air Act Enforcement Authority Is Undermined

A seemingly technical change in an amendment at subcommittee significantly weakens current law by eliminating judicial enforcement of EPA's single most effective compliance tool, the Administrative Order. The change would render EPA's existing enforcement program toothless. In addition, the same amendment eliminates authority for judicial enforcement of Clean Air Act provisions for the control of ozone depleting chemicals. Authority to judicially enforce new air toxic provisions to both protect the Great Lakes and prevent accidental air toxic releases is also eliminated.

The Waxman-Bryant Amendment will restore existing authority to assure that all Clean Air Act requirements are fully enforceable, as provided in President Bush's original proposal.

Problem 2: The Ability of Individual Citizens to Enforce the Act is Still Restricted

Citizen enforcement through "citizen suits" is a vital complement to state and federal enforcement actions. During the early 1980s, the only effective enforcement of federal environmental laws was citizen involvement through lawsuits.

The Waxman-Bryant Amendment will enhance citizen enforcement rights. It will provide that citizens can sue to enforce permit terms and seek penalties for past violations (as is the case with other federal environmental laws), require EPA to respond to citizen petitions, and clarify court decisions that have frustrated citizen enforcement.

THE SIKORSKI-GREEN WARRANTY AMENDMENT

H.R. 3030'S IMPACT ON THE CLEAN AIR ACT'S WARRANTY PROVISIONS

The existing Clean Air Act requires carmakers to provide warranties for almost all pollution control equipment for 5 years/50,000 miles. H.R. 3030 would reduce those warranty requirements to 2 years/24,000 miles for all but two auto parts related to emissions control. This is one of only two provisions in H.R. 3030 that actually weakens current law (the other is a change barring judicial enforcement of numerous Clean Air Act requirements). The warranty requirements for the catalytic converter and Electronic Control Unit (ECU) would remain at 5 years/50,000 miles.

THE SIKORSKI-GREEN AMENDMENT

*What the Amendment Does*

The Sikorski-Green Amendment amends Title II of H.R. 3030 to extend the manufacturers' warranties for catalytic converters and electronic control units (ECU) to 8 years/80,000 miles.

*Background*

Since 1970, the aftermarket industry—which is made up of thousands of small, independently owned gas stations around the country—has been urging Congress to reduce warranties to 2 years/24,000 miles. These stations have argued that the longer warranties resulted in car owners bringing their cars back to dealers for servicing, instead of to local gas stations, because of an expectation that repairs might be covered under the pollution control warranty.

Consumer groups have strongly opposed any reduction in the warranties, as that would directly strip existing benefits from current law. Environmentalists also opposed weakening the law because shorter warranties mean carmakers have no obligation to make durable equipment, and automobile emissions increase dramatically when pollution control equipment wears out.

A compromise was reached last year between the aftermarket industry, environmentalists, and consumer groups that balances their legitimate concerns. The agreement would cut warranties on most equipment to 2 years/24,000 miles, but extend the warranty for catalytic converters and ECUs to 8 years/80,000 miles. The catalytic converter and ECU are the most important—and the most expensive—parts of a car's pollution control system. Longer warranties on these parts ensures that emissions won't increase and offsets any losses to consumers from the other warranty reductions.

The longer warranty for catalytic converters and ECUs is also important to consumers because H.R. 3030 increases the amount car owners have to pay under the Act's auto emission inspection and maintenance (I/M) program. Under current law, car owners can waive emission-related repairs if the cost exceeds $75. H.R. 3030 increases the waiver threshold to $450. As now written, H.R. 3030 would increase the burden individual car owners have to clean the air while dramatically cutting the responsibility carmakers have to make pollution equipment last.

The Energy and Commerce Committee's action scuttles the carefully balanced agreement reached by the mechanics, environmentalists, and consumer advocates, and unfairly tilts the deal toward carmakers at the expense of consumers and the environment. The Sikorski-Green amendment restores the original agreement. If it should be defeated, another amendment will be offered that restores the current law warranty requirement of 5 years/50,000 miles for all emission-related equipment.

*Who supports the Sikorski-Green amendments*

The Sikorski-Green Amendment is supported by the Automotive Parts & Accessories Association (APAA), the Automotive Service Association (ASA), the Automotive Warehouse Distributors Association (AWDA), the Auto International Association (AIA), and the Specialty Equipment Market Association (SEMA), which collectively represent over 15,000 companies, most of which are small businesses.

The Amendment is also supported by many environmental and consumer organizations including the Center for Auto Safety, Consumer Federation of America, National Wildlife Federation, Sierra Club, Audubon Society, American Lung Association, and the National Clean Air Coalition.

Among the state and local government groups supporting the amendment are the National Governors Association, National League of Cities, and the National Association of Counties.

*Who opposes the Sikorski-Green amendment*

The Sikorski-Green Amendment is opposed by the major automobile makers, the Motor and Equipment Manufacturers Association (MEMA), and Automotive Service Industry Association (ASIA).

[From the Clean Air Facts, May 8, 1990]

THE WAXMAN-LEWIS CLEAN-FUEL VEHICLE AMENDMENT

PRESIDENT BUSH'S ORIGINAL CLEAN FUELS PROGRAM

The President's clean air proposal, H.R. 3030 as introduced, contained a major initiative to promote the increased use of clean fuels such as natural gas and ethanol in the nation's most polluted cities. The President described the program as "the most innovative and far-reaching component" of the Administration's clean air bill—a "bold, new initiative to reconcile the automobile with the environment, ensuring continued economic growth without disruptive driving controls."

The program had two key elements: (1) a proposal to put one million low-polluting, clean-fueled vehicles a year on the road in the nation's nine most polluted cities; and (2) a proposal to require new urban buses in all large cities to shift to clean alternative fuels.

THE PROVISIONS OF H.R. 3030 AS REPORTED

The bill reported by the Energy and Commerce Committee deleted the most important elements of the President's innovative clean-fuels program. It eliminated the requirement that car makers develop and produce a new generation of ultra-clean vehicles for use in the nine most polluted cities. It also eliminated the requirement that oil companies develop new fuels for these ultra-clean vehicles.

In addition, the reported bill watered down the urban bus program. Under the reported bill, so-called "clean-fuel buses" are required to be no cleaner than conventional diesel buses. And in the early years of the program, they can even pollute more than current law allows for conventional diesel buses.

WHAT THE WAXMAN-LEWIS AMENDMENT DOES

The Waxman-Lewis amendment will strengthen the clean-fuel provisions of H.R. 3030 as reported in three ways.

*Restoration of the President's Original Clean-Vehicle Program*

The Waxman-Lewis amendment restores the mandate that car makers produce—and oil companies fuel—one million clean-fuel vehicles each year. To guarantee "fuel neutrality," the amendment establishes specific emission standards that these clean-fuel vehicles must meet. The standards follow the recommendations of California and New York and call for a 50% reduction in smog-forming and toxic emissions from 1995 through 2000 and a 75% reduction thereafter.

Under this approach, any fuel-and-vehicle combination that meets the emissions standards satisfies the requirements of the program. It is likely that at least the first phase standards, which call for 50% reductions, will be met through a combination of cleaner gasoline and improved emission controls on the vehicle.

*Tougher Urban Bus Program*

The Waxman-Lewis amendment tightens the emission standards for clean-fuel urban buses. Under the Waxman-Lewis standards, clean-fuel urban buses will once again be required to pollute less than conventional diesel buses—just as proposed in the President's original program.

*Stronger Fleet Vehicle Program*

The reported bill added a modest program to require the use of clean alternative fuels

in vehicles that are part of centrally fueled fleets, such as taxicabs and delivery vans. The Waxman-Lewis amendment will substantially strengthen this program by incorporating recommendations proposed by the Texas Land Office.

In particular, the amendment will increase the number of cities covered by the program (to include all seriously polluted areas), expand the coverage of the program to include light- and heavy-duty trucks, and set tighter emission standards for clean-fuel fleet vehicles.

THE NEED FOR A STRONG CLEAN-FUEL VEHICLE PROGRAM

Ozone pollution is the nation's most intractable air pollution problem. Despite twenty years of efforts, over 100 cities remain out of compliance with the federal health standard for ozone. To reach compliance, the most heavily polluted cities must reduce levels of hydrocarbon emissions by 50% to 80%.

According to the Office of Technology Assessment, even if all available control technologies are implemented, many cities (perhaps as many as 50) will remain in violation of the ozone standard. This means that new and innovative control strategies are necessary. Without them, according to OTA, the most heavily polluted urban areas will never achieve the ozone standard.

The most promising new technologies involve the use of clean fuels in motor vehicles. Cars and trucks account for half of the nation's ozone pollution—and even more in many cities. The use of clean-burning fuels such as natural gas and ethanol can reduce these motor vehicle emissions by 80% to 90%, according to EPA. Moreover, EPA estimates that these emission reductions can be achieved at no additional cost to consumers or the economy. There is no other realistic way to achieve these emission reductions.

A strong clean-fuel program such as that proposed in the Waxman-Lewis amendment can also reduce toxic emissions by as much as 90%. According to EPA, emissions of cars and trucks cause over a thousand cancer cases annually—more than half of the national total of cancer cases attributable to toxic emissions.

---

[From the Clean Air Facts, May 9, 1990]

THE RICHARDSON-MADIGAN REFORMULATED GAS AMENDMENT

KEY TERMS

Aromatics—These toxic compounds (i.e., benzene, toluene, xylene) are used in gasoline to boost octane. Each oil company mixes a different "recipe" for its fuel, so the relative amounts of the aromatics can vary. Aromatics are the primary reason that gasoline emits toxic pollutants. High-octane gasoline contains up to 45% aromatics.

Reformulated Gasoline—This is gasoline that is specially formulated to lower ozone-forming and toxic emissions. Emissions are reduced by replacing aromatics with much cleaner alcohols or alcohol derivatives, such as ethyl tertiary buthyl ether (ETBE), which can be made from fermented corn, grains, or other farm products.

THE RICHARDSON-MADIGAN AMENDMENT

*What the amendment does*

The Richardson-Madigan Amendment requires oil companies to sell only reformulated gasoline in all serious, severe, and extreme nonattainment areas (27 cities). This gasoline will replace both current leaded and unleaded products. The Amendment requires that the ozone-forming potential of the gasoline be reduced by 15%, and establishes minimum oxygen content (2.7%) and maximum aromatic content (25%) limits for the fuel. The requirement is effective in 1994. Waivers of the requirement are available if there is insufficient domestic capacity to meet the demand for reformulated gasoline.

*Background*

Throughout the 1980's, oil companies continually claimed that gasoline was being made as clean as possible. However, today's gasoline is actually much dirtier than the products sold ten years ago, because it contains more aromatic and volatile compounds than ever before.

Soon after President Bush unveiled his Clean Air bill last July—which contained an ambitious alternative fuels program—ARCO announced it would begin selling a new type of gasoline that achieved dramatic pollution reductions. Other companies have also recently discovered and begun marketing new gasoline formulas that pollute less.

The advent of reformulated gasoline is one of the most far-reaching developments in the fight against air pollution. The Richardson-Madigan Amendment, which was defeated by a 22-21 vote in the Energy and Commerce Committee, has important environmental, energy, agricultural, and economic implications.

*Environmental benefits*

Reformulated gasoline cuts pollution significantly. In New York City, for instance, 20% of all the reductions needed to meet the federal health standards can be achieved simply through the use of reformulated gasoline.

One of the reasons that reformulated gasoline is so effective is that it is the one control strategy that helps reduce pollution from all vehicles, including the *oldest* and *dirtiest cars.* According to OTA, these cars are a significant portion of the emissions inventory. Since they can't be retrofitted with pollution control equipment, the only way to reduce their pollution is through cleaner gasoline.

*Energy benefits*

For years our highest energy priority has been finding ways to reduce our dependence on foreign oil. Today, oil companies import hundreds of millions of dollars of aromatic compounds annually. These imports are expected to increase significantly in the next few years, reflecting a greater reliance on OPEC production. A large part of these imported chemicals can be eliminated if domestically produced alcohols and ethers, made from corn, wheat, or other crops, are used in place of aromatics in gasoline.

*Agricultural benefits*

By moving away from imported aromatics our nation's farmers will find a new demand for their products. The Richardson-Madigan Amendment boosts the agricultural community at the same time it cleans the air.

*Economic benefits*

Fighting air pollution is a zero-sum game. What we don't cut from one source we have to take from somewhere else. That's why the reformulated gasoline mandate can save our country billions of dollars. Instead of ratcheting down tighter and tighter on sources like dry cleaners, bakeries, and other small businesses—with increasing costs and diminishing returns—we can get the emission reductions we need at cheaper prices through the use of cleaner gasoline in *old* and new cars.

Reformulated gasoline may be the most cost-effective control option available. Since ARCO now sells its reformulated gasoline at no additional cost, its cost-effectiveness is *$0 per ton of* hydrocarbon emissions eliminated. A recent study indicates that a comprehensive reformulated gasoline program would cost about $1000 per ton, compared to the typical $5000 per ton cost of stationary source controls.

The switch from imported aromatics to domestic farm products has two other important economic impacts. First, it has a positive impact on our trade balance, as we will import less. Second, according to GAO, the new demand for American crops could save taxpayers over $1.2 billion per year in farm price support and other programs.

THE OIL COMPANY ARGUMENTS AGAINST THE RICHARDSON-MADIGAN AMENDMENT

The major oil companies oppose the Richardson-Madigan Amendment. Some of their primary criticisms are summarized below.

*The Amendment dictates the recipe for reformulated gasoline*

Many oil lobbyists are charging that their companies will be hamstrung by the Amendment's precise standards for oxygen, benzene, and aromatic hydrocarbon content. This is untrue. The Richardson-Madigan Amendment expressly allows these limits to be waived if a fuel using a different mix achieves equivalent or greater emission reduction.

*There isn't adequate capacity to meet demand*

This criticism accepts the notion that reformulated gasoline is available, but argues there won't be enough supply to meet the Richardson-Madigan 27 city mandate. To deal with this possibility, the Amendment provides for a series of waivers if there is insufficient domestic capacity to meet demand.

*The Richardson-Madigan mandate will cost billions*

The oil companies are concerned that a massive reformulated gasoline program will necessitate overhauling refineries, which could cost billions of dollars and add twenty-five cents to the cost of each gallon of gasoline. However, other analysts, such as the Congressional Research Service and Information Resources Inc., strongly disagree and estimate that gasoline can be reformulated for only a few pennies per gallon.

*Reformulated gasoline will cut some pollution but increase others*

Although reformulated gasoline will clearly cut hydrocarbon emissions, some companies argue that it could increase emissions of nitrogen oxides. However, the Richardson-Madigan Amendment *expressly prohibits* a company from selling a reformulated gasoline if it would cause any increase in nitrogen oxide emissions. According to the California Air Resources Board (CARB), gasoline reformulation can reduce hydrocarbon emissions without increasing emissions of other harmful pollutants.

*Consumers won't buy reformulated gasoline*

Some lobbyists are arguing that the government can force oil companies to sell reformulated gasoline, but consumers won't buy it and will continue to use existing gasoline. This is impossible under the Richardson-Madigan Amendment, since only reformulated gasoline can be sold in the 27 affected cities. Moreover, consumers have expressed a preference for the reformulated gasoline on the market today.

[From the Clean Air Facts, May 10, 1990]

THE BATES-BOEHLERT AMENDMENT ON STRATOSPHERIC OZONE DEPLETION

THE BATES-BOEHLERT AMENDMENT AND H.R. 3030

The Bates-Boehlert amendment establishes a new program for the control of ozone-depleting chemicals very similar to that in H.R. 2699, the Stratospheric Ozone Protection Act, which has nearly 160 House cosponsors. The amendment also tracks the ozone protection program which passed the Senate overwhelmingly last January. As reported by the Energy and Commerce Committee, H.R. 3030 currently includes no provisions to reduce the release of ozone-depleting chemicals.

THE PROBLEM: DEPLETION OF THE STRATOSPHERIC OZONE LAYER

There is widespread scientific agreement that man-made chemicals, such as chlorofluorocarbons (CFCs), are destroying the stratospheric ozone layer, which shields the earth from the sun's dangerous ultraviolet (UV) radiation. As the ozone layer gets thinner, more harmful UV radiation reaches the planet's surface.

In the past several years, researchers have documented extensive damage to the ozone layer. On a global scale, depletion has occurred with unexpected rapidity, greatly outpacing predictions based upon computer models. A dramatic seasonal hole discovered in the ozone layer over Antarctica in 1985 was entirely unpredicted. The hole is now larger than the continental United States, and researchers believe that an ozone hole is also developing in the Northern hemisphere, where a much greater impact on populated areas is likely.

Scientists have identified a variety of very serious repercussions from the loss of our ozone shield, including a global increase in skin cancers and cataracts, suppression of the human immune system, potentially dramatic damages to agriculture and forests over the entire planet, and possible impacts on the food chain that supports much of the earth's marine life.

OZONE-DEPLETING CHEMICALS

Depletion of the ozone layer is caused primarily by the release into the atmosphere of CFCs and similar persistent man-made chemicals that rise into the stratosphere and release bromine or chlorine atoms. These atoms act as catalysts, causing reactions which destroy ozone. The chemicals can last for decades in the stratosphere—in some cases more than 100 years—continuing for their full life to cause ozone depletion.

According to the National Oceanic and Atmospheric Administration, more than 6 billion pounds of ozone-depleting chemicals are released into our planet's atmosphere each year. The U.S. alone releases more than 30 percent of this total, far more than any other nation.

There are in general two classes of ozone-depleting substances. The most dangerous ozone-depleting chemicals are CFCs, carbon tetrachloride, methyl chloroform, and synthetic varieties of halons. These are especially potent ozone depleters, either because they last an extremely long time in the stratosphere, or because they are very widely used and present a great threat in the aggregate.

Other chemicals, with a slightly different chemical construction than CFCs, are less persistent in the stratosphere, but are still a threat to the ozone layer. These chemicals are known as HCFCs, because they have the same basic chemical configuration as CFCs except for a hydrogen atom in place of one or more of the chlorine atoms. In many cases HCFCs are short-term substitutes to CFCs that can serve as a temporary solution until new substitutes, that do not deplete the ozone layer at all, can be developed. However, these chemicals must also be phased out in the long term or ozone depletion will continue.

THE MONTREAL PROTOCOL

In September 1987 an international agreement was reached to establish a global program to reduce the release of ozone-depleting chemicals. This agreement, the Montreal Protocol on Substances that Deplete the Ozone Layer, calls for a 50 percent cutback in CFC production by 1998.

There is widespread scientific agreement that the controls on ozone-depleting chemicals in the Montreal Protocol will not be adequate to protect the planet. Experts estimate that concentrations of stratospheric chlorine, the central compound responsible for depletion, will double in coming decades even with full implementation of the Montreal Protocol. Efforts are now underway to strengthen the Protocol. However, the international process has historically been slow and uncertain.

THE HEALTH AND ECONOMIC BENEFITS OF A PHASEOUT

EPA has estimated that a phaseout of CFCs and halons by the year 2000 will benefit the entire U.S. population born before 2075 by eliminating almost 159,000,000 cases of skin cancer, more than 3 million cancer deaths, and over 18,000,000 cases of cataracts. The phaseout of methyl chloroform will eliminate an additional 3,600,000 skin cancers, almost 65,000 cancer deaths, and more than 360,000 cases of cataracts.

EPA also estimates that the value of reduced agricultural damage exceeds $41 billion. Total economic benefits of a phaseout to the United States are approximately $58 billion.

Not considered in the estimates of benefits are the uncertain risks to all forms of life on land and sea. Marine ecosystems, many of which rely heavily on vulnerable kelps and algae, may be especially affected.

THE BATES-BOEHLERT AMENDMENT

Like the program overwhelmingly adopted by the Senate, this amendment includes a rapid time frame for the phaseout of the most destructive ozone-depleting chemicals, a long term program for phasing out use of other ozone-depleting substances, and provisions concerning recycling, labeling, international trade, and safe alternatives.

Phaseout of Class I Substances. The five most destructive CFCs, the three most destructive halons, carbon tetrachloride, and methyl chloroform are designated as Class I chemicals. They are placed on a phaseout schedule that calls for a 50% reduction in production by July 1, 1994, and a complete phaseout (except for medical uses) by July 1, 1997.

Phaseout of Class II Substances. The amendment also calls for a longer term phaseout of other, less destructive, ozone-depleting chemicals, which are called class II substances. The manufacture of products using these substances is barred after the year 2010, and the production and use of these ozone-depleting chemicals is barred (except for medical uses) effective 2020. An amendment placing a similar but slightly less aggressive program in the Senate Clean Air bill passed by an 80 to 16 vote.

Accelerated Schedule. The Administrator of EPA is authorized to accelerate the phaseout of either class I or class II substances if it is determined that safe alternatives are available, that a more rapid phaseout is needed because of increasing destruction of the ozone layer, or that an accelerated schedule is called for in revisions to the Montreal Protocol.

Recycling and Disposal. A program is established to promote and, where feasible, require the recycling of CFCs used in products such as air conditioners and refrigerators. A system is also put in place to assure that motor vehicle air conditioners are only serviced at qualified facilities where personnel are trained and equipped to recover and reuse CFCs. In addition, the program includes measures to minimize the release of ozone-depleting chemicals after disposal. Scientists estimate that up to a fifty percent reduction in the release of CFCs can be attained through this program.

Labeling. Products manufactured with ozone-depleting chemicals, or which contain such chemicals, are required to be clearly labeled so that consumers can be fully informed of impacts on the ozone layer when making choices about product purchases.

Nonessential Products. Nonessential products that deplete the ozone layer, such as CFC-containing party streamers and noise horns, are to be banned under EPA regulations.

Safe Alternatives. A program is included to assure that in developing alternatives to ozone-depleting chemicals, careful attention is given to the health and environmental impacts of substitutes. The effort to carefully screen substitutes, and encourage only those which are safe, is integral to a successful phaseout.

Trade Sanctions. Trade sanctions are included to leverage other nations to comply with the Montreal Protocol and, ultimately, to adopt ozone protection provisions as strong as those in place in the U.S. These provisions will assure that U.S. companies will not be put at a competitive disadvantage as a result of America's leadership in the effort to save the planet's ozone layer.

WHO SUPPORTS THE BATES-BOEHLERT AMENDMENT

The Bates-Boehlert Amendment is supported by environmental and public health groups, and state and local government organizations, including: the National Clean Air Coalition, the American Lung Association, the Sierra Club, the U.S. Public Interest Research Group, the National Wildlife Federation, the National League of Cities, the National Association of Counties, the National Conference of State Legislatures, and the Northeast States for Coordinated Air Use Management.

Mr. LENT. Mr. Chairman, I yield 9 minutes to the gentleman from Ohio [Mr. OXLEY], a member of the Subcommittee on Energy and Power.

Mr. OXLEY. Mr. Chairman, today we stand on the eve of casting the first floor votes in more than a decade to amend the Clean Air Act.

Significant progress has been made in reducing air pollutants over the last 10 years, despite a substantial increase in our demand for goods and services. These reductions are a testament to the fact that environmental laws can and do work. However, while we expect this progress to continue, there is now consensus that we are not doing

enough to protect the environment for future generations.

President Bush and the Congress are committed to enacting legislation that effectively strengthens the Clean Air Act, and today we are closer to that goal than we have been for many years. The legislation before us today represents a comprehensive clean air program, addressing acid rain, ozone and CO nonattainment, and air toxics.

This bill attempts to strike a balance between increased environmental protection and sustained economic growth, a balance which has been impossible to achieve under past proposals.

Mr. Chairman, all Americans want cleaner air. However, cleaning it up will be expensive. The surveys tell us that the environment is one of our Nation's top concerns. However, what the surveys do not tell us is exactly what Americans are willing to pay for cleaner air. While many people may be willing to sacrifice some expense and some convenience for a better environment, I doubt many people are willing to pay with their jobs. I am also not sure that by requiring our constituents to pay anywhere from $20 to $50 billion a year they will believe that they are getting their money's worth.

The Clean Air Act Amendments of 1989 is one of the most comprehensive and complex pieces of environmental legislation to come before us in years. This bill affects every industry, every business, every consumer in our Nation. I believe that these industries, these businesses, these consumers support the objective of clean air as much as we do.

The differences that we have worked long and hard to resolve center around how do we reach the goal of improving air quality. Success will require sacrifice. Who do we ask to make the sacrifice?

Because of the configuration of auto and autoparts manufacturing, industry heavily reliant on electricity, and coal mining, my home State of Ohio will be significantly impacted under every title of this bill. My constituents will be called upon to make sacrifices, often more than their share.

Certain provisions of H.R. 3030 are improvements not only to the quality of air, but also to the quality of life my constituents now enjoy. Other provisions are impediments to maintaining that way of life. The bill includes strict pollution control requirements and timetables to bring cities into compliance with health standards.

It requires industries to install the "best available technology" to control sources of air toxics, and it includes the most stringent acid rain proposal ever reported. Some of these sweeping controls on automobiles, factories, and powerplants are a result of compromises struck to meet President Bush's test of "balance and reasonableness."

The mobile source provisions of this bill are tough. However, to soften the blow on the auto industry, I am happy to say that we struck a compromise on tailpipe emission standards. It is my hope that we do not upset this compromise and add additional costs to the auto industry, to workers, and to consumers either on the House floor or in conference. Further, I would hope that we look carefully at all proposed changes in the mobile source provisions and make sure that what is promoted as "necessary for environmental protection" will actually result in improved air quality.

Under the air toxics section, we struck a delicate balance between industry and the environment by requiring technology standards for all categories of major sources while preserving the standard in current law for health-based standards.

Perhaps the toughest compromise to strike was that regarding acid rain. While I supported the acid rain agreement worked out in the Energy and Commerce Committee, I must admit that I believe the process has been flawed from the beginning.

Ten years ago we established a taxpayer funded study, costing more than $500 million, to be the definitive statement on acid rain. Just a few months short of the final statement, we are saying it was just another worthless Government study and that despite the fact that we are not scientists, we know the answers. This rush to the finish not only wastes taxpayer dollars, it ignores the interim reports published by NAPAP which indicated that acid rain is not a serious environmental problem.

This chicken-little mentality will cost my home State of Ohio between $1.5 and $2 billion a year. These costs will result in electric rate increases of 10 to 40 percent and an estimated loss of 15,000 mining and related jobs. In my district, a steel plant, which already pays $2 million a month for electricity, faces double-digit rate increases. In the Ohio Valley, an aluminum producer faces up to 40 percent rate increase.

One key element of title V of H.R. 3030 was to provide for the most cost-effective sulfur dioxide emission reductions. However, it pitted one region of the country against the others. Within these confines proposed by President Bush, it was difficult to protect jobs in the Midwest and provide for potential growth elsewhere. While the bill still caps all future growth, I am happy that we included some assistance for those units nearing completion, such as the Zimmer plant in my home State.

Another key component of the President's bill was the concept of allowing the market to encourage reductions in pollution. This provision also caused divisions between the Midwest and the other States. To blunt the argument that the Midwest would hoard allowances, and not give access to utilities in other States, I am happy to say that my proposal for auctioning allowances was accepted as part of the acid-rain compromise. The allowance auction will provide money to the Midwest utilities faster, as they work to retool and meet the costs of complying with the new requirements. The auctioning of allowances will also help to ensure that allowances are available to utilities across the Nation when needed for economic growth. To accomplish these goals, the bill provides for an early voluntary auction in 1992 and annual auctions commencing in 1993.

Mr. Chairman, it is our challenge to solve the scientific, economic, and environmental controversies and enact a clean air policy that improves both the public health and the economic well-being of all American people. We have learned, our technology has advanced, every step along the way we have tried to build upon our knowledge to improve the health, the economic opportunity, and the lives of our people.

While this bill is far from perfect, we have crafted a compromise that goes a long way toward ensuring a better environment for future generations.

There may be attempts on the floor to expand this bill to include provisions addressing stratospheric ozone depletion. While ozone depletion deserves attention, we should not mandate control schedules that are inconsistent with those to be agreed upon next month at the meeting of the parties to the Montreal protocol. Should an agreement not be reached today, I am prepared to offer an amendment with my colleague Mr. BRUCE which would provide for the phaseout of ozone depleters in a manner consistent with the terms of the Montreal protocol.

In summary, Mr. Chairman, I want to applaud President Bush, my colleagues on the Energy and Commerce Committee, and American industry for the steps we all have taken to meet the challenge of economic progress and environmental responsibility.

President Bush took the initiative last year and submitted H.R. 3030 which represents the first comprehensive reauthorization bill introduced by an administration since the Clean Air Act was last revised in 1977.

My colleagues on the Energy and Commerce Committee have worked very hard to focus on real, identifiable environmental needs, and meet those needs with financially prudent policy.

And, American industry should be commended for their efforts to improve our way of life, not only materially, but also environmentally. Let us not forget that it is because we have continual economic progress that we

are able to afford environmental protection. It is a luxury not all nations enjoy.

The path to a cleaner, safer environment is long and often painful. Today we take another step along that path.

□ 1400

Mr. DINGELL. Mr. Chairman, I yield 10 minutes to the distinguished gentleman from Indiana [Mr. SHARP], the chairman of the Subcommittee on Energy and Power.

Mr. SHARP. Mr. Chairman, after more than a decade of work, frustration and hope, Congress will take steps today to fulfill the promise of cleaner air for all Americans. This week we will rewrite and amend the Clean Air Act.

The act has served us well—many of the problems its authors first saw are on their way to a solution.

In other areas the act has simply not worked. Over 100 American cities do not offer their residents healthy air. This legislation will tackle that problem—with an ambitious but realistic new smog plan—and keep the promise of clean air.

Some chemicals used in industrial processes threaten the health and even the lives of our citizens. The current Clean Air Act attempted to provide the needed protection—and failed. Only 17 of hundreds of cancer causing, death-dealing air toxics ever got action from the Environmental Protection Agency. This bill will keep the promise of clean air.

And in another area, acid rain, this bill will keep the promise of clean air. Acid rain was not a part of the original Clean Air Act in 1970. Over the years, concern has mounted as sulfur dioxide and oxides of nitrogen, emitted largely by fossil-fuel-burning electric utilities and industrial boilers and processes, fouled lakes and streams in New England and elsewhere, killing fish and the waters themselves.

Combined with ozone, acid rain damaged trees and was implicated in the deterioration of buildings, statuary, car finishes and even the health of Americans.

This legislation tackles the problem of acid rain. It is very tough environmentally. And some of us fought hard to make changes to make the bill more fair to nine States in the Midwest and Southeast that bear a disproportional share of the burden for reducing acid rain. The legislation proposed by the President asked nine States, which produce 50 percent of the Nation's sulfur dioxide to reduce 77 percent of the bill's requirements. In fact, in the early years of the legislation, those States will be responsible for 90 percent of the bill's reduction requirements. We did not get cost-sharing, the type of fairness we felt entitled to—where other parts of the country would help pay for the reductions we were doing in their stead. But we did make changes to the proposal that provide real benefits to the workers and electric ratepayers of those States asked to bear more than their fair share of the burden.

Mr. Chairman, the acid rain program we have before us today is the result of hard-fought negotiations and hard-won concessions. It is carefully balanced to ensure that this Nation achieves a 10-million-ton reduction of sulfur dioxide and up to a 4-million-ton reduction of nitrogen oxides. We did not compromise the environmental goals of the President's bill. In fact, by providing incentives for the use of conservation and renewable energy sources, we have strengthened the bill environmentally.

Mr. Chairman, the acid rain proposal we will vote on this week contains modest but necessary incentives to minimize the job disruptions that will inevitably occur as we push this Nation toward cleaner air. In this case, the job losses we seek to minimize are those of industrial workers in energy intensive industries and workers who mine the high-sulfur coal our country has long depended on for electricity. This will be a miserable time in the high sulfur coal fields. We tried to ease what remains terrible economic news for many miners, their families and their communities.

The acid rain portion of the bill is balanced in terms of the compliance choices likely to be made by those who have to reduce emissions. The President's bill did not contemplate using any job-preserving technology. In contrast, our proposal promises to blunt the job loss, and keep some who would have lost their jobs employed. Technology, whether it is the newest generaton of scrubber technology that literally scrubs smoke clean of sulfur dioxide, or whether it is the still developing and promising clean coal technologies, will play a role in complying with this legislation. Technology can provide the greatest reductions of pollution, and can help get the job done early. Again, these incentives are modest, Mr. Chairman, but necessary and just to moderate what is predicted to be a body blow to entire communities in the high sulfur coal belt.

There is, Mr. Chairman, good news in the acid rain bill for other workers, other regions. It is inevitable that natural gas will become more and more the fuel for clean-burning applications. The natural gas industry stands to benefit greatly from the new markets available to it in this legislation, and particularly, in the acid rain section. Low sulfur coal, as well, which is found in the West and some Eastern portions of the United States, will find an expanded market from the need for compliance with tough control standards.

The President proposed, and we have adopted, a stringent cap on emissions growth. This cap will preserve the expensive and hard won reductions that will stop acid rain. It means that those currently emitting pollution at relatively low levels will be frozen at those levels, and it means that all new growth—new power plants that will be needed before the end of this century—will essentially have to buy reductions from existing sources to keep the level of pollution in the air at the 10-million-ton reduction level chosen by the administration. This is a big and expensive task. And it is not one that was contemplated by most of the previous legislation debated to solve the problem of acid rain. It significantly raises the stakes for the West and other high growth areas of this country.

The administration provided a new currency in air pollution, called allowances, to facilitate a new market in pollution reduction credits. Mr. Chairman, the committee has worked very hard to make that system work. We needed to guarantee that allowances would flow to those who needed them. We needed to guarantee that those who had ability to create allowances would not hoard them, but rather would produce and sell them. And we needed to guarantee that no anticompetitive behavior would stand as a barrier to entry or the new independent power industry and for public power entities. The bill has received much praise in these areas.

One more feature of the legislation bears special mention. Because of the restrictive nature of the cap and the need to ensure the 10-million-ton reduction by the deadline chosen by the administration, the year 2000, some in the country with special problems were disadvantaged. States with extremely high growth in this decade, utilities which had emergencies, utilities that temporarily emitted at extremely low levels during the base period, utilities scheduled to be constructed before the bill takes effect but after enactment—these problems had to be addressed in the committee.

In addition the committee added important incentives for utilities to adopt conservation strategies which save energy, reduce pollution and save consumers money.

All these elements are part of this compromise that is title V of the bill, the acid rain title.

We can truly say we have made it fairer than the legislation that was before us when we started. It is clear that many of the provisions in the bill will have major impacts on our energy policy—both in the choice of fuels and their cost. It will become more difficult to use our most plentiful domestic resources—coal—to generate electricity, and we are changing the mix and

composition of our transportation fuels. We have had to balance these energy policy and economic effects with the demands for air quality improvement, and I believe the committee bill has achieved a reasonable balance.

Mr. Chairman, I look forward this week to the debate and to the consideration by this House of the legislation which has occupied the thoughts of so many for so long. It is very hard to construct legislation that balances jobs and the environment—regions, one against the other—and even industries in competition. But, painful as it has been, when we are done we will be able to say that we have kept the promise of clean air—for our Nation, our communities, our families, and our children's children.

□ 1410

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. WALKER], the ranking minority member of the Committee on Science, Space, and Technology.

Mr. WALKER. Mr. Chairman, I thank the gentleman for yielding this time and thank him for his hard work, and the chairman of the Committee on Energy and Commerce and all the others who have labored to bring this bill to the floor.

I am pleased to see the legislation finally on the floor. I think Congress will act responsibly in bringing us a final product within the next few days.

As a part of those deliberations, the chairman of the Committee on Science, Space and Technology, the gentleman from New Jersey [Mr. ROE] will be asking that the Clean Air Act research amendments, reported by our committee, be made in order as an amendment to H.R. 3030.

We had hoped, at least I had hoped, that those amendments would be a part of the base bill being brought to the floor. It now appears that was not able to be worked out, and that is disappointing to me. I would have preferred to have it as part of the base bill, but it is important that the House have an opportunity to act on this research program as a part of what we do in the clean air bill, so I fully support the action of the gentleman from New Jersey [Mr. ROE] to go to the Rules Committee and ask that these research amendments be made in order when the Rules Committee meets tomorrow.

The Science Committee legislation makes an important contribution to the Clean Air Act reauthorization by directing the EPA to conduct vital air pollution monitoring and assessment activities. Some of the kinds of things that are included in that research title are a research program on the effects of air pollutants on human health, a study of the causes and effects of ecosystem damage from air pollutants, a basic engineering research and technology program to develop and evaluate technologies for air pollution prevention, and the development of an acid disposition response plan.

Research work of this type is vital to the success of the Clean Air Act. As the effort to improve air quality progresses, the cost of each incremental step increases. A solidly grounded research and monitoring program is needed to ensure that the requirements imposed by the act are indeed working as projected to improve air quality across the country. The activities outlined in the Science Committee's legislation will go a long way in telling us which requirements are fulfilling the goals of the act and which need to be modified.

So I am hopeful that the Rules Committee will make in order an amendment to allow the Science Committee to bring its title to the floor, and I am hopeful that the house will act on that amendment in favorable terms so that as a part of what we do to improve the regulation of air quality, we also improve the research and science surrounding air quality. I think that we can make an important contribution to not only the present, but to the future if we strengthen our research program.

Mr. DINGELL. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Ohio [Mr. THOMAS A. LUKEN].

Mr. THOMAS A. LUKEN. Mr. Chairman, the committee chairman, the gentleman from Michigan, is always generous with his time and I thank him, but I may run out somewhere around 6 minutes.

Mr. Speaker, we are writing history today.

In an unprecedented manner, adversaries have come together, animosities have subsided, differences have been put aside in this year of the environment.

"Hallelujah" was the word which rang out when the committee completed its deliberations, and that word is applicable today.

Chairman DINGELL, the gentleman from California [Mr. WAXMAN], the gentleman from New York [Mr. LENT], the gentleman from Illinois [Mr. MADIGAN], the gentleman from Washington [Mr. SWIFT], the gentleman from Indiana [Mr. SHARP], and others have worked prodigiously. Their efforts have been tremendous, their patience and sacrifices have likewise been great.

The bill accomplishes more, at lower cost, than the bill passed by the other body. The bill will not cause the shutdown of the coke ovens for the steel industry. The acid rain provisions recognize the concerns of the high-sulfur coal miners, the steelworkers by allowing for more flexible, yet very stringent regulation.

The bill does achieve balance. It is a good bill; yet, in some places the bill goes further than some of us thought necessary.

The acid rain proposal herein is ambitious. It sets as its goal a 10-million-ton reduction in sulfur dioxide emissions levels by the year 2,000, and a 2-million-ton reduction of nitrogen dioxide emissions by the same year. I do not have a problem with these goals, none of us do.

However, I do have several concerns with respect to the accuracy of the 10-million-ton reduction estimate; how the reduction will be achieved, and the disproportionate burden it places on the Midwest and Southeast.

Some people say that acid rain is a Midwest problem, as has been stated already here today. Let me remind you that while all our utilities will bear the enormous compliance costs, the ultimate effect of acid rain control on international competitiveness and energy security impacts everyone, and industrial sources other than utilities are contributing to the problem, but are not paying.

In the State of Ohio, compliance costs are estimated to be $1.5 billion to $2 billion a year. These costs will result in electric rate increases of 10 to 40-percent and an estimated loss of 15,000 mining and related jobs. In the Ohio Valley, an aluminum producer faces up to a 40 percent rate increase. This means a loss of more jobs.

The National Acid Precipitation Assessment Program, or NAPAP study, has recently stated that the total sulfur dioxide emissions reduction resulting from this bill would be much more than 10 million tons, more like 10.6 to 11.3 million tons.

H.R. 3030 is not totally equitable in its emissions reduction requirements. For example, the bill requires Ohio and 8 other Midwestern and Southern States to achieve over 70 percent of the Nation's sulfur dioxide reductions, while these States contribute only about 50 percent of the total emissions.

Ohio utilities have spent more than any other State on air pollution control, so it is not totally equitable.

Further, another aspect of this bill, proposals for the regulation of emissions from consumer and commercial products are part of the bill. The public probably does not realize that clean air covers emissions from products, not just the manufacture, but the use of the products in our households. The original proposal in one of the bills provided for mandatory percentage reductions of 25 percent in 5 years and 50 percent in 10 years.

We would have been denied, under that proposal, the use of many seemingly innocuous products, such as perfume, shampoo, deodorants, mouthwash, along with paints, varnishes and

stains, without the benefits of the analysis to tell just how harmful these studies might be.

Although the report language suggests that all commercial and consumer products will be regulated, from shampoos to toxic solvents, this was changed in the statutory language, and I congratulate those who were helpful in changing it, which now requires that only the worst actors be regulated.

□ 1420

That is where this bill has bounced. The EPA must consider how much a product actually contributes to the formation of ozone before it decides whether or not it makes some sense to regulate it.

Hundreds of thousands of household products sold throughout the country and not found to be the cause of the problem will not be subject to unnecessary regulation. On the other hand, the major contributors, as recognized by the OTA and other agencies such as surface coatings, paints, and asphalt, are likely to be regulated.

The compromise exists in this bill, and it is common sense, as much of the bill can be so described. It is progress that the authors of this bill and the crafters of the many compromises and modifications along the way can be proud of.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Colorado [Mr. SCHAEFER].

Mr. SCHAEFER. Mr. Chairman, it is with a great deal of pride that I rise today in support of H.R. 3030, the Clean Air Act Amendments of 1990. Proud to be of the party of the president who has been the leader of this critical legislation. Proud to be a member of the Energy and Commerce Committee which has strengthened the bill considerably without overburdening our economy. But perhaps most proud to represent an area of the country whose commitment to improving its air quality is unsurpassed.

Colorado's fight for clean air hasn't been an easy one. Faced with Federal sanctions, the State adopted a number of aggressive and politically sensitive measures. At the top of that list is an innovative oxygenated fuels program which, thanks to its consumer choice approach, has led to significant reductions in automobile emissions. This effective clean air strategy, with the cooperation of the public, has reduced violations of air quality standards to just a handful.

Colorado's struggle at the Federal level has been altogether different. Plagued with excessive levels of carbon monoxide—and not the better-known ozone and acid rain pollutants—the fight has been one for recognition. Colorado's nonattainment areas are not as prevalent and the source of the problem is better understood. As a result, in clean air discussions on Capitol Hill, carbon monoxide is often regarded as a persistent afterthought.

This secondary status is no indication of the severity of the problem. Forty four cities nationwide exceed the health-based standard for carbon monoxide, posing risks to their residents and local economies. While short-term progress is being made in many of these areas, vast increases in vehicle miles traveled and overall growth threaten to erase much of the improvement. The challenges of the future are just around the corner and the States cannot meet them alone.

Fortunately, there is an administration in place that understands the need for Federal leadership. By introducing comprehensive clean air legislation, it effectively broke the congressional logjam which had allowed the act to expire. I was pleased to cosponsor this landmark legislation, recognizing it as a critical starting point.

But not until the Energy and Commerce Committee completed its consideration were the States given the tools to finally reach attainment. Strict deadlines, mandatory sanctions and close Federal scrutiny ensured that States' feet would be held to the fire and that progress would continue to be made. More importantly, the actions of the committee showed a commitment to improving air quality in all areas in nonattainment—regardless of the offending pollutant.

For carbon monoxide areas, this meant one thing—cleaner automobiles. In many cities, up to 90 percent of CO can be attributed to mobile sources. The legislation before us addresses this with a number of aggressive provisions including tighter tailpipe standards, adopting California's standards, cold weather certification, requiring Detroit to engineer its cars to meet the CO standards at 20 percent, enhanced inspection and maintenance programs and oxygenated fuels. From Colorado's perspective, this alone is quite an accomplishment.

But the committee did not stop there. We also agreed to two amendments which I sponsored relating to those nonattainment areas located at high altitude. First, at least one high altitude testing center would be established to make certain that vehicles comply with emission standards regardless of the part of the country in which they are driven. And second, high altitude cities would be brought into the age of alternative fuels with a requirement that fleet vehicles operate on something other than conventional gasoline. With these provisions in place, the message to environmentally responsible areas like Denver is clear—in the fight for better air quality, you are no longer alone.

Before closing, I would like to commend my colleagues on the Energy and Commerce Committee for putting together such a responsible package of amendments to the Clean Air Act. We can take pride in nearly every account which selects our bill as being better environmentally and economically. Special recognition goes to Chairman DINGELL and Representatives LENT and WAXMAN whose leadership has brought us to this point. And again, thanks to President Bush for demonstrating his commitment to the environment by not only getting the train rolling, but by making sure it stayed on track.

I urge my colleagues to support this critical legislation.

Mr. DINGELL. Mr. Chairman, I yield 9 minutes to the gentleman from Washington [Mr. SWIFT].

Mr. SWIFT. Mr. Chairman, when I first got involved with this issue, which seems now to be somewhere in the vicinity of the dawn of time, but only 3 or 4 years ago, the first thing I heard, and the second, the third, the first 100 things I heard were that, "This is going to cost a great deal of money in my industry, and you are only going to get that much environmental improvement." It was true. It was true.

Because the fact is there are no big hits anymore. There is not any place left where we can go and get a prodigious amount of pollution that we can take away and do so at low cost. The automobile industry had reduced its tailpipe emissions by 96 percent, 96 percent, and we are having to ask them to do even more. This legislation does ask them to do even more.

I point this out simply because I think that there are many in industry who think that there is someplace else we can go and get this out of somebody else at less cost and at bigger improvement to the environment. The fact is that is not true, and because I think there are many on the other side of this issue who think that this particular environmental cleanup process can be done easily and cheaply if only people had the will to do it, both are wrong. This is a difficult job, and it is a very expensive job. It is a job that this bill is going to get done.

There is no cost-benefit ratio in this bill, and some people are surprised to hear this. This does not say, "You will clean up as much of the air as you can afford to do." This says, "You are going to clean up the air to a set standard." What is that standard? It is a medically established standard, one about which there is almost no argument at all. It is a standard below which air would no longer be healthy to breathe.

Mr. Chairman, I have talked to many, many groups, industry groups, around this city. I have said, "Is there anyone here who would like to take the position for their corporation that

their corporation is for something less than, by definition, air that is healthy to breathe?" I have yet to have one single taker.

So we have established a health-based standard without regard to the cost-benefit, and we are pursuing in this legislation that goal vigorously, but let no one believe it is easy or inexpensive.

I think it is important, because I think sometimes when we come to these important public policy issues that deal with the environment we get into a holy war.

□ 1430

On the one side those who are so committed to strong environmental legislation that they do not look at the cost, and those who are so committed to looking at the cost that they refuse to look at the environmental degradation that goes on around us.

Somewhere the best public policy grows out of an understanding of what you must do for the environment and an understanding of what the cost of that policy is going to be, because I think it helps one develop honest and fair compromises.

Does this bill contain compromise? Oh, you bet it does. Were those compromises honest? All the ones I know about were. Were they fair? The ones I know about were. Were they helpful in addressing this issue of meeting the environmental needs, but keeping an eye on the cost? The answer is yes.

I think the gentleman from Michigan [Mr. DINGELL], the gentleman from California [Mr. WAXMAN], and the gentleman from New York [Mr. LENT], as the leaders of the three groups in the committee and subcommittee, are to be commended for with great difficulty and hard work hammering out the compromises that exist in this bill and that make it I think in the long run a better bill, because it has blended an understanding of the environmental necessities and extremely great cost that is associated with them in this legislation.

A group of members on the committee that somebody called the Group of Nine developed a piece of legislation that has become at least in part embraced in title I and to some degree title II of the bill. What we managed to work out was something that the EPA said was as strong an environmental proposal for title I as existed, save one in the other body, and that it did so at less cost to the economy than any other proposal on the table, including that of the Reagan administration, which from my perspective was not environmentally very strong.

The point is that while a cost-benefit ratio is not appropriate when you are dealing with health, having a cost-effective way of dealing with health is appropriate. I would submit that this legislation, worked out over years, with compromises worked out over the last few months, has managed to draw in most of these instances a fine balance between being a strong bill that will provide clean and healthy air for the American people, and doing so at a very large cost, without question, but at a cost that could have been so much higher in order to achieve a level of clean air than might otherwise have occurred had it not been for the compromises worked out by the leaders of the committee.

Mr. SHARP. Mr Chairman, will the gentleman yield?

Mr. SWIFT. I yield to the gentleman from Indiana.

Mr. SHARP. The gentleman from Washington [Mr. SWIFT] deserves a great deal of credit for a year of devotion to this question when he led the Group of Nine in trying to examine how we could get communities into attainment with the Clean Air Act goals and to do it the least expensive way. The gentleman understood it was going to be expensive and accepted that proposition, but knew the goal was to try to do it at the best cost that we could possibly make it to the consumer.

The gentleman from Washington [Mr. SWIFT] deserves enormous credit that I do not think he has been properly recognized for, for endless hours that he gave to this in producing a document that has become a major part of this bill before us today and that the EPA, as indicated, has identified as both environmentally stronger than many of the other proposals, and yet doing it at the least cost.

Mr. Chairman, I compliment the gentleman from Washington [Mr. SWIFT] for his work.

Mr. SWIFT. Mr. Chairman, I thank the gentleman from Indiana [Mr. SHARP] for his kind remarks. There were a group of us that really ran a gamut in terms of geographical distribution across this country and in terms of philosophical view that worked on that together, all of us investing an enormous amount of time and staff time. We hope we did make a contribution.

Mr. Chairman, my bottom line is that neither side should assume there was a cheap way to achieve these goals, and neither side should assume that these are goals that we could in any conscience not seek to pursue and to achieve. As long as everyone realizes that, I think we will understand that what we will be doing when we pass this legislation later this week is an enormous step toward the improvement of the air quality of this country and providing all of the citizens of America with air that is by definition healthy to breathe at a cost that is not greater than was absolutely essential in order to achieve that goal.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Texas [Mr. FIELDS], who is a member of both the Subcommittee on Health and the Environment and the Subcommittee on Energy and Power.

Mr. FIELDS. Mr. Chairman, this is a momentous day for all Americans. No issue strikes deeper into Americans' conscience than clean air. Finally, after 13 years of legislative deadlock, we have clean air legislation before us for consideration.

I want to thank my colleagues on the Energy and Commerce Committee and all the staff for their diligent work on the clean air bill. Countless hours were spent by all to reach accommodation on some of the most contentious areas of the legislation.

H.R. 3030 is a strong bill which will bring cleaner air to all Americans. Still, the final product is far from perfect. I have serious, lingering concerns about provisions in the air toxics, alternative fuels, and acid rain sections of the bill. I plan to work with my colleagues to address these problems between now and conference.

We do need to revamp our clean air law. But we cannot do that from fantasyland. We have to strike a balance between stronger rules to protect our environment and the economic impact they will have on our industries and our lifestyles.

Americans are already spending $32 billion per year to clean our air. More needs to be done. And, I am not suggesting that additional controls are going to be cheap. In fact, the administration estimates the additional yearly cost of H.R. 3030 to be $20 billion. If history is any guide, however, the actual cost of complying with the clean air reforms will be substantially greater than $20 billion.

The fact is, we don't really know the full cost of the legislation before us. For example, the bill forces new technology for which we can only guess the price tag. Whatever the final cost of the bill, one thing is certain—it will be an expensive drain on our constituents' pocketbooks and on our economy.

However, as an original cosponsor of the President's clean air bill, I believe that it is a price tag which must be paid. But, at the same time, I must repeat my strong belief that we must choose only the most cost-effective approaches to cleaning the air. We simply can't afford gold plating. The price tag is too high.

I urge my colleagues to apply the cost-effectiveness test to each amendment we consider over the next few days. As a representative from Houston, TX, I am particularly concerned that the final product which this Congress sends to the President be environmentally progressive, but not economically devastating. If we do both,

and I believe we can, it will be a law both the Congress and the President can be proud of, and it will be a law which finally will achieve the goal of cleaner air for all Americans.

□ 1440

Mr. DINGELL. Mr. Chairman, I yield 5 minutes to the gentleman from Oklahoma [Mr. SYNAR].

Mr. SYNAR. Mr. Chairman, we have come a long way today. After almost a decade of work both in the public and private sectors, we are now ready to try to pass a clear air bill.

As we begin this legislation, for those who are listening, I think it is important to note that this is a story that really has two stories to it.

First, it is a story of people. It is a story about a man named JOHN DINGELL who had the courage and foresight to put together one of the greatest pieces of legislation that this Nation will see, and will be remembered for it in the 1990's. It is a story about HENRY WAXMAN, a person whose determination to improve the quality of the air was the driving force behind this legislation and who worked closely with all of us who shared that dream so that it could become a reality. It is a story about NORM LENT, who had the patience and the courage to work with everyone to make sure that the bill was balanced. And it is also a story about nine people who began 3 years ago to learn what needed to be done in the United States and around the world with respect to clean air. It was PHIL SHARP, and AL SWIFT, and DENNIS ECKART, and RICK BOUCHER, JIM COOPER, JIM SLATTERY, TERRY BRUCE, BILLY TAUZIN, and others.

It is a story about people trying to do the thing that the Nation has said that they want in the 1990's, and that is a cleaner environment.

But as the gentleman from Washington [Mr. SWIFT] said during his remarks, there is a second story, and that is the story of compromise, because in the next days as we debate this bill we are going to find that no one got everything he or she wanted, and that almost every bit of this bill has been negotiated in order to accommodate the various interests that are at stake.

I think we can all conclude that the clean air bill that we bring to the floor is a very good start in accomplishing the goals that all of us have, producing a cleaner environment into the 1990's and for the next century.

In our acid rain provisions we balanced the regional interests in order to ensure that our air would improve. In the ozone area, we reached an agreement that results in true reductions in areas that are not presently in compliance. The ozone provisions are more efficient, and more cost-effective, than those of the other body and they will help us win the war for that most important goal.

For fuels, we will offer an amendment on reformulated gasoline which recognizes its new contribution to the fuel mix. During the debate on our fuels provisions Members will learn what our underlying theory should be, we want cleaner air without disrupting our energy supply, and that this should be the driving principle.

We will present to our colleagues a toxic provision which was fashioned to protect the human health not only of this generation but for future generations.

Finally, we will begin to protect the crown jewels of this Nation, our national parks, but putting forth a visibility provision to protect air in our natural parks. It will begin to give us the type of protection that all Americans want for these most precious resources.

We started a decade ago and we have made real progress. In the days ahead as we debate this bill I hope all of my colleagues will remember this is a bill of people, and it is a bill of compromise.

But finally, let me reiterate what the gentleman from California [Mr. WAXMAN] said. This is a bill that shows that the process works. The staff who have worked literally around the clock for almost 3 months are to be commended most. Through their tireless efforts in working to bring this bill here today, we are able to bring to our colleagues probably the best step forward in clean air in this century. I am proud to be associated with it. I commend my colleagues in this debate and look forward to working with them as we proceed through this debate and through conference and deliver to the President the strongest clean air message for the decade of the 1990's.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Virginia [Mr. BLILEY], a member of the Subcommittee on Health and the Environment.

Mr. BLILEY. Mr. Chairman, it is rare that we come and debate on a piece of legislation that has worked. The Clean Air Act Amendments of 1977 have done a good job. Ambient ozone levels are down 21 percent; carbon monoxide levels 32 percent; and sulfur dioxide levels 37 percent.

This progress has not been cheap. In 1987, the Commerce Department estimated that in that year alone it cost $33 billion. But in spite of all of this, it has not gone far enough.

Last year 100 areas failed to meet the health levels for carbon monoxide and ozone. Worse yet, 28 additional cities have fallen into the nonattainment category. And acid rain has not only damaged our forests and our streams, but it has acted as an irritant in our relations with our good neighbor to the north, Canada.

For 9 years I have been privileged to be a member of the Health and the Environment Subcommittee and the full Committee on Energy and Commerce. We have struggled with this issue.

At the beginning we lacked complete data. We also had some inaccurate data. But finally this has come together, and a year ago as we began the 101st Congress I wrote a letter to President Bush saying that the one ingredient that we lacked to move a good, strong clean air bill was presidential involvement. I am proud to say that the President has responded with the most comprehensive bill ever submitted to the Congress on this subject, and we used it in our deliberations in the Energy and Commerce Committee, H.R. 3030, as our mark from which to work to improve, and we have improved it, as my colleagues on both sides of the aisle have pointed out, with many compromises.

I was proud to be associated with one in title I, and also one on visibility. It is a balanced bill. As my colleague from Washington said, it is not cheap. It is going to require great sacrifice on the part of all Americans, not just business and industry, but Mr. and Mrs. America in their homes in the fuel bills that they will pay, and in the type of vehicles that they will drive and the chemicals they will use.

But this is a good bill and I am proud to have been a part of it and to have had the privilege to work with our chairman and our ranking member on our committee and other members. But as the gentleman from Oklahoma pointed out, probably the most important people that should be recognized are the unseen members of our staff, our personal staff, and the committee staff who have worked around the clock, particularly in the last month, to create this vehicle, this bill, these compromises and to bring us to this point. I thank the gentleman from New York [Mr. LENT] for yielding me the time, and I yield back to him the balance of my time.

Mr. SHARP. Mr. Chairman, I yield 6 minutes to the distinguished gentleman from Louisiana [Mr. TAUZIN].

Mr. TAUZIN. Mr. Chairman, I thank the gentleman for yielding time to me.

Mr. Chairman, there is a saying environmentalists have used on bumper stickers for some years now, and it says very simply: "Think globally but act locally." A remarkable thing happened on the Energy and Commerce Committee as we began marking up this bill. Under the incredible leadership of the gentleman from Michigan, [Mr. DINGELL], the gentleman from New York [Mr. LENT], from the minority side, the gentleman from California [Mr. WAXMAN], the gentleman

from Indiana [Mr. SHARP], and others who play such vital and key leadership roles, our committee began thinking globally and produced a bill that requires us to act locally to begin cleaning up the air in America and in the world.

It would have been easy for Members who represent districts whose utilities burn coal that is laden with sulfur and whose districts contribute heavily to the acid rain problems of America to think locally and to fight against decent acid rain legislation because of its cost.

□ 1450

It would have been easy for those who represent the automobile industry sectors of our country to think locally and to fight against decent tailpipe emission standards for America. It would have been easy for us who represent oil and gas communities to think locally and to fight alternative fuel provisions for cleaner fuels in America's fleets of automobiles, trucks, and buses.

It would have been easy, even, I think, for some representing petrochemical industries to think locally about the jobs and the economic impact on those industries instead of thinking about the awful damage to the lives and health of the citizens of this country and of the world because of the awful level of toxic emissions poured upon families and communities near those plant sites.

Instead, our committee came together and began focusing on the global effects not only of the damage that we were doing here in America but how America might lead the way for the world to begin cleaning up what is so critical to all of us and what is held so in common by all of us, the air that God created for us.

I waxed a bit poetic during the committee markups, remembering my days as a thespian in Nicholls State University, where I performed the role of Hamlet. I recall the words that Shakespeare wrote in one of Hamlet's soliloquies when he talked about, "This most excellent canopy, the air, look you, this brave o'erhanging firmament, this majestical roof fretted with golden fire, why, it appears no other thing to me than a foul and pestilent congregation of vapours." Shakespeare, even in those days, was reminding us how precious the air is and how sacred it is to all of us.

Our committee came together in an extraordinary way and did things in this bill which will hurt every section of this country economically in order to improve the health of our citizens in this country and for the world, the air that we all breathe. That is a remarkable feat.

As we come to the floor with this legislation, the extraordinary delicacies of the balance we placed into this bill to make sure that it functions, that it is practical, that it works, is overladen with one salient demand upon those in America and around the world who think they can ignore the perils that the air faces when we think we have the right to pollute. And that is a demand that pollution shall cease, not that it shall be turned back or diminished, but that it shall eventually cease in our land.

The message is: You have no right to pollute something so sacred as the air.

As soon as that message is heard and received through this bill, the sooner this Nation's and this world's air will be safer for our children and future generations to come.

We have worked out some delicate balances, we are still working them out, in alternative fuels, for example, and we are still working them out as we debate what to do with chlorofluorocarbons in the delicate and difficult situation of weeding out those chemicals that have the perverse impact upon the Nation's ozone, our protection against ultraviolet rays. We are trying indeed to work out the rest of the problems, but this bill is a great step forward and a reminder to America that all of us can come together once in a while and put our parochial interests aside and do something good for America and for this world.

This bill thinks globally, and it calls upon us to act locally. And it calls upon Americans and the world to begin putting an end to pollution of so sacred an element as the air we breathe.

Mr. Chairman and Members, we will have some debates on this floor; we will still have some differences, but I am proud of our Committee on Energy and Commerce and I am proud of this bill. It is a great piece of legislation. We shall make it better in our debates.

When we are finished, America and this world will be a better place for it.

Mr. LENT. Mr. Chairman, I am pleased to yield 5 minutes to the gentleman from North Carolina [Mr. McMILLAN], who played a very important, key role in seeing to it that provisions were inserted into this legislation that protected our Nation's industries against foreign competitiveness.

Mr. McMILLAN of North Carolina. I thank the gentleman for yielding.

Mr. Chairman, few of us would question that we live in the decade of the environment.

In the last two centuries, our country has experienced enormous growth and prosperity, but we are quickly realizing that growth and success can overwhelm nature's beautiful and resilient balance.

Historically, we have taken clean air, clean water and clean land for granted. We've produced, consumed, driven and dumped as if our natural resources were a constant. Only in the last 20 years have we begun to wake up to reality.

Clean air legislation has been stagnated in the Halls of Congress for over 12 years. At the initiative of President Bush, the committee chairman and ranking Republican, and many Members concerned about the environment, this issue is back on the front burner. This House is now on the verge of passing a comprehensive clean air package.

I am proud to serve on the Energy and Commerce Committee, which, I believe has put together a tough, practical bill. H.R. 3030, as compared to S. 1630, the Senate version, has been given good reviews by both environmentalists and industry.

We should not dilute our duty to be environmentally disciplined and economically sound at the same time. I believe that tough standards can be compatible with flexibility built into the means. In fact, part of our challenge is to stimulate alternative and competitive means of meeting these standards. For the most part, H.R. 3030 embodies this philosophy.

I have long been concerned about the implications of tough environmental standards on competitiveness. The gentleman from Washington and I were able to amend H.R. 3030 unanimously in committee by a provision requiring the President to report back to Congress on ways to address trade imbalances that may result from the costs of complying with this bill. In effect, we must create a level playing field between U.S. business and our trading partners. The bill requires that the President develop a strategy to negotiate with our trading partners to either adhere to equal environmental standards or accept trade adjustments to avoid penalizing domestic producers.

While I could continue praising the committee's tremendous efforts, which resolved many differences, in markup I want to warn my colleagues that floor amendments to "toughen or weaken" the bill destroy the delicate balance between economics and environmental concerns embodied in its present form.

In closing, I would like to remind all of us of our individual responsibility in this challenge to clean-up our environment. Government can clean its own environmental waste and react legislatively to the pollution caused by society. But prevention rests essentially in the people's hands. We are on the threshold of adopting and enforcing the toughest clean air standards in the world. There is no free lunch. I hope the public is prepared to pay the price. I urge my colleagues to support H.R. 3030 as reported.

Mr. SWIFT. Mr. Chairman, will the gentleman yield?

Mr. McMILLAN of North Carolina. Mr. Chairman, I yield to the gentleman from Washington [Mr. SWIFT].

Mr. SWIFT. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would like to commend the gentleman for the amendment that he offered to this bill. It recognizes that if this country did everything you could conceivably imagine environmentally right, the world would still have an environmental problem and that we need to provide two things: Leadership to the world for all industrialized nations to begin to address their air, water, and land pollution problems the way this country is; and, second, to protect our industry which is incurring those costs to meet those environmental standards so when they go into the world they are not at a competitive disadvantage.

□ 1500

I think the gentleman's amendment to this legislation is an excellent first step in this country assuming that leadership role.

Mr. McMILLAN of North Carolina. Mr. Chairman, I thank the gentleman for his contribution and his comment.

Mr. WAXMAN. Mr. Chairman, I yield 7 minutes to the gentleman from Ohio [Mr. ECKART].

Mr. ECKART. Mr. Chairman, there was a TV commercial so many years ago when I was a child, and the jingle went, "They said it couldn't be done, they said nobody could do it." Well, the fact is that for a number of years about the Committee on Energy and Commerce, and certainly about the Clean Air Act, "They said it couldn't be done, they said nobody could do it." The fact is that it has been done and we did it. We did it in a way that removed some of the most difficult and contentious issues, after a difficult and intense negotiation into the arena of compromise.

A compromise, of course, is the glue of the political process, but in order to get compromises your way, Members have to give them the other way. For years, if any Member mentioned "Clean Air Act," we instantly thought about air toxins. We have a tough air toxic provision, and to my colleagues from the Great Lakes, let me point out to those Members that the gentleman from Minnesota [Mr. SIKORSKI] and I and others have drafted a Great Lakes air toxic provision. We included the Chesapeake Bay area because of its peculiar circumstance. This provision will give Members the tools we need in this next decade to address the single largest source of air toxics making their way into our watershed.

For years, if Members said "the Clean Air Act," they talked about acid rain. Gosh, I never would have bet that I would have found myself in a committee supporting a compromise on dealing with acid rain, drafted by my colleague, the gentleman from Indiana [Mr. SHARP], with the aggessive support of virtually every other regional interest in our committee. We struck an appropriate balance that preserves the environmental integrity of the program while reflecting the pecular economic circumstances of our region.

For years, if Members said "The Clean Air Act," it meant we had to talk about tailpipe emissions. If any Member had ever told me that a John Henry agreement could be struck on tailpipe emissions, I would have said the heavens would have had to part the skies, the Earth would have rolled, the clouds would have rumbled. However, in fact, they did. In merging that agreement to deal with tailpipe emissions, we held the environmentalists to their standard, and the auto companies to their word. To ensure that the sources of mobile air pollution really are responsibly and reasonably addressed was no easy task. In fact, the administration and the environmentalists and those Members of Congress representing significant industrial production of American automobiles, realized that the Clean Air Act had to include mobile source controls as part of that solution.

For years, when we said "The Clean Air Act," we talked about what initially promoted the act, and that is urban smog. The provisions of urban smog and pollution control were contained in title I. That was perhaps the most difficult provision to start the debate, because, frankly, it had been the most contentious for the longest period of time. Debated at first in the early 1970's, legislated first in the late 1970's, it has escaped the ability to find the compromise that is essential to moving a piece of legislation forward.

Mr. Bush, our President, broke a little bit of that deadlock when he submitted a bill. To his credit, the Congress is responding to this Presidential initiative. To break the legislative logjam, a group of Members on the Democratic side who became affectionately known as "the Group of 9," or "G-9," decided to try to bridge the differences between the competing Democratic interests in our Caucus, and fashioned a compromise that became the basis of the title I provisions. It is a significant effort and a major step forward. We redefine and create special ozone classifications and deadlines—marginal, moderate, severe, serious, and extreme—so that each peculiar community can tailor-make the provisions to the peculiar nature of their problems. A graduated system of pollution control programs is put in place with the maximum achievable technology to back it up. We require a larger control of more substances, and we reduce the levels that they need to be reduced to. We put milestones in place, because as we discovered from the law that had been in effect for so many years, we found that in a conclusion of a particular period of time, a particular community still had not met the deadlines. Everybody wanted to know why, and what was next.

Now a system of 3-year milestones will be established to ensure that the areas achieve reasonable progress toward their ultimate goal, and we do not find ourselves in main deficit at the end. We have important sanctions in place as well. Not easily agreed to, because after all, a law without any teeth is probably worse than no law at all, because it creates the pretense of protection where none would, in fact, exist. However, the sanctions are meaningful, they are tough, but they are fair.

Mr. Chairman, we have had a lot of studies. Oh, I suppose we could study more. We have had lots of talks. Over the next few days we will talk even more. But the fact of the matter is, we have had enough delay and enough excuses when it comes to improving America's air. Also, like another TV commercial, "We can pay for it now or we can pay for it later."

There is not a district in which each Member is elected that is not going to be required to pay a price for the passage of this bill. We all want clean air, but it is a little bit like all Members wanting to go to heaven, but not wanting to die to have to get there. Yes; our constituents will pay some for clean air. But they will pay dearly more with unabated pollution, depriving children of greater lives, elderly of more fruitful lives, and all people of better lives, because when we had a chance to make a difference we chose not to. Today this Congress, this committee, brings to Members a bill that does make a difference, a bill that will be able to tell all of our children that we had a chance, we worked hard to improve the quality of life and the quality of air for themselves and for future generations as well. I appreciate my colleagues' support of this bill.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Utah [Mr. NIELSON], a member of both the Subcommittee on Health and the Environment and the Subcommittee on Energy and Power.

Mr. NIELSON of Utah. Mr. Chairman, I rise today to support H.R. 3030, the Clean Air Act Amendments of 1989.

This bill received a 42-to-1 vote in committee, and as been mentioned many times today, is the result of much compromise.

My first introduction to the clean air bill was not as the gentleman from Ohio [Mr. ECKART] first described on the toxic area, but rather the acid rain part. I felt particularly interested in

that area because I felt the 1977 act discriminated against the clean coal States, which I represent, by requiring a same percentage reduction even when they have very little sulfur dioxide, as when they had a lot of sulfur dioxide. In fact, our coal was cleaner before scrubbing than the coal in the Midwest. I think that is totally unfair to have the same percentage reduction. I opposed the first bill which came up which was basically a half mil a kilowatt cost on every subscriber throughout the country with electrical facilities, whether hydro, nuclear, or coal-fired. I preferred, instead, the approach by our colleagues at that time, Mr. Cheney, and the gentleman from Arizona [Mr. UDALL], which was basically polluter pay, but let them pay in the cost-effective way.

This bill we have today has preserved the polluter pay principle by and large. It has given them some ways to do it, and some incentives and other things to soften the blow, but it is definitely polluter pay, which I think is important. While it does not go quite as far as I would like to see it in terms of being fair to the States which already made much of the sacrifice, I still can support the bill.

□ 1510

The Clean Air Act of 1970 proposed regulations on the existence of a new source in order to decrease air pollution. It established a national ambient air quality and ordered States to design plans to achieve it. The act also sets up performance-based standards for new sources.

As my colleague, the gentleman from Colorado, said, the West has done more than its share in this area. My own State went with wet scrubbers rather than dry, and we have cut our pollution way down. The sulfur dioxide emission from our goal-fired electric plant is the lowest in the Nation by a factor of 2 or 3 over any other States, and we are very proud of that.

At any rate, in 1977, the percentage reduction was something that did give us concern, but there were other attempts to amend the act ever since that time. The 1985 attempt was to let the Governor decide politically how to handle the problem, and that had some concerns as well as the various regulatory agencies.

So now we have this bill, and I think we should give credit for its due to the committee which worked very hard. Members of the committee who should be commended include the gentleman from Michigan [Mr. DINGELL], the gentleman from New York [Mr. LENT], and the gentleman from California [Mr. WAXMAN], who have been mentioned, but there are many others who played a significant role on this bill, and we should have to name about 40 Members, in fact, most of the committee, in order to give proper credit. Most all of the Members have offered amendments and participated very well in this work. I think a lot of credit, however, should go to President Bush. Had President Bush not presented the bill, this H.R. 3030, had he not received 160 cosponsors through the efforts of the gentleman from Michigan [Mr. DINGELL], the gentleman from New York [Mr. LENT], and others, we would never have gotten this bill off the ground. It would have had the same fate as previous bills.

Great compromises have been struck. While I do not agree with everything in the bill, I still feel that the NAPAP study which is coming next year should be looked at. I think we are overestimating the amount of sulfur dioxide we have, and I think we should take a look at that. I have an amendment that covers that particular aspect of it.

I do not think we have covered the PM-10 program quite as adequately as we should. We have some double counting, and we have some double penalties in various parts of the bill that need to be straightened out. We have an amendment that we think will take care of that problem.

While I believe that there are some other aspects of the bill such as having visibility over parks, I have been able to work with the gentleman from Oregon [Mr. WYDEN], the gentleman from Colorado [Mr. SCHAEFER], the gentleman from Virginia [Mr. BLILEY], and the gentleman from Oklahoma [Mr. SYNAR] on this issue. I think we have come up with a compromise we can all live with.

Let me suggest that the unsuccessful attempts of the last decade were probably necessary to get us in the frame of mind where we could do something. This is a very costly bill. Everyone will have to pay, as has been mentioned. The Committee on Energy and Commerce has met over many hours, not only in this session but in previous sessions, debating the legislation in order to bring the bill before the House. I would like to suggest that had there not been a spirit of compromise, we would not have the bill before us on the floor. We all feel that this is the year to do it. If we do not do it this year, it will never get done. And that may have been the case. If we had not had a commitment from all parties, from the most conservative to the most liberal, working together, we would not have a bill today.

I would like to thank all the Members for their efforts in this process, and I would also like to thank the staff that spent long hours to work out the details. We would often meet with the staff and say that this is what we want to do, and then we would go on to our other activities and make them work overnight and over the weekends to achieve our ends. I think they deserve a good bit of credit. I would single out on my staff Ruth McCormick and Jayneanne Rex for the work they have done, and I would commend others before them.

We have done well on unattainment, antitoxics, and acid rain. As I indicated, PM-10 is an issue.

I believe the provisions of this bill are greatly strengthened through committee action. We have met the President's five tests of balance and reasonableness. While I do have a few concerns that I have mentioned, overall I feel this is a good bill. It provides us with a program necessary to address the air pollution problems of this country and to achieve better air quality for the American people.

Mr. Chairman, I hope we can pass H.R. 3030 through the House this week and shortly return it to the Senate and also send it to the President for his signature.

Mr. SWIFT. Mr. Chairman, I yield 5 minutes to the gentleman from Kansas [Mr. SLATTERY].

Mr. SLATTERY. Mr. Chairman, Edmund Burke once said that all government, indeed every human benefit and enjoyment, every virtue and every prudent act is founded on compromise.

The legislation before us today is an example of such a compromise. As we have already heard, the Clean Air Amendments of 1990 is the product of months of agonizing negotiations and work by the Committee on Energy and Commerce. As is always the case with negotiations, neither side got all of what it wanted, but I believe the American people will get a good clean air bill this year that will make a giant and a historic step toward cleaning our Nation's air. The legislation before us is clearly the most important environmental legislation to be considered by this body in the last 5 or 6 years.

This legislation contains new tough auto emissions standards which are needed to reduce urban smog in our Nation's cities. Under this legislation—and I ask the Members to please keep this in mind—98 percent of carbon monoxide emissions, 98 percent of hydrocarbon emissions, and 90 percent of $NO_x$ emissions will be eliminated from new automobiles by the year 2000. Needless to say, this is a major achievement that we all take pride in.

With the passage of this legislation, we will regulate acid rain for the first time in our Nation's history. The acid rain section in this bill will bring about a 10 million-ton reduction in sulfur dioxide emissions and a 2½ million-ton reduction in $NO_x$ emissions by the year 2000. This is undoubtedly the toughest acid rain bill to come before this body, and certainly it is far tougher than most would have imagined just a year ago.

I am particularly pleased that those areas like my State of Kansas that have already spent hundreds of mil-

lions of dollars to reduce $SO_2$ emissions will not be penalized by some cost-sharing plan to help pay for the cleanup in other parts of the country where they have not cleaned up their $SO_2$ emissions.

Mr. Chairman, in the last 20 years only 8 air toxics have been regulated by the Environmental Protection Agency. Under this legislation, 191 air toxics will be subject to national achievable control technology by the year 2000. That is again tremendous progress.

Some may think this legislation does not go far enough in cleaning up our Nation's air. I am absolutely convinced that when my colleagues have a chance to carefully review this legislation, they will conclude, as I have, that this is a tough clean air act, one that will require American business and industry to make tremendous changes to come into compliance, and it will make a great step toward cleaning up our Nation's air. As we commence this important debate, I am hopeful we can resolve remaining differences on alternative fuels and accidental releases and mandate the production of clean air autos.

Mr. Chairman, outside experts have compared this bill with the President's bill and with the bill passed by the other body. They concluded in H.R. 3030 will do more to clean our Nation's air than the other proposals, and it will achieve this goal at a lower cost. This, as far as I am concerned, is the best compliment that anyone could pay this bill, and that is why we should pass H.R. 3030. The Committee on Energy and Commerce has worked as a congressional committee should work in handling this legislation. The members of the committee listened to their colleagues and attempted to respond in a thoughtful and responsible manner to the differences and to advance at all times our goal of cleaning our Nation's air in the most cost-efficient manner possible. That is why the vote out of committee was an overwhelming bipartisan vote of 42 to 1.

It was a pleasure to work with my colleagues on the committee and with the great staff on our committee and the individual Members who worked with us. Certainly the chairman of the full committee, the gentleman from Michigan [Mr. DINGELL], the chairman of the subcommittee, the gentleman from California [Mr. WAXMAN], and the gentleman from New York [Mr. LENT] and the gentleman from Illinois [Mr. MADIGAN] on the other side and the group of nine, including the gentleman from Louisiana [Mr. TAUZIN] and all the others who participated in this legislation, in preparing this legislation, should be recognized for their extraordinary efforts. Also the staffs, as has been noted already, expended countless hours to get to this point today, and they should be commended.

So, Mr. Chairman, I urge my colleagues' support for this legislation, and I hope as we debate this issue in the days ahead, we will keep in mind the need for us to maintain the delicate balance we worked so hard in the Committee on Energy and Commerce to achieve.

Mr. LENT. Mr. Chairman, I am pleased to yield 8 minutes to the gentleman from Florida [Mr. BILIRAKIS], a member of both the Subcommittee on Health and the Environment and the Subcommittee on Energy and Power.

Mr. BILIRAKIS. Mr. Chairman, today we are approaching a moment of decision. Following the discussion and debate today, this body will move to consider a broad revision and strengthening of the existing Clean Air Act.

We have therefore arrived at a moment of environmental action as opposed to environmental posturing. We have arrived at a moment where slogans no longer matter, but actual legislation will determine the quality of air in our cities and towns during the next decade and beyond.

During the floor proceedings this week, we will commit this Nation to a course of action which should help clear our skies of smog, particulates, acid rain and hazardous air pollutants. We will therefore renew not only our verbal commitment to clean air, but the legal framework to force a substantial and sustainable reduction in airborne threats to public health and safety.

Mr. Chairman, I cannot help but to note that words similar to mine have been spoken in this Chamber before. Indeed, the enactment of the original Clean Air Act brought with it excitement and expectations that later proved misplaced. While elements of the original law worked and worked well, the law did not bring about a comprehensive framework to address all air quality problems. The hopes and theories of the original law did not account for every contingency or the complexity of controlling many discrete sources of pollution.

One could easily be cynical again. Throughout the process of marking up and delivering a bill to the floor, we have repeatedly heard that certain measures within H.R. 3030 or various amendments to the legislation are inadequate to the task of protecting current and future generations from pollution.

This is part of the process of legislation, but I think this perspective can sometimes ignore the real world as much as the hopes of the founders of the Clean Air Act were not borne out in regulatory practice. What we sometimes overlook is that the bill before us builds on 2 decades of experience, nearly 20 years of promulgating and enforcing clean air regulations.

As opposed to either the original act or the 1977 amendments we have a better legislative perspective now on what works and what doesn't work. During our committee mark up, we were well aware of the mistakes of the past and sought to draft responsible and responsive legislation to avoid historical problems in enforcement of clean air regulations.

Standards in the bill are more tightly drawn; grants of discretionary authority explicitly tied to environmental goals. The bill not only controls acid rain, it attains and guarantees a 10-million-ton reduction in $SO_2$ through the allowance system.

The bill further requires maximum control technology for nearly 200 air toxics as opposed to the relative handful that have been regulated under existing law. Ozone attainment strategy is restructured and set on a new timeframe to clear smog from our cities and metropolitan areas.

In particular, I was pleased to be a part of subcommittee negotiations to arrive at new auto and light duty truck emission standards. In my home state of Florida, clogged highways and a tremendous influx of new residents has accentuated an underlying increase in vehicle miles traveled.

The operation of cars and trucks represents the most pervasive threat to general air quality in my State. The successful subcommittee negotiations I participated in with Representative TAUKE, ranking Republican LENT, and Chairman DINGELL and Subcommittee Chairman WAXMAN served to resolve this longstanding and very contentious issue. Indeed, I believe they helped guarantee our presence here today and helped promote the spirit of negotiation and compromise which aided our committee in proceeding with other titles and other clean air issues.

Additionally, although title V of the bill represented a most difficult and complicated issue, I believe we take a historic step in H.R. 3030 in controlling the precursors to acid rain. During the 99th Congress, I was an original cosponsor of H.R. 4567, acid rain legislation introduced by Subcommittee Chairman WAXMAN. I also negotiated amendments to the legislation and voted to report the bill from subcommittee—until last year the first time acid rain legislation had progressed from committee in Congress.

We were unsuccessful in this 1986 effort, but H.R. 3030 built upon our initiative and services to ensure a substantial reduction in utility $SO_2$ and $NO_x$ emissions. I think this is both a tribute to Chairman PHIL SHARP, to the consistent work of the health subcommittee and to the Bush administration which proposed the strictest acid rain legislation ever considered in Congress.

I must say that our committee was not successful in resolving all issues. Indeed, it may require floor action this week to settle the problem of air emissions from offshore oil and gas exploration and production. While such emissions represent largely a future threat to Florida—one we hopefully will not face—it makes little sense in my mind to distinguish between onshore and offshore facilities that may contribute to coastal air quality problems.

Due to jurisdictional requirements, an outer continental shelf amendment was not possible during our committee's consideration of H.R. 3030. I therefore intend to pursue this matter with my own amendment or to join forces with other members concerned with the issue. In either event, we cannot allow offshore activities to negate onshore gains in air quality.

Altogether, I believe our country and our citizens have benefitted from a maturation of environmental science and environmental law. Clean air legislation, as other environmental law, presents a unique blend of science and legal theory, of technological development and consideration of societal behavior, of incentives and penalties aimed at influencing compliance and of public health presented by pervasive environmental conditions. This is an immense challenge for legislative drafting and parliamentary consideration. I think H.R. 3030 as amended by committee and with further amendments on the floor will largely meet this challenge and meet our responsibilities to our citizens.

The bill before us is not perfect. Indeed, any complicated and controversial legislation avoids elevation to the beatific ideal. But we should recognize this imperfection for what it is and no more—a product of the legislative process and the endless hours of negotiations which led to floor action this week. Imperfection is, in many ways, the price of legislative success. Many perfect bills die in committee at the end of each Congress.

This is not to say that further progress cannot be made through amendments this week or within the likely House/Senate conference. It is merely to note that a legislative journey of this magnitude is subject to more than a few difficulties.

I cosponsored and voted for H.R. 3030 in the Health Subcommittee and in the full Energy and Commerce Committee. Barring currently unforeseen and destructive amendments, I intend to support approval of the bill in the full House later this legislative week.

In doing so, I will make no formal predictions other than to say that I believe the air we and our children breathe will improve considerably under this legislation and that the annual cost of well over $20 billion will be fully justified on the basis of our collective well-being.

I was not in Congress when either the original clean air law or the 1977 amendments were approved. But we necessarily build on the foundation of what went on before our service in this body and the legislation today will help to improve and preserve a structure of environmental protection and conservation. I urge my House colleagues to move with all due speed and to let the legislative process in the House take the next step in approving a new clean air bill for the rest of the decade and into the next century.

□ 1520

Mr. SWIFT. Mr. Chairman, I yield 5 minutes to the gentleman from New Mexico [Mr. RICHARDSON].

Mr. RICHARDSON. Mr. Chairman, this is monumentally important legislation. The law was last amended in 1977, and, while progress has been made in resolving some air quality problems, others have proved intractable.

In fact, Mr. Chairman, levels of certain pollutants have actually increased in some areas over the past two decades. New problems, not anticipated in the original legislation, have emerged.

According to EPA, 121 million Americans live in areas where pollutant levels currently exceed at least one of the health based quality standards established under the Clean Air Act. Air pollutants cause a variety of adverse health and environmental impacts, and among these are respiratory problems, cancer, birth defects and other diseases in humans; damage to vegetation, which can reduce farm and forest productivitiy, and declines in fish and wildlife populations.

Mr. Chairman, over the last decade Congress has worked to develop amendments to the Clean Air Act that would resolve outstanding problems such as controlling the ozone smog in urban areas and emissions of toxic chemicals from industrial plants and other facilities and address also relatively new ones such as acid rain.

The process was expedited somewhat in 1988 when President Bush submitted proposals saying that we must have clean air legislation, something the Reagan administration had never done. In fact, it said that we only need more research on what is causing monumental neglect to our entire stratosphere.

During deliberations in the Committee on Energy and Commerce, a lot of my colleagues recounted that bipartisan compromises have been reached on many key elements of the bill including revised schedules and mechanisms for achieving Federal air quality standards in polluted areas, tougher tailpipe emission standards for motor vehicles and a new system of technology based control on emission of hazardous pollutants.

Mr. Chairman, although several issues remain controversial, it does appear that we have a good clean air bill. Clean States have gotten a fair break. Polluting States have gotten a fair break. "Polluter pays" is the concept of this bill.

Mr. Chairman, I think a lot of people have talked about all the Members that have worked on this legislation, and I will do so at the end of my statement.

□ 1530

Mr. Chairman, I wish to raise three issues that I have been involved with in the clean air debate, two of which will be offered as amendments in the next few days.

First of all, on acid rain, the bill also contains several amendments that I offered during committee markup with respect to independent power producers. The next 10 years will be an important transition period for the Nation's clean air and energy supply goals. Old powerplants are going to have to be replaced by new clean facilities. Independents have proved to be a clean, reliable source of electricity, accounting for about 4 percent of the Nation's electric supply, with a potential to provide a far greater share.

The bill ensures a competitive market for these independent power producers.

Mr. Chairman, I also wish to take the opportunity to ask my colleagues' support for an amendment that I will be offering with the gentleman from Illinois [Mr. MADIGAN] on reformulated gasoline. Thankfully, there has been a bipartisan compromise in the committee struck so that a lot of the contention hopefully will be reduced. Nonetheless, it will be a provision that will be opposed by some.

There has been a very nasty public relations campaign against this amendment, ranging anywhere from $2 to $21 million, mainly by the American Petroleum Institute, using in many cases statements that were not true, using exaggerations about what this amendment does.

Mr. Chairman, I will now explain what this amendment does.

First Richardson-Madigan will require the use of reformulated gasoline in the nine worst ozone nonattainment cities. Other cities may opt in as the program gets under way.

More importantly, gasoline sold in these cities will contain 15 percent less ozone forming compounds and toxic air pollutants respectively.

Additionally, all 44 carbon monoxide nonattainment cities will be required to sell gasoline containing a minimum oxygen content level of 2.7 percent to reduce carbon monoxide to healthy levels.

Among others, our amendments addressed two of the major concerns expressed by the oil industry, yet they persist in opposing this amendment. These include the charge that the amendment mandates a recipe for reformulated gasoline and that the amendment will increase nitrogen oxide emissions.

On the first point, our amendment establishes minimum standards to reduce ozone forming and toxic compounds. So long as equivalent or greater emissions reductions are achieved, oil companies are free to formulate their fuels any way they choose.

On the second point, our amendment specifically prohibits a fuel from being certified for sale if it results in increased ozone or nitrogen oxide emissions.

In short, this amendment has substantial environmental and health benefits by controlling ozone forming and carcinogenic air toxic compounds, trade and economic benefits by reducing dependence on foreign oil and it expands the domestic renewable fuels industry.

There have been 11,000 accidental releases of toxic chemicals in the United States between 1980 and 1987. As a result, more than 300 have died and more than 10,000 were injured.

The United States has had 17 different toxic accidents with potential effects greater than the Bhopal, India catastrophe.

The amendment that I will be offering with the gentleman from Texas [Mr. BRYANT], the gentleman from Kansas [Mr. SLATTERY], and the gentleman from Texas [Mr. BARTON], requires the EPA to establish a list of at least 100 accident hazardous chemicals.

Moreover, EPA would be required to promulgate rules establishing risk management plans to detect or minimize accidental releases.

Mr. Chairman, this is monumentally important clean air legislation. Credit should go to the gentleman from Michigan [Mr. DINGELL], the gentleman from California [Mr. WAXMAN], the gentleman from New York [Mr. LENT], and many others.

But also, Mr. Chairman, it should go to those who labored in the vineyards for years. One of those is my colleague, the gentleman from Minnesota [Mr. SIKORSKI]. The noted radio humorist, Garrison Keillor, said that GERRY SIKORSKI's first words when he was born were, "Stop acid rain." The genetleman from Minnesota [Mr. SIKORSKI] will be doing this after this legislation passes.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. TAUKE], a member of the Subcommittee on Health and the Environment of the Committee on Energy and Commerce, who really has done an outstanding job. He has been a moderating force in bringing all sides together during the committee deliberations on the bill, and he deserves a great deal of credit.

Mr. TAUKE. Mr. Chairman, I thank the gentleman for those kind comments.

Mr Chairman, it is indeed a pleasure to be here today to have an opportunity to participate in the debate on the floor on the Clean Air Act. Some of us felt that we would spend a career getting to this point, and indeed some Members of the Congress have spent a career attempting to insure that we enact meaningful and worthwhile clean air legislation.

I want to join with all my colleagues in throwing kudos at the other members of the committee and myself, and also particularly commending the chairman of our committee, the gentleman from Michigan [Mr. DINGELL] for his strong leadership; the chairman of the subcommittee, the gentleman from California [Mr. WAXMAN] for his leadership on the issue.

Mr. Chairman, while there has been a lot of discussion about the differences of viewpoint on the other side of the aisle and the heroic work that was done to bring people together on that side of the aisle, I think that it is important to note that we also had a very strong leader on the Republican side of the aisle, the gentleman from New York [Mr. LENT], because you see, there were some fairly deep divisions among the Republican members of the committee as well. Because of his strong leadership and because of his patience and because he is generally a good guy, he brought the Members together in the way that permitted us to move forward.

Mr. Chairman, there has been quite a bit of discussion about the cost of this legislation, some pointing out that it will be very costly to the consumers and to industry and to the workers of the Nation. There has been very little discussion, however, about the cost of not doing anything, and when push came to shove perhaps that was the motivating factor for many Members of Congress, that the cost of not acting on clean air legislation was actually greater than the cost of enacting a good clean air bill.

We know, for example, that the cost would be very high in the area of health. Just in terms of dollar cost, failure to act in clean air legislation would mean an additional $100 billion in health care costs over the next two decades. That would result from increased respiratory disease, increased cancer, increased lead poisoning of our people; but it is not just in the health care arena that the cost would be high. The cost would also be high economically.

A recent Federal study said that failure to deal with the problem of air pollution would result in an annual loss of 5 to 10 percent in our crops. That means a cost of $5 to $6 billion in annual crop losses if we fail to act to control pollution.

The cost of cleaning up acid rain would be $80 billion if we failed to do something about controlling the pollutants that cause acid rain.

I say these things only to put the cost of this legislation in perspective. Yes, there will be a cost that will have to be borne by our economy, all parts of our economy, but the cost of not acting would be even greater than the cost of taking action by passing this legislation.

Having said all these things about the clean air bill, I think it is also important to note that there is a lot of uncertainty about just what we are doing and just what the impact will be. We would all like to be here and say that we know precisely that the standard that we are setting in this legislation is correct and the methods we have used to achieve the goals established in this bill are proper, but we do not renew that. That is why this committee worked very hard to set reasonable goals for the cleanup of the air and provide as much flexibility as possible in attaining those goals.

I think that the leadership that was ultimately provided by all the members of the committee on this issue has moved us into a position where we have a bill which sets goals that we can all be proud of, that are attainable, but also will do an awful lot to clean up the air, while at the same time ensuring that there is enough flexibility in this legislation to make it workable.

Finally, I would like to observe, Mr. Chairman, that this legislation is enormously complex.

□ 1540

Because it is enormously complex, there are very few people sitting on this floor who understand what is in the bill, who understand how it will work. Our job will not end when this legislation passes this House and moves through a conference and heads down to the President's desk. At that point there will still be an awful lot of work to do to continue to monitor the implementation of this legislation, perhaps change it from time to time in order to make sure that it works well, and that we adapt it to the increased knowledge that we will gain as time goes by.

But while there is uncertainty and while there is a lot of complexity, this is a giant stride forward, and all of us from the President down to the lowliest Member in the House can take great pride in the fact that we have worked together to do something that will be good for the Nation.

Mr. WAXMAN. Mr. Chairman, I yield 7 minutes to the gentleman from Oregon [Mr. WYDEN].

Mr. WYDEN. Mr. Chairman, I want to thank the chairman of the Health Subcommittee and commend him for all the good work that he has been doing for this whole decade.

Mr. Chairman, millions of vulnerable Americans, kids and seniors and those with respiratory diseases, are being forced to breathe dirty air every single day. From coast to coast, unhealthy air is getting into the nooks and crannies of our Nation, and it is time to take strong action to stop these dangerous health practices.

This legislation is going to get our country moving in the right direction again, and I want to commend our colleagues on both sides of the aisle for all of their efforts.

I would like to touch on just a couple of the provisions that have not been discussed by other Members, because I think they are important. One such part deals with our small businesses. This legislation is going to regulate small businesses as never before under air pollution law. Many of our small businesses have never been exposed to the maze of air pollution control regulation and will now find themselves right in the center of these programs.

Our committee recognizes that it makes good environmental sense and good economic sense to try to assist these small businesses.

In the subcommittee we adopted an amendment I authored authorizing an information clearinghouse to help small businesses understand their obligations under the law. In addition, in the full committee, the gentleman from Viriginia [Mr. BOUCHER] and I authored legislation to create programs to help small businesses through the air permit labyrinth. These programs will allow permits to be tailored to the needs and limitations of small businesses without relaxing the environmental goals of the law. The result is both the environment and the economy will benefit.

I am also very pleased about the air toxic provisions in the legislation. One of the reasons we are here today is because EPA has literally dragged its feet for decades on regulating air toxics.

In my home State of Oregon in a recent year, industry released over 1 pound of carcinogens into the air for every single person in the State.

The bill as introduced would have assured regulation of only half the major industrial sources of these pollutants. I'm pleased that the committee has agreed to a version that will regulate all major sources.

At the same time, the legislation will give EPA the flexibility to put together a system that works. EPA will be able to tailor standards by categories and subcategories of industrial sources, requiring the maximum controls from each. It is a tribute to the efforts of the chairman, the gentleman from Michigan [Mr. DINGELL], and the other members of the committee, that the experts have said that, compared to the Senate's toxic bill, our provision will do more for the environment yet cost less in the long term.

The other provision that I would like to touch on, and it will be the subject of a specific amendment later in the week, is the question of wilderness protections, protection for our parks and spectacular national treasures. I am very pleased to report to the Members that this weekend a bipartisan group of Members, the gentleman from Virginia [Mr. BLILEY], the gentleman from Oklahoma [Mr. SYNAR], the gentleman from Utah [Mr. NIELSON], the gentleman from Washington [Mr. SWIFT], the gentleman from Colorado [Mr. SCHAEFER], the gentleman from Indiana [Mr. SHARP], the gentleman from New York [Mr. LENT], the gentleman from California [Mr. WAXMAN], and the gentleman from Michigan [Mr. DINGELL], all worked very hard to come up with a compromise on this difficult and contentious issue, and with the help of the gentleman from Massachusetts [Mr. CONTE] and the gentleman from Minnesota [Mr. VENTO], we are going to be offering an amendment on the floor that will allow us to protect this Nation's sparkling jewels.

Our amendment, in brief, establishes a special Western park pollution program to address the twin problems of manmade haze and plume blight. For regional haze control, the amendment directs EPA to establish a regulatory program that will protect our Western parks. To deal with plume blight, EPA is directed to study large polluters that are located next to these parks and take appropriate action under existing law.

We update protection for newer parks, wilderness, and preserves. Parks created since the 1977 Clear Air Amendment would get the same class I protections as the older parks. New wildernesses, national monuments, and other preserves would be guaranteed to keep class II protection that they currently enjoy.

The legislation also gives the national park and wilderness managers greater input and influence in State and EPA decisions about whether to allow new polluters to locate near protected lands.

Mr. Chairman and colleagues, it is high time that we took these steps to protect our national parks.

Congress directed in 1977, that a full program of park protections be implemented and yet it is still not in place.

According to the National Park Service, in the Grand Canyon visibility impairment is likely to increase 400 percent on some days in the next few decades. At Glacier National Park in Montana, it could be upward of 500 percent. So it is very important that we go forward with these protections. As a result of the excellent bipartisan work over the weekend, we will be able to come to the floor with a bipartisan amendment to protect the parks and our other national treasures.

I particularly want to thank the chairman of the subcommittee, the gentleman from California [Mr. WAXMAN], who has helped this Member so much; our chairman, the gentleman from Michigan [Mr. DINGELL], as well, has been extraordinarily patient in this effort. I think many of the Members know that Chairman DINGELL has passed more environmental legislation than any of us on either side of the aisle. I also want to thank my friend, the gentleman from New York [Mr. LENT], who over the years has also been exceptionally patient for this important parks issue.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. LEWIS].

Mr. LEWIS of California. Mr. Chairman, I certainly appreciate my colleague, the gentleman from New York, yielding me this time.

I believe that I am the first noncommittee member to speak on H.R. 3030, and I do so to express my strong appreciation and support for the work that the committee has done.

I frankly feel somewhat obligated to demonstrate to the chairman, the gentleman from Michigan [Mr. DINGELL], and to my colleague, the gentleman from New York [Mr. LENT], exactly how I have become so involved in this issue when I do not work with them on their committee.

One thing I think the Members ought to know is that there is not a district in the country that is more affected by air pollution problems than my own. The San Bernardino Valley is surrounded by beautiful mountains, and for over 200 days a year, even though they are just a few miles away, one cannot even see those mountains because of the smog which moves by air currents from the west into our valleys. That air quality difficulty is a challenge that goes well beyond the question of whether one can see the mountains or not.

The impact upon people's health is very, very significant.

Beyond that, Mr. Chairman, some years ago it was my privilege, while a member of the State legislature, to serve as the chairman of a select committee dealing with air quality. In those days I had the chance to play a role in creating a major regional air quality management district that regulates most of southern California, a district that in many ways, has led the

country in terms of implementing policies designed to control the emissions of a stationary sources of urban smog.

I wanted to rise to express my deep appreciation and congratulations to both the chairman, the gentleman from Michigan [Mr. DINGELL], as well as to the gentleman from New York [Mr. LENT], for the work that they have done. The bill that is before us is a tough bill. Indeed, they have laid the foundation, I think, for the renewal of the Clean Air Act in a way that significantly refreshes our fight to clean the air.

Mr. Chairman, I would further like to express my appreciation for my colleague, the gentleman from California [Mr. WAXMAN], with whom I joined very early in this effort to renew the Clean Air Act. It is also appropriate to express appreciation to the administration for their effort and for the legislation they sent to the Hill earlier. I must say it was a much tougher piece of legislation than many of us ever expected to see at the beginning stages. It served as a very excellent foundation.

The value of a very tough Clean Air Act should not be underestimated.

□ 1550

I think we should understand from the beginning point that the auto and oil industries do not see their bottom line, their profit margin, as a means of cleaning the air. Therefore pressure often is necessary, and I congratulate those who have been responsive to these very important pressures.

I would like to close by making a brief comment about costs. There has been a lot of discussion of the cost of this package, the cost of implementing tough regulations, for example. Those costs are difficult to measure at best.

Having said that, if I failed to mention that there also is a cost factor involved in cleaning our air. That is the significant reduction in costs for health care products that will not develop for those children not impacted by poor future air quality. Indeed, our goal here is to renew the Clean Air Act in a fashion that will help all of our country. We must make certain that over the years ahead our air is improved and better for all of us in terms of our health.

Mr. WAXMAN. Mr. Chairman, I yield 6 minutes to the gentleman from Georgia [Mr. ROWLAND].

Mr. ROWLAND of Georgia. Mr. Chairman, this Clean Air Act is without a doubt one of the most complicated and far-reaching pieces of legislation Congress has ever attempted to enact.

As the chairman said earlier and others have repeated, it will impact every sector of our society and economy and its cost will be significant.

Very few can speak to every specific of this comprehensive compromise, but I would like to speak to several principles which were of concern to me and why, while I worked with my colleagues to reach agreement on a bill we could all support, yet still be true to our legitimate regional and philosophical differences.

First, I am a mortal man who must live on this earth as all of us must. My children and their children will have to live here. The environment must be protected if we are to survive. In that regard it is essential then that we all view ourselves as environmentalists and act responsibly in that role. That directive is what brought us to the table and was the guiding principle in our achieving our goals. I do not believe any of my colleagues came to these discussions as an antienvironmental type person. I certainly did not. But we all came with different ideas how best to achieve our goals.

Second, I am a medical doctor who took an oath to protect human health and cure illness when prevention was unsuccessful. Over the course of the years, medicine has changed; first from being able to effect only the most primitive of treatments or relief from pain to increasingly miraculous interventions, rehabilitations and cures to the final step of preventing the illness in the first place. This bill is, in my belief, the ultimate prevention technology. Costly but with benefits to be reaped well into the next century. Our progress in the clean air legislation will mean that we are no longer treating the symptoms, but we are working to prevent the disease, hazardous pollution and emissions.

Third, but no less important to my constituents back home, I was sent here to protect the interests of the citizens of Georgia on a more parochial level. Some would suggest that might be selfish and without place. However, that is why Representatives are elected in the first place. I would say what is good for my State is good for the country as a whole. There are many different ways to skin the proverbial cat, and I wanted to make sure my State lost as little blood in the process as possible. While the folks that I represent back home will be picking up a hefty tab, as will all the rest of our neighbors in the Southwest and the country, we have written provisions into this bill which acknowledge our right to grow as a State and improve our standard of living along the way.

Growth is an important aspect of our Nation's future. This is recognized in several passages of the bill which provide growth allowances for those who supply energy resources necessary for such growth. This is of paramount importance as no nation throughout history has been able to enjoy economic security without secure and plentiful energy supplies. The citizens of Georgia look forward to unprecedented economic growth, growth reflected in the currently higher than average demand for electricity.

Therefore, the compromises for growth contained in the bill are very important to me. But like any good Member of Congress and responsible representative of the people, I look forward to working with the other body to strengthening these provisions where possible.

For the time, however, this bill is an excellent product of our efforts to represent the Nation as a whole and her citizens individually.

Mr. Chairman, I want to congratulate the chairman of the Committee on Energy and Commerce, the gentleman from Michigan [Mr. DINGELL], the chairman of the Subcommittee on Health and Environment, the gentleman from California [Mr. WAXMAN], the ranking members of both the subcommittee and the full committee for the compromise and hard work that they have done. I think it is a job that is really to be recognized as well done, and I am glad to have been part of that process.

Mr: LENT. Mr. Chairman, I yield 10 minutes to the gentleman from California [Mr. MOORHEAD], the ranking member of the Subcommittee on Energy and Power.

Mr. MOORHEAD. Mr. Chairman, I rise today to speak in support of H.R. 3030, the Clean Air Act Amendments of 1990, and to commend the leadership of our committee—Chairman DINGELL, ranking minority member LENT, and Health and Environment Subcommittee Chairman WAXMAN—for their extraordinary efforts at moving clean air legislation through our committee and to the floor. The most notable accomplishments of this leadership and our committee has been the negotiated resolution of many difficult clean air issues. The committee crafted consensus solutions to the problems of urban smog, air toxics, acid rain, permits, enforcements, and visibility. This was a time-consuming and difficult process and I think all Members of the House, indeed the country, should be grateful to the committee's commitment to this process. And, of course, I would be remiss if I did not note that the Nation is in debt to President Bush for breaking a decade-long logjam by proposing comprehensive revisions to the Clean Air Act last June.

Mr. Chairman, I want to turn now to a description to two amendments I hope to offer on the floor. The first, the Cooper-Moorhead amendment, is a simple, but important amendment that will give scientists a critical tool to use to measure the impact of the most serious potential problem facing our planet. Global warming.

In many ways, the Clean Air Act Amendments of 1990 will go a long way to improve air quality in our Nation's cities, curtail acid rain, reduce pollution from the cars we drive, and limit toxic emissions from industrial plants. But, despite these improvements on a domestic level, we must still consider the effects our emissions may have on the global climate.

Scientists have disagreed about the scope and magnitude of global climate change from manmade air pollution, and much of that disagreement stems from lack of necessary data to assess the impact these emissions may have on the Earth's climate. The Cooper-Moorhead amendment helps fill this information gap.

The Cooper-Moorhead amendment will require U.S. utilities to monitor their emissions of carbon dioxide, which many scientists believe to be one of the major contributors to global warming.

Although many scientists estimate that utility emissions account for roughly one third of our Nation's contribution to global carbon dioxide emissions, EPA does not collect data on these emissions and the current Clean Air Act does not require these emissions to be monitored.

Whether manmade carbon dioxide emissions actually increase the Earth's temperature will continue to be a hotly contested issue, but we can hardly expect to make responsible decisions about controlling these emissions if we fail to take the necessary steps to improve our understanding of the magnitude and rate of increase in these emissions.

The Cooper-Moorhead amendment will also give us a head start if and when we need to take steps to reduce our carbon dioxide emissions. By establishing an early baseline of carbon dioxide emissions for our domestic utility companies, we will put the United States in a position to take credit for its efforts to control emissions.

Cooper-Moorhead is a cost-effective, responsible approach to a problem of growing concern. Mr. COOPER and I have worked together to develop this amendment and, we both believe it is a responsible and measured next step to address global climate change concerns. This amendment has received the endorsement of several utilities and the national clean air coalition.

My second amendment concerns the nonroad engine and nonroad vehicle preemption adopted by the committee. H.R. 3030 as reported from the Committee on Energy and Commerce would revoke State and local authority to regulate emissions from nonroad vehicles and nonroad engines. The bill would prohibit State or local controls on new engines used in off-road vehicles, such as ships and other marine vessels, trains, and construction and utility equipment. EPA would be given discretion—but not be required—to control these sources. If enacted into law, this nonroad engine preemption would:

First, it would prohibit State or local control of sources in California with ozone forming emissions equal to 275,000 tons per year. These emissions are equivalent to those emitted from 75 large oil refineries or 9 million vehicles with the emissions of today's automobile fleet. By the year 2010, emissions from preempted sources are projected to grow to 380,000 tons per year, fully 14 percent of the State's inventory.

Second, it would void California law which requires adoption of State or local controls for these sources by the end of 1992.

Third, it would prevent California from meeting commitments in the adopted State implementation plan. Measures that are expected to reduce ozone-causing emissions by 143 tons per day—10 percent of tier I and II reductions in the plan—would be voided.

Fourth, the bill would force California to rely on EPA regulation of these sources to the level the EPA Administrator "deems appropriate" based upon national considerations of cost, noise, safety, and energy factor, not on what California needs.

Unless the EPA uses its discretionary authority to regulate these sources in a timely and stringent manner, the preemption would make it impossible for Los Angeles to demonstrate attainment of the ozone standard within the 20 years provided by the bill and subject the region to sanctions; and greatly increase the time needed to attain standards in other areas of California, potentially triggering sanctions and requiring additional costly controls on other sources still subject to State and local jurisdiction.

Mr. Chairman, I have asked the Rules Committee to make in order an amendment to delete this Federal preemption, at least as it relates to California. I hope the committee will grant my request to protect the air in California.

I urge my colleagues to support the Cooper-Moorhead amendment and my amendment to delete the nonroad engine and nonroad vehicle preemption, now contained in the bill.

□ 1600

Mr. WAXMAN. Mr. Chairman, I am pleased to yield 6 minutes to the gentleman from Illinois [Mr. BRUCE].

Mr. BRUCE. Mr. Chairman, I thank the gentleman for yielding time to me.

Mr. Chairman, first I think for all of the people who have worked so long on this particular piece of legislation that thanks are due, particularly to the chairman of the committee, the gentleman from Michigan [Mr. DINGELL], and the minority spokesman, the gentleman from New York [Mr. LENT]. Both of these gentlemen have spent an incredible amount of time on this legislation. Also thanks go to the gentleman from California [Mr. WAXMAN], chairman of the subcommittee, and the gentleman from Illinois [Mr. MADIGAN], the minority spokesman, as well as to the gentleman from Indiana [Mr. SHARP] and his colleagues on the Energy and Power Subcommittee.

Additionally, as has been said here already, the staff of the committees and the subcommittees should be mentioned because I think it ought to be recognized that without the strong work of the staffs of both sides of the aisle that this compromise position and proposal would not be on the floor. It took again 13 years from the last passage of major clean air legislation to make it back to the floor again.

I am happy that several members of the House Energy and Commerce Committee had, I believe, significant roles in bringing this bill to where it is today. First of all, the group of nine, nine moderate Democratic members of the committee that decided well over a year ago that this bill had to come to the floor, 13 years was long enough that this House had not addressed the issue of clean air, and that we ought to try to forge a compromise that would allow both sides to bring legislation to the floor. We worked very hard, but the issue was greater than the nine of us, and only in one title were we able to get a compromise, but in that area of tailpipe emissions we were able to strike a compromise, and much of the group of nine proposal is found in this proposal that will be on the floor to be voted on later this week.

Part of the work of that group of nine I think led to the major compromise between the gentleman from California [Mr. WAXMAN] and the gentleman from Michigan [Mr. DINGELL] on tailpipe emissions. We worked very hard that that logjam that had kept legislation from this floor for such a long time would finally be resolved not in the committee but before committee where we could sit down and reason with one another without the glare of cameras and without the problems of trying to go through all of the parliamentary procedural problems that are part of open committee hearings, and that we would in fact sit down and try to work out problems, and they were worked out to the point that an agreement not only was agreed to in committee, but on the floor of this House, and through conference committee, and I think all of us were very well served by the Waxman-Dingell compromise, particularly on tailpipes.

This is needed legislation. We need to spend more time in protection of the environment. But also I think the

committee took good heed of the problems of economic cost and the consideration of those economic costs.

We are already spending as Americans over $30 billion a year on costs of cleaning up the environment. This bill will add an additional $21.9 billion in additional costs. We need to be careful about how we make those costs and spread those costs not only among industry but across areas of the United States.

I had as a watch word the fact that we could pass environmental legislation through this body without doing economic damage to one particular area of the United States. It takes very hard work to find just the right mix, and I think that is what we did basically in this Energy and Commerce compromise.

There is one area where, I think, we could have done better, and that is in the area of acid rain. The acid rain agreement I think helps. It goes a lot further than the Senate provision, but still, thousands of coal miners will be unnecessarily put out of work, and the economy of the central part of this country, I think, will be severely damaged.

We face severe burdens under the acid rain legislation. It is tough. But my concern is it may not be fair to the Midwest. We will continue to work to see that this proposal, as the acid precipitation assessment study is completed, we will work with Members of this body and the other body to see if the provisions within the acid rain portion of this legislation cannot be modified to be of more assistance to the Midwest.

We have reached agreement just this weekend on reformulated gasoline. I think that that is good for the environment, and again for the domestic economy. It will help us sell a great deal more ethanol in urban carbon monoxide non-attainment areas, and it should increase the use of ETEB in ozone areas.

The bill is overall tough, but fair. In autos, in CFCs, in consumer solvents and a whole range of items touching every American the legislation has certainly tried to be tough but fair. In a bill of this size, it is possible that not everything will work the way it is planned. This Congress has waited 13 years to address the question of clean air. We should not wait another 13 years to pass the next round of amendments. A steady progress is better for the economy and better for the environment, and I hope that this body will revisit this issue as recently as next year to find the problem that we have solved and also the problem that we have created for certain parts of our economy and address those problems next year.

But this is a tremendous accomplishment for the committee and for this body to have passed and considered clean air legislation. This is a good package and I hope it receives the support of the entire House.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. LAGOMARSINO].

□ 1610

Mr. LAGOMARSINO. Mr Chairman, I thank the gentleman for yielding time to me.

Mr Chairman, the day is finally here! It has been 13 years—long overdue—As a Member of Congress who has highly anticipated this day and who has worked hard for passage of a clean air bill, I rise in strong support of H.R. 3030, and urge my colleagues to vote for this very important piece of legislation.

I want to commend Chairman DINGELL, Vice-Chairman LENT, Congressmen MADIGAN and MOORHEAD, Congressman WAXMAN, the members of the energy and commerce committee, and my California colleague JERRY LEWIS, for working so hard to bring this legislation to the floor and congratulate them on a job well done. I also commend President Bush for proposing H.R. 3030, giving this issue the boost needed to break past deadlocks, and making this day possible.

The district I represent has one of the most serious ozone problems in the country and, like many areas, also suffers from other air pollution problems. I have received literally hundreds of letters in support of a strong clean air bill and I am pleased that the House of Representatives is finally responding to the overwhelming call for action.

I have worked for passage of a clean air bill for a number of years. During the 100th Congress, I cosigned the Vento/Green letter and was presented a clean air champion medal by the Sierra Club for that effort to bring a clean air act to the House floor in the final days of the Congress.

During this Congress, I cosponsored H.R. 2323, the Clean Air Restoration Act and H.R. 1470, the Acid Deposition Control Act. I also joined a number of my colleagues in sending a letter to President Bush urging him to join the efforts to reauthorize and strengthen the Clean Air Act and supported H.R. 3030 when the legislation was first introduced. I have also worked hard to ensure consideration and passage of the Levine/Lagomarsino/Lowery clean coasts amendment, which will address a major pollution source facing many coastal areas.

The fact remains that over 150 million Americans now live in cities with pollution levels that experts consider unsafe. Through hard work and compromise the Energy and Commerce Committee was able to report a good bill which effectively addressed the major air pollution problems facing our Nation.

We have always known that it would not be cheap to clean up our air pollution problems. But, we also knew that the alternative of continued air pollution and the associated health problems were totally unacceptable.

The citizens of my district, as well as people across the Nation, have demanded the right to breathe clean air. Today we begin an important step toward giving them that right.

Mr Chairman, for my constituents, for their children, and for generations to come, I strongly support H.R. 3030, and urge every Member of the House to vote in favor of the bill.

Mr. WAXMAN. Mr Chairman, I am pleased to yield 5 minutes to the gentleman from Maryland [MCMILLEN].

Mr. MCMILLEN of Maryland. Mr. Chairman, I want to salute the chairman of the Energy and Commerce Committee—Mr. JOHN DINGELL—for his excellent leadership during the full committee markup of H.R. 3030—as the newest member of the Energy and Commerce Committee, I was impressed by the level of commitment of each of the members to achieving the best possible bill. Even on potentially divisive and contentious issues, members strove to find common ground. It is a testament to the leadership abilities of Representatives DINGELL, WAXMAN, LENT, and SHARP that we have been able to break the impasse that stymied progress on clean air.

Our work is not over—we have an awesome responsibility in the days ahead as we proceed with floor action on H.R. 3030, the Clean Air Act Amendments of 1990. The greatest challenge before us is how to best reconcile the demands of economic growth with effective environmental protection. After long months of arduous debate and markup in the Energy and Commerce Committee, I believe we have crafted a bill that strikes the appropriate balance. The New York Times lauded the Energy and Commerce Committee for producing a bill that was more protective of the environment than the version of the other body, at a reduced cost. The smog provisions call for a stronger Federal role in forcing cleanup by States and municipalities. There are real teeth in this section—unlike previous versions of the Clean Air Act, these are meaningful sanctions that seek to compel cities toward compliance. Title I is a better plan than corresponding portions in the Senate version, as it tailors requirements for cities to the severity of their air quality problem. Cities and locales with more severe ambient air quality problems than their neighbors will have correspondingly longer periods of time in which to rectify their problem. To assist with the evaluation of their progress toward compliance, H.R. 3030 institutes a series of milestones—times by

which an area must report on their effort to gain compliance. Such measures will enable authorities to evaluate whether mandated State plans are adequate for the task at hand, or whether or not upgrade refinement is needed or whether, in fact, Federal preemption is needed.

Many agree that title III—covering air toxics—does a superb job of clamping down on sources of cancer-causing industrial emissions. As an improvement to the markup vehicle, a motion was made—and accepted—to enlarge the scope of control and regulation to include 100 percent of all categories of major sources of toxic chemicals. This is in keeping with Senate language on the same subject. Representative GERRY SIKORSKI and I were successful in committee in adding even more stringent requirements for air toxics sources adjacent to delicate estuaries, such as the Great Lakes and the Chesapeake Bay. Our amendment mandates a 2-year study to determine the bioaccumulative effects of airborne toxics, at the end of which time it is incumbent on the EPA to proceed with effective and meaningful control regulations for toxics sources. That is accomplished 1 year after the completion of the EPA study. To be sure, these mandates will go a long way toward ensuring better health for residents of these areas.

While the Energy and Commerce Committee endeavored to produce the finest possible bill, the need for refinements exists. As we speak, staff and members are trying to forge meaningful and workable compromises on outstanding issues.

I am pleased that an agreement was reached on reformulated gas, which will clearly improve our air quality but not impose undue costs. I look forward to a lively and informative debate on some of these remaining points of interest today during general debate.

Mr. LENT. Mr. Chairman, I yield 7 minutes to the gentleman from New York [Mr. BOEHLERT].

Mr. BOEHLERT. Mr. Chairman, I rise in support of H.R. 3030, legislation that has been painstakingly crafted over many, many years. I take some measure of pride in the final product, particularly as it relates to the subject of acid rain. I would like to think that I have made some contributions to that section for the good of America.

Mr. Chairman, the work that we are about here and now in this Chamber, the people's House, is of monumental significance, so much so that even the most articulate and eloquent among us will have difficulty overstating its value.

Simply put, we are taking a giant leap toward that day when once again clean air will be an American birthright.

We have been talking and studying for years. And now we are acting with determination, with resolve, with commitment.

For years and years we talked, and for years and years we studied, and it seemed always that every time a new study came out with what we thought was a definitive mandate to move, someone called for yet another study.

The studies went on and on and on.

Finally in frustration, the former Governor of New Jersey, Tom Kean, said:

> If all we do is continue to study the problem, we will end up with the best-documented environmental disaster in history.

What is the difference? What is different about these past 12 months as we compare them to the previous decade?

This time someone is providing the missing ingredient, and that missing ingredient, I submit to my colleagues, is leadership from the top. President George Bush advanced this program, sent it to Capitol Hill last summer. No way could we be here today, no way could we be discussing this important legislation had not we had that leadership from the top.

I know the great work done by the chairman of the committee, the gentleman from Michigan [Mr. DINGELL], the vice chairman of the committee, the gentleman from New York [Mr. LENT], and certainly that most active of activists among us in the environmental causes, my colleague and good friend, the gentleman from California [Mr. WAXMAN].

The honor roll of those who have left their imprints on this legislation is long, but there is one person who made a difference, and let us never forget it; George Bush provided that missing ingredient, leadership from the top, and he has earned our thanks.

My story is like the story of some people here. When I first campaigned for office back in 1982, I decided I could not be all things to all people.

□ 1620

So I was going to try to focus on certain select issues where I thought maybe, just maybe I could make a difference. The environment was one of those issues.

Then I came to Washington all full of energy and said "Boy, we are going to do something about this environment." Every time I brought up the subject of acid rain I would get muffled yawns and disinterest. Finally, one day a senior colleague called me aside and said, "Now, lookit, the problem of acid rain—why don't you guys up in New York get together with the people in Ohio and work this problem out? It is just a regional problem." That is what he thought.

The scientific evidence is something else entirely different. Finally, one gentleman came forward, a surprise to many Members to really have a significant impact on the action of the U.S. Government on this subject—that individual is the Prime Minister of Canada, Brian Mulroney. I remember it so well. President Reagan went up to Quebec City to Shamrock Summit 1. It was on St. Patrick's Day. Just a few years ago, and I thought that he was well prepared, and he thought so, too. Certainly, everyone would want to discuss trade, because the trade barrier between our two nations is very important. Certainly, the subject of mutual defense would be very important. But lo and behold, the Prime Minister of Canada said, "No, Mr. President, the issue that is critical in terms of the relationship between our two nations is the subject of acid rain." From that day forward, a lot more attention was paid to this subject by some of my colleagues in here who in the past had greeted me with muffled yawns and disinterest when I talked about the need to do something.

Then, in 1985, after I looked over my first 3 years in office, I said to myself, "I have a lot of press releases but not much progress. Why not do something even more? I am not on a committee of jurisdiction, how can I have an impact?" Well, I went and talked to my friend, the gentleman from California [Mr. WAXMAN]. He had some good ideas. I talked to other activists in the group, and then I decided and it hit upon me that people said Republicans do not care about the environment. I said that simply is not true. Republicans are just as committed, just as determined, have just as much resolve as those in the environmental community. We formed a group and we called it "The working Group on Acid Rain." From that day forward, a dedicated band of Republicans—and the list is long—Ms. SNOWE of Maine, Ms. SCHNEIDER of Rhode Island, Mr. TAUKE of Iowa, Mr. SMITH of New Hampshire, Mr. GREEN of New York, and a whole list of committed environmental Republicans began working with our colleagues on the other side of the aisle and began working with the administration to convince all that we had to do something meaningful. The time for study was long since past. It was time for action.

Now we have that action here and now on, on this floor.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. BOEHLERT. Mr. Chairman, I yield to the gentleman from California.

Mr. WAXMAN. I thank the gentleman for yielding. We will not be having a debate over the acid rain issue, because that is now agreed upon. However, when people look at that provision and want to know how it came into being, I want to pay tribute to the gentleman from New York for his leadership. Sometimes people

think only of the members of a committee as having an impact on policy, but the gentleman's persistence in demanding that we address the issue of acid rain is as responsible, and in fact, more responsible than almost any other Member in this House for making sure that that issue was not ignored.

I thank the gentleman publicly. This issue was never a partisan issue. Protecting the environment and the public health should not be partisan, and the gentleman's leadership has been a very important ingredient in the fact, today, we can stand here and acknowledge that this bill has an acid rain control program which is not controversial in the sense that it is clearly a consensus, has a consensus behind it for its adoption.

Mr. BOEHLERT. Mr. Chairman, I thank the gentleman from California for those very generous remarks. He points out something that is so important, that I want all Americans to pay attention to.

In this Congress, in this House of Representatives, the people's interest comes first. As so often is the case in point right now, a bipartisan coalition of people committed to the public good are able to develop something that is meaningful, that is significant, and will serve Americans well for generations to come. A lot of people in this House deserve credit. but I say once again, the missing ingredient was provided by the President of the United States, George Bush—leaderships from the top.

Mr. WAXMAN. Mr. Chairman, I yield 7 minutes to the gentleman from Illinois [Mr. POSHARD].

Mr. POSHARD. Mr. Chairman, I thank the gentleman for yielding time to me. I would like to thank the gentleman from Michigan [Mr. DINGELL], the gentleman from California [Mr. WAXMAN], the gentleman from Indiana [Mr. SHARP], the gentleman from Illinois [Mr. BRUCE], the gentleman from Illinois [Mr. MADIGAN], and others on this committee who worked very hard to find compromise, especially in the title V portion of this bill.

Mr. Chairman, we are faced with a classic dilemma here: Is the glass half full or half empty? For a lot of working people in my area, the glass is not only half empty, it could be easily be kicked over. And economic ruin could spill throughout the communities of southern Illinois as a result of this bill. We are not alone. Other high-sulfur coal areas are in the very same predicament in about nine States of this country. Some jobs will be lost. We do not know how many. Right now, the predictions for my particular district are between 9,000 and 19,000 jobs being lost in the coal mines.

However, the bill does mean clean air for all Americans. Truly, it will improve our air quality. But in the fairest way possible? I do not think so. Coal-fired utilities create only half of the sulfur dioxide, and a third of the nitrogen oxides in this country. Yet we must accept the great majority of the cleanup burden. Ninety percent in the early phases, over 70 percent in the latter phases. Industrial sources kick in a pretty fair share of the emissions in this country, but escape almost untouched in this bill. We are treating a national priority as a regional problem, and it just is not so.

What is the difference between spending Federal money for disaster assistance, or after floods, or hurricane damage, and spending a little up front to help the coal mines and the utilities that burn their coal meet their natural challenges in this country? What is more, we have spent over $400 million on an acid rain study, yet surge toward legislation without bothering much to find out what the study has to say.

People in my district are not opposed to clean air, even the ones who are going to be standing in the unemployment lines—those 9,000 to 19,000—because of this bill. We are simply asking for fairness. If 9,000 or 19,000 people lose their jobs, what does that mean to the small businessman on Main Street who has to sell his shoes or his groceries to survive? What does it do to the truckers who haul the coal, to the electricians who service those mines? What does it do to the schools when the mines shut down, who depend upon the property tax base from the mines to support our children's education? All of these questions are yet to be answered, Mr. Chairman.

I am seeking assistance for two amendments being proposed for consideration in this debate. The first is an amendment from the gentleman from West Virginia [Mr. WISE], unemployment transition program. It is an excellent amendment providing for extension of unemployment benefits for those workers who are displaced by this bill. It also provides for retraining of those displaced workers to gain additional skills for finding jobs in other parts of the economy. Is it too much, Mr. Chairman, to ask for those miners of ours and others in related industries, who will be displaced by this bill, to receive an additional 6 months of unemployment insurance benefits? Is it too much, Mr. Chairman, to ask for those people who go down into the belly of the Earth, day after day, doing the job of producing energy for all Americans in this country? Is it too much for them who have thought that that coal would be there forever, for them to mine and put clothes on the backs of their children?

□ 1630

Is it too much for those who have thought that that coal would be there forever for them to mine and put clothes on the backs of their children, is it too much, Mr. Chairman, to ask for those people to be given retraining efforts when their jobs are lost as a result of this bill? I think not. That is the minimum amount of fairness we could accord to those workers.

Mr. Chairman, if we are going to require lower emissions for utilities without providing real cost-sharing, then we should help our communities and our regions assess the future for their businesses and customers, for their schools and their children.

In the second amendment, Mr. Chairman, I suggest that a university or universities in the high-sulfur coal areas combine their departments of economics, of coal research, and business to analyze the cost, the benefits, and the drawbacks of switching from high-sulfur coal to other fuels.

To meet the low emission standards, obviously one option for the utilities is to bring in low-sulfur coal, but when we factor in transportation, the need to burn more coal to get the same amount of power, and the huge numbers of job losses in the high-sulfur areas, it may be that sticking with the high-sulfur coal and applying the technology to clean it up is in the best long-run interests of our high-sulfur coal areas. At least the high-sulfur coal regions need to know what the long-range economic impact of this legislation is going to be.

Mr. Chairman, I urge my colleagues to consider these suggestions in a partnership for clean air and a sound energy policy based on abundant domestic resources, including high-sulfur coal.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Arizona [Mr. KOLBE].

Mr. KOLBE. Mr. Chairman, I rise today in support of H.R. 3030, the Clean Air Act. My support is accompanied by praise, caution, and optimism.

The praise is for President Bush. He took the bull by the horns—introducing a bold and specific initiative to improve this country's air quality. Although the proposal is not perfect, it has provided a direction and a framework within which to work. And, perhaps more importantly, the proposal has broken the deadlock on clean air legislation that has existed for over a decade. Mr. Bush promised to be the environmental President, and he has delivered. Now it is time for us to be the environmental Congress. Let the "greenhouse effect" come to mean the positive effect this House had on the environment.

While the committees of Congress that have worked long and hard on this legislation also deserve praise, at the same time Congress needs to be cautioned. Unquestionably, now is the time to take action to protect our envi-

ronment. Our approach, however, must be fair, reasonable, and balanced. With the attention of our country justifiably focused on environmental issues, it would be easy, but irresponsible, to act with disregard for the attendant cost of the program and the possible deleterious effects on business and society as a whole.

For example, a law that would require Western States to subsidize the installation of scrubbers required by Midwest utilities to meet their emission limits is patently unfair. My State of Arizona and other Western States have already installed expensive sodium dioxide scrubbers and low-nitrous-oxide burners to comply with present and projected standards. Electricity rates in Arizona are already high due to these modifications. Electric consumers in Arizona have paid over $400 million for the scrubbers and another $80 million for the low-nitrous-oxide burners. Subsidizing of States not in compliance with emission standards at the expense of those States in compliance is not only unfair, it is a disincentive to compliance. Admittedly, this issue is not just a local, State, or even national issue—it is international in scope. Certainly, we must all do our part. But equity requires that States leading the way toward a cleaner environment not be penalized for their efforts.

This legislation must also be reasonable. It is not reasonable for one who fully satisfies the act's permitting requirements to be subject to a violation for the same circumstances; nor is it reasonable to criminalize inadvertent recordkeeping errors. After all, if we want people to respect the law, the law must be respectable.

This legislation must be balanced, too. A law that would establish permitting requirements so stringent that it severely inhibits the ability of American business to respond to market demands is out of balance; so, too, is any part of the law where the benefits do not outweigh its costs. Although the ultimate cost of the act are unknown, annual estimates run as high as $104 billion or as little as $14 billion. Fiscal responsibility is a must.

Let us aggressively pursue clean air, but this pursuit must be tempered by fairness, reasonableness, and balance.

Finally, on this day I am optimistic. The piece of legislation before us, although imperfect, provides an opportunity to pass a comprehensive and meaningful clean air bill.

The act establishes requirements for emissions control of mobile sources. These sources cause 50 percent of urban ozone pollution, 50 percent of nationwide toxic emissions, 90 percent of carbon monoxide pollution, and, as such, are the biggest offenders of clean air in the country. The bill establishes a much needed clean-fuel program for fleet vehicles to encourage the use of new power sources like electricity.

The act establishes a market-based allowance system for acid deposition control. This will reduce sodium dioxide emissions from utilities to 80 million tons a year by 2000, down 8.5 million tons from 1980 levels. Coupled with expected reductions from 1980 levels of 1.5 million tons from other nonutility sources, the bill should result in a net reduction of 10 million tons of sodium dioxide.

The bill also seeks to control nitrous oxide emissions. It requires EPA to set certain specified emission limitations for electric utility sources sufficient to reduce nitrous oxide emissions by 2.5 million tons below the administration's 1989 projections of the level of nitrous oxide emissions in the year 2000.

The bill establishes programs directed at controlling hazardous air pollutants and attains ambient air quality standards. I am pleased to be a part of these meaningful and responsible environmental reforms.

In the final analysis, the act achieves its goals by significantly addressing three major areas of the air quality problem: urban smog, acid rain control, and toxic air pollutant regulation.

Here is an opportunity for Congress to toughen air pollution laws for the first time in 13 years. This chance must not be squandered—for next time may be too late. It has been said that the environment belongs to all of us. I believe, however, that the environment belongs to none of us; it is a gift from nature's library—to be borrowed and enjoyed and then returned to the shelf for the next generation.

Mr. WAXMAN. Mr. Chairman, it is my pleasure at this time to yield 5 minutes to the gentlewoman from Illinois [Mrs. COLLINS], an important member of our committee and our subcommittee and a real environmental champion.

Mrs. COLLINS. Mr. Chairman, while driving in the rain down Eisenhower Highway in Chicago recently, I noticed a dirty film on my windshield. I tried to remove it with the windshield wipers, but the film streaked. Initially I thought my windshield wiper blades were worn, but after applying the window washer solution several times, the windows became spotless and I realized, I experienced once again just how much damage polluted air is doing to our lungs and to our overall environment.

The reckless dumping of dirty, deadly chemicals and emissions into our atmosphere is injurious to both public health and the environment in which we live. It is such a common occurrence that environmental protection has become one of the most important issues of this generation.

Clean air is neither a novelty item nor a luxury, rather, it is the foundation on which our entire survival is based. The massive pumping of carbon dioxide has drilled a hole in the ozone layer, a significant expansion of which has been known to cause health problems and death. Autos, trucks, and buses still account for 45 percent of the ozone problem. In 1980, ozone standards were exceeded on 28 days in Illinois; in 1988, they were exceeded on 32 days. The proliferation of air toxics is no better. In 1988, 46 million pounds of toxic chemicals were spewed into the air by Chicago-area industries, up from 38 million pounds the year before.

At the other end of the spectrum, the daily inhalation of pollutants, which have become commonplace, has drastically increased rates of cancer and other lung diseases in residents of Chicago and elsewhere. Of the 46 million pounds of toxics pumped into Chicago's air in 1988, 1.4 million pounds were cancer-causing carcinogens.

We must respond forcefully and with total commitment to recapturing our future put in jeopardy by careless indifference toward environmental and health concerns. And we must do so now, capitalizing on this week's opportunity for progress. Some industries have been protesting that proposals affecting automobiles and their fuels, electric utilities, and the use or production of toxics will cause them to change their way of doing business. Well, that's precisely the point. American business has been too often conducted with little or no regard for environmental concerns.

I am fully confident, however, that the ingenious, creative American entrepreneurial spirit will have no trouble developing and adjusting the new standards set forth in this legislation. I have already seen many examples of environmentally sound methods of profitable production and am aware that many others exist. Most importantly, atmospherically safe production and manufacturing alternative are staggering.

Motor vehicles provide an excellent example. They are the main contributors to Chicago's air quality malaise. American manufacturers have already developed many methods of better controlling the emissions from auto, trucks, and buses. Yet, those methods have been left in the labs rather than built into the vehicles. H.R. 3030 would bring these technologies to the fore.

I want our automakers to experience continued growth in the United States and abroad in the 1990's and the next century. But they won't succeed by saving $50 or $100 at the cost of environmental irresponsibility. As consumers increasingly demand vehicles with the lowest possible emissions, they will

turn to whichever manufacturer best satisfies that need. To remain competitive, our auto manufacturers must make a serious commitment to producing vehicles that are economically and environmentally viable.

Consequently, not only do I support the bipartisan agreement on tailpipe emissions that we agreed to last year in the Energy and Commerce Subcommittee on Health and the Environment, but also all other efforts to rely on cleaner vehicles. Among the initiatives, that I will be supporting on the floor this week are the broadest and strongest possible provisions on alternative fuels, superclean fleet and other vehicles, and reformulated gasoline. I am optimistic that a combination of solutions will lead to a profound improvement in air quality, both in Chicago and nationwide.

Chicago's air pollution problems unfortunately do not end there. Acid rain is endemic to the Midwest and other areas, and Chicago is not exempt. It takes a daily toll in vital ways. It contaminates and limits the growth of crops, weakens our trees, poisons our waters, kills our fish, and even fizzles away the paint on our cars. I am convinced that the Energy and Commerce Committee's work on title V of the bill, on acid rain, will drastically reduce this problem. I am proud to have contributed language to that title that will safeguard poor Americans against the leap in electricity costs that are expected to result from title V.

The bottom line is that our Nation's utilities and production facilities must reach beyond coal, oil, and fossil fuels. The focus must shift instead toward conservation and renewables such as hydropower, solar thermal, photovoltaics, geothermal, and wind. These clean sources of energy, available in virtually limitless supply, are the way of the future. Although applications of these sources were initially developed in the United States in the past decade, Japan and other countries have taken the lead in their development. I would hate to see another American industry take a loss in competitiveness by resisting this inevitable trend of the future. Consequently, I am very pleased with the inclusion in title V of a provision which I helped develop to encourage utilities to reach their air quality goals through greater use of renewable energies and conservation. It allows a small pool of the sulfurdioxide allowance credits to be allocated to utilities that clean their emissions through the use of conservation and renewable energies during the first years after passage of this bill.

There are other major ingredients in a balanced, comprehensive, and effective clean air bill which were not addressed in committee. The toxic emissions from stationery sources must be sharply curtailed. I plan to offer an amendment to ensure that existing sources adhere to a strong standard of maximum achievable control technology. We must also take a tough stand to prevent against accidental releases of toxics which can lead to catastrophe.

The rights of private citizens must also be protected. I have been working since last year on language with which to amend title VI, on enforcement. The objective is to ensure the rights of private citizens to take legal action to enforce the clean air laws, even when the authorities have chosen not to pursue violations. If we are taking action for strong clean air legislation, then we must also ensure that the resulting legislation is fully enforceable. Clear citizen suit provisions are the key to that.

Mr. Chairman, I am pleased that clean air legislation is rapidly moving forward. However, to complete the task, we must spend the next few days adopting amendments which toughen the bill. If our aim is to amend the Clean Air Act without any disruptions to standard business practice, then we fail. We must aim instead toward making our Nation competitive in the long run, while acting on the air quality imperatives of coming decades. The businesses worth bolstering are those which eargerly embrace the future, not those which fight against it. I look forward, Mr. Chairman, to a productive week toward the goal of solid, serious clean air legislation.

□ 1640

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentlewoman from Maine [Ms. SNOWE].

Ms. SNOWE. Mr. Chairman, I am happy to rise today in support of H.R. 3030, the Clean Air Act reauthorization. The Nation has waited too long for Congress to improve our air pollution laws, we must act now to protect and improve our air quality throughout the country.

I also rise in recognition of President Bush's central role in breaking the decade-long legislative logjam which has blocked consideration of the Clean Air Act. And I would like to commend the gentleman from Michigan [Mr. DINGELL], the chairman of the Committee on Energy and Commerce, the gentleman from New York [Mr. LENT], the subcommittee chairman, the gentleman from California [Mr. WAXMAN], the gentleman from Illinois [Mr. MADIGAN], and the committee for its perseverence in grappling with and overcoming the seemingly irreconcilable regional differences over this issue.

In addition, let me add my words of praise to our colleague from New York, Representative BOEHLERT, for all of his efforts on this issue. The initiatives of the 92 Group's House Working Group on Acid Rain, which he headed, were instrumental in creating the compromise embodied in the bill before us today. Our 92 Group is devoted to realistic and effective solutions to the problems of our time, and this is a prime example of our approach.

The very pervasiveness and wide-ranging impact of air pollution, in all its different forms, has meant that this is an extremely complex bill to construct. But, for those same reasons, this legislation will have an enormously positive impact upon our Nation. Yes, it comes with costs; yet untreated air pollutants have already exacted a price and will exact an even higher one without this legislation.

Mr. Chairman, I am particularly pleased with title V of this bill, which addresses the harmful effects of acid rain. Over the years, this has been of the utmost concern to me: for with Maine's lush forests and unsullied lakes and rivers, my State is highly vulnerable to the eroding impact of acid rain.

These carefully shielded resources represent the economic backbone of Maine, primarily through the forest products industry and through tourism. But just as important, a threat to Maine's forests and waters is a threat to the very heart and character of our State.

Because of this, Maine and other New England States have taken action to limit emissions from utilities to standards far stricter than those imposed by the Federal Government. These stringent controls have come at a very real price—higher electric rates for Maine and northeastern consumers, and a limit to the amount of job-producing industrial development.

This Congress reflects the realization that these consumers must not be forced to pay even more—to pay twice, in effect—to clean up utilities that have polluted our air for years while charging their customers demonstrably lower electric rates. With the financing mechanism contained in title V, we finally and thankfully have a fair approach to curtailing acid rain.

The success of the original Clean Air Act cannot be denied—it is hard to imagine what our air quality would have deteriorated to, without it. Nevertheless, the United States has changed considerably since 1972 and our principal environmental law must be adapted and strengthened to reflect those changes.

Today we are faced with new problems that were unknown only a decade ago. The potential of global warming forces us to find ways of limiting our reliance on fossil fuels and to find cleaner, safer, and renewable forms of energy.

Ozone, for example, presents a particularly difficult problem: we have too much on the ground and too little in the upper atmosphere. I am especially concerned about ground level

ozone because of the nonattainment levels of pollution that plague much of Maine's coast. My concern is heightened by the fact that the majority of this ozone is not generated in Maine, but rather moves up the coast from our neighbors to the south.

Again, H.R. 3030 addresses this issue fairly and effectively, much more so, than the parallel provisions in the Senate-passed legislation. Nonattainment areas such as Maine, which did not cause their pollution, can be exempted in this bill from the strict control provisions due to that imported pollution. It's a matter of common sense: don't punish an area that is already suffering from a problem that it did not create.

Mr. Chairman, the American people have waited too long for a new Clean Air Act. President Bush provided the leadership to move the debate and now the Congress has responded responsibly with a bill that we all can support. It fairly and realistically addresses our air pollution problems and provides remedies that will allow our constituents to breath easier without taking the breath away from business and industry. I urge my colleagues to join me in support of H.R. 3030.

□ 1650

Mr. SIKORSKI. Mr. Chairman, I yield 6 minutes to the gentleman from Ohio [Mr. APPLEGATE].

Mr. APPLEGATE. Mr. Chairman, my colleague, the gentleman from Illinois [Mr. POSHARD] was up before us awhile ago and made some very stirring and very straightforward remarks with which I would agree.

There have been a lot of glowing remarks about this bill. I have to ask the question, is it worth the cost?

We talk about how much nitrogen oxides and how much sulfur dioxides will be taken out of the air, and I agree that this bill will probably do it. But is it worth the cost?

Are the Midwest power plants and the coal mines and the steel mills the real culprits? Well, if you take a look a lot of the studies that have come out, you will find that, no, they may not be the culprits at all. If you take a look at these studies and read them in depth, you will understand it.

So why are we pushing forward with this piece of legislation without taking into consideration the results of these studies?

Now, let me tell you, the taxpayers in this country when you have to finally go back and explain to them that we spent $600 million of your tax dollars involving Canada, England, and the United States, to come forth with a study of 10 years, the results of that study to be due in the fall of this year, and yet nobody is paying any attention to it. When I tell people this is $600 million of your money, our tax dollars, people say, "Oh, why?"

I mean, if we blew $600 million on some idiotic proposal, the press in this country would be jumping down our necks, and they would say these crazy people in Congress are just wasting your money again, or they are spending it on something that is not even worthwhile.

Well, this is worthwhile. Who was it in 1980 who supported this acid rain study, called NAPAP, the National Acid Precipitation Assessment Program, 10 years, $600 million of your tax dollars? The result will be out. The preliminary results are already out.

Do you know what they say? They say the sky is not falling. There is no environmental crisis, and all these serious concerns are unfounded.

The environmentalists pushed this thing in 1980, but because it does not say what they want it to say, they are disregarding it altogether. They are pushing the President, they are pushing the Congress, and they are successful.

So where have your bucks gone? They are right down the tube, and I think the people of this country should be outraged about it.

We in the Midwestern part of the United States are as much concerned about clean air as any of the other people throughout America, but we are also aware that it has to be balanced with a stable economy. It has got to be balanced with the retention of industries. It has got to be balanced with the saving of our community, the saving of our jobs.

I intend to oppose this bill in its present form. There is no way that after saying what I have said that I can come forth and support this bill.

The tragic consequences are the closing of industry and the jobs that are going to be lost, lost for no reason whatsoever, the loss of the right of the quality of life of people, and as was pointed out before, these hundreds of thousands of people who are going to be put out of work. How are they going to be able to clothe, feed, house, and educate their kids? You cannot do it today even when you are working, so how are you going to do it when you do not have a job? You cannot rely on the Government to come forth and pay for everything.

Let me say that in the seventies we were paying $32 billion a year for the Clean Air Act that we passed then. It was already passed. We lost hundreds of thousands of jobs. We only had 17,000 high sulfur coal jobs in my district, 14,000 of those are already gone, so we only have a little over 3,000 left. That is in southeastern Ohio.

Dr. Steger of the Carnegie Mellon University came out with a little study of the impact of the passage of this bill, and if the Senate bill is passed he says it is going to cost 4 million jobs. That is what is going to be placed at risk, and 750,000 of those jobs will be lost, 350,000 will be lost because of the House bill, and there will be steel, there will be coal and there will be a lot of others.

The reason I got up, I wanted to say this, because I wanted to mention that because of the job loss if this bill is passed, we must support the Clean Air Employment Transition Program, which is sponsored by the gentleman from West Virginia [Mr. WISE], which is like the TRA, the Trade Adjustment Assistance Program, which will allow that there will be 6 months of additional compensation and retraining for those people whose jobs will be lost as a direct result of the implementation of this bill.

I think it is very good legislation. I am afraid that it is going to be something that is after the fact, because the bill will be passed. We are going to lose the jobs. We should not do that in the first place, but it is going to be passed and if the jobs are going to be lost, then these people should be retrained and should have some additional compensation.

So I say it is a very good bill. I would ask your support when that bill comes to the floor. I understand that it will come to the floor perhaps at the end of this week.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. CLINGER].

Mr. CLINGER. Mr. Chairman, I thank the gentleman for yielding this time to me.

Mr. Chairman, I would like to commend the gentleman for a very fine statement. I would like to associate myself with his remarks. I think we agree, those of us who represent the areas that produce high-sulfur coal, agree that reauthorization of the Clean Air Act is long overdue, and yes, too many years have gone before we really addressed what has become an increasingly serious problem, and yes, we need an effective policy to deal with acid rain. I say that as one who represents a coal-producing district, but I also speak from personal knowledge about the acid rain problem. Kane, PA, a town within my district, has reported some of the highest readings of acid rain of anywhere in the world, so it is a problem.

There should be no debate—there is an acid rain problem and we need to legislate a fair solution—Although title V of H.R. 3030 is one of the better attempts at finding a fair solution, it is not perfect.

A fair solution requires that benefits and costs be taken into consideration. We have done a good job in identifying the benefits, but I am not convinced that we have identified fully all of the costs.

There will be costs to ratepayers, costs to the economy, costs to coal operations, potentially thousands of coal

jobs in Ohio, Pennsylvania, West Virginia, and throughout the Midwest, and costs to this Nation's energy security in the future.

I believe that most of us are familiar with the costs to ratepayers and the risks to the economy. Title V of H.R. 3030 tries to soften these impacts through a market-oriented system of sulfur dioxide allowance auctions and trading schemes; and in the case of low-income ratepayers offers, there is some protection against rate hikes.

The economic costs of compliance with title V is estimated to range from $3.3 to $4.8 billion. Yet our bosses, the American public, have told us that this is the price we should be paying.

What we have not heard enough about is the impact to coal miners and coal mine operators. Some have determined that the job impact of the Senate-passed legislation to be as high as 15,000 direct mining jobs. If prudent measures currently in the House bill are not signed into law, the impact could be equally catastrophic.

Even with the House bill's provision providing States with the authority to require utilities to use only in-State coal in complying with emission reductions, it cannot be assumed that all States will act to protect high-sulfur coal mining jobs. If the Senate version prevails, there will be no such authority provided to States.

Accordingly, I would urge my colleagues to pass the Wise amendment. It is a modest, yet thoughtful, approach, designed to ensure that all workers—petrochemical workers, autoworkers, coal miners, steelworkers—all workers who lose their jobs because of the Clean Air Act's compliance burdens will have minimal benefits available to them. With the cost of complying with the Clean Air Act expected to increase, at a minimum, an additional $20 billion per year to over $50 billion per year; $50 million, or one-tenth of 1 percent of the annual compliance cost, seems like the least that we can and should do.

Finally, I would like to remind Members of the importance of coal in meeting our Nation's energy demands and in ensuring our national security.

With 462 billion tons of proven reserves, coal is our Nation's most abundant energy resource. And while I support efforts to more equitably distribute the costs of cleaning up our larger utilities, including maximizing Federal assistance, I am concerned about dedicating all of our remaining clean coal technology moneys to just phase 1 powerplants.

The Clean Coal Technology Program is a sound investment designed to ensure that there will be a future market for not just higher sulfur coals, but all coals. Expanding the number of qualifying clean coal technologies and providing greater flexibility in the use of these technologies will ensure that the program is a success and that all of our Nation's coal resources are available to meet our energy needs.

In closing, I would warn Members, if we bankrupt eastern coal companies, we may be forsaking billions of tons of our most abundant energy source: Coal.

I urge Memers to consider favorably committee amendments that ensure greater flexibility in the Clean Coal Program, while ensuring that the program remains competitive.

Having adopted these amendments and the Wise amendment, we should vote to reauthorize the Clean Air Act.

□ 1700

Mr. WAXMAN. Mr. Chairman, when I came to this institution 15 years ago, there was one man who was working for a strong clean air bill. He has never let up the fight. He has a firm commitment and dedication to protecting the environment.

Mr. Chairman, I am pleased and honored to yield 7 minutes to the gentleman from California [Mr. BROWN].

Mr. BROWN of California. Mr. Chairman, I am extremely grateful to the able chairman of the Subcommittee on Health for those kind and generous remarks.

It is true that the fight over clean air began in Los Angeles 35 years ago, at least, and almost 30 years ago when I and another young crop of Congressmen came to Congress from California, one of our first crusades was to help to do something about this plague which had already visited us in southern California. I can recall some of our more flamboyant efforts, such as bringing back cans of polluted air which we distributed on the floor to try and convince our colleagues that we really did have a serious problem. I commend those Members such as the gentleman from New York [Mr. BOEHLERT], and there are many others like him, the gentlewoman from Maine [Ms. SNOWE], and others, who were mentioned on the Republican side as well as on the Democratic side, who placed the cleanup of our atmosphere at the top of their priority list and who have been working diligently to achieve that goal for all of these years.

In a sense, one could say that this debate is sort of, in the words of a great American statesman, deja vu all over again, because we have been hearing many of these speeches before, but I think today we see a wider interest, a greater concern, a more knowledgeable understanding of the wide range of effects from the air pollution problem than we have ever seen before.

I consider this to be a sign of promise and, of course, I think it is very welcome, indeed, that the President has made this a priority and has given his leadership toward seeking to achieve good legislation.

Mr. Chairman, obviously I rise in support of the clean air amendments, H.R. 3030, and urgently hope that they will pass. I wanted to make the point, particularly, that the district which I am privileged to represent, the 36th District of southern California, which includes a portion of two of America's largest counties, San Bernardino and Riverside Counties, is probably the worst impacted area or region in the entire United States from air pollution. We have more smog alert days than any other region. On the worst days, the air which hangs over our counties is brown, and that is not because my name is BROWN, it is because of the air pollution. The high mountain ranges which ring the valley are completely obscured.

There is strong evidence that this smog is a killer. The death rate from chronic lung disease in the region is 37 percent higher than for the rest of California. Even if we eliminated all stationary sources of reactive organic gas emissions today, my district would still be out of compliance with the Federal ozone standards. More than half of the gas emissions in my district come from motor vehicles, and in southern California the lack of public transportation and commuter rail lines makes it very difficult for most people to cut back on driving. The problem is vast.

Califonia's South Coast Quality Management District will require roughly an 80-percent reduction in emissions of reactive organic gases and oxides of nitrogen in order to reach the Federal ozone primary ambient air quality standards in the next century.

Mr. Chairman, the only way the area can hope to achieve clean air is to combine strong stationary-source reduction provisions with strong motor vehicle emission controls. I believe the best way to achieve a long-term solution for controlling motor vehicle emissions is through the production and use of alternative fuels and alternative-fueled vehicles.

The problem not only affects southern California. We know that over 100 urban areas in the Nation do not meet existing Clean Air standards for ozone, and that more than 40 areas fail to meet standards for carbon dioxide. We also know that programs directed at reducing emissions from mobile sources will be central to air quality restoration efforts in these areas.

Consequently, Mr. Chairman, I am hoping to offer an amendment to the Clean Air Act which would increase the Federal role in creating markets for alternative fuels and alternative-fuel vehicles. This legislation would apply only to areas classified as extreme. Currently this would apply

only to the Los Angeles Basin, which contains approximately 26,000 federally operated vehicles, and my proposed amendment would require that this considerable purchasing power by the Federal Government be used to acquire vehicles after 1994 which would meet the most stringent hydrocarbon and oxide of nitrogen standards.

I understand that the distinguished gentleman from California, the chairman of the subcommittee, will be offering an amendment which probably goes even further than this, and with his kind cooperation, my amendment could probably be incorporated into his. I will look for opportunities to do this.

But the point that I am trying to make with this amendment is that we have to use every possible method in order to encourage and to create markets for vehicles which are completely different from today's vehicles. They have to be very low-emission vehicles. We may even need to move to systems such as electric vehicles or hydrogen-powered vehicles. We need to gain momentum in achieving this as quickly as possible. Hence, I think it is desirable that we begin to incorporate provisions of this sort into the Clean Air Act.

Mr. Chairman, I strongly urge the approval of this legislation. I think it is a landmark step forward. I do not expect that we will, of course, solve all of these problems, probably not in my lifetime, but we must continue the fight which has, as I have indicated, been going on now for over 30 years and which is vitally important to the health and welfare of this country.

Mr. Chairman, I am including for the RECORD a copy of my amendment and an explanation.

Page 217, after line 14, insert:

"(9) UNITED STATES GOVERNMENT VEHICLES.—Within 18 months after the date of enactment of the Clean Air Act Amendments of 1990, each State which has received a waiver pursuant to section 109(b) and which contains all or part of an Extreme ozone nonattainment area shall submit a revision to the implementation plan applicable to the Extreme area setting forth requirements for 1994 and later model years vehicles acquired by the United States. Such revision shall require that each vehicle purchased, leased, procured, or otherwise acquired by an agency, department, or instrumentality of the United States and operated primarily in the Extreme area shall comply with the most stringent standards for emissions of reactive hydrocarbons and oxides of nitrogen which the State determines may feasibly be achieved by vehicles of such class and model year. The State may waive the requirements of this paragraph to the extent that the United States demonstrates that vehicles complying with such standards, or fuels required for their operation, are not available.".

---

EXPLANATION OF THE GEORGE BROWN AMENDMENT TO THE CLEAN AIR ACT

The fundamental purpose of this amendment is to increase the federal role in creating markets for alternative fuels and alternative fueled vehicles.

This legislation would apply only to states which have received a waiver pursuant to section 209(b) and which contain all or part of an extreme nonattainment area (currently only Los Angeles Basin, California). This proposed amendment would provide that, when acquiring new vehicles commencing in model year 1994, the federal government would be required to obtain vehicles meeting the most stringent emissions standards adopted by the state for reactive hydrocarbons, and oxides of nitrogen which the state determines may feasibly be met for such class and model year vehicles. The requirement could be waived if the federal government demonstrates that such vehicles or their fuels are not available in sufficient quantities to meet the government's needs.

If our nation is to realize the substantial environmental benefits offered by cleaner fuels and cleaner fueled vehicles then the federal government must demonstrate its commitment to the purchasing and use of such vehicles and fuels. By so doing, the federal government would encourage additional private sector research and development efforts, stimulate market development, and reduce its contribution to the deterioration of air quality.

□ 1710

Mr. WAXMAN. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. LEVINE].

Mr. LEVINE of California. Mr. Chairman, first of all I would like to commend the leadership of the committee on a bipartisan basis for the fine work that they have done in bringing this bill to the floor. I would particularly like to commend my close friend, the gentleman from California [Mr. WAXMAN] on the superb job that he has done on addressing numerous critical air-pollution problems threatening the health of millions of Americans and for the leadership which he has provided to us, not just in southern California, but throughout the country, on this critical issue over the course of the past decade and even before that.

Even with the superb work that the committee has done in putting this bill before us, Mr. Chairman, there remains a gaping loophole in this legislation which I urge my colleagues to join me, as well as the gentleman from California [Mr. LAGOMARSINO], the gentleman from California [Mr. LOWERY], and the gentleman from New York [Mr. GREEN], in closing, and that is the loophole of offshore platforms that escape all regulation under the Clean Air Act.

Under the 1978 Outer Continental Shelf Lands Act, the Department of the Interior was to regulate all offshore operations in Federal waters. Twelve years later, DOI has yet to finalize a rule for California and has not even begun to address the issue in the gulf.

One might ask, what is the big deal about this issue? The platforms are off-shore and how much could they pollute anyway?

The answer is that this source of pollution is in fact a very big deal. The daily emissions of a platform off the coast of California is equal to 15,000 to 100,000 automobiles. In California there are roughly 20 platforms in Federal waters within 25 miles of shore. Some of those have already contributed to violation of State and Federal air quality standards.

I originally became involved in this aspect of this issue, Mr. Chairman, because of my concern for California's air quality, but this is not just a California issue. There are about 2,000 platforms within 25 miles of shore in Federal waters in the western gulf. These platforms are contributing to air pollution in as many as two dozen coastal counties and parishes which are nonattainment of one or more Clean Air Act standards.

In reviewing the EIS's for gulf sales over the last few years I have found that the EPA has consistently expressed concern about the problem, and yet DOI has done nothing about it.

Let me just read two quotes from 1988 EPA comments on a gulf sale EIS:

We seriously wonder if EPA and Texas-Louisiana efforts at ozone abatement will be partially or perhaps totally nullified by the huge increase in volatile organic and $NO_x$ from the new drilling activity. The introduction of 132,000 tons per year of $NO_x$ and 49,000 tons per year of VOC upwind of gulf coast nonattainment areas is practically tantamount to locating another Houston there.

DOI has been negotiating a rule in California for over a decade. The most recent draft was resoundingly denounced by the EPA, the State of California, and the local air districts. DOI has failed at its task, plain and simple.

The Levine-Lagomarsino-Lowery amendment which we will offer to this bill on Wednesday, Mr. Chairman, will rectify this serious problem, and I urge Members to support it.

Our amendment would require the EPA to regulate all platforms and the vessels that service them, and platforms and service vessels within 25 miles of State waters would have to comply with the same requirements as similar sources in State waters or on shore.

In addition, our amendment will address a growing concern that toxic air pollutants end up in the Nation's coastal waters. We are concerned that these toxics are bioaccumulating in the food chain, including fish and waterfowl which are taken for human consumption, and then present a direct threat to human health.

The amendment would require the EPA to complete a study of airborne deposition of toxics in coastal waters and their tendency to bioaccumulate in the food chain. If the EPA finds that the Clean Air Act does not pro-

tect human health or the environment from airborne depositions, the EPA would be required to develop regulations to prevent such adverse effects.

Mr. Chairman, I urge Members to support this amendment when we do offer it on Wednesday. It will be a bipartisan amendment. It will correct these important omissions of what is otherwise a very, very significant and important piece of legislation that I very much hope will pass resoundingly on the House floor in the next several days.

Mr. LENT. Mr. Chairman, I am pleased to yield 10 minutes to the gentleman from Pennsylvania [Mr. RITTER].

Mr. RITTER. Mr. Chairman, everyone agrees that we need to improve our environment. No one disputes that the American people demand healthier, cleaner, and clearer air. And we should help them get it.

There is an old saying that success begets success. The 1970 Clean Air Act, with its 1973 and 1977 amendments, has been very successful and it continues to improve air quality. According to the EPA, from 1978 to 1987, lead, perhaps the most important emission from the standpoint of human health, has been reduced 94 percent; ambient levels of sulfur dioxide are down 32 percent; particulates, down 21 percent; and ozone levels, down 16 percent.

Tailpipe hydrocarbons and carbon monoxide are down 96 percent and oxides of nitrogen are down 76 percent. That's not a record we should ignore. Further tightening of tailpipe emission standards for new cars won't clean up those cars on the road that are dirty—cars that were built before emission controls, some of which may be very dirty, and cars built after controls that are out of tune. It is crucial that we focus far more resources on cleaning up gross polluters if we wish to be successful. The rational solution is not necessarily tighter new car emission regulations, but detection systems to locate gross polluters and get them back in tune, whether old or new. An amendment by the gentleman from Texas [Mr. BARTON] to this effect which I strongly support is part of our committee bill.

In any event, the turnover of the fleet does the lion's share of emission reduction.

The electric power generating industry has decreased the average sulfur content of its coal by almost 33 percent since 1973. Sulfur dioxide emissions are down 29 percent. All this while coal use has increased over 80 percent. It represents a remarkable yet untold success story. But even here scrubber-based control has reduced acid-buffering particulates and created highly airborne aerosols of sulfur which pose new problems. Scenarios for the next 20 years show limited differences between the projected effects of current clean air law and 1990 amendments regarding $SO_2$. The main reason for such limited differences is that over the next 20 years, older plants will come into compliance with current NSPS. Targeted investment tax credit incentives to replace those plants earlier than projected could have been most helpful.

While it is discouraging that Congress ignored its own one-half of a billion dollar, 10-year NAPAP study, the administration's plan for using the marketplace to trade emissions seems, at this stage, to be a creative, innovative, and useful way to help pay for further sulfur dioxide-based, acid rain reduction.

On NAPAP, we, in the House, did not hold one hearing. That's right, not one single public hearing on this 10-year study. Congress' own 10-year one-half of a billion study could have served as a guide, but it has been ignored. Clean coal technology is also given relatively short shrift by this bill.

Also, if coal scrubbing is the main technology for further $SO_2$ clean-up, we end up substituting a major solid waste disposal problem for an air problem. Each 1,000 megawatt coal-fired power plant generates 1 square mile of 1-foot-thick scrubber sludge each year. Greater emphasis on clean coal technology would go a long way to reduce this substitution of one environmental problem for another.

Mr. Chairman, to get markedly cleaner air than we have now we need better applications of science and technology far more than a new regulatory straightjacket. One amendment I have presented to the Rules Committee for their consideration is aimed at encouraging clean coal technology by allowing a 1-year extension for existing units using clean coal technologies. My amendment will require that they not only pay back the additional allowances, but with interest. This would both encourage the use of clean coal technology by providing slightly more time needed to develop the technology, and also, upon implementation of the technology, pay back more allowances than they borrowed, showing a net gain in emissions reduction.

The Waxman/Lewis amendment to mandate production of alternate fuel vehicles including heavy-duty trucks may be well intended but it is unwise. Heavy-duty vehicles and trucks over 14,000 pounds gross vehicle weight are used for a diverse range of activities and require added consideration when the use of alternative fuels is debated. This Ritter amendment will assure that the regulation of heavy-duty vehicles and trucks over 14,000 pounds gross vehicle weight is not only well intended, but well informed, and technologically feasible.

The amendment I have provided to the Rules Committee authorizes a mechanism to allow the Environmental Protection Agency to establish emissions standards for vehicles and trucks of 14,000 pounds gross vehicle weight and above. The amendment is necessary because the Waxman/Lewis clean-fuel vehicles amendment fails to consider the following:

First. The practical effect of the Waxman/Lewis clean-fuel vehicles amendment's heavy-duty engine requirements will be to kill the diesel engine.

Second. The EPA has determined that compared to diesels, lead-burn CNG vehicles would be expected to result in a 13 to 15-percent increase in greenhouse gases and increased potential global warming impact.

Third. Given the estimates in the April 1990 EPA report on alternative fuels, even an optimized CNG engine at best offers minimal ozone reduction benefits over a 1994 heavy-duty diesel engine.

Fourth. The EPA has recently determined that given the relative engine efficiencies, the fuel storage, weight impacts, and fuel prices, fuel economics favor a diesel engine over an optimized CNG engine.

Fifth. Methanol creates severe serviceability problems due to its highly poisonous and corrosive nature. Service and repair personnel will be put at risk.

This amendment on heavy-duty diesels conforms to the original H.R. 3030 as introduced.

For this historic legislation, there's also the issue of American industrial jobs. Excessive regulation of the very marginal environmental hazards puts jobs of American workers, particularly those in manufacturing, and "Made In America," itself in danger. Imports and foreign workers are the winners.

Make no mistake about it. Large numbers of American steel, truck, auto, cement, utility, and manufacturing workers in general, and their families can be severely hurt by very specific provisions in this bill.

Is the American taxpayer going to be called upon to ante up benefits if those jobs are lost to foreign competition?

I sincerely hope the $20 to $50 billion a year that this bill will impose on American consumers, their jobs, and their communities will add real tangible environmental and health benefits. We must ensure the benefits are real.

I am requesting that my amendment to quantitatively and qualitatively assess the public health and environmental benefits associated with the EPA regulatory programs which derive from this act, be ruled in order by the Rules Committee. My amendment would authorize a formal mechanism to inform Congress of the incre-

mental health and environmental benefits of the 1990 amendment's emission reductions. It would require the EPA to list the most hazardous emissions in rank order, worst first and the costs and health benefits associated with each as a result of this act, evaluated. Such an assessment would help us to determine where our priorities should be placed and avoid great cost of reductions in one area while ignoring far more hazardous areas.

I firmly believe America should make major investments in further cleaning up the air we breathe. We could do much more to identify the dirty businesses, utilities, and vehicles, and rifle-shot their cleanup. We could be more successful in achieving clean air if we were more focused and our policies more scientifically based.

I also believe, at a fraction of this act's costs, we could make nature's beauty more accessible to citizens throughout America, not just in faraway national parks. Federal incentives for State and local environmental investments could be made to create or preserve greenspace, wild lands, or parklands in our urban or suburban areas. Our regional rivers could be restored while giving access to the public to experience their natural heritage.

This would mean environmentalism that you can see; that you can smell; that you can touch.

What I have been describing is just a fraction of a more tangible environmental progress. Not like so much of what we deal with in Washington, DC—worst case risks blown up out of all proportion to reality so that much of our environmental legislation is far less effective than it could be.

Mr. Chairman, I do not oppose the bill. Indeed, I supported its passage in committee. I would hope however that we learn from our experience here and, in future environmental legislation, pay more attention to scientific merits of the debate and a little less to the political science.

Environmentalism as religion may be attractive to some, but has no place in the U.S. Congress.

Finally, I would like to express my great respect for our Chairman, the gentleman from Michigan [Mr. DINGELL], who exhibited the patience of Job in leading the committee through the veritable minefields of conflicting politics and policies. I'd like to express, too, my admiration for the gentleman from California [Mr. WAXMAN] whose perseverance and political skill has been the leading force in the success of this legislation. My own ranking member, the gentleman from Newark [Mr. LENT], did yeoman service in seeking to bring greater reality to the process.

Our colleagues and their respective staffs also deserve credit for the massive task of helping to forge the final legislative product.

Mr. Chairman, this is indeed a historic moment where the U.S. Congress is on the verge of passing, by far, the most stringent regulatory program over energy production, transportation, and industry in history.

I sincerely hope we achieve the desired results.

□ 1720

Mr. WAXMAN. Mr. Chairman, no Member of this institution has greater credit due him for the battle for reduction of acid rain pollutants than the gentleman from Minnesota [Mr. SIKORSKI]. In the 98th Congress, he introduced H.R. 3400; in the 99th Congress; H.R. 4567; in the 100th Congress, H.R. 2666; and in the 101st Congress, H.R. 1470.

The gentleman from Minnesota [Mr. SIKORSKI] has been the absolute single-handed champion of acid rain, far and above any other Member of this institution. He has clearly established himself as one of the handful of leading environmentalists in the Congress of the United States. I am pleased to yield such time as he may consume to the gentleman from Minnesota [Mr. SIKORSKI].

Mr. SIKORSKI. Mr. Chairman, I thank the gentleman from California for yielding time to me. It has only been my pleasure to stand in his shadow as clean air has advanced. I have benefited in remarkable ways because of that, and I thank the gentleman from California for allowing me to help out on acid rain.

I also should comment that Mickey Leland took on the air toxic issue 1½ years ago, and we miss his efforts there.

Mr. Chairman, this week we make history in this Chamber. Today the U.S. House of Representatives takes up, for the first time in 13 years, the Clean Air Act. Most of the Members of this body, including myself, were not even here the last time this act was debated on this floor.

Our understanding of clean air 13 years ago was incredibly small compared to what we know today:

Catalytic converters were just beginning to go in cars; lead was just beginning to come out of gasoline.

Pollution control in 1977 for many companies, meant building taller smokestacks to send acidic pollutants, to rain down as acid rain hundreds of miles away.

Acid rain wasn't in America's vocabulary and most Members of this body probably had no idea that this so-called solution of tall smoke stacks threatened America's lakes, lung's and forests just as it had already killed hundreds of thousands of acres of trees in Germany and, as we now know, in the Eastern bloc.

No one dreamed then that over 2 billion pounds of toxic pollutants, carcinogens, and mutagens, cripplers of the body and cripplers of the mind, were being shot into the air every year—no one had bothered to make industry count.

And a seemingly pristine lake in the middle of the largest island in the middle of the largest freshwater body in the world, Lake Superior, had not yet yielded the secret that these toxic killers were being transported thousands of miles, to settle in our lakes and streams and forests, our communities and our lungs, across the country.

We know now and with knowledge comes responsibility, and with dominion over the land and sea and air, as Genesis tells us, comes the responsibility of stewardship. The legislation before us takes a step on the road to stewardship.

As far as I'm concerned, it won't go far enough. It won't do everything. And it won't do it fast enough. Any document of this scope, approved by a body of this breadth and diversity, dealing with issues of this scope, is bound to have shaved corners and rounded edges.

And by the time this body has finished its consideration, I am hopeful we will have bettered the clean air laws of America. Finally, after almost a decade of administration footdragging, we will deliver on the President's proclamation of last summer: That every American will breathe clean air. We won't deliver on that promise as swiftly as I had hoped and fought for, and for the residents of this Nation's two largest cities, it will not be done within the President's own deadline of the end of this century. But it will do so.

CREDITS

The clean air bill and the amendments before us today are testimony to men and women of will and vision. Like the chairman of the Health and Environment Subcommittee, HENRY WAXMAN, and like the tireless advocate for the threatened, the champion on air toxics, Mickey Leland.

HENRY WAXMAN has been the guiding light for clean air legislation for over a decade now—against ferocious attacks on the environment during the Reagan administration—articulating and successfully implementing a vision of a cleaner, safer environment, for this generation and generations to come. Mickey Leland was the moral beacon to whom this bill should be dedicated.

Credit must go to those Members of Congress who worked tirelessly over the years to bring us to the brink of victory today in the war on acid rain: SILVIO CONTE, SHERWOOD BOEHLERT, MO UDALL, BILL GREEN, and again, most importantly, HENRY WAXMAN. Finally, credit goes to those members of the Energy and Commerce Committee who worked long and hard and in good faith to fashion the clear air package

before us today, including BILL RICHARDSON, MIKE SYNAR, AL SWIFT, DENNIS ECKART, ED MARKEY, RON WYDEN, JOHN BRYANT, JIM BATES, JIM COOPER, PHIL SHARP, JIM SLATTERY, CARDISS COLLINS, TERRY BRUCE, TOM MCMILLEN, ED MADIGAN, CARLOS MOORHEAD, and MATT RINALDO.

Today's clean air bill is also testimony to the political skill and pragmatism of Energy and Commerce Chairman JOHN DINGELL, ranking minority member, NORM LENT, and President George Bush.

I want to discuss two clean air issues that have been particularly important to me—acid rain and air toxics—and to suggest some areas where this Clean Air bill needs some cleaning and improving.

ACID RAIN

For years, I've felt like the John Baptist of acid rain control. I've been preaching my sermon, and winning many converts—over 180 of them on the most widely supported acid rain legislation ever introduced in Congress—with the message that when it comes to acid rain control, the day of judgment is at hand. You know the sermon:

Every day more than 176,750 tons of sulfur dioxide and nitrogen oxide—the equivalent of 4,144 fully loaded freight cars—are shot into the skies of North America. Every 24 hours! And what goes up comes down. It comes down in the form of rain, snow, sleet, precipitation or dry deposition. It's called acid rain. And it destroys lakes and lungs, forests, and farmlands, hunting and fishing, our environment and our economy.

For 13 years, here and in the Minnesota State Senate, I've been working for the day when acid rain control would finally be the law of the land. I am delighted that that day is at hand.

Since arriving in Congress 7½ years ago, I have worked to draft legislation to protect the environment and human health from acid rain while protecting jobs from dislocation and ratepayers from excessive electricity rate increases. In four successive Congresses I introduced acid rain control legislation that drew widespread, bipartisan, national support because it successfully did just that. I am happy that this committee, by a 42-1 vote, has approved clean air legislation containing an acid rain control title that will begin doing what should have been done over a decade ago.

This legislation includes a number of important findings on acid rain:

That acid rain resulting from emissions of sulfur and nitrogen oxides "represents a threat to natural resources, ecosystems, materials, visibility, and public health";

That "the problem of acid deposition is of national and international significance and cannot be addressed adequately without effective State-Federal cooperation";

That strategies and technologies to control acid deposition exist now and are economically feasible; and

That "current and future generations of Americans will be adversely affected by delaying measures to remedy the problem."

These findings are not new. They are not surprising. They represent the collective wisdom of years of research, over 6,000 studies on acid deposition, and literally hundreds and hundreds of hours of public testimony by expert witnesses before subcommittees of the Energy and Commerce Committee. Nearly a decade ago, the National Academy of Sciences [NAS], this country's most prestigious national scientific body, called for a 50-percent reduction in sulfur dioxide emissions to control acid rain. This legislation will almost do that—nearly two decades, by the time controls are required, after the NAS's call.

These findings also recognize the tremendous costs of acid rain:

The EPA has found that ozone levels in many parts of the country, in part the result of nitrogen oxides, reduce crop yields up to 33%. The damage: $2 to $3 billion per year.

The Interior Department has estimated acid rain damage to materials, buildings and historical monuments at up to $60 billion per year.

The Congressional Research Service reports annual forest damage from acid deposition in the Eastern United States alone at $1.75 billion.

Seventy-six million Americans pay with their lungs and bodies the direct health costs of exposure to excessive ozone. Sulfur dioxide, nitrogen oxide and ozone injure pregnant women and threaten people with heart disease, asthma, bronchitis or emphysema.

The American Lung Association 5 years ago reported that the human health costs alone from air pollution run as high as $40 billion annually. This year they issued an update: the human toll from air pollution now stands at $100 billion per year.

The Congressional Office of Technology Assessment estimates that 50,000 Americans die prematurely each year due to the chemical precursors to acid rain. Researchers at the John F. Kennedy School at Harvard University put this figure closer to 100,000 premature deaths each year.

The list of costs goes on and on—visibility, forestry, fishing, monuments, human life—but the bottom line is clear. Air pollution exacts a price in money, lives and irreplaceable economic and natural resources.

The ability of this committee to arrive at an acid rain title that fairly addresses most of the concerns of Members representing all regions of this country illustrates the veracity and strength of the premise underlying legislation I have introduced in each of the last four Congresses: effective control of acid rain can be achieved without unduly burdening any consistuency or region of the country.

The acid deposition title reported by this committee shares the approach that has highlighted acid rain legislation I have introduced in every Congress since the 98th; the combination of strong controls to protect the environment and human health with balancing features to ensure that jobs and electricity rates in no region of the country will be substantially harmed.

In the 98th Congress, I joined Health and Environment Subcommittee Chairman HENRY WAXMAN in authoring H.R. 3400, the National Acid Deposition Control Act. This legislation garnered strong bipartisan support in the House of Representatives, with over 135 cosponsors from every region of the country. This nationwide support stemmed from the dual core elements of the legislation: A strong, 14-million-ton reduction in the precursors of acid rain, combined with billions of dollars in assistance to regions particularly affected by acid rain reductions as protection against loss of jobs or utility rate increases. Despite this protection, in the face of intense opposition from the very industries and groups it was designed to protect, the legislation failed in subcommittee by a single vote.

In the 99th Congress, I introduced H.R. 4567, the Acid Deposition Control Act of 1986, the most broadly supported acid rain control bill in the history of Congress. Over 180 House Members gave this bill a bipartisan, geographically broad base of support. This legislation called for a similar 14-million-ton reduction in sulfur and nitrogen oxides, and provided protections for jobs and against increases in electricity rates of more than 10 percent in any single State.

In the second session of the 99th Congress, industrial polluters spent more in opposition to this legislation than on any other issue before Congress. The Health and Environment Subcommittee passed H.R. 4567 by a vote of 16 to 9, but a series of procedures and delays prevented full consideration of the legislation by the full committee.

In the 100th and 101st Congresses, I introduced similar legislation—H.R. 2666 and H.R. 1470, respectively—which again attracted the most cosponsors and the most bipartisan, nationwide cosponsorship of any acid rain control legislation in those Congresses. Again the legislation contained safeguards to protect industries, regions and individuals against economic hardships. Again those who make money from pollution opposed it. And against those whom the bill would have protected from economic shock opposed it. In the 100th Congress, the Health and Environment

Subcommittee held hearings and reached tentative agreement on H.R. 2666 before Clean Air Act legislation stalled over other issues.

In the 101st Congress, the Clean Air Act amendments proposed by the Bush administration contained the first ever administration-backed acid rain proposal. It called for acid rain reduction goals identical to the reductions achieved in my legislation and included a feature for which I had fought—a cap on emissions to prevent deterioration of acid rain reductions in later years.

The Bush administration's 180-degree reversal from the past 8 years of administration policy is testimony to the desire of the American people to stop acid rain once and for all.

In subcommittee markup, clean air advocates succeeded in removing features in the Bush proposal directly contrary to the goal of acid rain control which were, most notably a repeal of existing legal protections against tall smoke stacks which cause acid rain.

We also improved significantly in markup on the administration acid rain title: by making the emissions cap and allowance trading system more workable; by providing additional allowances to ensure that Midwestern ratepayers won't be subject to rate-shock; and by encouraging technology that will lessen the employment impacts of H.R. 3030.

This legislation is also environmentally superior to the administration bill:

It requires a real 10-million-ton reduction, rather than projecting it, by imposing an absolute cap on utility emissions;

It provides incentives for earlier SO2 reductions;

It provides incentives for using conservation and renewable energy for acid rain compliance;

It increases NOx reductions from the 2 millions tons called for in the Administration bill to 2.5 million tons (and up to 4 million tons if the EPA finds it cost-effective). When combined with the additional NOx reductions achieved in the Committee's mobile sources provisions this should produce real reductions in NOx emissions.

It restores citizens' rights to ensure enforcement of the law.

National acid deposition control legislation is long overdue. I have been working toward it since my days in the Minnesota State Senate. In 1978 I coauthored a resolution calling for adequate safeguards at the Atikokan powerplant in Canada, near the Minnesota border, which threatened the wilderness land of the Boundary Waters Canoe Area in northern Minnesota. In 1980, the Minnesota State Legislature passed the first legislation in the history of the North American acid rain debate, and 2 years later, the first acid rain deposition control law in North America.

The acid rain title reported by the Energy and Commerce Committee is the product of much hard work and sincere efforts by members of the committee. Credit must go, however, to those Members of the House who have worked over the years to focus attention and to draft a balanced, national approach to this national problem: most prominently, SILVIO CONTE, SHERRY BOEHLERT, and MO UDALL. The greatest credit for passage of national acid rain control legislation belongs to the leadership, guidance and vision of HENRY WAXMAN.

H.R. 3030 as reported by the Energy and Commerce Committee takes good, solid first steps toward addressing the problem of acid rain fairly, firmly, and adequately. Such an approach is long overdue.

AIR TOXICS

Last spring we learned that more than 2.7 billion pounds of toxic chemicals—over 10 pounds for every American man, woman, and child—are released directly into our air every year. This spring we learned that the deluge continues. The data was the result of an amendment I helped author to the Superfund law 4 years ago known as the Community Right To Know Act. Industry fought us tooth and nail on this amendment. They told us that, "what we don't know can't hurt us." They were dead wrong.

We have also learned that Great Lakes residents are at special risk: Great Lakes residents are exposed to more toxic chemicals and carry a higher toxic body burden than any other comparable population in North America; more than 50 percent of Great Lakes toxic pollution comes from the atmosphere; environmental pollution directly threatens human health through bioaccumulation in the food chain, which has rendered close to 30 species of fish unsafe for consumption by women of child-bearing age and children, and increased the cancer risk of cancer from eating one meal a year of contaminated Great Lakes fish to 1,000 times what the EPA considers acceptable.

The air toxics title of this legislation goes a long way to ending the threat of toxic air pollutants. It includes a provision on Great Lakes air toxics that I worked to have included and worked to strengthen. This amendment ensures that if toxic chemicals continue to threaten the Great Lakes, they will be regulated. We also succeeded in extending this provision to the threatened Chesapeake Bay region. I support an amendment which will be offered by Congressmen LEVINE and LOWERY which does what my amendment would have originally done: extend the study to all threatened coastal waters.

STRENGTHENING AMENDMENTS NEEDED

More needs to be done, if we are truly to deliver on the President's promise that all Americans will breathe clean air:

AUTOS

Last year 130 million Americans breathed unhealthy levels of smog and carbon monoxide. The single largest cause: the automobile.

First. This legislation should help the President keep his promise—his clean air centerpiece—to produce 1 million alternative fuel vehicles per year by the turn of the century. The current bill does not. Waxman-Lewis amendment puts the President's words into law.

Second. Americans in most of America's cities simply won't breathe clean air until gasoline is made cleaner. And that's not hard to do. It's not a Buck Rogers or Nintendo fantasy. In fact, gasoline produced today is actually dirtier than that produced 10 years ago, with an extra dollop of carcinogenic aromatics. The Richardson-Madigan amendment will require cleaner gas in those cities that are grossly out of compliance, and give a boost to the American farmer at the same time.

Third. Emission control equipment on our cars do the heavy cleanup work on auto emissions. They are effective, when they work and they work when they are warranteed. But H.R. 3030 actually weakens emission warranty requirements that exist today. I will be offering an amendment with Congressman BILL GREEN to reverse the weakening of existing law and increase warranty requirements on the two big items of emission control equipment—the catalytic converter and electronic control unit, or ECU. This will ensure that consumers and the environment don't get stuck with the bill for faulty equipment. And it helps the mom and pop service stations. This amendment is supported by the major environmental and consumer groups and most of the trade associations representing independent auto service shops that repair cars. First, Levine-Lowery will protect coastal areas from smog and air toxics; second, Richardson will prevent chemical accidents; third, Wyden will restore visibility in our national parks; fourth, Bates-Boehlert will phase out the production of CFC's and other chemicals that destroy the ozone layer; and fifth, finally, gaping holes in enforcement and permitting provisions in H.R. 3030 need to be closed. Congressmen WAXMAN and BRYANT will have an amendment to do just that.

Until the Members of this Chamber put their voting cards where their mouths are, their words will be more hot air pollution. A strengthened H.R. 3030 can be worthy of its title, "Clean Air."

CONCLUSION

Our job, as democratically elected representatives in this great democratic system, is to cut through the wall of smog spewed out by those for whom the only good clean air bill is a dead

clean air bill, and get about the task of protecting those we were sent here to represent: the American people. Our job as intelligent men and women is to see through the lies and half lies, the untruths and the false truths, to the real values that make this country great. Our job as stewards of the land, the sky, the water, is to preserve these glorious legacies for the generations of Americans to come.

The Clean Air Act amendments is one of the few chances we as elected Representatives have to make a literally visible difference. A life or death difference. Amendments will be considered this week—the Waxman-Lewis amendment on clean cars, and coastal waters, and the amendment to be offered by Congressman GREEN and myself on auto warranties that will positively, concretely protect the beauty of America and the health of Americans.

Our legacy to our children, and to their children, must be more than a nation of belching smokestacks and tailpipes—it must be the ability to look across the Grand Canyon.

Our legacy to coming generations must be the opportunity to breathe deeply, without worrying about birth defects or lung disease.

Our legacy must be more than dirty air, devastated resources and damaged lungs; it must be a cleaner environment, a revitalized American economy and a better life.

□ 1730

Mr. LENT. Mr. Chairman, I reserve the balance of my time.

Mr. WAXMAN. Mr. Chairman, I am pleased to yield 7 minutes to the gentleman from West Virginia [Mr. WISE].

Mr. WISE. Mr. Chairman, I appreciate the gentleman yielding this time to me.

Mr. Chairman, the Clean Air Act is something definitely whose time has come. As one whose district and State are affected in every possible way—we are ardent environmentalists, we love to hunt and fish in West Virginia, we make our living from the chemical industry, the steel industry, from the coal industry.

We generate our power for all of the east coast. As I say, there is no way that we are not affected in every way by clean air.

I also note that I grew up in an area, and I have seen the benefits of earlier clean air acts and Clean Water Act, where we can now fish, swim, and water ski in rivers that once were too polluted for those activities. I can breathe air that does not have an odor to it; that when I earlier grew up in earlier years on air-inversion days, you just stayed inside.

So I know the importance and significance of this legislation before us.

As we deal with the environment, I think it is also important that we deal with the needs of those people who are affected by that legislation. In that case, we need to also provide for the workers who may be affected by this legislation.

So I would like to talk for a moment about the amendment that I will be taking to the Committee on Rules and asking them to make in order, the clean air workers transition amendment.

I stress the word "transition" because this amendment is simply that, helping workers to make a needed transition who may be affected adversely by implementing the Clean Air Act.

First, I think it has to be pointed out that this is a transition program with limited benefits, modeled after existing programs, in this case the Trade Adjustment Assistance Act.

It provides very limited benefits of 6 additional months of unemployment for a total of 1 year and up to 2 years of training; once again, totally in line and in keeping with existing programs already on the books.

I would like to talk just a moment about what this amendment is and is not.

First of all, this amendment is a transition program, to enable workers who can successfully show and document to the Department of Labor that they lost their jobs due to the implementation of the Clean Air Act in their industry to make a transition to other work. It is not a protection amendment. It does not protect one job. It does not protect or guarantee employment for a longer period of time or indeed any period of time. It simply helps them make the transition by, once again, providing 6 additional months of unemployment benefits and that would provide them a total of 1 year and up to 2 years of training.

This amendment is limited in benefits. It is not unlimited. It is not large scale. Its benefits are only temporary. It has a maximum ceiling of $250 million authorization over a 5-year period, for a 5-year program, and thus would be roughly $50 million per year.

It is limited in benefits, it is not unlimited. This amendment applies to all workers. It is not limited to one group of workers.

I have heard questions about, "Is it limited only to high-sulfur coal miners?" Or, "Is it limited to one region of the country?" And the answer is "no" to those questions.

The amendment applies to all workers, chemical workers, autoworkers, utility workers, coal miners, whomever may successfully show that they have lost their jobs due to implementation of the Clean Air Act.

Furthermore, the amendment is applicable to all regions. It is not a region-specific amendment, it is not dedicated simply to West Virginia, to the Midwest, to high-sulfur coal-producing regions. In fact, I think you will find this amendment has great application from Texas City, TX, to New Jersey to California to wherever there may be difficulty in implementing the Clean Air Act.

So, it is not limited to one group of workers, nor is it limited to one region, but indeed is a comprehensive amendment.

This amendment is simply an extension, in many ways, of existing programs. This amendment is not the creation of a new bureaucracy or a new program that is unfamiliar to this Congress. Indeed, it is closely modeled after, in every possible way, the Trade Adjustment Assistance Act.

It was my deliberate intent in drafting this amendment, and those who put it together, to work with a procedure that we were all familiar with and that would not result in an additional bureaucracy.

So we set up something similar to the Trade Adjustment Assistance Act. We have workers apply to the Department of Labor, and if they can successfully show they lost their job due to the implementation of the Clean Air Act as a major contributing factor, they would be entitled to these benefits, assuming the money is available. And that, of course, is determined by the Committee on Appropriations.

So it is an extension of existing programs, it is not the creation of a new program or, more importantly, a new bureaucracy.

Finally, I think it is important to talk about what this amendment is.

This amendment is a strengthening of the Clean Air Act. It is not a challenge to the Clean Air Act, it is not a weakening of the Clean Air Act. It is simply saying we can have the environment and we can have jobs and we can have both. This amendment strengthens the Clean Air Act.

I believe it takes a lot of the fear that many people genuinely feel who want clean air. "We want clean air for our children to breathe, but also desperately we want our job."

What this says is that "you need not fear the Clean Air Act, that we will help you make the transition in a just and humane society." That is something that is necessary to do.

Mr. Chairman, the chairman of the full committee, the gentleman from Michigan [Mr. DINGELL], has spent long hours, weeks, months, whatever, putting together the compromises that are necessary. And the gentleman from California [Mr. WAXMAN], the subcommittee chairman, also.

So I think as they have put together the compromises to try to meet the various needs that we all express, this is one additional measure than can go a long way toward making this the

kind of legislation we can all embrace happily, particularly those people who are sitting at home wanting this bill to pass but also who are questioning, "What happens to me?" This is their insurance policy that they will get to make the transition and indeed we can have the environment and we can have the jobs that go with it.

I thank the chairman very much for the opportunity to speak today.

□ 1740

Mr. LENT. Mr. Chairman, I yield 10 minutes to the gentleman from Ohio [Mr. REGULA].

Mr. REGULA. Mr. Chairman, the importance of this legislation and the importance of producing a balanced bill is well illustrated by a quote from U.S. News on June 19, 1989. It is entitled "The Coming Power Crunch." I quote:

America's next energy crisis is building like a billowing August thunderhead. The first hot flashes will hit the crowded Eastern Seaboard during the sweltering days of summer and spread throughout the country by the mid-1990's. Instead of irate motorists queued up at gasoline stations, the new crunch will be marked by dim lights, bulky computers, stuffy office buildings, and perhaps even total blackouts in some areas. Those temporary discomforts pale beside the long-range economic consequences if the United States lacks an adequate supply of electricity to power its homes, factories, and offices in the coming decade.

I think that illustrates the importance of having a balanced bill and what I would like to discuss briefly.

When the President announced the broad outlines for sweeping revisions to the Clean Air Act, I was cautiously optimistic about the acid rain portion of the administration's package. The President promised a plan which would allow utilities maximum flexibility in achieving emissions reductions. He called for a market based approach which would promote least-cost compliance. And most importantly, he pledged to maintain and enhance the viability of the clean coal program.

Somewhere between the Rose Garden ceremony and the legislative drafting board those principles have been compromised.

I have been a strong supporter of the Clean Coal Program since its inception in 1985. To date the Federal Government has committed some $2.7 billion to this program to demonstrate innovative technologies to burn coal more cleanly and efficiently, certainly in an environmentally safe manner. The private sector is committing even greater amounts.

In the State of Ohio, the voters approved a $100 bond issue to do research on clean coal technology. It would be a travesty to waste this substantial investment of both public and private funds. Caution must be exercised so that arbitrary compliance deadlines do not prevent clean coal technologies from being a part of the pollution solution.

Sound environmental policy must include consideration of both economics and the environment.

The future of the Nation's economy is inextricably linked to continued availability of reasonably priced energy. Therefore we will continue to realy on coal to meet future energy demand. Clean coal technologies will enable Americans to burn coal in an environmentally sound manner.

Acid rain legislation which does not provide sufficient time for development nor provide appropriate incentives, may result in these new technologies not being developed or used to meet energy requirements in the United States or abroad.

I note that one of the previous speakers, the gentleman from Pennsylvania [Mr. RITTER] pointed out that forcing the utility industry to use scrubbers will result in another great environmental problem, and that is sludge.

Clean cut coal technologies avoid that problem. Clean coal technologies are the key to a cleaner environment without undue burden to the ratepayer, the coal producer, or the mine workers.

I might say it also will protect our competitive position in the global economy.

The President's acid rain proposal calls for a reduction in sulfur dioxide emissions of 10 million tons by the year 2000 and a 2-million-ton reduction in nitrogen oxide emissions.

Utilities and industry will be forced to spend up to $7 billion a year and ultimately the consumer pays that, in a crash program to meet these arbitrary goals.

Unfortunately, this crash effort to reduce emissions will not permanently solve the problem because it will preclude the use of advanced technologies now being developed.

By forcing the use of scrubbers in old plants, instead of allowing utilities to phase in new clean coal-burning technologies, the acid rain program will degrade our ecosystem.

The mandated scrubbing will bring new pollution problems. Scrubbing generates 3 tons of sludge for every ton of sulfur dioxide removed. For each ton of sulfur dioxide removed scrubbing adds a ton of carbon dioxide into the atmosphere.

The burden of achieving emissions reductions would fall principally on Midwestern States, especially Ohio. A recent analysis of American jobs that would be affected by the proposed bill estimated that the acid rain provisions alone would impact over 46,000 jobs in Ohio alone.

The burden of costs under the current plan is not shared equitably nationwide.

Ohio would be asked to provide 18.6 percent of all $SO_2$ reductions despite the fact that Ohio, in 1985, contributed only 11.1 percent of the total emissions. This will result in an overall electric rate increase of 13 percent by 2000 and an estimated loss of 17,000 mining and related jobs. Utility rates are estimated to rise as much as 40 percent in some parts of Ohio.

Ohio ratepayers have already spent more for air pollution control than any other State. Private utility air pollution control expenditures through 1987 have totaled $2.1 billion.

Ohio's electric-intensive industries such as autos, steel, aluminum, and chemicals compete in tough, cost-conscious international markets. The quickest way to make Ohio's products noncompetitive is to drive up production costs. The acid rain proposal being considered would surely do that.

From 1975 to 1985, Ohio's electric companies have cut sulfur dioxide emissions by 37 percent, despite a 19-percent increase in demand over the same time period. By the year 2030, another 50-percent reduction in emissions would take place under current pollution control, with no new legislation. This would take place even though the demand for electricity from coal-fired powerplants will increase by 36 percent over the same period.

Under the proposed legislation more than 80 percent of the Nation's utilities and half of our States will not be allowed to participate in the Clean Coal Technology Program.

Clean coal technologies are an effective mechanism for achieving pollution prevention, not just control, and are also a cost effective means of producing electric energy from coal. Clean air legislation should provide adequate time and appropriate incentives for use of these technologies, otherwise, the United States may forfeit the energy and environmental benefits derived from use of these coal programs.

We should be in a position to share this knowledge with the rest of the world, especially with developing Third World countries, in an effort to improve global ecology.

I think all Members have heard the results in the Eastern European countries because of their failure to have environmental controls. The clean coal technology will be a highly marketable commodity, and we need to move forward rapidly in developing these programs.

I support the enactment of a strong clean air bill, but one that is both affordable and equitable. The impact of this proposal on the employment of our people and the competitiveness of our industries will be substantial. It is crucial that the legislation that is en-

acted does not damage our economic stance in the global marketplace.

I would say to my colleagues that I hope out of the negotiations between the House and the Senate and the conference working with the administration that we can get a bill back, in the final package, that will allow the continued progress in clean coal technologies while, at the same time, achieving a highly desirable environmental impact in terms of improving air quality in these United States.

Mr. LENT. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. SCHUETTE].

Mr. SCHUETTE. Mr. Chairman, I appreciate the gentleman from New York yielding this time to me.

The next 3 days this House will debate how we best clean the Nation's air, and during the course of that period of time we will also debate how we best provide jobs for working men and women in the auto industry of America.

Good jobs and clean air, the economy and the environment—those are the two competing goals or the twin objectives that this House and the other body should keep squarely in mind and firmly in mind as we debate the clean air bill.

These are not necessarily conflicting objectives. Sometimes they are competing, but they both can be accomplished at the same time if we use common sense and a balance to make sure that our environment is clean and healthy and there are jobs for people in Michigan and America.

□ 1750

For the chairman of the committee, the gentleman from Michigan [Mr. DINGELL], and the ranking member, the gentleman from New York [Mr. LENT], this has been a difficult job, a complicated task, with complex issues. We say to them, "A job well done."

My time today will be brief. As we get into the amendments, I will come back and share my views with Members of the House and participate in the debate. Let me review just a couple of titles now for a moment. First, we have title I, in terms of emissions in tier 1 standards. These standards will reduce emissions an additional 2 percentage points beyond fleet turnover. These are the same standards mandated in California. They are tough standards, tough provisions for clean air.

Tier 2, however, if found technologically feasible—and some question that—would cost the auto industry nearly $7 million per year, and what it would really mean is that it would cost jobs to people in the auto industry in Michigan and other parts of the Nation.

There is another feature called mandated production, which will be debated and discussed here in this Chamber. What is severely wrong with this is that it shows us that this is not how the market works. If we mandate production and mandate certain items, it does not guarantee that the product will be sold, and that will cost people jobs in Michigan.

On the CFC phaseout, the real concern here is whether or not it is technologically feasible, and again we will have considerable debate on that here in this Chamber.

This is a tough bill. Is it a perfect bill? No, but it is an effort to meet those twin competing objectives of clean air and good jobs, the economy and the environment. As we go through this debate, I would encourage my colleagues to try to meet these competing goals. We can achieve both, and in so doing we would better the environment and make sure that the people have jobs and maintain a better quality of life for themselves and their families.

Mr. DINGELL. Mr. Chairman, I yield 6 minutes to the gentlewoman from Ohio [Ms. OAKAR].

Ms. OAKAR. Mr. Chairman, this week, the House will meet to discuss the Clean Air Amendments of 1990. It is important to recognize the efforts of Chairman DINGELL, ranking minority member, Congressman LENT, Congressman WAXMAN, Congressman SHARP, Congressman MADIGAN and all of the other critical leaders of the Energy and Commerce Committee to bring this bill to the floor of the House for debate. I applaud the work and the end product of this important group.

H.R. 3030 is one of the most important measures regarding environmental, economic development, industrial regulation and international competitiveness issues. Consequently, we must act carefully in order to ensure environmental quality, national energy security and continued economic stability.

One of the difficulties I foresee in the bill regards energy security. Over the last year, the House Banking Subcommittee on economic stabilization, which I chair, has investigated our continuing problem with securing sufficient energy supplies. In particular, the subcommittee was informed that electric energy for the eastern seaboard is 2 percent less than needed to meet current demand, with the balance being "imported" from States not located on the east coast. This problem will be exacerbated by the current bill since it is projected that 12,600 megawatts of electric generating will be lost. As a result, blackouts will certainly increase.

With these facts in mind, I intend to introduce an amendment to H.R. 3030 which I call the cleaner air amendment. It is designed to guarantee long-run environmental improvement, allow our Nation to remain industrially competitive, and to ensure the survival of an important trade commodity of the future; namely, clean coal technology.

The core of my amendment aims to allow utilities that sign a binding letter of intent with the Department of Energy to acquire clean coal technologies—once approved by the regulatory authorities of their States—to operate in the same manner as small systems under title 5 of the bill. In particular, any overage in tonnage of emissions which are tabulated in a special account for that company, would be deducted from future allowances. In addition, as an incentive for rapid compliance, a 50-percent additional emissions reduction, as interest, will be required. In other words, if a utility decides to wait 4 years for the advent of clean coal and therefore emit at a rate greater than currently allowed by the bill, that utility would have 4 years to reduce its emissions below the individual utility cap by the amount it exceeded its limit, plus an additional 50 percent as interest.

For example, if 100 tons of overtonnage were accumulated over a 4-year period to allow installation of clean coal technology, the utility company would have 150 tons deducted from its allowances over the next 4 years, or the monetary equivalent—about $1,500 per ton. This is a strong incentive for rapid compliance without the risk of losing industrial competitiveness, energy security and economic stability. In addition, over the course of the next 20 years, my amendment will result in a total reduction of acid rain emissions below the amount allowed in the current language of the bill.

The benefits of this approach are many. First, it gives clean coal a chance to provide itself as a viable, environmentally responsible source of fuel. Since clean coal technology demonstration projects are only now being built, they have not had an opportunity to operate and verify their ability to affordably produce clean coal. Only a few more years are needed to allow this valuable technology to come on line.

Second, in order to ensure the success of clean coal technologies, we must work to create the market that will purchase future clean coal stockpiles. My amendment will allow the current coal-using markets to continue—under pressure of the 150-percent payback provisions of my amendment—to operate using coal as a fuel source until clean coal comes to market.

Third, my amendment recognizes an important environmental reality. China, Eastern European nations, and other countries with developing economies will continue to burn locally available coal regardless of our actions. This continued and increased use of unclean coal will greatly con-

tribute not only to the international problem of acid rain, but also to the emission of carbon dioxide—the primary greenhouse gas. Clean coal technologies, a critical source of future export income, will help to greatly alleviate this critical international environmental problem.

In particular, clean coal technologies have already proven in the laboratory to remove up to 99 percent of sulfur dioxide, similar amounts of nitrous oxide—scrubbers do not affect nitrous oxide emissions—and, more important to the problem of global warming, carbon dioxide would be reduced. This drastic reduction of carbon dioxide is accomplished because the combustion efficiencies of clean coal are up to 60 percent higher than conventional powerplants currently produce. In other words, it will take substantially less coal to produce a given amount of heat energy, thereby greatly reducing the emission of carbon dioxide. This is extremely important for countries, like China and the Eastern European nations, which are using any energy source they can find to develop their economies, which is almost always locally available coal. In addition, there is no reason to believe developing nations will change their development plans just because the United States has passed a bill which does not allow the development of clean coal technologies. Obviously, we cannot help developing nations develop in an environmentally responsible manner if we do not allow clean coal technologies to materialize.

Therefore, my amendment is a long-term environmental quality amendment as well as an energy security and economic stability amendment. Of all the environmental problems, global warming is by far the most serious. Passing my amendment is a sound long-term environmental action. Over the next 50 years, clean coal technologies are projected to save over $400 billion compared to the provisions of the present bill.

In addition, my amendment provides for the creation of a substantial fund that will finance the cleanup of 162 northeastern lakes which have been damaged by acid rain emissions. This $5 million fund is expected by the group, Living Lakes, Inc., to be more than sufficient to neutralize the acid in the damaged lakes. This will allow us time to simultaneously adjust to clean coal technologies and work to clean damaged lakes.

Mr. Chairman, I urge my colleagues to support my amendment for all the reasons I have outlined. Again, my bill will force a utility cleanup greater than currently required in the bill; it promises to work to decrease the emission of carbon dioxide, the primary greenhouse gas; to allow the development of domestic and international markets for clean coal technologies; and to neutralize the acid deposition in 162 acidified lakes. My amendment is designed to help our Nation achieve greater environmental quality and ensure energy security as well as economic stability.

I urge my colleagues to support my amendment.

□ 1800

Mr. LENT. Mr. Chairman, I yield 6 minutes to the gentleman from Ohio [Mr. MILLER].

Mr. MILLER of Ohio. Mr. Chairman, no one realizes more than I our responsibility for preserving our precious environment for future generations. However, history, and most recently our eastern neighbors have shown us that if we are to ensure the preservation of our environment we must retain a strong economy and free enterprise system.

As we debate this bill it is important that we remember the tried and true principles that have allowed the United States to improve air quality. These principles are: preservation of a free society where innovations can thrive, a firm and sound adherence to the sciences, and flexibility allowing local jurisdictions to help make decisions on how best to achieve these air quality goals.

Clean air is a scientific subject and this is definitely a scientific bill. In 1980 we acted responsibly by authorizing a comprehensive 10-year research program to provide information to the Congress on acid rain deposition. The reason we did was so that we today could fashion an effective rational bill. The National Precipitation Assessment Program, commonly referred to as the NAPAP study will complete its final results in just a few short months. The study will be comprehensive. We spent half a billion of the American taxpayer's hard earned dollars on this study. Don't we owe it to them to first have and evaluate the results of this 10-year scientific study? Enacting emotionally driven legislation to address a problem the precise cure for which is not yet known can only lead to more problems than benefits.

I think it is important to point out that the current Clean Air Act is working. Although electricity sales during the last 10 years have increased and our use of coal has increased almost 50 percent, sulfur dioxide emission are down. NAPAP concludes after 10 years of study that only 5 percent of the lakes in the northeast are currently acidic and that a number of these acidic lakes in the northeast have been that way since pre-industrial time. NAPAP further concluded that after extensive survey there was no evidence of widespread forest decline in North America related to acidic deposition. Yes, acidic deposition appears to intensify the effects of natural stresses upon red spruce at high elevations but is this grounds for enacting legislation which will cost thousands of jobs.

Not only will this bill in its present form cost thousands of jobs, loss of Federal, State and county revenues which currently go toward schools and parks, the policy of this bill holds serious consequences for our national energy supply. The Subcommittee on Economic Stabilization held a hearing earlier this year to look at the energy security and economic stability aspects of the Clean Air Act amendments. The conclusions of this hearing according to my colleague from Ohio, Congresswoman OAKAR, chairwoman of that subcommittee, is that this "pending legislation would severely impair the Nation's energy security. Experts predict that the safety margin for electricity generation would fall 3.6 percent below minimum standards by 1998 for the entire Eastern United States." In addition the pending amendments will act to defer, rather than accelerate, the introduction of evolving clean coal technologies, as utilities will be forced to concentrate their attention on short-term compliance with the 1995 deadline for removal of 50 percent of existing sulfur dioxide levels. They will be forced to use the existing available chemical scrubber technologies, because leadtime to installation is 5 to 10 years. After investing millions of dollars on scrubbers, utilities will be short of funds to purchase the fully integrated clean coal technology of the future. I feel this would be a grave mistake—clean coal technology will not only allow us to continue using our coal resources and save thousands of miners jobs in high sulfur mine areas, it would result in cleaner air, less waste and the development of a technology which can be used world wide to clean up our planet's pollution problem.

In looking at this bill we must seek to establish a realistic goal, one which balances our environmental objectives with our energy security needs and economic well-being.

Mr. DINGELL. Mr. Chairman, I yield 5 minutes to the gentleman from Tennessee [Mr. COOPER].

Mr. COOPER. Mr. Chairman, I appreciate the gentleman from Michigan [Mr. DINGELL], the chairman of my committee, for yielding this time to me, and I would first like to commend him for the outstanding job that he did in pulling together the conflicting interests on what may be the toughest piece of legislation that this body faces this year. It is extremely complex. The Clean Air Act is probably unrivaled in terms of the technicality of its provisions and the broad sweep of its provisions.

Mr. Chairman, for years now various Members and various groups have been debating the scope and the

impact of proposed legislation. This year many of us face the legislation with much foreboding and not really knowing whether these sharply divergent interests could be reconciled. However, when the legislation came to the committee, we first met it with a group of nine, a group of ad hoc committee members, formed to look at and study the technicalities of the measure so we could arrive at simple, common sense solutons to some of these problems. From then the legislation moved on to the subcommittee level, and then to the full committee level, and under the leadership of the gentleman from Michigan [Mr. DINGELL] we were able to achieve a remarkable consensus.

Mr. Chairman, the final vote on the legislation, when it was reported out of the committee, was a vote of 42 to 1. I do not think any commentator, I do not think any critic or pundit, could have anticipated a unanimity of that degree on such an important and divisive issue. I think it is a genuine testament to the leadership of the gentleman from Michigan [Mr. DINGELL].

That is not to say, Mr. Chairman, that the bill is perfect in all ways, and I am sure there will be a number of amendments proposed here on the floor to, hopefully, improve the legislation.

I have noted myself what I think might be one small flaw in the legislation. I focused particularly on the utility section of the bill, particularly the acid rain section of the bill, and it seems to me that in that area, although we are requiring monitoring of sulfur dioxide and nitrogen oxide, we have omitted monitoring carbon dioxide.

The American public is well aware of that global warming looks as if it is a major, not only national, problem, but world problem. In order to address this problem we need to know what our carbon dioxide emissions are, and for that reason I am planning on teaming up with the gentleman from California [Mr. MOORHEAD], a colleague, to offer to the Committee on Rules for their consideration the so-called Cooper-Moorhead amendment so that we could monitor carbon dioxide emissions at each utility plant in the United States.

The purpose of this is threefold. First, in order to furnish better scientific evidence so that we will know exactly what the U.S. contributon to the problem is. Of course it is a worldwide problem. Our share of the problem is really very small.

Second, Mr. Chairman, we need to form a baseline so that we know what the utility effort is in cleaning up the problem so that we know when to give them credit for their reductions, and when we know they are not, perhaps moving as quickly as we would like.

Finally, we need to know in order to form a proper role in international negotiations so that we know what the U.S. contributions to the problem is so that we can accurately frame our response in international negotiations.

So, Mr. Chairman, I would urge my colleagues, particularly on the Committee on Rules, to look with favor on the Cooper-Moorheard amendment, and I wuold urge my colleagues in the House to study the problem carefully to see whether a moderate, fair approach like this to global warming is warranted at this time and to see whether a monitoring approach like this is appropriate.

□ 1810

My amendment would not force any reductions right now. It would simply require a monitor on each utility unit so that not only would we be monitoring sulphur dioxide and nitrogen oxide, we would also be monitoring the other major utility gas, carborn dioxide, the major global warming gas.

I thank the gentleman for yielding this time to me.

Mr. DINGELL. Mr. Chairman, at this time we have on this side no requests for time. We reserve the balance of our time, which is 15 minutes.

Mr. LENT. Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN pro tempore (Mr. COLEMAN of Texas). The Chair recognizes the gentleman from California [Mr. ANDERSON] for 30 minutes.

Mr. ANDERSON. Mr. Chairman, I yield myself such time as I may consume. Mr. Chairman, on behalf of the Committee on Public Works and Transportation, I want to congratulate my colleagues on the Committee on Energy and Commerce for their efforts in bringing H.R. 3030 to the House floor. We know you have worked for many years on this legislation and you deserve praise for this bill.

I especially want to commend the committee chairman, the gentleman from Michigan [Mr. DINGELL] and my colleague, the gentleman from California [Mr. WAXMAN], the subcommittee chairman, as well as the gentleman from New York [Mr. LENT] and the gentleman from Illinois [Mr. MADIGAN].

As a Californian, I am acutely aware of the importance of this clean air legislation. In the last two decades, since the passage of the first Clean Air Act, we have made strides in cleaning up our air. The Clean Air Act has, in many cases, prevented continued deterioration of the atmosphere and, in some cases, resulted in improvements. That is especially true in the area of smog resulting from auto pollutants.

It has also become evident during the last 20 years that more must be done to control air pollution. When it comes to the air we breathe, we can no longer afford the status quo. Whether it is the lingering pollution over the California basins, the destruction of the scenic vistas at the Grand Canyon or the acid rain of the Northeast, it is clear that a national effort is needed to develop effective and innovative means of winning the fight against air pollution.

At the same time that we face these growing environmental problems, the Nation is also threatened with an imminent transportation crisis. We have a deteriorating and inadequate infrastructure that also needs immediate attention. If we neglect our infrastructure, this Nation will forfeit its competitive position in the world.

The United States ranks 55th in the world in capital investment. Japan spends five times more than we do in infrastructure and West Germany's annual productivity rate is three times ours.

Infrastructure is not just potholes; it is productivity!

Infrastructure is not only concrete; it is competitiveness!

Our system today is one in peril: 60 percent of our highways and 41 percent of our bridges are in need of work; by the year 2000, traffic delays caused by inadequate roads will cost us $50 billion in lost wages and wasted gasoline.

This is an alarming situation and this Nation must maintain the tools for a major rebuilding effort. On the Committee on Public Works and Transportation, we believe that H.R. 3030 as reported by the Committe on Energy and Commerce would, inadvertently, prevent us from maintaining and rebuilding our infrastructure.

We have held two hearings on clean air issues. We have worked for several weeks to develop amendments that would correct these problems while preserving the strong environmental safeguards in H.R. 3030. Given a sequential referral for a limited time, we have developed amendments that we believe will correct the problems in H.R. 3030. The amendments have been developed after discussions with the leaders of the Energy and Commerce Committee and I am happy to say we have agreed on the changes. Subject to approval by the Rules Committee, they will be offered for floor consideration when the bill is open to amendment.

I believe these amendments represent modest changes to H.R. 3030 which would enable us to move forward with the rebuilding of America while providing ample protection for the environment. I fear that failure to adopt these amendments would sacrifice our economic productivity while at the same time doing little for the environment because of continued traffic congestion.

The provisions we are most concerned with are, first, how and when will a state transportation plan conform with the requirements contained in a state air quality implementation plan, known as a SIP, and second, where and when highway sanctions may be imposed for failure to meet certain requirements called for in H.R. 3030.

The first area, the relationship of the transportation plan to the SIP is known as conformity. H.R. 3030 as reported by the committee on Energy and Commerce would shift the meaning of conformity from one where Federal actions must conform to an approved plan to one where Federal actions must conform to a plan's purpose, possibly a project by project review.

In this area of conformity, which is so important to air quality programs, we should ensure that State and regional plans are reviewed to see if the plan as a whole conforms to the SIP.

It is crucial that the Department of Transportation be allowed to use its long-standing expertise on these matters. The Public Works and Transportation Committee amendment will invest a measure of decision making authority in EPA, but nothing can be issued without concurrence by the Department of Transportation.

On the issue of sanctions, the agreement provides that after 18 months, the sanction cannot be statewide if a political subdivision of a State is principally responsible for the noncompliance. In an additional 6 months, EPA may extend sanctions statewide. This gives a State, after the initial 18 months, 6 additional months to remedy the failure of a region to come into compliance before there is any threat of a statewide sanction.

This bill will have a major impact on the kind of America we have in the 21st century. I believe every Member of this House wants a clean and healthy environment. At the same time, we also want a strong economy that will lead to productivity gains and economic expansion. I believe these goals are not conflicting.

The amendment that has been agreed to by the Committee on Public Works and Transportation and the Committee on Energy and Commerce will provide an opportunity to move in that direction. I hope my colleagues will support the amendment when it is offered on the floor.

The CHAIRMAN pro tempore. The gentleman from Pennsylvania [Mr. SHUSTER] is recognized for 30 minutes.

Mr. SHUSTER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, as a young boy growing up in the steel valley of western Pennsylvania, I know what it was to smell air pollution. In fact, on many days you could not see from the valley to the top of the hill until noon as a result of the tremendous air pollution caused from the steel mills and soft coal.

I had forgotten that not only could we see and smell the air pollution, we could even taste it. We could taste the soft coal. I had forgotten all about that until this past Easter when with another committee we traveled to Poland and Czechoslovakia, and there I was reminded and once again learned just what the taste of air pollution is, the taste of soft coal in your throat and in your nostrils. I was reminded that what was happening in Poland and Czechoslovakia was the result of 40 years of environmental pollution, 40 years of degradation, 40 years of not caring about the environment. It seemed to me that for those in America who care about the environment, we certainly are on the right track when we talk about clean air and the importance of providing standards so that we can assure the tremendous progress which already has taken place in our country will continue in the years ahead, and yet as we focus and emphasize the importance of clean air, it is also equally important that we focus on the balance that must go with such decisions, the balance that recognizes, yes, there is a cost attached to clean air, the recognition that jobs can be lost, the recognition that this particular clean air bill before us could indeed cost our country over $50 billion—yes, billion, not million dollars a year, that there could be thousands of jobs lost. Indeed, it could help precipitate a depression.

So while we must support clean air, we must likewise be equally concerned that there be a balance, a balance that recognizes not only the importance of clean air, but the importance of providing jobs for our people and creating a continuing growing economy.

□ 1820

I regret that in some of this legislation I believe there is not balance. In fact, particularly in the transportation area, one of the deep concerns we have had is that it gives all the weight to environmental decisions and very little weight to the importance of transportation decisions and yet, as a result of tremendous efforts particularly on the part of the distinguished chairman of our full committee, the gentleman from California [Mr. ANDERSON], and the distinguished chairman of our subcommittee, the gentleman from California [Mr. MINETA], they have worked out amendments which I understand are reasonable and can be accepted, amendments which provide for the very balance which is so necessary in the transportation area of this legislation, amendments that provide that transportation policy will not be decided exclusively over in the Environmental Protection Agency but will be decided in concert with the U.S. Department of Transportation where these very decisions should properly be made.

I would urge my colleagues, when we consider the transportation amendments tomorrow, that they look favorably upon the amendments which are going to be offered by the chairman, the gentleman from California [Mr. ANDERSON], because these amendments bring very much needed and vital balance to our legislation, the kind of balance that is so necessary for us to move ahead with the vital transportation needs of our country while at the same time recognizing the importance of clean air.

Mr. Chairman, finally, I would call our attention to the importance of dealing with the issue of protecting and preserving the money that is flowing into our highway and transit trust funds. As a result now of the gasohol exemption on gasoline taxes, we are losing about $500 million a year which should be flowing into the highway trust fund.

As a result of the clean air legislation, if it passes, and as a result of the continued exemption for both ethanol and, indeed, expanding it to methanol, the American people will be losing about $1 billion a year which otherwise should be flowing into the highway trust fund to preserve and improve America's transportation system.

When, indeed, we said years ago that we should stimulate the development of gasohol, ethanol, and one of the ways to do it was to provide the 6-cent-per-gallon gas exemption, it was done on the basis of encouraging a new technology, a new capability, but if now we are going to mandate that this particular technology, ethanol, methanol, must be used, then there is no need. In fact, that eliminates the justification for providing any exemption from the tax, and so just as gasoline is taxed, the people who drive on our highways pay their gasoline tax, simply because they happen to pull into a service station and have methanol or ethanol put in their car rather than simple gasoline, there is no reason for exempting them from the gasoline tax. So this is an issue of vital importance, and if we care about America's transportation needs, it is my understanding that the Committee on Ways and Means is willing to sit down with those of us on the Committee on Public Works and Transportation to come to grips with this issue. I focus on it because it is absolutely vital if we are going to come to grips with the important transportation needs of our country.

Mr. Chairman, for those various reasons, I urge my colleagues to support the transportation recognition in this bill that, indeed, it is the Department

of Transportation along with the Environmental Protection Agency which should be involved in this decisionmaking process.

To each of my colleagues, I say in closing, that if they care about improving highway projects in their districts, if they care about seeing to it that the money that their constituents put into the highway trust fund gets spent for needed transportation programs, then I urge them to support the transportation amendments which will be offered by our distinguished chairman to this bill.

Mr. Chairman, I urge the Members to recognize that as we approach the importance of clean air, we do it recognizing that there must be a balance, and that transportation and transportation needs in America must stand alongside clean air so that we provide the proper balance to accomplish both of these important objectives.

Mr. ANDERSON. Mr. Chairman, I yield such time as he may consume to the gentleman from California [Mr. MINETA], the chairman of the Subcommittee on Surface Transportation.

Mr. MINETA. Mr. Chairman, the Clean Air Act Amendments of 1990 have traversed a long and rocky road through both Houses of the Congress. Finally, we find ourselves in a position to enact legislation that will improve our health and environment.

I commend the leadership of the House on both sides of the aisle for their efforts to bring the bill, H.R. 3030, Clean Air Act Amendments of 1990, to the floor for consideration. I especially wish to commend the distinguished gentleman from Michigan [Mr. DINGELL] and my good friend and colleague, the gentleman from California [Mr. WAXMAN], as well as the ranking Members from New York and Illinois.

H.R. 3030 is sound and comprehensive legislation that will dramatically strengthen the Nation's clean air laws.

More than 100 million Americans live in areas that fail to meet national air quality standards. Between 5 and 10 million Americans suffer from the adverse effects of dirty air.

Through the enactment of clean air legislation, relief will be shared by everyone and the Nation as a whole will benefit.

Mr. Chairman, I believe that H.R. 3030 goes a long way toward improving air quality. Some people may say that the bill does not go far enough. I would agree, but H.R. 3030 takes a long-overdue step in the right direction.

I believe the Congress has to take a balanced approach to addressing the Nation's environmental problems while addressing its transportation needs.

Clean air is a national resource and we must work to keep it clean.

Over the past few weeks, the Committee on Public Works and Transportation under the capable leadership of Chairman ANDERSON and our ranking Republican Member, Congressman HAMMERSCHMIDT of Arkansas, and my good friend and colleague with whom I have the honor to serve, Congressman SHUSTER, the ranking Republican on the Surface Transportation Subcommittee, has worked in good faith with the Committee on Energy and Commerce to address concerns that directly affect the Nation's surface transportation programs. The two committees have today reached an agreement on the proposed amendments.

I am well aware that mobile sources produce half our urban ozone pollution, half our toxic emissions nationwide, and 90 percent of carbon monoxide pollution.

At the Federal level, the responsibility for widespread failure to reduce mobile source pollutants since 1977 rests with the Environmental Protection Agency [EPA] and the Department of Transportation [DOT]. For the future, both Departments must work together to reduce emissions. For that reason, the Energy and Commerce and Public Works and Transportation Committees have proposed to amend the Clean Air Act Amendments of 1990 to provide for an effort by both EPA and DOT to assure conformity of transportation plans and projects.

As the House considers the bill, H.R. 3030, we must keep foremost in our minds that overall the Clean Air Act Amendments of 1990, as reported by the Energy and Commerce Committee, is a very good bill. I strongly support enactment of H.R. 3030.

The amendments to the legislation agreed to by both committees are only intended to improve the implementation of the Clean Air Act without neglecting the need to move people and goods.

The committees' amendments address two areas: sanctions and conformity requirements.

Under the sanctions provisions, the EPA Administrator is required to establish criteria for exercising his or her authority to impose sanctions on political subdivisions that have adequate authority to correct air quality deficiencies.

On Wednesday, the committees will amend the conformity requirements to permit EPA and DOT to work together to determine which transportation projects conform to the State implementation plan.

These are good amendments.

When we reauthorize the surface transportation programs next year, it is my intent to include strong consideration of environmental improvement goals—in addition to improving our economic development, international competitiveness, public safety—and most obviously—our transportation system.

Over the last two decades, the Congress has struggled to develop solutions to improve air quality. Success has eluded us.

Now, we have an opportunity to enact legislation to clean up dirty air.

It is clear Americans are willing to tighten their belts and make sacrifices to achieve cleaner air for themselves and their children.

I would urge my colleagues to keep foremost in their minds that the enactment of clean air legislation is what Americans want and should have.

My Santa Clara County district is part of the San Francisco air basin—a nonattainment area. And my constituents are not willing to exchange their health for economic gains alone.

Americans are looking to us for leadership and we must provide that leadership by enacting strong and workable clean air legislation. Further, we can ensure that H.R. 3030 is workable by making modest, but important adjustments to H.R. 3030 to strengthen the bill and facilitate its implementation.

Mr. Chairman, I urge the adoption of amendments offered jointly by the Committee on Public Works and Transportation and the Committee on Energy and Commerce.

□ 1830

Mr. SHUSTER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I would ask the distinguished chairman of our full committee, the gentleman from California [Mr. ANDERSON], a question with regard to the safety exemption from existing law.

It is my understanding that it is continued and that the Department of Transportation has the statutory authority to determine what is a safety project. Further, that the Department of Transportation has used this exemption to allow much-needed safety projects to go forward in States which are under sanctions.

Mr. Chairman, it is my understanding that the Department of Transportation will continue to be able to continue approving these types of projects under our committee amendment, and indeed the definition of "safety project" is to be interpreted in its broadest context.

Mr. Chairman, I would ask if that is the understanding of the gentleman from California [Mr. ANDERSON] as well?

Mr. ANDERSON. Mr. Chairman, will the gentleman yield?

Mr. SHUSTER. I yield to the gentleman from California.

Mr. ANDERSON. Mr. Chairman, yes, in this agreement that is agreed to both the Committee on Public Works

and the Committee on Energy and Commerce, that determination will reside with the head of the Department of Transportation.

Mr. HAMMERSCHMIDT. Mr. Chairman. I rise in support of the goals of H.R. 3030 and to convey my belief that our Nation's transportation programs must be part of the solution to the environmental problems that threaten our quality of life. At the same time we must be sure that in advancing clean air goals we do not unnecessarily impede the improvement of our transportation systems.

I am extremely pleased to support a very positive amendment to H.R. 3030 that will clarify how specific provisions of the Clean Air Act amendments will be applied to Federal transportation programs. Where H.R. 3030 is unclear, this amendment provides specific guidance to the Environmental Protection Agency and the Department of Transportation on how transportation programs will be judged in measuring up to clean air objectives.

The Surface Transportation Subcommittee has held six hearings in the last 2 months to learn where our transportation programs should be headed. We heard that high-quality, well-maintained roads are critical to keeping America a strong competitor in the global marketplace. We heard that traffic congestion is, day in and day out, undermining the productivity of our commercial fleets and wasting countless hours as the American work force sits in gridlock. Transportation officials told us that bureaucratic labyrinths and legal entanglements tied to Federal funds are holding up critical transportation projects aimed at getting us out of our congestion nightmare.

Just as important, we heard that Americans want a transportation system that can coexist with a healthy, clean environment. I want to particularly note that Secretary of Transportation Sam Skinner personally pledged his support before the Public Works and Transportation Committee to see that transportation policy will foster the protection of our environment and our quality of life.

We will be called upon in next year's surface transportation bill to solve these basic transportation problems, and to do so in a manner that is compatible with clean air goals. My concern is that certain provisions of the bill reported by the Energy and Commerce Committee, if enacted into law, would pose serious problems for our transportation system.

On the conformity issue, the amendment first of all sets out in detail the methods by which transportation plans, programs, and projects are determined to conform with clean air plans. In particular, the amendment ensures that conformity will be determined for a transportation plan as a whole, not for individual projects included in a plan. At the same time, the amendment guarantees that projects that were not in a plan, or whose design or scope have changed, will be closely analyzed to prevent evasion of clean air goals. This amendment is crucial for ensuring that clean air goals are advanced at the planning stage of transportation projects, and also for ensuring that a program of transportation projects can be advanced, with some projects that enhance air quality, some that are neutral, and some that do not enhance air quality.

This is a critical clarification of H.R. 3030 strongly supported by regional councils nationwide. In nonattainment areas, regional councils are the designated agency to perform coordinated, continuing metropolitan transportation planning in urbanized areas. They are responsible for assuring that all Federal-aid transportation programs are in conformity with State implementation plans to meet national air quality goals. The regional councils believe that the conformity language of H.R. 3030 reported by the Energy and Commerce Committee will seriously impair the ability of metropolitan areas to meet current and future transportation needs. They believe it will impose costly and technically impractical requirements on planning agencies, and could ultimately jeopardize the economic health of many of our Nation's metropolitan areas.

The second amendment relating to conformity provides that the Administrator of EPA will jointly set the guidelines for conformity in concurrence with the Secretary of Transportation. This will bring the expertise of both EPA and DOT to the table as decisions are made that affect both clean air and transportation programs.

Another basic change is proposed in the amendment regarding the authority to cut off highway funds as a sanction for Clean Air Act violations. The amendment ensures that sanctions, if necessary, are aimed at the level of Government responsible for taking remedial action. Thus, highway sanctions cannot be cut off in the first instance for an entire State for a violation in one part of the State, if a local government has primary responsibility for correcting the violation.

The amendment that will be offered will promote the clean air goals of H.R. 3030, while ensuring that we can move forward with a strong national transportation policy. I strongly urge my colleagues in considering this issue to reflect upon the transportation challenges facing them in their own districts. I hope you will support the very constructive changes in this amendment.

One additional aspect of the Clean Air Act amendment causes me concern. Mandates for increased gasohol usage in nonattainment areas will result in substantial additional losses of revenue to the highway trust fund. Gasohol currently has a 6-cent-per-gallon exemption from the Federal excise tax on gasoline. This exemption already drains the trust fund of $500 million per year. Once mandates are in place for use of oxygenated fuels, we need to address the lost revenue issue. I know that the Public Works and Transportation Committee is very concerned about this matter at a time when critical transportation projects are unfunded. I hope the Ways and Means Committee will share this concern and that our committees can cooperatively address this important matter in future tax legislation.

Mr. SHUSTER. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

Mr. ANDERSON. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

The CHAIRMAN pro tempore (Mr. COLEMAN of Texas). The Chair has been advised that the Committee on Ways and Means will not consume the 60 minutes of general debate time that has been allocated to it. Therefore, the time is considered to have been yielded back.

The Chair recognizes the gentleman from Michigan [Mr. DINGELL].

Mr. DINGELL. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, my remarks at this point will be very, very brief. I would like to commend my friends and colleagues on the Committee on Public Works for the very gracious and constructive attitude which they have demonstrated on this very difficult piece of legislation. The chairman of the committee, the gentleman from California [Mr. ANDERSON]; the subcommittee chairman, the gentleman from California [Mr. MINETA]; and the distinghished gentleman from Pennsylvania [Mr. SHUSTER] have certainly merited the thanks of the House for the way in which they have conducted the business here. I believe their suggestions are constructive and we will look with a great deal of kindness upon them. I believe that resolution of the difficulties that appeared to lie before us has been accomplished. I want to commend the gentlemen just mentioned, including my good friend the gentleman from Pennsylvania [Mr. SHUSTER], for their participation in this debate and their assistance to us in addressing the problems we have with regard to this Clean Air Act.

Mr. Chairman, I yield back the balance of my time.

Mr. LENT. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I thank the gentleman from Michigan [Mr. DINGELL] for his remarks. I will not add much to it, except to remind the House that H.R. 3030 balances the safety of our environment with the health of our economy. We as a nation have enjoyed seven consecutive years now of economic expansion, which is the longest period of sustained growth in the history of our Nation. This expansion has resulted in more jobs and better wages for millions and millions of Americans. We cannot and must not jeopardize our economy by overloading on Wednesday next a good environmentally solid bill with some perhaps unjudicious and unwise amendments which might invite a Presidential veto.

So with that small footnote to add to the words of the gentleman from Michigan [Mr. DINGELL], I yield back the balance of my time.

Mr. ROSTENKOWSKI. Mr Chairman, I strongly support the action of the Committee on Ways and Means to delete from H.R. 3030 certain fees which are, in reality, taxes or tariffs.

Several of the provisions of H.R. 3030, as reported by the Committee on Energy and Commerce, either propose to give the Envi-

ronmental Protection Agency [EPA] the direct authority to impose fees to serve as economic incentives to eliminate pollution or the authority to impose fees if those levied by the States are considered inadequate. In substance, these are taxes, not user fees. The fact that revenues from these fees were proposed to be used to pay certain EPA costs does not turn them into user fees after the fact, just as the general tax revenues that now pay EPA's costs are not turned into fees as a result of such use.

In one case, the bill attempts to characterize as a penalty what is, in reality, a tax. It proposed to impose a penalty on certain large companies just because they happen to be located in areas which fail to comply with certain pollution control limits. The companies would be required to pay the penalty, even if they actually emit less pollution than their permits allowed. This is clearly a tax, not a penalty.

Finally, the bill also would permit the States to impose fees on the importation of products which contribute to the formation of what is commonly known as smog. This provision would allow the States to impose tariffs—at a level to be determined solely by the States—on products imported into the United States. This provision could, conceivably, result in States imposing tariffs on imported foreign cars. This measure raises serious trade policy issues and likely would violate U.S. international trade obligations under the General Agreement on Tariffs and Trade. In addition, it raised serious constitutional questions.

The Committee on Ways and Means amendment struck these provisions from the reported bill, because they are taxes or tariffs, not fees designed solely to compensate the Federal Government for the provision of services to the persons required to pay such fees or fees properly characterized as penalties.

Mr. Chairman, the members of the Committee on Ways and Means recognize that the administration of clean air legislation will be costly. We have no quarrel with the need to fund EPA's enforcement efforts adequately. But the need to raise revenue for these purposes cannot justify raising taxes or imposing tariffs in the guise of fees. It especially cannot justify the unconstitutional delegation of the power to tax by the Congress to the executive branch, as would be the case if some of these fees were adopted.

Mr. Chairman, the Committee on Ways and Means has been careful to limit its actions to those which are clearly within its jurisdiction. We have not attempted to modify those fees which are clearly user fees, even though members of the Committee may have questioned their merit.

Before I conclude my remarks, I wish to express my deep concern about the precedent set by another provision of the bill not addressed by the action of the Committee on Ways and Means. One of the sanctions provided by the bill is the denial of certain awards from the highway trust fund. I am disturbed that this provision attempts to usurp control of trust funds properly within the jurisdiction of other committees.

In conclusion, Mr. Chairman, I wish to emphasize that the concerns of the Committee on Ways and Means are not merely issues of committee jurisdiction. These same types of fees are frequently contained in legislation adopted by the Senate. We must take very seriously our collective responsibility to protect the constitutional prerogative of the House to initiate revenue measures. To do so, we must not simply call a measure a user fee if, in reality, it is a tax or a tariff. Our failure to face up to that fact will only serve to impair the House's constitutional prerogative to originate revenue legislation.

Mr. KANJORSKI. Mr. Chairman, I rise today in strong support of H.R. 3030, the Clean Air Amendments of 1990, as well as a number of the amendments that will be offered in the next few days to strengthen this important legislation.

During a recent visit to Eastern Europe, I saw numerous opportunities for America to help these countries in their struggle to reform their economic and political systems. Perhaps more importantly, however, I found a significant lesson that Eastern Europe has to offer the United States.

The lesson is simply: We must pay heed to the environmental impact of our actions if we are going to survive.

Not until you visit the eastern bloc can a person truly know the potential damage of unregulated air and water pollution. In the cities and the surrounding areas, even on the clearest of days, the smog has cut visibility down to less than a mile.

Acid rain has decimated not only buildings and statues that have been standing for hundreds of years, but also natural treasures such as the Black Forest.

The worst part about this situation is that there is not much hope for a near term solution to reverse the environmental damage. Cleaning the air and water in these countries will take millions—perhaps billions—of dollars and require the use of technology that they do not have.

The United States needs to continue to pursue the advanced technology and industry that has allowed this country to grow and prosper. This cannot be done, however, at the expense of the environment. A balance must be found.

Eastern Europe provides powerful testimony to the fact that strong regulations protecting the health of the air, water, soil, and people must be enacted and maintained if we are to continue our course of progress. It provides a frightening glimpse of what America could become if we do not act quickly and decisively. Thus I urge my colleagues to support this legislation.

Mr. FORD of Tennessee. Mr. Chairman, I stand before you today in support of the House Clean Air Bill, H.R. 3030. The committees with jurisdiction, my congressional colleagues, businesses, environmental activities, and citizens alike have worked hard to create new and comprehensive environmental legislation that would address the need to clean up our environment. This legislation is the result of the input of many and reflects the concerns of all.

Clean air legislation was first enacted in 1970 and again revised in 1977. Consequently, it has been 13 years since there has been any major revisions to clean air legislation. However, air pollution from more than 200 industrial plants continue to pose risks at least 1,000 times greater than the federally accepted limit. At the same time, 2.7 billion pounds of chemicals were released into the air from the routine operation of factories alone, and 9.7 billion pounds of chemicals into streams and other bodies of water. It is time we addressed these problems.

Mr. Chairman, I support H.R. 3030 for three reasons: acid rain, air toxics, and smog.

Acid rain has been found to aggravate human respiratory illnesses, causing numerous breathing problems. Acid rain also has been cited as causing corrosion of buildings, monuments and water pipes and releasing cancer- and disease-causing substances into the water. This chemically contaminated precipitation is a prime suspect of forest decline and is estimated to cause 50,000 premature deaths in this country.

Title I of H.R. 3030 would establish provisions to address the problems of acid rain. This title would call for a 10-million-ton reduction in the 1980 level of sulfur dioxide emissions, the major contributor of acid rain, by the year 2000.

Air toxics released into the air have been known to turn backyards red and dissolve tombstones. Imagine the impact these toxics have on our bodies. Strong levels of air toxics have been linked with high incidents of cancer. H.R. 3030 would regulate the release of air toxics and implant changes to decrease the overall levels of air toxics in our environment.

Finally, smog has continued to be more than an eyeache for this country's citizens. While, we as representatives and other informed individuals continue to preach about the hazards of air pollution, it is often that our words fall on deaf ears. In most instances, without being able to see a greenhouse effect or to see ozone depletion, the problem cannot be viewed as an important issue. Yet, smog is a very visible and significant problem.

The thick masses of dirty air hover above us, clouding our skies and creating dark hazes. Estimates indicate that $5 billion are lost annually due to lowered productivity of farmland and crop losses due to smog.

The clean air bill would divide the country into various categories based on the levels of pollution and failure of an area to achieve established standards and would institute stricter control measures for automotive vehicles, gasoline pumps and other contributors to smog.

H.R. 3030 is not just a clean air bill but it is a ticket for the future. It has been estimated that this bill will cost $21 billion a year.

Yes, changes to the clean air bill may be costly. But the price tag of pollution is much more expensive. Studies implemented by the American Lung Association indicate that the health costs of pollution range from $500 million to $15 billion per year. However, implementation of new Federal Public Health standards for fine particulate matter would result in $5.3 billion to $9.6 billion saved in health benefits.

Likewise, if Federal standards were maintained for sulfur dioxide exposure, $10 billion could be saved. Consequently, the results of these and other studies continue to confirm

that the overall net benefits in the savings of potential health costs far outweigh pollution control costs.

Since 1970 our Nation has made great progress in cleaning our air, but more needs to be done. The key to future improvements is proper planning. Let us plan now to implement a bill that can work for us all. I urge everyone to support H.R. 3030 and to create a comprehensive clean air plan.

Mr. DREIER of California. Mr. Chairman, I want to congratulate my colleagues on the Energy and Commerce Committee for bringing to the floor a workable package of amendments to strengthen the Clean Air Act. President Bush deserves special praise for the initial development of this comprehensive plan. I am convinced that, without the President's leadership, we would be facing another legislative stalemate, and another extension of a Clean Air Act that has proven to be ineffective in addressing the most serious air quality problems facing many of the Nation's urban areas.

I am an original cosponsor of H.R. 3030, and the changes made by the committee will only serve to strengthen its effectiveness. H.R. 3030 maintains the President's initiatives to provide for achievable attainment of air quality standards. It provides a cost-effective means to reduce sulfur dioxide emissions in an effort to address the problem of acid rain. It contains a workable system to control toxic air pollutants, and it promotes advanced fuels and technologies to reduce automobile emissions and industrial pollution.

H.R. 3030 is an ambitious attack on health-threatening pollution. It is necessary for addressing the severe pollution problems in areas like the Los Angeles Basin, which has the worst air pollution in the country. In 1989, there were 160 days when the basin's air quality exceeded the EPA standard, and there were 54 stage 1 alerts. Fifty-two percent of the basin's smog-producing ozone pollution comes from cars, buses, trucks, and motorcycles.

I am cognizant of the potential impact this legislation could have in terms of economic growth and industrial competitiveness. I am particularly concerned about the ability of small businesses to comply with the extensive permitting and enforcement provisions. After implementation, should some of the provisions in H.R. 3030 prove to be prohibitively costly without providing any net marginal environmental benefits, I will support congressional efforts to revisit those issues. But for now, we need a multifaceted attack against pollution, and H.R. 3030 provides a number of market-oriented tools to fight the battle for clean air.

Mr. Chairman, failure to strengthen the Clean Air Act this year will prolong uncertainty about our commitment to improve the Nation's air quality and protect public health. It is time that we end the 7-year stalemate that has tied up this important legislation. H.R. 3030 is a fair, yet aggressive pollution reduction program, and it has my full support.

Mr. ROGERS. Mr. Chairman, the measure reported out of the Energy and Commerce Committee is a comprehensive, complex, and tough bill. The House compromise is tougher than the administration's proposal, and in some key aspects, tougher than the legislation which passed the Senate.

I am acutely aware of the 10-year stalemate that has plagued previous attempts to reauthorize the Clean Air Act. Much credit of course must be given to the President for breaking that log jam, and much credit must be given to the able leader of the Energy and Commerce Committee, Mr. DINGELL, and the ranking Republican member from New York, Mr. LENT. Concessions have been worked out on a number of issues, including air toxics provisions, a tail pipe standard agreement, and new requirements for ozone nonattainment problems in the most heavily polluted cities. While the auto companies are not wildly enthusiastic, they have a can do attitude about these requirements, at least for the first phase of these requirements.

But, we live in a very complex industrialized society. For every requirement we enact there is an economic impact, there is a job impact, a small business impact, and those tabs must be paid. The Business Round Table recently published a comprehensive analysis of the costs of various clean air proposals. Their best cost estimates using models developed by several organizations range from $31 billion to $104 billion. Moreover, a Harvard University report on environmental regulation and U.S. economic growth finds that pollution abatement controls were a significant contributor to the growth slowdown of the 1970's. There is an economic price to be paid, and we must readily acknowledge that the price is high.

The Commerce Department reports that we currently spend $32 billion a year on environmental regulations. Consequently, we have seen significant improvements in the air quality across the country. For example, today's cars are 25 times cleaner than 20-year-old cars. The Environmental Protection Agency reports that since 1978 emission of ambient airborn lead declined 88 percent. From 1973 to 1988, despite an 85-percent increase in coal use nationwide, sulfur dioxide emissions have decreased 35 percent. Nitrogen oxides have declined 12 percent since peaking in 1978. In my home State of Kentucky, electric utilities have cut sulfur dioxide emissions in half from 1975 to 1985, while increasing the amount of coal burned by 17 percent. All these decreases are the result of the current clean air law.

But as we look for ways to continue these improvements, we may well jeopardize the only course that can guarantee a cleaner environment. The solution to our nation's pollution problems is innovation, better technology, and unleashing the power of the human mind in a free society. The results we seek cannot be achieved if we go after them with the heavy artillery of big government. History tells us that closed societies, where Government controls technology and innovation, have dismal success records at achieving clean air goals. I am concerned that we are forgetting the lessons of history. It is not surprising to me that the West Germans have had to waive the air pollutant standards on East German cars. That is a typical problem of command-control economies. We must not move in that direction. The first principle of any clean air bill should be maximizing flexibility for innovation.

Last, Mr. Chairman, but certainly not least, I want to focus on the acid rain title of the bill. Although this title has also been worked out in committee, I remain deeply concerned that title V is not a fuel-neutral bill. Because of the effects of the so-called cap in phase II, the acid rain provisions will severely restrain the use of coal for utilities in high growth States. Although the committee report acknowledges this problem, the agreement does not, in my opinion, address this issue.

Moreover, the economic impacts of the acid rain title on coal communities in Kentucky will be concentrated on Kentucky's small coal towns which are almost exclusively dependent on mining for their economic viability.

In my district, which is sometimes referred to as a low-sulfur coal area, only 20 percent of the coal can meet the stricter 1.2 pounds-per-milion BTU standard required in phase II. EPA has greatly underestimated the potential mining-related job loss in its cost estimates. According to estimates from the Clean Air Working Group [CAWG], the potential jobs at risk of being lost from clean air in my district could be as high as 1,400. One coal company in particular is now threatened with extinction because of the uniquely crafted features of the sulfur dioxide emission allowance system. Eight hundred jobs in Whitley and Knox counties are at risk. Ironically, this firm produces 2.5 million tons of some of the lowest sulfur coal in the State of Kentucky, and it generates $100 million of revenues into the Kentucky economy. That hits us very hard when parts of my district are already suffering with unemployment rates as high as 18 percent. Although I have discussed this problem with committee members at great length, the committee was unable to resolve the problem.

We also know that the acid rain title will mean higher utility rates for Kentucky's ratepayers. The latest estimates from the Kentucky Energy Cabinet reveal that Kentucky's consumers will pay anywhere from 12 to 18 percent more for their electricity, depending on how utilities comply.

Finally, Mr. Chairman, what about the science behind the acid rain issue? Let me close by discussing the National Acid Rain Precipitation Assessment Program [NAPAP] that was established in 1980. This report was planned as a comprehensive 10-year study. Over the decade, the cost of that program has risen to over one-half billion dollars. The NAPAP Program is the most broadly based analysis on the effects and causes of acid rain ever undertaken. The Commission has reviewed over 5,000 documents and studies, more than 300 authors explained their findings, and more than 100 peer reviewers examined the reports.

Although the final report will be out in September, a draft was presented to an international conference of scientists in February. According to the program administrator, there is little probability that any of the conclusions would be changed. Therefore, the report offers very conclusive and significant findings.

The findings under section 18 that deal with forests are, and I quote:

There is no evidence of a general or unusual decline of forest in the United States or Canada due to acidic deposition or any other stress factor. Moreover, there is no case of forest decline in which acidic deposition is known to be a predominate cause.

In turning to the issue of crop yields, the NAPAP report states and I quote:

Ambient sulfur dioxide concentrations by themselves are not responsible for regional scale crop yield reduction in the United States.

Mr. Chairman, these excerpts offer a revealing look at what the scientists are saying about acid rain. This is a $1 million problem with a $1 billion price tag. Unfortunately, the debate in Congress is not about science. The proposal to control emissions that form acid rain—now being debated on the House floor—could cost $5 to $10 billion a year; the benefits, in terms of reduced damage, are uncertain and, at best, quite small.

I have a summary of each section of the NAPAP report; and, I insert that summary in the RECORD:

SUMMARY

The following summary comments are keyed to the individual section numbers in the Detailed Comments section which follows:

1. $SO_2$ Emission Trends.—National $SO_2$ emissions decreased by approximately 25% from 1973-1983 and have remained relatively constant since that time. Without new controls, emissions may increase or decrease by as much as 20% between 1990 and 2010. Emissions are expected to decline from 2010 to about 2030 as pre-NSPS plants retire. New plant growth after 2010 could result in an increase in total emissions after 2030, when all pre-NSPS plants have been retired.

2. $SO_2$ Effects Categories.—Regional scale $SO_2$ effects are usually evaluated for surface waters, forests, crops, materials, human health and visibility (see items 3 through 8 below).

3. Surface Waters.—A percentage (0 to 6 percent of mid-Atlantic, northeastern and midwestern lakes and streams are acidic and a further percentage (0 to 18 percent additional) are highly sensitive to acidification ($<50$ $\mu$eg L acid neutralizing capacity [ANCI]). Florida is a special case. Biological impacts occur in some acidic and sensitive waters. In the Northeast, the time for biological recovery may be long, so that little near term benefit would be expected to result from rapid emission reduction. In the Mid-Appalachian Region, the time scale of acidification and/or recovery (chemical and biological) is an important unknown. It will be reported in the NAPAP 1990 Assessment. Preliminary findings suggest that in some mid-Atlantic subregions, significant acidification may occur within a few decades.

4. Forests.—Impacts from acidic cloudwater in combination with other stresses affect some high elevation spruce forests in the East. However, there is no evidence of widespread forest damage from acidic deposition. Long-term changes in the chemistry of some sensitive soils are expected, although it is uncertain whether this will affect forest health.

5. Crops.—$SO_2$ emissions do not reduce crop yields, except possibly on a local basis near very large sources. Crop plants are not sensitive to the wet deposition of acidic substances.

6. Visibility.—NAPAP has not conducted independent research on visibility effects or values. However, visibility benefits should be included in any assessment of $SO_2$ emissions reduction, and are being included in NAPAP's Integrated Assessment. Atmospheric sulfate particles derived from $SO_2$ emissions are a significant contributor to reduced visibility and emission reductions will lead to improved visibility.

7. Human Health.—NAPAP program has not conducted independent research on the "direct" effects associated with inhalation of $SO_2$ or its transformation products, which include acid sulfate aerosols. The health risks associated with acid aerosols are being evaluated by EPA for possible inclusion as a National Ambient Air Quality Standard. Reductions of $SO_2$ emissions would reduce risks associated with current loadings. NAPAP continues to evaluate the results of research conducted on the "indirect" health effects of acid deposition (e.g., related to mobilization of lead, mercury or other metals in acidic waters).

8. Materials.—Both wet and dry sulfur deposition accelerates the deterioration of carbonate stone, galvanized steel, paint, etc. Materials benefits would be greatest if deposition in urban areas is reduced, thus local sources need to be considered.

9. Nitrogen Oxide Emissions.—$NO_2$ emission control will be beneficial in several regions. This favors the use of technologies that remove $NO_2$ including low $NO_2$ burners and clean coal technology (CCT) compared to the current generation of scrubbers in cases where controls may be required at existing plants.

10. Impact in Canada of U.S. $SO_2$ Emissions.—U.S. emissions reductions intended to benefit effects categories, e.g., surface waters, health and visibility, in the Adirondack area and New England will also benefit geographical areas in northeastern Canada. There is no supportable evidence, however, for widespread impacts on Canadian forests.

11. Economic Valuation of Benefits.—No comprehensive benefit evaluation is available, nor likely in the next year. Control strategy evaluations must necessarily involve both economic and physical measures.

12. Control Strategy Implications.—Enhanced energy conservation is the lowest cost means of emission reductions. Coal substitution and coal washing (where not already practiced) are low cost options for near term (e.g., by 1995) emission reductions. Clean Coal Technology (CCT) has many benefits (including reduced global climate impacts) compared to current scrubber technology, but will need a post-2000 deadline (e.g., 2003-2005) for full implementation.

For its integrated Assessment, NAPAP is evaluating the timing, magnitude, location, and costs of various control options. The issues revolve around the use of currently available techniques such as, fuel switching, coal cleaning, LIMB, duct injection, and scrubbing versus the next generation of clean coal technologies. The Clean Coal Technology Program will be resolving technical and economic questions of emerging techniques so that their performance and penetration rate can be determined.

13. NAPAP Assessment Reports.—NAPAP's fully reviewed reports (to appear in late-1989 and 1990) and the NAPAP International Conference in February 1990 are intended to assure credibility for the technical information generated by the program for use by policymakers in the development of acid rain control legislation.

1. $SO_2$ Emission Trends—Past and Projected:

1.1 National $SO_2$ emission rates have declined by 25 percent (from 32 to 24 million tons per year) between 1973 and 1988. Much of this reduction occurred in Ohio River Valley and midwestern states. Most of the reduction had been achieved by 1983, and national $SO_2$ emission levels have been approximately constant during the past five years.

1.2 The fraction of $SO_2$ emissions from tall stack sources increased during the 1973-1988 period. As a result, the reduction in long-range transport has been less than the 25 percent reduction in emissions.

1.3 If no new control legislation is adopted, various projections of national $SO_2$ emissions during the next 20 years range between $\pm 20$ percent or more, compared to current levels, depending upon assumptions about energy demand, fuel mix and new control technology penetration rate at existing power plants. Beyond 2010, there is general agreement that $SO_2$ emissions will decline, as a result of the retirement of older, higher emitting plants.

1.4 For this memorandum, a maximum emission reduction of 12 million tons per year (50 percent decrease) was considered, in order to comment on the expected benefits in the case of the largest reductions proposed in the current acid rain debates. Smaller total decreases (e.g., 6, 8 or 10 million tons per year) would result in smaller benefits; however, the relationship between emission reductions and benefits may not be linear. Two schedules for the 50 percent reduction case were considered:

2000 Target: 50 percent decline (from 24 to 12 million tons per year) by 2000, with constant emissions after 2000.

2005 Target: A 25 percent decline (24 to 18 million tons) by 2000, a further 25 percent decline (18 to 12 million tons) by 2005, with constant emissions after 2005.

2. Effects Categories for $SO_2$ Impacts:

2.1 The following effects categories are usually considered when evaluating the potential regional benefits of $SO_2$ emission reductions:

Surface Waters: Effects on lakes, streams, and coastal estuaries—both chemical and biological.

Forests: Effects on unmanaged and commercial forests.

Crops: Effects on agricultural crops.

Materials: Effects on exposed construction materials and cultural resources.

Health: Direct (inhalation) and indirect (other pathways) effects on human health.

Visibility: Effects on visual range through the atmosphere.

2.2 Important Note: Ozone (and other oxidants) and nitrogen oxides also can cause effects in the above categories, as noted in the following sections. Such ozone and nitrogen oxide effects will not be improved by $SO_2$ emission reductions alone.

The extent of changes in effects which may arise from ozone and nitrogen oxide would depend on the selection of control methods which included reductions in more than sulfur emissions alone.

3. Sulfur Deposition Effects on Surface Waters:

3.1 Current Status of Surface Waters: A percentage (0 to 6 percent) of eastern and midwestern lakes and streams are acidic, and a further percentage (0 to 18 percent additional) of these lakes and streams are highly sensitive to acidification. Regional distributions of lake and stream acidity are summarized in the following table. While this survey information cannot be used to establish the cause of a water body's status,

it provides a description of the number of acidic and very sensitive surface waters for the population sampled. Biological impacts are expected in acidic waters and may occur in sensitive surface waters. Snowmelt and intense summer storms can increase surface water acidity and lead to many more acidic waters than reported, particularly during biologically sensitive times of the year.

| Region [1] | Status (number of lakes or streams in percent) | |
|---|---|---|
| | Acid (ANC $<0\mu eq\ L^{-1}$ | Most sensitive (ANC $<50\mu eq\ L^{-1}$ |
| Lakes: [2] | | |
| Northeast | 5 | 19 |
| Upper Midwest | 2 | 15 |
| Southern Blue Ridge | 0 | 1 |
| Florida [3] | 22 | 35 |
| Mountainous West | 0 | 17 |
| Streams: | | |
| Interior Mid-Atlantic | 3 | 11 |
| Mid-Atlantic Coastal Plain | 6 | 24 |
| Interior Southeast | 0 | 5 |
| Florida [3] | 12 | 61 |

[1] Regions reported are as defined in NAPAP and EPA documents. Values reported are regional averages. Proportions of acidic and most sensitive surface waters within defined subregions are considerably lower or higher than this average.

[2] Small lakes (less than ten acres) were not sampled by EPA but in some areas (e.g., New York's Adirondack Mountains) are more likely to be acidic than larger lakes.

[3] Compared to other regions, it is better established that surface water acidity in Florida is the result of other processes in addition to acidic deposition.

3.2 Future Projections:

Indications are that the steady-state hypothesis holds in the Northeast, i.e., taken as a region, surface waters are in equilibrium with sulfur inputs. In the Southern Blue Ridge Province systems are not in equilibrium and are still absorbing sulfur. Assuming these conditions to be true, the following results may be expected.

The relationship between acidity changes and sulfur additions is complex. In general, percentage changes in sulfur will be accompanied by small changes in acidity.

3.2.1 Constant $SO_2$ Deposition: In the Northeast, little change will occur: few acidic systems will recover and few additional systems will become acidic. In the Southern Blue Ridge Province, significant changes could occur after the protective capacity of watersheds is exhausted (especially sulfate absorption capacity). Biological impacts will generally follow changes in acidity.

The Mid-Appalachian Region (part of the Interior Mid-Atlantic Region) is presently a key unknown. Significant research for this region is being completed and will be included in the NAPAP 1990 Assessment. This research was undertaken when EPA's National Stream Survey showed that sensitive surface waters occurred in some of the mid-Atlantic regions and the additional analyses suggest that significant acidification may occur within a few decades.

3.2.2 2000 Target Emission Reductions: In the Northeast, a percentage of systems will eventually improve chemically. This response will not be immediate since the watersheds will "bleed" sulfur into surface waters and a limited number of systems may continue to acidify. Due to the $SO_2$ reduction, more systems improve (chemically) than become acidic. Changes in acid neutralizing capacity will not be as large as change in sulfate. Biological recovery (e.g., self-reproducing fish populations) may require additional time. In the Southern Blue Ridge Province, the rate at which acidification occurs is slowed. Although there are few acidic systems at present, it is possible that some systems may become acidic in the future.

3.2.3 2005 Target Emission Reductions: Surface waters in the Northeast will respond similarly to the 2000 target case, except that the responses will be displaced in time, by less than five years. Recovery (chemical and biological) will occur but the response will not be immediate. Systems in the Southern Blue Ridge Province will continue to receive net increases in sulfur for an additional period. More systems may become acidic over this decade, but the additional number of acidified systems would be small.

4. Sulfur Deposition Effects on Forests:

4.1 Current Status: Preliminary indications suggest there is no widespread forest damage from acidic deposition. High elevation spruce forests in the eastern United States are effected by acidic cloud impacts, in combination with other stresses. At high elevations (>3400 ft) in the Adirondack and Green Mountains, the growth of red spruce has declined and mortality has increased (>50 percent dead.) Mortality in the Southern Appalachian Mountains is within the natural range but growth has declined. These forests represent less than 0.01 percent of the total eastern forested area. Cumulative effects of acidic deposition on some soils in the East may affect soil fertility in about 50 years. Sulfur deposition has changed soil nutrient status in the Midwest but this does not appear to have affected forest health.

The finding of "no widespread sulfur damage to forests" is widely acknowledged among most forest scientists, but varies from the views commonly reported in the media. NAPAP's state-of-science critical reports, with extensive reviews by all interest groups, are intended to assure credible findings on forest status. It is generally agreed that ozone reduces forest health in southern California and possibly also in some areas of the eastern U.S.

4.2 Future forecasts

4.2.1 Constant Sulfur Deposition: Continued decline of red spruce may occur at high elevation, although the remaining trees may be genetically more resistant to ozone and acid stress. Effects would occur only in association with another stress, e.g., drought, extreme low temperatures.

Some forest soils in sensitive regions in the East will exhibit reduced fertility from acidic deposition in about 50 years. This may affect forest growth.

4.2.2 2000 Target Emission Reduction: Current information suggests that only high elevation spruce growth would be improved if sulfur deposition were reduced. Although this represents less than 0.01 percent of the forests in the U.S., it is an important natural resource in our National Parklands. High elevation forests are also important in erosion protection. Possible changes in soil chemistry in sensitive regions in the East would be reduced and delayed if deposition were significantly reduced.

4.2.3 2000 and 2005 Target Emission Reductions: The reduction of stress on high elevation spruce growth would be delayed by a time of less than five years. Long-term (50-year) soil acidification improvement would be delayed slightly. Cumulative changes in the chemistry of sensitive soils would be reduced, but not as rapidly.

5. Sulfur Deposition Effects on Agricultural Crops:

5.1 Current Status: The yield per acre of most crops in North America has increased steadily over time for the past 60 years because of genetic improvements through crop breeding and improved management practices such as fertilization, irrigation and pesticide application. Year-to-year and site-to-site variations in crop yield are principally the results of natural environmental factors and management differences. Research indicates that crop yield is not impacted by acid rain. However, in many regions of the country, ambient levels of ozone reduce the yields of some crops by 1 to 15%.

5.2 Future Forecasts:

5.2.1 Constant Sulfur Deposition: No changes in crop yield are expected if current levels of $SO_2$ emissions continue.

5.2.2 2000 or 2005 Target Emission Reduction: No agricultural benefits are expected with any reductions in $SO_2$, except possibly on a local scale (within a few miles) near large smelters, refineries, or multiple point sources.

The benefits associated with the input of sulfur (a plant nutrient) to agricultural regions would be reduced if $SO_2$ emissions were reduced. This would result in higher sulfur fertilizer requirements to maintain optimal crop growth. Any control strategies that reduce ozone levels (e.g., $NO_2$ reduction) would likely benefit agricultural production.

6. $SO_2$ Emission Effects on Visibility

6.1 Current Status:

Summertime visibility over much of the eastern U.S. has decreased to a current visual range of generally less than 20km for areas east of the Mississippi River, except for northern New England, where it is 40 to 60km. Estimates of natural visibility in the East suggest background levels of visual range between 60 to 80km; substantially more than current levels in the East but still less than half of current western levels. Degradations in western visibility have not been as severe as in the East. Western visibility generally ranges from 100–200km.

In the rural East, reduced visibility results primarily from light scattering by fine particles, predominantly sulfate particles. In urban areas and in the rural West, light absorption and scattering by carbon particles is also important. The higher humidity in the East significantly increases the light scattering by sulfate particles compared to the West. Scenic vistas are affected by pollution at all 35 National Parks within the contiguous 48 states, and sulfate particles are the single most important factor in visibility impairment.

6.2 Future Forecasts:

6.2.1 Constant $SO_2$ Emission: Visual range would remain constant under current $SO_2$ emissions levels.

6.2.2 2000 or 2005 Target Emission Reduction: Visual range should improve immediately if $SO_2$ emissions are reduced, although quantification of the relationship is not yet possible. (Quantitative estimates are being prepared for the NAPAP assessment reports.)

7. $SO_2$ Emission Effects on Human Health

7.1 Current Status:

Both $SO_2$ and sulfate aerosols can result in bronchoconstriction in asthmatics and changes in mucociliary clearance. The $SO_2$ National Ambient Air Quality Standards (NAAQS) are met in most regions of the nation, and the remaining $SO_2$ nonattainment cases are subject to further regulatory control under existing Clean Air Act authorities. In 1985, the $SO_2$ NAAQS were exceeded in parts of 60 counties in 16 states.

Only a few direct measurements of ambient acidic sulfate aerosol concentrations have been made, and the highest measured levels are slightly lower than the concentrations which cause the effects mentioned above. However, some epidemiological studies suggest the possibility of long-term chronic effects resulting from exposure to high ambient levels of acid aerosol. EPA is currently considering the need for an acid aerosol ambient standard, and NAPAP is developing its analysis in close collaboration with the EPA regulatory decisionmaking.

Violations of the ozone NAAQS occur in many regions in the U.S. and it is likely that decrements in lung function occur in sensitive individuals in these areas.

Several indirect health impact mechanisms are being evaluated, including the possible mobilization of lead in low pH drinking water systems, and of mercury in lakes, with subsequent accumulation in fish used for food consumption. These studies are continuing; reported risk estimates will likely be low, but may not be negligible in all cases. (NAPAP's state-of-science reports to be released for public review in November 1989 will report on these risks.)

7.2 Future Forecasts:

7.2.1 Constant $SO_2$ Emissions: Chronic effects (if any) from acid aerosols would continue among sensitive individuals.

Indirect health risks (if any) would continue at approximately current levels.

7.2.2 2000 or 2005 Target Emission Reduction: Large-scale (50%) emission reductions would benefit individuals in those localities not currently attaining the $SO_2$ NAAQS. However, broad $SO_2$ emission reductions may not be a very inefficient means of achieving these benefits (i.e., if such emission reductions were not otherwise required).

Indirect health risks (if any) would be reduced. If significant indirect risks were confirmed, evaluation of specific emission reduction requirements in the affected regions would be necessary.

8. Sulfur Deposition Effects on Materials:

8.1 Current Status:

Acidic deposition increases the rate of deterioration of some building materials (e.g., galvanized steel and carbonate stone), some surface coatings (e.g., carbonate paint) and cultural resources (e.g., statues). The relationships between acidic deposition rates and deterioration rates for various materials are not well quantified, and are currently being investigated. Because of the large overall external maintenance costs for structures in the nation, enhanced deterioration from acidic deposition could potentially be significant. This is problematic since no generally accepted estimates of maintenance costs resulting from all air pollution impacts (nor from acidic deposition specifically) are currently available. Also, no credible analysis of consumer maintenance practices has yet been done. Additional information on this issue is anticipated for the 1990 Assessment.

Since most of the nation's materials and cultural resources are in urban areas, the focus of control decisions is similar to health effects, i.e. local sources need to be considered. Emissions from a limited number of remote sources (e.g., power plants) may result in a less than proportional impact on urban structures.

8.2 Future Forecasts:

8.2.1 Constant Sulfur Deposition: Current levels of surface deterioration will continue. Local situations of corrosion and other air pollution impact have been described but larger regional patterns of damage (i.e., those which would benefit from large regional $SO_2$ emissions reduction) are not well-characterized and constitute a significant gap in our knowledge.

8.2.2 2000 or 2005 Target Emission Reduction: Emission reductions will, at a minimum, provide an additional margin of safety relative to possible regional scale materials impacts from acidic deposition. No estimates of specific benefits are currently available. (NAPAP will report on the materials benefits which may result from sulfur emission controls in its Integrated Assessment in 1990. Because of significant data and inventory limitations, specific projections are unlikely. However, bounding estimates will be reported.)

9. Importance of Nitrogen Oxide ($NO_2$) Emission Reductions:

$NO_2$ emissions, which result from all combustion sources (i.e., both motor vehicles and stationary sources) can cause three types of effects on the regional scale:

Acidic deposition—typically 10 to 30 percent of that caused by sulfur oxides in the East. However, $NO_2$ may be a major component of acidic deposition to the extent that it occurs in the West.

Ozone ($O_3$) is produced photochemically by $NO_x$ and volatile organic compounds (VOC). The $O_3$ production or degradation rate depends on the local ratios and absolute amounts of $NO_x$ and VOC. This is very important because of the widespread nonattainment of the $O_3$ standard.

Contribution to eutrophication of coastal waters—may be a significant contribution (10 to 20 percent) in some cases.

Nitrates, derived from $NO_x$ may be important in some acute acidification episodes in surface waters.

In view of the possible effects, the question of $NO_x$ controls should be addressed as part of any evaluation of $SO_2$ control strategy.

Current $SO_2$ scrubber technologies remove very little $NO_x$ emissions. However, currently available low $NO_x$ burners may achieve 30-50 percent reductions. Some of the Clean Coal Technologies now being demonstrated (fluidized bed combustors, advanced scrubbers) also remove 30 to 50 percent of $NO_x$ emissions.

10. Impact of U.S. Emissions on Canada:

The principal impact of acidic deposition in southeastern Canada is the same as in the northeastern United States—acidification of a percentage of watersheds and lakes in geologically sensitive regions. Because of the large number of Canadian lakes in sensitive regions, this is a particular concern. Acidic deposition in both Canada and the United States results from sources on both sides of the border. It is generally agreed that the net transboundary flux of sulfur oxides is from the United States to Canada.

Canadian government representatives frequently assert significant forest damage as a result of acidic deposition. (Indeed, some of the best documentation of severe forest damage from extremely high levels of sulfuric dioxide impact come from the Canadian experience near the nickel smelter in Sudbury, Ontario—the world's largest individual $SO_2$ source.) Most Canadian and U.S. scientists now agree that there is no scientific basis to relate widespread forest effects to current levels of deposition. Long-term cumulative impacts on the fertility of certain soils is being evaluated with respect to possible forest affects.

Canadian representatives have expressed specific concerns about acidic deposition impacts on its sugar maple industry. Current information indicates that insert infestation and management practices significantly contribute to the observed impacts. Note: Canadian production of maple syrup was at a record high level in 1988.

U.S. emissions reductions intended to benefit effects categories (e.g., surface waters, health and visibility) in the Adirondack area and New England will also benefit the principal areas of concern in Southeastern Canada.

II. Economic Valuation of Benefits:

NAPAP has avoided basing its assessments on explicit comparisons of the economic benefits and costs of controls, partly because only limited information is available on the economic values associated with some of the effects. NAPAP is currently conducting economic benefit evaluations in a limited number of situations, and will report on methodologies employed and specific results in its assessment reports.

Because of the impracticality of developing credible benefit estimates for all impacts by 1990, NAPAP is evaluating alternate emission reduction strategies on a comparative basis, in order to report on strategies which achieve largest benefits (as determined by either physical or economic measures, as appropriate) for similar control costs.

Because economic evaluation methodologies are not well agreed upon for all of the effects/benefits categories relevant to acidic deposition, NAPAP's comparative evaluation of control strategies recognizes three categories of benefits. Benefits in individual categories can be cross-compared for the various control strategies evaluated, but cannot be combined into a comprehensive dollar estimate of benefits. The categories are:

(1) Health related benefits—having special public policy importance;

(2) Economically evaluated benefits—including market estimates (e.g., productivity in commercial forests) and behavior base estimates (e.g., recreational use of lakes); and

(3) "Conservation benefits"—including preservation of remote lakes and mountaintop forests, for which economic evaluation methods are not well agreed upon.

12. Control Strategy Implications Resulting From the NAPAP's Effects and Technology Analyses:

The time scale for biological recovery of lakes and streams in the Northeast may be long in the Northeast so that little near term benefit would be expected to result from rapid emission reduction. The time scale and importance of other effects (lakes and streams in other eastern regions, possible health effects, materials impact, forest response, visibility impacts) is still being evaluated. If the time scale of all significant effects is long, rapid imposition of controls will not result in significant near term benefits. This suggests that slower but less costly control strategies should be evaluated carefully. Specifically:

There is general agreement that moderate emission reductions (e.g., 3 to 5 million tons of $SO_2$) can be achieved within approximately five years by currently available technology. This includes coal substitution, coal cleaning, LIMB duct injection, and enhancements to existing scrubber technology.

LIMB technology has been demonstrated for wall-fired boilers and is attractive from a cost-effectiveness standpoint for control of $SO_2$ and $NO_2$ emissions.

Scrubber technology is continuing to advance with a focus on increased removal efficiency and reliability and/or reduced costs. The current technology is ready for implementation with known cost, performance and environmental impacts.

Clean Coal Technologies, including repowering and advanced energy conversion techniques, are being demonstrated. These technologies are potentially lower emitting and more cost effective than current technologies. The demonstration program will help develop these technologies as well as clarify their ultimate performance, cost, and penetration rates.

The Clean Coal Technologies (CCT) currently being demonstrated have several significant advantages compared to the current generation of flue gas desulfurization (scrubber) technologies:

Improved energy efficiency through greater kilowatt output per ton of fuel consumed (less $CO_2$ emissions and global climate impact).

Significant $NO_2$ emission reduction (30-50 percent in some cases) not achieved by current scrubbers.

More manageable wastes, compared to scrubber sludge.

Potential future export markets (coal and combustion technology) for the United States.

Wide deployment of CCT instead of scrubbers would require an extension of the deadline to achieve the full planned emission reduction beyond 2000 (i.e., to 2003-2005) unless a "crash program" of technology demonstrations is pursued.

13. Future NAPAP Assessment Reports on Benefits and Strategy Evaluation:

NAPAP will complete a large series of State-of-Science and State-of-Technology reviews, and an Integrated Assessment reporting on comparative evaluations of control strategy options, during the next 16 months. All NAPAP documents will have extensive review by U.S. and foreign scientists, and interest groups concerned with acid rain issues. These NAPAP reports will provide the following:

Credibility.—This is the most important scientific product of NPAP's work. Reasonable national agreement on the major cause-effect relationships, and the effectiveness of the planned control strategy, is most important. NAPAP's extensive scientific and public review procedures address the need for credibility. The NAPAP International Conference on Acid Rain, scheduled for February 1990, will be the most visible part of the extensive review process.

Completion of scientific, technological and economic studies.—NAPAP will continue to provide decision-makers currently available information upon requst, for analysis of legislative options, while its several key cause-effect analyses and other studies are being completed.

Comparative evaluation of strategies.—These analyses will aid decision-makers in the evaluation of legislative options until a law is adopted, and will guide regulatory management in the years ahead.

Mr. CHAIRMAN pro tempore. Pursuant to the order of the House of Thursday, May 17, 1990, the Committee rises.

Accordingly, the Committee rose; and the Speaker pro tempore [Mr. ECKART] having assumed the chair, Mr. COLEMAN of Texas, Chairman pro tempore of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 3030) to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, the control of toxic air pollutants, the prevention of acid deposition, and other improvements in the quality of the Nation's air, had come to no resolution thereon.

## □ 1840

## PUBLIC WILL SUPPORT TAX INCREASES AND SPENDING CUTS TO BALANCE THE BUDGET

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California [Mr. STARK] is recognized for 5 minutes.

Mr. STARK. Mr. Speaker, the public is ready and willing to cut the deficit. They want a budget treaty to come out of this week's summit. The voters of my district tell me that they favor a balanced budget, even if Congress and the President are failing to act.

Based on a survey of about 6,000 people from California's Ninth Congressional District, there is support for enough spending cuts and tax increases to reduce the budget deficit to zero by 1994. People love their country and their children so much that they are willing to make the hard choices—now. Congress and the President need to roll up their sleeves. Fingerpointing will only increase the growing contempt of the political process.

Citizens have targeted defense spending as a prime source for cutbacks. They want to cut weapons procurement and Armed Forces operation and maintenance by 25 percent each, limit the strategic defense initiative to research and development, eliminate the B-2 "Stealth" bomber, and reduce active duty military personnel by 10 percent. These cuts would take place over 5 years and would total savings of $58.6 billion by 1994. There is close to 90-percent support for several of these reductions and all have at least 75 percent public approval.

The voters also cited Medicare reimbursement rates as an area for savings. Sixty-two percent support freezing reimbursement rates for hospitals and physicians for 1 year out of the next 5, saving $14 billion more.

People called for cuts in other areas as well, such as foreign aid, postal subsidies for nonprofits, and congressional expenses.

All the cuts put together total $79 billion in savings by 1994.

But this is only half of the story. To raise additional revenue, people called for seven of eight possible tax increases. They registered overwhelming to support for increasing the top tax bracket on the 600,000 highest income persons from 28 to 33 percent, and raising taxes on cigaretts, beer, and wine. More than three quarters of the taxpayers would reduce deductions for business meals and expenses from 80 to 50 percent, many arguing there should be no deduction at all and 63 percent would up the top corporate tax rate from 34 to 36 percent. A majority also agreed to putting a transaction tax on stocks and other securities, and 50 percent supported raising the Federal gas tax by 10 cents a gallon. Added together, the tax increases total $51.8 billion in new revenue.

If we followed this course of action, we would get an $800 million surplus rather than the currently projected $130 billion 1994 deficit. Mr. Speaker, Members of Congress, it's time we read the people's lips. They want the deficit cut and will accept and support new taxes and major spending cuts. For the sake of our children and the long-run future of America, let's do our duty.

## AMERICAN OPPORTUNITIES WORKSHOP

The SPEAKER pro tempore, Under a previous order of the House, the gentleman from Georgia [Mr. GINGRICH] is recognized for 60 minutes.

Mr. GINGRICH. Mr. Speaker, I take this time, if I may, to report to the House on the American Opportunities Workshop which we had on Saturday nationwide in over 600 workshops around the country connected both by satellite and by the family channel, an hour-long television program which was broadcast at 10 o'clock eastern time, 9 o'clock central and again at 10 o'clock mountain time, 10 o'clock Pacific time. We believe, based on our current estimate, we sent out over 40,000 copies of the special supplement which was printed in the National Review. In addition, we believe there were probably more than 40,000 people altogether who took part in the workshops and the program, and I wanted to report to my colleagues on exactly what happened.

It is a bipartisan effort, an effort which had as one of the most vigorous members of the workshop, Representative Polly Williams, who is a Democrat from Wisconsin, who offered the voucher program in Wisconsin which this fall will allow 1,000 poor children to have a choice as to where they and their parents decide they will go to school. It was bipartisan in that one of our co-hosts was former Attorney General Griffin Bell, and it was a serious effort to reach out.

I think the seriousness of this was caught in the news coverage which came out. I want to include in the RECORD today and read from several articles in the Washington Post and the New York Times that I think gave a pretty good insight into what was happening. Let me start with the Washington Post coverage on Saturday morning entitled "Conservatives Embrace War on Poverty. Proposals Range From Reading Bonuses to College Tuition Promises." Paul Taylor is the author.

Rep. Newt Gingrich (R-Ga.) has made an offer to third graders in five low-income communities in his district he hopes they can't refuse: He will pay them $2 for each book they read this summer.

Housing and Urban Development Secretary Jack Kemp thinks the federal government should guarantee full college tuition payments to every poor child in America who finishes high school. He doesn't care how much it costs. "As a society, we have the money," he said.

Paul Weyrich, president of the Free Con-

gress Foundation, wants welfare payments to a single mother to be tied to three conditions: Her abstinence from drugs, her willingness to seek financial support from the absent father, and her child's continued attendance in school. He also believes that rather than confiscate illegal drugs, the Drug Enforcement Administration should contaminate them "with a substance that makes users wretchedly ill, preferably with distinctive symptoms."

These conservative activists are at the cutting edge of an intellectual and political movement that is suddenly alive with manifestoes, paridigms, proposals and debates. They're trying to launch a new War on Poverty—a conservative war, grounded on the principles of individual empowerment, bureaucratic decentralization and market incentives.

They bring an urgency to their mission. Gingrich says the nation is "on the verge of catastrophic decay" because of its growing underclass. He says it's no longer sufficient for conservatives to rail against "the bureaucratic welfare state's" role in fostering the social pathologies of the poor. "We've won that argument," he said. "Now we have to show we can come up with something better. We have an obligation to govern."

He will open one front of the war today in the form of the American Opportunities Workshop, an hour-long television program beamed by satellite to more than 600 sites around the country. It will spotlight the efforts of citizen activists in poor communities to confront problems involving schools, crime, housing and other matters.

The show is being underwritten by $500,000 raised by GOPAC, a conservative political action committee Gingrich chairs, and will include taped messages from President Bush, Vice President Quayle, former attorney general Griffin B. Bell, Kemp and others.

"There's a realization percolating through the conservative movement that there really can be a political payoff—as well as a policy payoff—in these issues," said Stuart Butler, director of domestic policy studies for the Heritage Foundation and an advocate of eliminating virtually all taxes on the working poor. "During the Reagan years, to put it crudely, the political beancounters didn't think there were any votes in fighting poverty. Now I think that attitude is changing."

Kemp and Gingrich long have preached that for the Republican Party to become a true governing majority it must show good faith on issues of poverty. Under Republican National Committee Chairman Lee Atwater, the GOP has set a goal of doubling President Bush's black vote total—to 20 percent—in 1992. Several of the local activists to be featured on today's show will be black Republicans.

But before there can be a political payoff, conservatives acknowledge they must first agree upon a coherent anti-poverty policy.

"As a movement of dissent, much of the conservative agenda has been articulated in negative terms," Weyrich wrote in a 11-page memo now circulating in conservative circles. "It is much easier to build and maintain an opposition movement than it is to govern."

Earlier this spring, James P. Pinkerton, deputy assistant to Bush for policy planning, outlined what he called a "new paradigm" for attacking social problems. It included these principles: Anti-poverty policies must bring market forces to bear; they should fund individuals rather than bureaucrats; they should expand poor people's array of choices, and they should be measured by results achieved rather than dollars spent.

While most conservatives embrace those tenets, there is lots of debate over execution. The difference between the Kemp and Gingrich approaches to education funding is instructive. Kemp wants a direct government guarantee. Gingrich urges incentives funded by the private sector. His $2-per-book "earning for learning" pilot program is to be funded from speaking fees he receives. He hopes local businesses eventually will join in the program.

In general, Gingrich believes that the only extra government dollars for poor communities should be used for police protection.

Kemp takes a more expansive view of government's role. "You can't throw out the baby with the bath water," he said. "There's no question you have to apply resources—real government dollars—to these programs."

That is the article from the Saturday Washington Post entitled "Conservatives Embrace War on Poverty." Let me say overall I think Paul Taylor in that article caught the essence of where we are trying to go, although I would suggest that I would believe in a lot more government activity than simply police protection. But I do think when we look at New York City's $27 billion city budget, and New York City's 300,000 full-time employees, that for the city government the problem is not lack of money. The problem is how do we spend the $27 billion in New York City, not how do we go out and find more money to pour into a bureaucratic welfare state that is failing.

On Saturday Paul Taylor was in Detroit at the workshop, and this is the report he wrote for the Sunday Washington Post entitled: "GOP-Backed Teleconference Stresses Community-Based Solutions."

DETROIT, May 19.—At the stroke of 10 a.m. today, the "citizen opportunities movement of the 1990's" was launched here in the Rev. Keith Butler's crowded innercity church.

And in a barbecue restaurant in rural Newnan, Ga.

And in a Hispanic neighborhood in San Diego, a community center in Orange City, Iowa, and an auditorium in Portland, Maine.

Community workshops in these five sites were strung together by satellite into a live, televised, interactive, hour-long national town meeting that married conservative ideology with modern technology and old-fashioned grass-roots organizing.

The $500,000 satellite teleconference was the brainchild of House Minority Whip Newt Gingrich (R-Ga), who explained from his perch on a stool at Strayberry's Barbecue in Newnan that the point was to demonstrate that solutions to common problems of poverty, drugs, crime, education and the environment "will not come from one big decision in Washington."

"The age of the centralized state is over," President Bush added in a brief taped speech. "We must address problems not with bureaucracies, but at the community level, one citizen at a time."

Here on the east side of Detroit, the featured community problem-solver was a guest from Milwaukee, state Rep. Polly Williams, who described how she pushed the most advanced school voucher program in the nation through the Wisconsin state legislature earlier this year.

Vouchers are a favorite approach of conservatives because they give individuals more choice and make public bureaucracies face stiffer competition. Under the Wisconsin plan, which goes into effect this fall, almost 1,000 low-income Milwaukee students will be given $2,500 apiece to cover their full tuition if they choose to attend a private nonsectarian school. For every child who exercises that option, the Milwaukee school system will lose $2,500 in state funding.

Williams, a Democrat, a former welfare mother and a state coordinator in 1984 and 1988 for Jesse Jackson's presidential campaign, said only "bureaucrats" and "white liberals" fought the change.

Among her most interested listeners here was Butler, 34, the pastor of the 5,000-member Word of Christ Christian Center and a rising political force in Detroit. Two years ago, Butler, who is black, organized a grass-roots movement that defeated casino gambling referendum favored by Mayor Coleman Young (D); last year he became the first Republican in recent history elected to the City Council.

Butler is supporting a slate of candidates for school board this year who advocate a similar voucher plan for Detroit. "There is a realization that what is going on in the schools right now just isn't working," he said.

Although today's program was funded by GOPAC, a Republican political action committee, there were no references to partisan politics. "This isn't about politics," Butler said. "It's about helping people learn how to succeed. If you do that, they'll listen to what you're talking about in other areas too."

The hour did not go flawlessly. A glitch made the satellite-fed pictures arrive on the two large television screens in Butler's church a split second ahead of the audio—so when Bush spoke or when a Georgia sheriff described how he maneuvered past local bureaucrats to build a new low-cost modular jail or when a Maine entrepreneur talked about his environmentally safe coolant for refrigerators, reading everyone's lips was no small feat.

The question-and-answer segment between cities didn't produce much in the way of soaring exchanges. "What advice would you give to citizens who want to get involved?" a Hispanic restaurateur from San Diego asked Butler midway through the program. "Roll up your sleeves and go to work," he responded.

But the workshop here grew much more animated—full of name and phone number exchanges—once the show was over, and the Detroiters spent another hour talking among themselves.

"As a race, we are not trained to become entrepreneurs, we are trained to work for other people," Terry Wynn said to the applause of the overwhlemingly black audience. "A lot of our people think we are doomed to just work for GM [General Motors] for 40 years and then die. We have to change the way we think."

Wynn, 27, who started a business that places temporary workers in law offices, asked Butler if he would use his church to teach entrepreneurial skills to the community. "We already do," Butler said. "Now all of you here tell your pastors to do that too. If you ask, they'll respond."

The exchange captured what Gingrich hopes will happen on an ongoing basis. Starting in July, his plan is for community activists to have monthly town meetings, shown on local community access cable channels across the country. GOPAC's

American Opportunities Workshop provides programming to assist them. "What we are really creating here is an American citizen's television," said Howard "Bo" Callaway, chairman of GOPAC.

Organizers to today's teleconference said it was sent by satellite to about 600 community workshop sites around the country. Several dozen cable stations also picked it up.

□ 1850

That was the article by Paul Taylor in the Sunday Washington Post.

Let me just mention a couple of things. First of all, the goal was, wherever possible, to have a workshop that performed exactly as Paul Taylor suggested it would. I got a report today from Paul Weyrich, who was out at the Detroit site. Paul Weyrich is the head of the Free Congress Foundation; has been a leading strategist in the conservative movement. He said that the hour after the television show the Detroit workshop was, if anything, more excited and more exciting than the television program.

I called in to a program that JOHN KYL was leading in Phoenix, AZ, at a high school, which also had a very resounding—at Horizon High School—had a very exciting, over 100 people, who were involved.

I talked to people by telephone after the workshop on Saturday in Florida, Fargo, ND, Texas, New York and a number of other States, such as Indiana.

The reaction we got over and over was the people were involved locally in developing new approaches and new attitudes.

I think one of the key points here is that we were encouraging people who were already active to get even more active.

For example, in Manchester, NH, the mayor of Manchester led a local workshop which was carried by the local cable access channel after they got done watching the local program. Of course, because we were on the Family Channel, we had used an 800 number to allow people to call in, an 800 number which is still available and which is designed to increase the number of people who on their own can get active and who can get copies of the videotape from the Saturday program. It was 800-872-2798.

We got about 380 phone calls by 5:00 on Saturday from people who were very interested in getting a copy of the videotape or getting involved in the program.

Now, the New York Times also covered the program on Sunday in an article entitled "GOP Conservatives Take Grass-Roots Road," by Robin Toner,"

NEWNAN, GA., May 19.—Representative Newt Gingrich's vision of the conservative future came to Sprayberry's Barbecue here today. Satellite trucks rolled up in the parking lot, Mr. Gingrich took his spot before the cameras, and a national teleconference began, grandly aimed at inaugurating a "citizens opportunity movement."

The one-hour program featured a tough, jail-building county sheriff, a black woman who fought for the right of parents to choose which schools their children could attend and a Hispanic entrepreneur, all presented as success stories of people solving problems close to home.

The program, carried by cable stations and by satellite to more than 600 sites around the country, repeated the message that Mr. Gingrich and other conservatives have been advancing in recent months. "All of us know the bureaucratic welfare state has failed," said Mr. Gingrich, a Georgia Republican, House minority whip and a leading theoretician of the right.

The future, he and others argued over the hour, depends on citizens solving problems at the grass roots, technological innovation, entrepreneurial drive and a resurgence of basic American values like hard work, education and responsibility.

While organizers of the conference sought a non-partisan, nonideological tone—former Attorney General Griffin B. Bell, a Democrat, was one of the guests—it reflected the attempt by many conservatives to redefine their movement for the 1990's.

"We can't be successful unless we find a replacement for the bureaucratic welfare state," Mr. Gingrich said after the conference. "I mean, we are trapped into being basically a cheap welfare party versus a lavish welfare party."

The solution, in the view of some conservatives, is "a new paradigm" for American politics that emphasizes a decentralized, grass-roots approach to dealing with many social needs. Mr. Gingrich spent much of today talking about the unique nature and responsibilities of American citizenship, quoting texts from de Tocqueville to the Declaration of Independence.

REPUBLICAN LEADERS ON TAPE

Today's session also included taped messages from President Bush, Vice President Dan Quayle and the Secretary of Housing and Urban Development, Jack Kemp. Mr. Quayle talked about unleashing the American spirit in "the exploration; conquest and development of space." Mr. Bush talked about the power of "a thousand points of light," the cumulative impact of individuals doing good deeds. "What you're doing this morning really matters," the President said. And Mr. Kemp talked about giving "opportunity to help people help themselves."

Democrats were watching the effort with interest. "We don't pooh-pooh the idea of progressive action by citizens to deal with problems locally," said Michael McCurry, a spokesman for the Democratic National Committee. "We think that's an idea with a lot of potential in the Democratic Party."

Today's session was principally sponsored by a political action committee, Gopac, devoted to building the Republican Party at the local level. Former Representative Howard H. (Bo) Callaway of Georgia, chairman of the committee, said today that a non-partisan organization would be established to produce and distribute future programming like today's for use by citizens groups.

The point I want to make tonight in putting into the RECORD the two articles from the Washington Post and the article from the New York Times, and in talking briefly about the actual program from Saturday, when we had the American Opportunities Workshop at Sprayberrys in Noonan, GA, and around the country, is that it is possible to develop new, positive approaches. It is possible to develop a different way of dealing with issues.

I noted that David Broder, in a column entitled "Political Sleaze Control," described what he called "my crank crusade to improve the tone and increase the substance of our political campaigns."

Now, I think that it is a very, very interesting thing that USA Today, the Washington Post, the New York Times, the Wall Street Journal, a variety of important publications, a column by Dick Williams in the Atlanta Journal, a column by Warren Brooks, which appeared nationally, a column by Don Lambro which appeared nationally and in the Washington Times, that a number of places around the country—an editorial in the Phoenix newspaper—a number of items I am going to be putting into the RECORD in the near future, again and again and again there were people in the news media interested in developing a positive idea-oriented approach.

□ 1900

We were very encouraged by some of the coverage we got. It was not everything we might have liked, but more than we would have gotten in the past, I think. Yet it was about an entirely positive program, a program which was designed without mentioning either party, without talking about a single campaign, without attacking anyone, to produce positive dialog about solutions for America's future.

Let me read from the opening to the program by Joan Scott, and I think it will give the Members of the House a sense of just how positive and just how problem-solving the American Opportunities Workshop was on Saturday, and Members can see why so many people called the 800 number, 800-872-2798, and indicated they wanted to get involved in a positive way. She said in the opening to the program, "All over America, men and women are inventing and creating and building a better future for their children, their neighbors, their families, their friends. Together, Americans are once again bringing human freedom to bear to create an even greater chance for human happiness. We decided in our Constitution that we, the people, have real power. All over the world, people are now pursuing that same freedom. During the next hour you will have a chance to join with others across America to celebrate the success stories that are the essence of the American dream."

Now, that was the positive tone with which we set out to suggest that there is an America that works, there is an America that is solving problems.

We outlined a model for change. We suggested, frankly, in about 60 seconds' time that the bureaucratic welfare state has failed so badly, that the failures of the bureaucratic welfare state are so obvious, rather than procurement in the Pentagon or trying to run Washington, DC or New York City, we do not have to spend a long time about talking about what does not work in America, and we also suggested permissive attitudes have clearly failed. That is not the way to solve America's problems. That promoting Johnny when he cannot do the work does not help Johnny. That allowing young people to get out of jail early when they have given no evidence of change in their behavior simply encourages more of the criminal activities that put them in jail in the first place. That not being honest about the risk of multiple partner sex was a significant factor in the rapid spread of AIDS. That not being honest about the dangers of so-called recreational drugs was a significant factor in the initial spread of heroin, cocaine, and crack.

People know that things in the bureaucratic welfare state and permissive attitudes do not work. What people are hungry for is explanations of what will work. We, early in the program, talked about the triangle of American success, the concept that literally there is a triangle that explains most of what has worked in American life. That the bottom of that triangle is basic American values, that the one side of the triangle is entrepreneurial free enterprise, and the other side of that triangle is technological process and innovation. Then we turned to Maine, where Gov. Lamar Alexander, the former Governor of Tennessee, and the current Governor of Maine, Jock McKernan, introduced Doug Sukeforth. Doug Sukeforth is an entrepreneur and inventor, a man who has developed a new technology that will eliminate the chlorofluorocarbons which are a problem in the ozone layer, and which are a major factor in refrigeration technology. Doug Sukeforth, starting in his garage as an inventor, developed a new approach to refrigeration, which may not only make him a lot of money but may, in fact, lead America to having a dramatically better future in terms of saving the ozone layer.

Therefore, it combines the best technological innovation and progress with the best entrepreneurial free enterprise. The result was a positive attitude toward both small business, technology, and the environment.

Then we talked briefly with what was possible in the exploration of space. I mentioned in the book that Mary Anne and I had written a book called "Windows of Opportunity," and the fact that I had a long chapter on space and the opportunities clearly for creating jobs by going into space. Then Vice President DAN QUAYLE discussed the kind of breakthroughs that we are seeing in space, the development of new private enterprise launchers that are going to allow the United States to launch satellites for much less money. The development of new approaches to commercial activities in space, and Vice President QUAYLE suggested that much of mankind's future and America's future lies in the area of the exploration of space.

Then we emphasized the importance of entrepreneurial free enterprise. The particular workshop that I was at, Sprayberry's Barbecue in Noonan, GA, was a pefect place to talk about entrepreneurial free enterprise, because Sprayberry's was founded in 1926 by the Sprayberry family. They are still earning a living. The third generation is working as Sprayberry's Barbecue and the grandchildren representing the fourth were running around. They sell barbecue, they are relatively famous though just a small family barbecue restaurant, but viewers could see the difference. In 1926 the road out front was a dirt road. Now it is paved. In 1926 they had no access to electricity, so they had to buy a generator to create electricity on the site. In 1926 we still had ice being used in many places for refrigeration, and there was no air conditioning. There was no microwave oven. There was no color television or black and white television. In fact, in 1926, commercial radio was just beginning, and the first radio station in Georgia had not yet opened up commercially.

So Members can see how much the world has changed. Entrepreneurial free enterprise created jobs, gave families the income they used to pay their taxes, they used to contribute to their churches or synagogues, they used to be involved in local good deeds, whether through a Kiwanis or Rotary or Lions or Business and Professional Women's Club, or to the Boy Scouts or Girl Scouts. We tried to suggest that reestablishing the importance of entrepreneurial free enterprise was a very important part of the triangle of American success. That it was encouraging people to go out and create businesses, to create jobs, to create wealth, that it was a very real part of what had made America work.

At that point we went to San Diego where the gentleman from California [Mr. HUNTER] introduced Luis Garcia. Luis Garcia was a man who created jobs in the Logan Barrio back in San Diego back in the 1970's. Some bureaucrats decided to build a freeway through the middle of the neighborhood, and for a while things were bad, but people like Luis Garcia and his father who founded Chuey's Restaurant in San Diego, are showing that entrepreneurial free enterprise can work even in the toughest condition. Luis Garcia began literally by painting flagpoles. That was his job. Today he has expanded and expanded, and today he has a business which directly employs over 80 people and which has over 150 people working as subcontractors. The point that Luis Garcia made on the program, talking from San Diego, was that every time we can take a person off of welfare and get them engaged in honest hard work so that the check they take home is a check they have earned, not a check that has been given to them, we improve the human condition. We improve the opportunities for them to be a model of the right kind of behavior, the right kind of basic American values.

So entrepreneurial free enterprise is important both because it creates the wealth which is the base of all taxes, and the base of all civilization, and also because it creates the personal pride, the personal sense of moral strength, which has to be at the core of basic American values and at the core of a free society.

Then we went to listen to Jack Kemp, the Secretary of Housing and Urban Development. Jack Kemp made the point that everywhere he travels across America, in Dallas, in East St. Louis, in Detroit, in Pittsburgh, in Washington, DC, he finds people who are currently economically poor but who are spiritually rich, who want to have an opportunity to manage their own public housing projects, who want to have an opportunity to develop a better future, and that his work in tenant management, his work in providing new and better ways of doing things, is a step toward creating that triangle of American success, and toward replacing the bureaucratic welfare state with a new paradigm, as Jim Pickerton described it, with a new approach that strengthens basic American values.

At this point, that is what we turned to, talking about the key concept that underlying entrepreneurial free enterprise and underlying technological progress and innovation, the baseline of the triangle of American success are basic American values. Learning, honest hard work, honoring honesty, punishing crime, rewarding effort, encouraging savings, building for the future, all of the kinds of core values which Benjamin Franklin, Thomas Jefferson, George Washington would have understood.

□ 1910

These are values which permissive attitudes have undermined for a generation, but these are values that go to the core of what America has to do if we are ever to succeed.

Let me apply that for 1 second to education. People keep trying to find out how we can improve education, but yet I would stipulate that the core

problem in education is in money, it is the structure of the bureaucratic welfare state, and it is the fact that we now have the wrong values in our classrooms. When young people do not do homework, when 19 percent of the students at a prestige private college in the Midwest plagiarize in their papers, according to the New York Times, when folks cheat to get a grade, then the core of education has to be crippled, because education is essentially a moral enterprise. Education has to occur inside you; it has to be a part of your own growth, and your own willingness to learn, to study, to work hard, and when you are not willing to do that, I do not care how much money you spend in the building, what is going on inside the child or inside the student, whether it is a child or an adult, is not going to be right.

So we turned at that point to Detroit, MI, where we had what I thought was a real opportunity to study values with three remarkable people—Paul Weyrich, the chairman of the Free Congress Foundation, one of the leading thinkers in America for the conservative movement and a man who has truly thought long and hard about the values revolution from the left which gave us permissive attitudes, and who is himself now engaged in the values counterrevolution from the center and the right that is reestablishing basic American values. And there in Detroit with Paul was Keith Butler. It was in Keith Butler's church that the workshop was taking place. Keith Butler is a man who first went to a training program with Paul Weyrich some 4 years ago, learning how to be a citizen activist, and today he is what Paul Weyrich calls maybe the best example of citizens' grassroots activism in the country.

And then there was Polly Williams, a mother of four children, a woman who, herself, had been on welfare and is now Democratic State legislator in Milwaukee, just as Keith Butler is a Republican city councilman in Detroit. And then Polly talked about her experience buying a home in a middle class neighborhood, where she wanted to send her children to the local school, which was supposed to be a good school, and seeing her children treated not as individuals, not as human beings, but as numbers, seeing her children told that they were going to be bused out of their neighborhood past a good local school to a school that may or may not have been as good but was a lot further away; and the children did not matter as human beings, they mattered as statistics.

Polly Williams got so angry that she introduced a bill to provide a voucher so that local parents would have an opportunity to choose. She recognized that she lived in a community where they had a local private school, an all-black, school, 98 percent of whose children go on to college. So they had people who were proving that its not what color you were, it is what quality of education you were getting that mattered. And she was determined to give every poor family in Milwaukee an opportunity to have choice, an opportunity to have some control over their lives. It was a remarkable experience.

The addition, we looked at the National Review special supplement, a serious of articles which had had a major impact on the people who have read them so far, a special supplement committed to citizen activism and a supplement which I hope to read into the CONGRESSIONAL RECORD in the coming weeks, because I think the National Review really established a new baseline, and that, frankly, was one of the reasons we gave out the 800 number—1-800-872-2798, to be able to have people call in. In addition to getting a copy of the videotape of the program, they were also able to get copies of the special supplement.

Then we went to Orange City, IA, where Congressman FRED GRANDY hosted a number of fascinating people. We had hoped to have Chuck Schantag there. Chuck is a Vietnam veteran who created a remarkable private system called Buddy Search, which is a computerized system. He decided he wanted to find somebody who was with him in Vietnam, so he got involved in setting up a program of tracking down Vietnam veterans. He has 60,000 Vietnam veterans now on his Buddy Search system on a private computer. Chuck could not be here because the weather in the Midwest was so bad that he was trapped in his hometown and could not get to Orange City, IA.

But we did have Tony Diamond. Tony Diamond has been very, very involved in developing a nationwide program in which Vietnam veterans are putting on programs as public access television. Tony reports that over 70 public access cable systems now carry his weekly veterans' program, which is a program that I would recommend to everyone to be involved in. Bravo, which is the organization Tony put together, has had a real impact on bringing veterans together. We had a very emotional moment when they showed some film entitled "Buddy Search, Buddy Found," showing two Vietnam veterans who had not seen each other for years and who encountered each other at a meeting. And it was captured on videotape and it was an example of what President Bush means by "a thousand points of light." Here were private citizens having a private impact.

We also had Tom Burch, the chairman of the National Vietnam Veterans Coalition, who introduced us to Chuck and Tony and who was there in Orange City.

Then FRED GRANDY introduced the Orange City 21 Foundation. Here was a marvelous example of a small town which has on its own developed a very active, very aggressive program which has reached out through a private foundation, a nonprofit foundation. It works on better housing, and better schooling, and it works on helping senior citizens who are over 80 years of age. The Orange City 21 Foundation is exactly the right kind of local citizen activism, and it is precisely why we were doing the American Opportunities Workshop.

I think Orange City has a lot to show many places around America, and in a way, New York, Washington, DC, and Detroit would be far better cities if they thought of themselves as thousands of small Orange Cities gathered together. You cannot run, in my judgment, a successful big city; you can run a city which is a collection of small local neighborhoods. One of the failures of the last 30 years has been the way the bureaucratic welfare state, whether it is in New York or in Baltimore or Atlanta, has broken down the fabric of the small neighborhood community and has replaced it with an impersonal, inefficient, ineffective, and largely destructive bureaucratic welfare state which is more and more expensive but less and less helpful to human beings.

Then we went back to Detroit, where Paul Weyrich talked about the background of all this. Actually, as I look at my notes, Paul said, and I quote:

> For more than 15 years the Free Congress Foundation has offered training for citizen activists. There are now literally tens of thousands of activists who have participated in our training programs but none that we are more proud of than the man standing next to me, Keith Butler. In 1984, Keith and a group of his supporters got in a car and drove all night to participate in a training program we were sponsoring in Chicago. The next year a group of us came to this very church to offer training to many of the people here in this room today. I don't think we can take all the credit, but I do know that since then this group has become one of the most successful citizen activist movements in the entire country.

I was a little wrong in my earlier comment. It was 6 years ago that Keith Butler first drove to Chicago. And again, let us notice this concept. Keith Butler and his church members did not have a lot of money. I happen to have been a part of that training program at that time in Chicago, and I remember meeting Keith. They did not have enough money to spend the night, so they got up in Detroit and they left; they had two carloads, they drove all night, they came to the workshop, they worked all day in the workshop, and then they drove back home all night because they could not afford to stay.

That was done deliberately to be able to reach out to the future Keith Butlers. It was the people who want to learn how to have that kind of a workshop and that kind of a grassroots activism that led us to put the 800 number out, to make it easily available to no cost to people who wanted to learn more. That is why we put on the screen the number, 800-872-2798, so people could be involved and could get a copy of the National Review special supplement and have an opportunity to get a copy of the videotape.

As we talked more about citizen activism, we then turned to Perry Grogan. Perry Grogan is the sheriff of Paulding County. When he took office, the county was about to build a jail that was too expensive and too small. As former Attorney General Griffin Bell said:

I'm just very excited about what I am seeing, and I think it's about time we say more about the good things that are happening in America. You know, my area has always been the law, and people today are pretty frustrated about what has been happening, criminals getting out of jail early or not being punished at all. Obviously we need a little bit more common sense in the courts and on how we run our jails. One fellow who has been doing that is a friend of mine and Newt's named Perry Grogan, who is the sheriff of Paulding County, right next door to where you all are meeting today.

Common sense was the focus of the Perry Grogan story. Perry decided they ought to build a jail big enough to meet the county's needs out over the next decade, so instead of building a 100-bed jail, they would build a 200-bed jail. He then decided that instead of using a construction company that was not an expert, they would hire a construction firm from Mobile, AL that did nothing but build jails and was a specialist in building modular prisons. They built the prison to Federal standards so if they had any free space, they would be able to rent it to the Federal Government to house Federal prisoners.

□ 1920

Mr. Speaker, what they discovered was that they could actually lower the cost of the prison from $8 million to about $4.3 million while doubling the number of beds. That meant they had lowered the average cost per cell from $80,000 to $24,000, and I mention that because I think all too often we in Washington decide that effectiveness is a function of how much money is spent.

Well, Mr. Speaker, we are arguing in our approach to the new paradigm, as Jim Pinkerton of President Bush's staff of the White House has said; what we are arguing is that we believe that it is possible, by applying new approaches, by using entrepreneurial free enterprise, by being involved directly with technological progress and innovation, by insisting on basic American values, including honest hard work, we believe that it is possible, very often, to do more for less.

Mr. Speaker, this is not just an argument for cheapness. Anybody who goes to Paulding County, GA, and interviews Sheriff Perry Grogan and goes out and sees the modern, sophisticated, technologically advanced jail, the electronically controlled jail, which is of such a high standard that the Federal Government keeps their prisoners there and pays Sheriff Grogan so that the people of Paulding County currently have a profit center in this jail; they are actually making more out of renting it to the Federal Government than it is costing them. The net result of that has to convince my colleagues that, by applying common sense focused on success and opportunities that it is possible to do more for less.

Now I think that is a very important consideration, that it is possible to do more for less; not just to do less for less, not just to be successfully cheap, not just to avoid paying for things, but that, in fact, by applying a new paradigm and by applying new ideas it is literally possible to improve the quality of government, to improve the goods and services, to have better education, more effective jails, safer streets, better health care, more access to health care, et cetera, by applying the new paradigm that Jim Pinkerton described in his speech by that name, to apply the new ideas that the National Review special supplement outlines and to apply the concepts that were available on Saturday morning in the American Opportunities Workshop and which are made available to the people who are calling 800-872-2798, which was deliberately chosen because we wanted to really say—notice that we are not saying Republicans, we are not saying Democrats, we are not saying liberals, we are not saying conservatives. Mr. Speaker, we are saying to anybody who is interested in pursuing new ideas and developing the new paradigm that is designed to replace the bureaucratic welfare state in reestablishing basic American values so that they are more effective and more powerful than the permissive attitudes which would cripple America, we believe we are on the verge of starting a new movement.

Now I think one of the tests to us this summer is going to be very simple. Can we find new ideas to take into the budget summit? Can we find new approaches which can be useful and usable in trying to solve the Nation's budget problem? Is it possible to develop new techniques that will allow us to encourage young people to read?

I happen to be pursuing what we are calling "earning by learning" in Georgia, paying $2 a book to third graders who are marginal readers to encourage them to read this summer so that they can actually earn the money to buy a bicycle, or to buy blue jeans, or to go to Six Flags, or whatever they want to do with their money. However, in addition to that, we are trying to develop a new approach that encourages a wide range.

A colleague of mine, a Democrat, approached me today and said that he was intrigued with this idea of encouraging the people to spend the summer reading, and he is thinking of issuing a certificate which will be given to anybody who reads six or more books this summer. I think that is exactly the right approach. I think that by recruiting people to be activists, we can, in fact, develop what President Bush called the thousand points of light, not just as a gimmick, but as a reestablishment of what Alexis de Tocqueville talked about in his famous study, "Democracy in America."

Mr. Speaker, when de Tocqueville visited America in the 1830s, he was trying to explore what made America different, what made America unique. Why did America work in a way that European countries had not? And what he concluded was that the American experiment was based on the idea that there was a citizen, and there was a state, but there was also an enormously rich zone in between, the zone of citizen activism, that Americans were more than just taxpayers and voters. Americans were joiners. When they looked out and saw a problem, they sought an opportunity to solve that problem. When they found a solution, they gathered their friends together, and they began to work on the solution, that it was possible for Americans, more than any other people in the world, to belong to many different clubs, many different societies, many different activist, problem solving groups, and that most of the creativity of America was to be found, not in its Congress or its White House, not in its bureaucracy, but that it would be found in local communities doing local things.

One of the reasons that we encouraged people on Saturday to be involved and to get involved, though we encourage them to call 800-872-2798, was to say to them that we really believe that citizens of any background, black, Americans from African descent, white Americans of European descent, yellow Americans of Asian descent, red Americans of American descent, native born Americans, of all backgrounds, that together collectively we can find solutions that work in our communities, in our neighborhoods, talking with people, and that one of the goals has to be to reach out, to start a new idea, to find a new solution, to begin a new program.

Mr. Speaker, we warn people:

When you do that, you may, in fact, discover that you fall on your face. Maybe

your first idea isn't the smartest thing in the world. When you go back and look at the Founding Fathers, at the Benjamin Franklins, at the Thomas Jeffersons, when you look at the Wright Brothers investing the airplane, a Thomas Edison inventing the electric light, you find that again and again that perseverance is one of the keys.

As my colleagues know, Edison once said that genius was 1 percent inspiration and 99 percent perspiration. I think what that means is that hard work, persistence, being willing to try and try again are not just homilies that our grandmothers told us. They are truths about the nature of life.

If we could find a way to break New York City down from one centralized bureaucratic welfare state focused on Gracie Mansion, and instead think of New York City, about 7½ million people, of communities of no more than 10,000, so there were 750 neighborhoods in New York making up a city of 7½ million, those neighborhoods are manageable, not just with the kind of phony decentralization that has one more layer of red tape, one more layer of pathetically small power, the things that have been done with the New York City schools which have been a total disaster.

Mr. Speaker, as my colleagues know, Americans are smart. Americans know if they have real choice and real power, and, when they have real choice and real power, they use it. What we are suggesting is, if there were to be 750 neighborhoods that could raise taxes and lower them, that could set local regulations, that could license local businesses, that could in many ways patrol local communities, that we would have a much larger dramatic decline in crime, a dramatically lower drug use. We would have a neighborhood which had people who cared about their children, who cared about whether or not their kids had good schools, and we would have people who insisted that they got pretty good service, or they would not pay for their government, who would be willing to fire the local government if it did not work.

As it is today, no one, not Mayor Dinkins, not the city council, not the heads of the local government employees unions, but no one really knows how New York City works, and, as a result, it does not work very well. It is simply too big, too bureaucratic and too cumbersome.

However, Mr. Speaker, I would say the same thing is true in the Pentagon. The current Pentagon is the last stage of McNamara's legacy. It is the last stage of the centralized bureaucratic welfare state unable to do its job, and, as we look at a change in defense spending, one of the places we should most insist on is fundamental, dramatic overhaul in the procurement system and in the administrative red tape. We should shrink the parts of the Pentagon that are pure bureaucracy and emphasize the parts of the Defense Department that represent real fighting power and a real opportunity to train, and organize and mobilize our fighting men and women.

So, on Satuday we hope that we really took a step toward launching a citizens opportunities movement. We believe the American Opportunities Workshops were a success. I look forward in the next few weeks to reporting to my colleagues on various results around the country as they are reported to us, and I look forward to an opportunity to share new ideas, new solutions and new approaches as they emerge as part of the citizens' opportunity movement, and, as we develop the new paradigm, that I honestly believe will replace our bureaucratic welfare state with a triangle of American success, and it will replace permissive attitudes with a return to basic American values.

□ 1930

## "M" AND "MERGED SURPLUS" ACCOUNTS OF DEFENSE DEPARTMENT—FOUR CASES OF DOCUMENTED ABUSE BY ANDY IRELAND

Mr. SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida [Mr. IRELAND] is recognized for 60 minutes.

Mr. IRELAND. Mr. Speaker, I rise to present my second report on the "M" and "Merged surplus" accounts of the Department of Defense [DOD].

This report focuses on four documented cases of abuse involving money drawn from the "M" and "merged surplus" accounts but also includes a detailed discussion of how the balances in these two accounts could be used to circumvent the Antideficiency Act and Gramm-Rudman-Hollings legislation.

Mr. Speaker, the four case studies outlined in today's report are a good sample of the issues surrounding use of the "M" and "merged surplus" accounts by the military services. They are a crosscut slice of the problem.

These four cases document the misuse of government money—a very serious offense indeed.

Mr. Speaker, I can't claim to be revealing important new information here. I wish it were so, but that's just not the case. Not at all. Congress has known about these abuses for quite some time. These very same facts were presented to Congress in formal reports issued between 1986 and 1989. And what was the upshot of all this fine audit and investigative work? Essentially nothing—except a few more congressional reporting requirements.

Well, in my mind, that is not enough. I want Congress to do something about the problem. Congress has a responsibility to act on this kind of information. We should take decisive action designed to stop it for good. We simply cannot allow it to continue unabated.

In keeping with my views on the need for action, I intend to lay some solutions on the table in the near future. That legislative proposal, I hope, will get at the root cause of the problem.

My proposal on how to fix DOD's "M" and "merged surplus" accounts will be the subject of my third report.

### COMMON THREADS

Mr. Speaker, there is one common thread that runs through the four documented cases of abuse cited in this report. There is patent disrespect for contracts and the laws that govern them. There is a concerted effort to thwart the will of Congress, and the "M" and "merged surplus" accounts provide the perfect vehicle for doing it. They are subject to almost no scrutiny either within DOD or by Congress.

Mr. Speaker, this is not ANDY IRELAND's conclusion. This is the considered opinion of the General Accounting Office [GAO], which over time has been super cautious in rendering such judgments, and the very thorough and competent surveys and investigations staff of the House Appropriations Committee.

The military services are making obligations and expenditures, using money drawn from the "M" and "merged surplus" accounts, that do not conform with underlying contractual agreements. They lack legal foundation.

The failure to stay within the confines of contracts happens in two ways. Both are violations of internal DOD regulations and Federal law.

First, these moneys are being used to make upward adjustments to pay for work that does not lie within the scope of the original contract. They are also being used to reduce the amount of work already paid for.

Work that changes the scope of the original contract must be paid for with current appropriations, if authorized. Otherwise, a request for new appropriations must be made. While contracts contain very specific statements of work, military officials treat scope of work very loosely—like a piece of putty, which essentially places no limits on what can be done with "M" account money.

This kind of abuse makes a bad joke out of DOD contracting procedures.

One example helps to underscore the attitude of some military officials toward scope of work limitations.

In a 1985 incident, the Army increased a contract for repair work, which specifically cited the number of trucks to be repaired, by doubling the number of trucks to be repaired. Army officials argued that this did not constitute a change in scope since the type of repair work was unchanged. I think that says it all. Scope of work is no hinderance to the flow of funds from the "M" accounts.

Second, disbursements from the "M" accounts are not properly matched with recorded obligations supported by documentary evidence. Obligation of U.S. tax dollars must be supported by a legal contract executed while the appropriations involved are still available—before they expire and begin their journey into the "M" and "merged surplus" accounts. The inability to match obligations with contracts is due, part, to a failure to maintain line item accounting and fiscal year identity of money in the "M" account. This leads to duplicate and

erroneous payments of old bills for which proper documentation does not exist.

The case of the B-1B bomber and the Mississippi ammunition plant clearly shows how funds from the "M" accounts were used to make additions, deletions, reductions, and changes in the scope of work. In the cases involving the Army and Air Force stock fund, money was drawn from the "M" account and obligated without being properly linked to specific contracts.

LACK OF CONTROL AND OVERSIGHT

With the balances in the "M" and "merged surplus" accounts increasing by $4.5 billion a year, the risk of abuse is clearly present.

For starters, no one really knows what is in the "M" accounts. How can that be? Is this another black hole in the DOD budget?

The "M" accounts now hold balances of close to $20 billion—up from $184 million in 1973. There is a general consensus that the vast majority of these obligations are invalid because of lax review procedures. I hear said that the military money managers are just too busy working current appropriations to concern themselves with validating these old, expired accounts. They say it would be impossible to thoroughly audit the "M" accounts. If they do not know precisely how much had been obligated against outstanding appropriations, how in the world can they determine how much is needed in the budget?

The cases discussed in this my second report clearly shows that management of these two accounts is weak. Internal controls and procedures are either nonexistent or simply not followed.

While the military services have established procedures for reporting on the use of these funds—primarily dollar thresholds that kick in reporting requirements, a tremendous number of obligations are made without ever being reported to or approved by higher authority. Most are relatively small, and most are reported after the fact.

Mr. Speaker, big cash balances plus weak controls coupled with almost no information spell trouble in my mind.

CASE NO. 1

Finding: Illegal use of funds.

ARMY AND AIR FORCE STOCK FUND

In 1982, DOD requested $194.6 millon to finance a change in accounting procedures governing the Army and Air Force stock funds. The proposed change allowed obligations for stock fund purchases to be recorded when orders were placed rather than at delivery. Congress approved the change in policy but denied the request for money, directing the changes be accomplished within available resources by the end of fiscal year 1984.

The Army and Air Force had the new procedures in place in October 1983 and April 1984, respectively, but chose to carry out the congressional guidance in a very creative but very illegal way. They decided to finance the unfilled orders in question by applying the new procedure retroactively and reconnecting them to expired appropriations.

To do this, obligations for unfilled orders—orders still in the pipeline—had to be switched and connected to appropriations available when the orders were originally placed. The bulk of the unfilled orders originated in fiscal years 1982-83—expired appropriations. There was a problem, however. There were insufficient unobligated fiscal years 1982-83 appropriations to cover the full cost of all pipeline orders. So the Army and Air Force decided to extend the retroactive policy change even further—to fiscal year 1981 and earlier. This allowed them to tap the vast reservoir of unobligated money in the "merged surplus" account.

While it is perfectly proper to make retroactive adjustments to correct accounting errors, changes must be accurately recorded and documented. Each specific order and resulting obligation should have been identified and connected. However, this was not done. Instead, the Army and Air Force used a statistical samplying technique to calculate the adjustments. This approch lacked legal foundation, since the specific underlying transactions were not identified and did not support the calculated totals.

Using these illegal accounting techniques, the Army and Air Force eventually obligated $625 million from the "merged surplus" account to pay for the stock fund accounting policy change. This is $430 million more than originally requested by DOD but denied by Congress.

After reviewing all the facts in the case, GAO concluded that the obligation adjustments were illegal. They did not comply with the "Documentary Evidence Requirement for Government Obligations" specified in section 1501 of title 31, United States Code. GAO also concluded that the methods used by DOD to inform the Congress were not adequate and the information provided was insufficient.

Source: "Financial Management: Defense Accounting Adjustments for Stock Fund Obligations Are Illegal." GAO/AFMD-87-1, March 1987.

CASE NO. 2

Finding: Illegal use of funds.

AIR FORCE STOCK FUND

The Air Force stock fund sustained a $490 million loss between fiscal years 1980 and 1988, because aircraft fuel sales were not accurately recorded in the aviation fuels accounting management system.

In order to partially recoup the $490 million loss, the Air Force decided to withdraw $238 million from the "M" account. This decision was based on a claim that certain, specific obligations to the stock fund, which had been improperly recorded in previous years, had been identified. GAO said this action would have been perfectly legal, had those obligations been supported by documentary evidence required for all government contracts as specified in section 1501 of title 31, United States Code. Unfortunately, they were not.

The Air Force never identified the specific underlying transactions giving rise to the obligations in question.

The Air force once again failed to link previously unrecorded prior year obligations to actual sales records. Instead, the Air Force Finance Center relied on trial balances contained in the stock fund accounting system to establish the existence of accounts receivable. It was not possible to trace the accounts receivable recorded in the stock fund accounting system to original transactions, because the Air Force destroys source documents after 1 year. Is this legal?

The GAO concluded that these were not valid obligations and that the $238 million should be returned to the "M" account and the losses written off. Congress agreed with the GAO's assessment and directed that this be done in fiscal year 1990 appropriations bill.

In reaching this conclusion, the GAO underscored the need for strict compliance with the documentary requirements specified in section 1501. This provision, the GAO said, was enacted in 1955 because Congress thought that some agencies were overstating obligations "when, in fact, no real obligation existed." Is the Air Force guilty of such conduct in 1989?

The GAO issued a stern warning about the Air Force's failure to comply with section 1501.

"We are concerned," the GAO said, "if the Air Force is allowed in doubtful circumstances to restore previously unobligated amounts from the "merged surplus" and "M" accounts for payment to the stock fund (to fund new acquisitions), such action could undermine congressional control over the budgetary process and fiscal affairs."

Source: "Restoration of Funds to the Air Force Stock Fund Pursuant to 31 U.S.C. Section 1552(a)(2) To Recover Claimed Fuel Sales Losses." GAO/B-236940, October 17, 1989 (letter to Congressman MURTHA).

CASE NO. 3

Finding: Very questionable use of funds.

AIR FORCE B-1B BOMBER PROGRAM

When the Air Force encountered serious technical problems developing of the ALQ-161A—the defensive avionics system for the B-1B bomber, it initiated negotiations with the contractor aimed at "restructuring contract requirements" to "correct identified deficiencies." At the time, the Air Force claimed to be "holding the contractor's feet to the fire" and was determined to make the ALQ-161A meet contract specifications. A plan was finalized in January 1988.

Subsequent testing of the ALQ-161A in March-June 1988 revealed more "major design deficiencies." These indicated that the system would never meet contract specifications.

As a result of the new problems, further negotiations were held, resulting in still another recovery program.

The restructuring process was carried out in accordance with the "changes" clause and "correction of deficiencies" provisions in each contract. The "changes" clause authorizes the contracting officer—usually a low ranking military officer or civilian—to make changes "within the general scope fo the contracts." Although a contract's statement of work is specific and detailed, military officials suggest that determining what is within or beyond

scope of the original contract is a subjective task.

The "cardinal change" rule, established in court, is the means for judging what is within scope. It says:

The basic standard is whether the modified job was essentially the same work as the parties bargained for when the contract was awarded.

The contracting officer and general counsel concluded that the proposed modifications to the ALQ-161A were within the scope of the original contracts and therefore rightly charged to the original appropriations. On the basis of that determination, the Secretary of the Air Force approved a plan to use in excess of $1 billion of expired and "M" account funds to finance the contract modifications. While the GAO, after evaluating all the facts, concurred in those plans, they acknowledge that these were highly controversial decisions to say the least.

The central issue in this case revolves around the scope of work clause. Were the negotiated changes within the scope of the original contracts, or did they lie outside the scope? If the answer is yes, then the use of moneys from the "M" account to finance the changes was illegal.

An examination of the changes to the contracts raises serious questions in my mind as to whether they do indeed lie within the scope of the original contract.

What did the changes do? In a nutshell, they lowered the specified performance capabilities of the ALQ-161A and increased the cost. The original contracts contain very specific performance specifications. These were changed. They were lowered. The scope was reduced. Using the "cardinal change" rule adopted by the courts, the modified job was not the same one "the parties bargained for when the contract was awarded." It was, in fact, less than bargained for, and we paid more for it.

This is a continuing dilemma. If there is no change and if the work is within scope, then how do you account for the need for more money—except for correction of deficiencies to meet contract specifications.

There are other problems as well.

First, the B-1B had dumped just $527.1 million into the merged surplus account as of September 30, 1988, but plans called for drawing out $1 billion to execute the restructured contracts. The B-1B program would use about $500 million more in expired money than the program had contributed. To me, this sounds like an overobligation. It sounds like the Air Force was planning to spend more on the B-1B than Congress had appropriated for the B-1B. Though technically not a violation of the Antideficiency Act—section 1341 of title 31, United States Code—if constitutional limitations are ignored, since there was $2.4 billion in the "merged surplus" aircraft procurement account, the Air Force was clearly planning to spend more on the B-1B than Congress had authorized and appropriated.

Second, the Air Force was planning to overobligate B-1B appropriations by $500 million without telling Congress. At the time, there was no requirement to do so. Even within Air Force financial circles, it was kept very quiet. When newspaper reporters blew the cover on the whole operation, the Air Force notified Congress. These revelations nonetheless generated a lot of criticism in Congress. This, in turn, produced legislative limitations—new reporting requirements and specific restrictions on the use of lapsed appropriations for the ALQ-161A.

Source: "Strategic Bombers: B-1B Program's Use of Expired Appropriations." GAO/NSIAD-89-209, September 1989.

CASE NO. 4

Finding: Illegal use of funds.

MISSISSIPPI ARMY AMMUNITION PLANT

In January 1979, the estimated cost to complete the Mississippi Army ammunition plant [MSAAP] was $417 million. The plant was to be ready by December 1983. However, by December 1985, its cost had increased by $125 million, the project was far behind schedule, and many technical problems remained unresolved. And this was just the beginning.

To cover the cost overrun in the MSAAP contract, the Army authorized the use of $12 million from the surplus fund. Obligations of the $12 million were made in varying dollar amounts—some over $100,000 and some in lesser amounts. Not one was reported through appropriate Army financial channels.

The Army prepared a detailed plan, documentating how the $12 million would be used. This document was used to justify the request to draw $12 million from the surplus fund. It was transmitted up through the Army chain of command for a approval. Subsequently, when the Army began disbursing the $12 million, the items for which those funds were actually used differed from the approved plan in over half the cases. Several items were specifically identified "as additions or changes to the contractor's scope of work."

While Army officials openly acknowledged that the surplus fund was not to be used to change the original scope of work, their interpretation of scope of work for MSAAP allowed complete flexibility.

While such determinations are subject to policy and legal review, interpretations were found to vary widely. Some Army officials revealed that these interpretations were greatly influenced by the "looseness or latitude" in the wording of the original contract. This approach does not square with the way contracts are written. A contract's statement of work should be and usually is very precise.

Under the Army's flexible interpretation of scope of work, the Army could do whatever was deemed necessary to build a plant capable of producing a specified number of ammunition rounds per month. In the Army's mind, the original contract allowed complete flexibility as to how to achieve that goal. It allowed the technical staff to modify plant layout and/or quantities and types of machinery and equipment—all without changing the scope of work. One Army lawyer agreed that this interpretation meant that there was no limit on how much money could be drawn from the surplus fund to make the MSAAP meet established production levels.

The House Appropriations Committee's S&I staff found the Army's attitude toward scope of work was found to be "particularly troublesome." A lack of discipline was apparent.

Source: "A Report to House Appropriations Committee: DOD Portion of the Memorandum Surplus Fund and Related M Accounts." Surveys and investigations [S&I] staff, April 1986.

LOOPHOLE IN GRAMM-RUDMAN-HOLLINGS

The surveys and investigations [S&I] staff of the House Appropriations Committee has suggested that the unobligated balances in the surplus fund could be a potential loophole in the Gramm-Rudman-Hollings legislation.

In determining how much DOD spending authority needs to be sequestered to achieve Gramm-Rudman-Hollings outlay reduction targets, the S&I report states, the Congressional Budget Office [CBO] "give no explicit consideration to possible increases in the rate of obligations derived from the surplus fund." The S&I report concludes that those increases could "totally offset the anticipated outlay reduction—and it would not be known until after the fact."

Outlays from the "M" accounts are not insubstantial. In fiscal year 1987 they were $2.4 billion; fiscal year 1988—$3.7 billion; and fiscal year 1989—$3.9 billion.

The S&I report was prepared in 1986 and could be out of date. New procedures may be in place.

I have therefore asked the GAO to look into the matter—to determine to what extent the "M" and "merged surplus" accounts could undermine or negate the effects of the Gramm-Rudman-Hollings legislation.

CIRCUMVENTION OF ANTIDEFICIENCY ACT

Several months ago, I asked the American Law Division of the Congressional Research Service [CRS] to determine whether the balances in the "M" and "merged surplus" accounts were susceptible to Antideficiency Act violations.

I posed the question because both the DOD Inspector General and the GAO have reported on different occasions that the "M" and "merged surplus" accounts could be used as vehicles for circumventing the Antideficiency Act—section 1341 of title 31, United States Code.

Naturally, this provision of law is a matter of great concern to Government officials who handle money and contracts. Those who knowlingly and willfully violate it can receive a $5,000 fine and prison sentence of up to 2 years or both. Having unrestricted access to a $50 billion financial cushion obviously provides them with a certain measure of security.

The Antideficiency Act prohibits an employee of the U.S. Government from making or authorizing an expenditure or obligation exceeding an amount available in an appropriation or fund for an expenditure or obligation. It links obligations to their original appropriations. It ties an expenditure or obligation to an amount available in the appropriation for which the expenditure or obligation is made.

"M" and "merged surplus" accounts help to decouple—to breakdown—the linkage between appropriations and obligations.

Under the law, an "M" account balance is available to pay any obligation attributable to any of the appropriations from which it is derived. Consequently, payments from an "M" account do not need to be related to specific balances of appropriations transferred to it. When appropriations expire and lapse into the merged accounts, they lose their line item and fiscal year identity. Many different accounts

are lumped together under one general purpose category for each agency, like "Operation and Maintenance, Navy" or "Aircraft Procurement, Air Force."

According to the CRS report, an unpublished opinion issued by the GAO general counsel in 1974 arrived at the following conclusion: Once an appropriation balance reaches an "M" account, as a practical matter, it no longer is suspectible to violations of the Antideficiency Act, provided that the total of all such payments does not exceed the entire "M" account balance.

As the DOD IG has pointed out, once appropriations merge and lose their fiscal year identity, a violation of the Antideficiency Act is a remote possibility. Such a violation could occur only if identifiable obligations exceeded the entire "M" account balance plus the aggregate of all funds potentially restorable from the "merged surplus"—literally billions of dollars. The balances in many appropriations are so large that there is no risk of overobligation.

## THE BUDGET AND NATIONAL SECURITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri [Mr SKELTON] is recognized for 30 minutes.

Mr. SKELTON. Mr. Speaker, in this whole budget business there is one area that leaves me with great concern, a subject that goes to the very heart of our Nation's ability to remain the bastion of freedom in this day and in this time. This is the budget as it relates to national security.

Recently, Mr. Speaker, you will recall that this House passed its budget, a good part of it dealing with national defense, national security, and in that budget we passed a budget authority of a $32.8 billion cut, which is a 10.4-percent cut, an outlay cut of $11½ billion for next year, a 3.7-percent cut.

At the present time, leaders here and in the other body across the Capitol and people in the White House are working in a summit hopefully to reach a positive solution on this budget. A good part of it, of course, a very important part will be that which relates to national security.

The results of this summit can set the stage for the future role of America as a world leader. As you know, as a result of World War II we assumed leadership in this world by becoming the bastion of freedom, by becoming the center of stability in Eastern Europe, Western Europe and other parts of the world. We did this because to have done otherwise would have created a void.

Now the question is whether we will assume this leadership position in the days ahead, whether this budget will allow us to do so, or whether we will create that void which we do not think is desirable.

Between World War I and World War II we did not seem to learn the lesson of preparedness and the necessity for national arms strength, though we should have. I can point back to 1934 when the Army of the United States merely had 138,000 members. At that time we were the 16th largest army in the world, and we had antique weaponry.

World War II came. We had some lead, but not much of a lead building up toward that. We won by the greatest of effort, I am convinced, one of the great efforts of all time.

Then, of course, in 1945, victory came both in Europe, came in the Pacific. People were joyous, of course. There was euphoria. The syndrome was to bring the boy's home, and we did. We cut down the troops in Europe immediately to some 70,000 troops, and we were dismantling our national security effort.

Within 5 years, Mr. Speaker, we all recall that we were again embroiled in a major war in Korea.

Then Vietnam came along where we fought for many years, unfortunately without a solid strategy to lead us.

Now we find ourselves having been victorious in the cold war, that is insofar as Eastern Europe is concerned, the cold war as we know it has been altered.

Back in 1945, just as today, we won a war that was different from a cold war, but we won a war, and the following year in 1946, Winston Churchill told us of the Iron Curtain that had descended across Europe.

In 1947, we established under the leadership of President Harry Truman who worked with this Congress the Marshall plan which brought Western Europe out of the ashes of that war.

In 1947, we also established under President Truman the Truman doctrine, which saved Greece and Turkey from communism.

In 1948, NATO was established.

The containment theory, the containment doctrine, the containment strategy concerning the Soviet Union and its expansionist efforts to spread communism throughout the world was under way, as we saw with President Truman and what he did.

Then in recent days we have seen that this containment strategy has succeeded. Communism has lost in Eastern Europe, freedom has won, containment has won, resolve has won, the West has won, NATO has won.

Admist all this euphoria, however, Mr. Speaker, we should realize that there is only 6 months of good news, as opposed to some 44 years of Iron Curtain rule in Eastern Europe.

I am convinced, Mr. Speaker, that it is too soon to relax our Western resolve. There is still cause for concern and there is still strong reason for remaining a viable, strong force, The Warsaw Pact is no longer the enemy, but there is an enemy out there, and that great enemy is what we call uncertainty. We see in Eastern Europe as a result of the crumbling of the Berlin Wall and the Iron Curtain those people in those Eastern countries are going to be expecting political freedom and they are going to be expecting economic opportunity. This will come about, hopefully, in years to come, and let us hope that it does come to pass, but there will not be immediate political freedom as they envision it and there will not be immediate economic opportunity as we would like for it to be. These high expectations will not be met within the near future, and as a result there could be turmoil, disagreement, all of which leads to more uncertainty.

As a matter of fact, back in 1945-46, it took some 10 years for us to put together a strong strategy and the doctrine in place that was successful in fighting communism. It may take 10 years for Eastern Europe to straighten itself out and with help from the West to win the hearts politically and to straighten out their economy so they can be part of this free world.

Mr. Speaker, I am convinced that now is the most challenging of times. Uncertainty gives this world a kaleidoscope of unforeseen events. It is a funny thing about kaleidoscopes. One can never predict what pattern will occur, what new pattern will show up in the lens of that kaleidoscope.

You know, there was something positive about the Berlin Wall and the Iron Curtain, because there was certainty. That certainty allowed us to put a plan and a policy in place. That is not the case today. That is not so. Uncertainty prevails. The Soviet Union finds itself with large questions of stability, but let us look at the Soviet Union and see what it has done only recently. It has given $6 billion in aid and weapons to Castro's Cuba. It has given $2½ billion to Vietnam in 1 year, Afghanistan $4 billion in 1 year, North Korea $1 billion in 1 year, Syria, $1½ billion in 1 year, Angola, $1 billion, and Libya $1 billion.

Again in another look at the U.S.S.R., we find it still has 30,000 nuclear warheads, the world's largest conventional army and a modern blue water navy. All of that still exists, together with a strong modernization of its armed forces that is taking place today.

□ 1940

Mr. Speaker, we also see when we think of the uncertainty that exists in this world the volatile Third World, those countries that heretofore did not find themselves militarily strong, today having nuclear weapons, chemical warfare capability, guided missiles, and strong conventional armies.

What about China? Mr. Speaker, where is it headed? Is it headed in a

positive direction or a negative direction?

Speaking of tinder boxes, the Middle East continues to be one. There have been threats and problems in Latin America, and we have, as we know, had to send military forces in Panama to help straighten out an intolerable situation and help bring freedom to come to pass there.

Terrorism continues to be a fear. Hostage taking, drug traffickers, the question of Japan.

There was recently a United States Marine lieutenant general who said that the main reason for America being in the Pacific and having troops in the Pacific was the presence of Japan.

Mr. Speaker, all of this shows that there are continuous uncertainties galore. We also see surprise, or the possibility of surprise, unhealthy alliances. This world was shocked in 1939, with the Molotov-Ribbentrop Treaty between Joseph Stalin's Soviet Union and Nazi Germany under Adolf Hitler. Could such a treaty, though unhealthy and though a surprise, come to pass once again? Mr. Speaker, we need to keep our sealanes open. We need to have a conventional capability that will deter would be aggressors. We need to keep free trade flowing, and we, of course, must keep human rights moving in the right direction.

Mr. Speaker, the specter of uncertainty is with us, and, therefore, we cannot predict what forces will dominate in the days ahead, and when we speak of predictions, there is a past set of predictions, the history of predictions not being very impressive. Please consider these examples, these predictions, out of the past: David Lloyd George, former Prime Minister of Great Britain, in 1936, said, "Germany has no desire to attack any country in Europe." Time magazine, 1939, "The modern German theory of victory by blitzkrieg is untried and, in the opinion of many experts, unsound," and John Foster Dulles, at that time an American diplomat who later became Secretary of State, said in 1941, "Only hysteria entertains the idea that Japan contemplates war upon us." Captain William Pulleston, former chief of the U.S. naval intelligence, said in 1941. "The Hawaiian Islands are overprotected. The entire fleet and air force could not seriously threaten Oahu," said just several days before the Japanese attack upon Pearl Harbor. Our own President, Jimmy Carter, in 1977, said that, "Iran is an island of stability in the Middle East." Secretary of the Navy Frank Knox, December 4, 1941, 3 days before Pearl Harbor, stated, "No matter what happens, the U.S. Navy is not going to be caught napping," and then there is a caption of a photograph of the U.S.S. *Arizona* in a program for the Army-Navy football game dated November 28, 1941, and some 8 days later we will recall that this Arizona was sunk and is presently at the bottom of Pearl Harbor, and this caption on that photo in that football program said, "It is significant that despite claims of air enthusiasts, no battleship has yet been sunk by bombs."

Mr. Speaker, the spirit expressed by these assessments from the past lives on today in what is shaping up to be a golden age of optimism. Each week's newspaper columns propose deeper cuts in U.S. Armed Forces on the grounds that there is insufficient danger to justify their upkeep. The forecasters have surveyed the future and see nothing that alarms them.

Ironically they project peace and stability mainly on the basis of spectacular changes within the last 6 months, changes that truly have surprised us, and yet I think, Mr. Speaker, there are other uncertainties and changes in the days ahead.

During these days that lie ahead and when uncertainty reigns, there are four things that we in our country should keep in mind and that we need: The first is we should keep good people in the armed services of the United States. Second, we need to keep the seed core that is the intellectual capital in the officer corps alive. Third, we need solid strategy for our national security as well as for our Western allies. Fourth, we need to keep the defense industrial base and our technology well suited to our day and time.

First, let us discuss briefly keeping good people in the U.S. Army, Navy, Air Force, and Marines. The quality of the people in our Armed Forces today is probably as high as we have had it since World War II. They are well trained, well motivated, and they are good men and women, because they are there because they want to be. They are professionals. If we are going to have a solid Armed Forces, we need the best people, and we have them. We must keep them, and although we will get smaller in numbers, we must keep those quality individuals, those men and women who are proud to serve their country and do so with enthusiasm and professionalism.

Regarding the second item, Mr. Speaker, I am chairman of the Committee on Armed Services panel on military education, and we have been looking for some time at the professional military education of our country. It is good, and it is getting better. We have had a number of recommendations set, to the credit of these services, many of those recommendations, probably 85 percent of them, have been adopted without corrective legislation. They realize, as we in this body realize, that we must keep the intellectual capital of the officer corps sound. Although we were unprepared between World War I and World War II in weapons and in numbers, we did probably by accident rather than by design have a strong intellectual capital in tactics, operational and strategic military thought. We must keep this as it has been, and if anything, get better. I commend the various war colleges, the five intermediate and the five senior war colleges for the efforts that they have done. We must keep this intellectual capital strong.

Third, there is a need for solid strategy for our national security. One reason we did not fare well in Vietnam was that we had no real strategy for winning that conflict. We had a strong strategy in World war II, and it worked. We need a blueprint. We need a policy. We need an overall strategy, and that is what we need to do as Americans and as the West and freedom-loving nations in this world must glue together that solid strategy, for if we do not, we will find ourselves with the wrong kind of doctrine, weapons, and military should unhappy days come to pass.

Fourth, we need to keep the defense industrial base and its technology alive. We have done well, because we have, as a country, always regarded the importance of air superiority. We cannot let that slip. We have always done well in undersea warfare and undersea detection. We cannot let that slip.

In other areas, we must keep the research and development in those Buck Rogers type of things that unfortunately may be commonplace on tomorrow's battlefield in the scope of study and research.

□ 1950

These are things, Mr. Speaker, that we need to do.

So as we enter this budget summit between ourselves and the other body and the White House, I think we should keep in mind that we should not rush to judgment and dismantle our Armed Forces, because we got there with a lot of hard work and planning and a lot of fine people. Let us not let the budget numbers dominate. Let us let strategy, let us let policy, make the decisions. Let us keep this challenge in mind during this entire budget summit in the days ahead and those days that are to follow. Let us not rush to judgment, Mr. Speaker. Let us shape our national security and the Armed Forces in light of the uncertainty of today, because uncertainty, unfortunately, is the polestar of decisionmaking in the days and months and years ahead.

## LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. THOMAS of California (at the request of Mr. MICHEL), for today and

the balance of the week, on account of a death in the family.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Member (at the request of Mr. LENT) to revise and extend his remarks and include extraneous material:)

Mr. IRELAND, for 60 minutes, today.

(The following Members (at the request of Mr. MINETA) to revise and extend their remarks and include extraneous material:)

Mr. STARK, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. NAGLE, for 5 minutes each day, on May 22 and 23.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. LENT) and to include extraneous matters:

Mr. STANGELAND.

Mr. BROOMFIELD.

Mr. LAGOMARSINO.

Mr. ROGERS.

Mr. BLAZ.

Mr. MACHTLEY in eight instances.

Mr. CONTE.

Mr. KOLBE.

Mr. GILMAN.

Mr. LEWIS of California in two instances.

Mr. GINGRICH.

Ms. ROS-LEHTINEN.

The following Members (at the request of Mr. MINETA) and to include extraneous matter:)

Mr. ANDERSON in 10 instances.

Mr. GONZALEZ in 10 instances.

Mr. BROWN of California in 10 instances.

Mr. ANNUNZIO in six instances.

Mr. MCMILLEN of Maryland.

Mr. FROST.

Mr. LAUGHLIN.

Mr. MARTINEZ.

Mr. HALL of Ohio.

Mr. MAZZOLI.

Mr. MONTGOMERY.

Mr. FALEOMAVAEGA.

Mr. VISCLOSKY.

Mr. NELSON of Florida.

Mr. FUSTER.

Mr. ACKERMAN.

Mr. ERDREICH.

Mr. SKELTON.

Mr. FEIGHAN.

Mr. WYDEN.

Mr. HOYER.

Ms. OAKAR.

## SENATE BILLS, JOINT RESOLUTIONS, AND CONCURRENT RESOLUTION REFERRED

Bills, joint resolutions, and a concurrent resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 1128. An act for the relief of Richard Saunders; to the Committee on Interior and Insular Affairs.

S. 1738. An act to convey certain Oregon and California railroad grant lands in Josephine County, OR, to the Rogue Community College District, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 1791. An act to amend the International Travel Act of 1961, to assist in the growth of international travel and tourism into the United States, and for other purposes; to the Committee on Energy and Commerce.

S. J. Res. 240. Joint resolution designating the week of June 10, 1990, through June 16, 1990, as "Multiple-Use Sustained-Yield Week"; to the Committee on Post Office and Civil Service.

S.J. Res. 315. Joint resolution for the designation of July 22, 1990, as "Rose Fitzgerald Kennedy Family Appreciation Day"; to the Committee on Post Office and Civil Service.

S. Con. Res. 133. Concurrent resolution providing for the use of the Capitol Rotunda; to the Committee on House Administration.

## BILLS PRESENTED TO THE PRESIDENT

Mr. ANNUNZIO, from the Committee on House Administration, reported that that committee did on the following dates present to the President, for his approval, bills of the House of the following title:

On May 17, 1990:

H.R. 3961. An act to redesignate the Federal building at 1800 5th Avenue, North in Birmingham, Alabama, as the "Robert S. Vance Federal Building and United States Courthouse"; and

H.R. 1805. An act to amend title 5, United States Code, to allow Federal annuitants to make contributions for health benefits through direct payments rather than through annuity withholdings if the annuity is insufficient to cover the required withholdings, and for other purposes.

On May 18, 1990:

H.R. 3910. An act to require the Secretary of Education to conduct a comprehensive national assessment of programs carried out with assistance under chapter 1 of title I of the Elementary and Secondary Education Act of 1963.

## ADJOURNMENT

Mr. SKELTON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 52 minutes p.m.) under its previous order, the House adjourned until tomorrow, Tuesday, May 22, 1990, at 10 a.m.

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3205. A letter from the Deputy Secretary of Defense, transmitting a memorandum of understanding between the United States and the Government of Italy on cooperative measures for enhancing air defense in Italy, pursuant to 10 U.S.C. 4542(e); to the Committee on Armed Services.

3206. A letter from the Secretary of Agriculture, transmitting a draft of proposed legislation to amend the National School Lunch Act; to the Committee on Education and Labor.

3207. A letter from the Chairman, Federal Trade Commission, transmitting the Commission's 74th annual report covering its accomplishments during the fiscal year ended September 30, 1988, pursuant to 15 U.S.C. 46(f); to the Committee on Energy and Commerce.

3208. A letter from the Director, Defense Security Assistance Agency, transmitting the Department of the Navy's proposed lease of defense articles to the Netherlands (Transmittal No. 10-90), pursuant to 22 U.S.C. 2796a(a); to the Committee on Foreign Affairs.

3209. A letter from the Director, Defense Security Assistance Agency, transmitting the Department of the Navy's proposed lease of defense articles to Venezuela (Transmittal No. 7-90), pursuant to 22 U.S.C. 2796a(a); to the Committee on Foreign Affairs.

3210. A letter from the Plan Administrator, Eighth Farm Credit District Employee Benefit Trust, transmitting its annual report for the year ending December 31, 1989, pursuant to 31 U.S.C. 9503(a)(1)(B); to the Committee on Government Operations.

3211. A letter from the Employee Benefits Manager, Farm Credit Bank of Columbia, transmitting the Bank's audited financial statement as of August 31, 1989, pursuant to 31 U.S.C. 9503(a)(1)(B); to the Committee on Governmental Operations.

3212. A letter from the Chief Judge, U.S. Tax Court, transmitting the actuarial reports requested for the U.S. Tax Court Judges' retirement and survivor annuity plans for the year ending December 31, 1988, pursuant to 31 U.S.C. 9503(a)(1)(B); to the Committee on Government Operations.

3213. A letter from the Clerk, U.S. House of Representatives, transmitting the quarterly report of receipts and expenditures of appropriations and other funds for the period January 1, 1990 through March 31, 1990, pursuant to 2 U.S.C. 104a (H. Doc. No. 101-195); to the Committee on House Administration and ordererd to be printed.

3214. A letter from the Deputy Associate Director for Collection and Disbursement, Department of the Interior, transmitting notice of proposed refunds of excess royalty payments in OCS areas, pursuant to 43 U.S.C. 1339(b); to the Committee on Interior and Insular Affairs.

3215. A letter from the Assistant Secretary, Non-Commissioned Officers Associations, transmitting the financial report for 1989, pursuant to Public Law 100-281, section 13 (100 Stat. 75); to the Committee on the Judiciary.

3216. A letter from the Vice President of Communications, Tennessee Valley Authority, transmitting the statistical summaries

annual report on its activities for the fiscal year October 1, 1988 through September 30, 1989, pursuant to 16 U.S.C. 831h(a); to the Committee on Public Works and Transportation.

3217. A letter from the Director, Congressional Budget Office, transmitting a copy of the report entitled, "Medicare's Disproportionate Share Adjustment for Hospitals"; to the Committee on Ways and Means.

3218. A letter from the Chairman, International Trade Commission, transmitting a draft of proposed legislation to provide authorization of appropriations for the U.S. International Trade Commission for fiscal year 1992, pursuant to 31 U.S.C. 1110; to the Committee on Ways and Means.

3219. A letter from the Secretary of Transportation, transmitting a report on passenger metal detectors in response to the requirement in section 2(e) of the Undetectable Firearms Act of 1988; jointly, to the Committees on the Judiciary and Public Works and Transportation.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ROSTENKOWSKI: Committee on Ways and Means. H.R. 3030. A bill to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, the control of toxic air pollutants, the prevention of acid deposition, and other improvements in the quality of the Nation's air; with amendments (Rept. 101-490, Pt. 2). Ordered to be printed.

Mr. ANDERSON: Committee on Public Works and Transportation. H.R. 3030. A bill to amend the Clean Air Act to provide for the attainment and maintenance of the national ambient air quality standards, the control of toxic air pollutants, the prevention of acid deposition, and other improvements in the quality of the Nation's air; with amendments (Rept. 101-490, Pt. 3). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. S. 286. An act to establish the Petroglypy National Monument in the State of New Mexico, and for other purposes; with amendments (Rept. 101-491). Referred to the Committee of the Whole House on the State of the Union.

Mr. JONES of North Carolina: Committee on Merchant Marine and Fisheries. House Concurrent Resolution 69. A resolution to urge the development and implementation of a comprehensive United States oceans and Great Lakes policy (Rept. 101-492). Referred to the House Calendar.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII,

By Mr. FORD of Michigan (for himself, Mr. SIKORSKI, Mr. GILMAN, Mrs. MORELLA, Mr. CLAY, Mr. HORTON, Mrs. SCHROEDER, Mr. YATRON, Mrs. OAKAR, Mr. MCCLOSKEY, Mr. ACKERMAN, Mr. DYMALLY, Mr. SAWYER, Mr. KANJORSKI, Mr. HAYES of Illinois, Mr. MCNULTY, Mr. UDALL, and Mr. DELUGO) introduced a bill (H.R. 4872) to establish the National Advisory Council on the Public Service, which was referred to the Committee on Post Office and Civil Service.

## MEMORIALS

Under clause 4 of rule XXII,

392. The SPEAKER presented a memorial of the Legislature of the State of California, relative to Azerbaijan; to the Committee on Foreign Affairs.

## ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 159: Mr. RINALDO.
H.R. 201: Mr. HAYES of Illinois.
H.R. 220: Mr. HOAGLAND, Mr. YATES, Mr. BOUCHER, and Mr. FROST.
H.R. 286: Mr. SHUMWAY.
H.R. 303: Mr. ROBERT F. SMITH.
H.R. 995: Mrs. BYRON.
H.R. 1068: Mr. PEASE and Mr. BRUCE.
H.R. 1546: Ms. PELOSI and Mr. RICHARDSON.
H.R. 2014: Mr. MAVROULES.
H.R. 2121: Mr. STANGELAND and Mr. HOAGLAND.
H.R. 2268: Mr. PENNY.
H.R. 2270: Mr. MILLER of Washington, Mr. HORTON, and Mr. GORDON.
H.R. 2285: Mr. ROE.
H.R. 2353: Mr. WHITTEN and Mr. FAZIO.
H.R. 2816: Mr. MAVROULES and Mr. MOAKLEY.
H.R. 2870: Mr. DYSON, Mr. WATKINS, Mrs. UNSOELD, and Mr. NEAL of North Carolina.
H.R. 3453: Mr. KILDEE, Mr. BRYANT, Mrs. KENNELLY, Mrs. SCHROEDER, Mr. MRAZEK, and Mr. CLAY.
H.R. 3693: Mr. ROE.
H.R. 3859: Mr. CLINGER.
H.R. 3914: Mr. SYNAR, Mr. SISISKY, Mr. HOAGLAND, Mr. ALEXANDER, Mr. HANCOCK, Mr. HERTEL, Mr. GUNDERSON, Mr. ESPY, and Mr. LAUGHLIN.
H.R. 3922: Mr. GIBBONS, and Mr. EMERSON.
H.R. 4079: Mr. STUMP.
H.R. 4096: Mr. KENNEDY, Mr. ROE, and Mr. MATSUI.
H.R. 4226: Mr. KYL and Mrs. VUCANOVICH.
H.R. 4310: Mr. LANTOS and Mr. DONNELLY.
H.R. 4362: Mr. LOWERY of California, Mr. ROYBAL, Mr. MINETA, Mr. CAMPBELL of California, Mr. LEWIS of California.
H.R. 4449: Mrs. BOXER.
H.R. 4640: Mr. YATRON.
H.R. 4641: Mr. SMITH of New Hampshire, Mr. TAUKE, and Mr. STARK.
H.R. 4690: Mr. BEREUTER, Mr. SERRANO, Mr. WOLF, Mr. HATCHER, Mr. VENTO, Mr. MILLER of Washington, and Mr. DYMALLY.
H.R. 4763: Mr. LEHMAN of Florida, Mr. MANTON, and Mr. FUSTER.
H.R. 4816: Mr. HATCHER, Mr. BROOMFIELD, and Mr. WYDEN.
H.R. 4818: Mrs. ROUKEMA, Mr. RINALDO, Mr. BERMAN, and Mr. BONIOR.
H.J. Res. 507: Mr. ANNUNZIO, Mr. WAXMAN, Mr. ROE, and Mr. NATCHER.
H.J. Res. 533: Mr. BOEHLERT, Mr. HUGHES, Mr. DELLUMS, Mr. NOWAK, Mr. MCEWEN, Mr. INHOFE, Mr. HAMMERSCHMIDT, Mr. CLAY, Mr. SERRANO, Mr. HOYER, Mr. SANGMEISTER, Mr. WALGREN, Mr. GILLMOR, Mr. ERDREICH, and Mr. TORRICELLI.
H.J. Res. 543: Mr. BUECHNER, Mr. RAHALL, Mrs. SAIKI, Mr. SAXTON, Mr. SCHAEFER, and Mr. PARKER.
H. Res. 384: Mr. MCCLOSKEY, Mr. MCDERMOTT, Mr. BEREUTER, Mr. FAUNTROY, Mr. BORSKI, Mr. PENNY, Mr. MFUME, Mrs. ROUKEMA, Mr. RUSSO, Mr. MCNULTY, Mr. MADIGAN, Mr. APPLEGATE, Mr. FAZIO, Mr. MATSUI, Mr. EDWARDS of California, Mr. BILBRAY, Mrs. PATTERSON, Mr. DIXON, Mr. FEIGHAN, Mr. JAMES, Mr. MRAZEK, Mr. KENNEDY, Mr. RANGEL, Mrs. UNSOELD, Mr. CARR, Mr. ESPY, Mrs. MORELLA, Mr. FOGLIETTA, Mr. KOSTMAYER, Mr. FALEOMAVAEGA, Mr. BUSTAMANTE, Mr. PANETTA, Mr. HUGHES, Mr. SABO, Mr. MOORHEAD, Mr. SHUMWAY, Mr. NEAL of North Carolina, Mr. ROBINSON, Mr. SMITH of New Jersey, Mr. GILMAN, Mr. BUECHNER, Mr. BRYANT, Mr. FORD of Tennessee, Mr. SIKORSKI, Mr. HORTON, Ms. SLAUGHTER of New York, Mr. ANDERSON, Mr. JONTZ, Mr. HERGER, Mr. LANCASTER, Mr. PRICE, Mr. UPTON, Mr. GEJDENSON, Mr. BROWN of California, Mr. GALLO, Mr. WHEAT, Mr. GLICKMAN, Mr. HYDE, Mr. TRAFICANT, Mr. GEPHARDT, Mrs. KENNELLY, Mr. GUARINI, Mr. STOKES, and Ms. LONG.

## PETITIONS, ETC.

Under clause 1 of rule XXII,

175. The SPEAKER presented a petition of Michael Baldigo, Santa Rosa, CA, relative to computers; which was referred to the Committee on Ways and Means.

## AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 3030

By Mr. WHITTEN:

SEC. 326. MEASUREMENT OF THE VOLATILE ORGANIC COMPOUND CONTENT OF CERTAIN WATERPROOFING SEALERS.

No regulation, requirement, standard, guidance or state implementation plan pursuant to this Act shall require that the measurement of the volatile organic compound content of waterproofing sealers which are intended for application to multiple surfaces be performed by removing the water content by volume of such waterproofing sealers.

By Mr. BROWN of Colorado:

—Page At the end of section 505(d), insert the following new paragraph:

"(6) CERTAIN MUNICIPALLY-OWNED POWERPLANTS.—

"(A) During the Second Phase, the Administrator shall allocate and issue for each existing municipally-owned oil and gas-fired electric utility steam generating unit with nameplate capacity equal to, or less than, 40 MWe, with an actual or allowable 1985 sulfur dioxide emission rate below 1.2 lbs/mmBtu, allowances in an amount equal to the product of the unit's annual fuel consumption on a Btu basis at a 60 percent capacity factor multiplied by the lesser of its allowable 1985 emission rate or its actual 1985 emission rate, divided by 2,000.

"(B) During the Second Phase, the Administrator shall allocate and issue annually for each existing municipally-owned coal-fired electric utility steam generating unit with nameplate capacity less than 25 MWe, with an actual or allowable 1985 sulfur dioxide emission rate below 1.2 lbs/mmBtu, allowances in an amount equal to the product of the unit's annual fuel consumption on a Btu basis at a 60 percent capacity factor multiplied by the lesser of its allowable 1985 emission rate or its actual 1985 emission rate, divided by 2,000.

—At the end of the bill insert the following new title:

TITLE —EXTENSION OF ENERGY INVESTMENT CREDIT FOR SOLAR GEOTHERMAL AND OCEAN THERMAL PROPERTY

SEC. . OF ENERGY INVESTMENT CREDIT FOR SOLAR GEOTHERMAL AND OCEAN THERMAL PROPERTY.

(a) IN GENERAL.—Clauses (viii), (ix), and (x) of the table contained in subparagraph (A) of section 46(b)(2) of the Internal Revenue Code of 1986 (defining energy percentage) are amended to read as follows:

| | | | |
|---|---|---|---|
| "(viii) Solar energy property.—Property described in section 48(l)(4) (other than wind energy property). | 15 percent... | Oct. 1, 1990. | Dec. 31, 1993. |
| "(ix) Geothermal property.—Property described in section 48(l)(e)(A)(viii). | 15 percent... | Oct. 1, 1990. | Dec. 31, 1993. |
| "(x) Ocean thermal property.—Property described in section 48(l)(3)(A)(ix). | 15 percent... | Oct. 1, 1990. | Dec. 31, 1993. |

(b) EXTENSION OF LEAKING UNDERGROUND STORAGE TANK TRUST FUND FINANCING TAXES.—Paragraph (2) of section 4081(d) of such Code is amended to read as follows:

"(2) LEAKING UNDERGROUND STORAGE TANK TRUST FUND FINANCING RATE.—The Leaking Underground Storage Tank Trust Fund financing rate under subsection (a)(2) shall not apply after December 3, 1993.".

(c) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to periods after September 30, 1990, under rules similar to the rules of section 48(m) of the Internal Revenue Code of 1986.

# EXTENSIONS OF REMARKS

## VERONICA REAGAN CARMICAL, ESSAY CONTEST WINNER

### HON. HAROLD ROGERS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. ROGERS. Mr. Speaker, 200 years ago, the Constitution of these United States was in its infancy. Our First President, George Washington, had been in office just a little over a year. Our first Congress had only begun to enact the laws of the land.

But the third branch of our Government, the judiciary, would not take a form recognizable to us until more than a decade later, when the Honorable John Marshall became Chief Justice of the U.S. Supreme Court.

It is in the spirit of celebration, of considering the foundations of this Nation, that I am proud to enter this essay from Veronica Reagan Carmical of Williamsburg, KY, into the eternal RECORD of this House.

Her astute essay on the importance of an independent Federal judiciary has won the praise of the Daughters of the American Revolution and the Commission on the Bicentennial of the U.S. Constitution, who judged it the best essay in the east central division of their recent nationwide essay contest.

I had the pleasure of meeting Veronica here in Washington a couple of weeks ago. Rarely have I met such a poised and articulate young lady, and I look forward to hearing of her future success in college, and in her adult life.

My congratulations also go to her parents, Mr. and Mrs. Oline Carmical, Jr., and to her fine teachers at the Williamsburg, KY, schools. I am quite sure they are all as proud of Veronica as I am.

I urge all of my colleagues to read this fine essay, and consider its meaning as we in this House write the laws of the land adjudicated by our independent Federal courts:

WHY ARE INDEPENDENT JUDGES IMPORTANT IN THE PRESERVATION OF OUR CONSTITUTIONAL SYSTEM OF GOVERNMENT?

(By Veronica Reagan Carmical)

In 1787 our founding fathers saw the necessity of a strong judicial system independent from the other two federal branches of government. Although they were vague in the composition of the judiciary, they did provide in Article III, Section I of the United States' Constitution that there would be one Supreme Court and other lower courts as Congress subsequently believed necessary. There were also other stipulations that the judges were given their posts for the duration of their lives, that they would be paid, and that their pay may never be decreased. The former has been interpreted to mean that a judge is nominated for a tenure of life during good behavior by the President, subject to federal Senatorial approval and his salary will never diminish. Specifically, a federal judge can never be removed from office unless he has been charged with a high crime or misdemeanor, impeached by a majority of a quorum in the United States' House of Representatives, and convicted by the votes of two-thirds or more of a quorum in the federal Senate.

Historically, federal judicial independence resulted in numerous analyses. Among the most notable of these was Number 78 of "The Federalist Papers," written by Alexander Hamilton, who favored life appointments for federal judges. Hamilton's only stated reservation regarding the matter was that in case of a judge who was insane or physically incompetent to hear and rule on cases before his court. Hamilton's opinion was apparently of little concern to the majority of the delegates at the 1787 Philadelphia Convention from which the Constitution emerged because that stipulation was not added in the document. By so many accounts, the establishment of an independent, essentially life-tenured judge fostered fair decisions; it hindered wealthy and otherwise powerful citizens from being able to sway a judge's decision because the latter would not fear the loss of his livelihood.

Indeed, a judiciary not affected by popular sentiment or special interest groups could constitute the wisest court system possible. Our founding fathers were by no means the first to arrange a judicial system in this manner. England was the first major nation to utilize this idea. Since the fifteenth century in England, a judge's rulings are supposedly fair and just, according to common law, equity, and statutory law. By analysis, one can see how the ordinary person might benefit from this because generally his cases are decided in the same manner as those involving more important persons.

Not all countries practice the appointment of their judges as part of some politically partisan process. France has had five radically different forms of government over the past two centuries, and each has had its own specific judicial system. One main idea has permeated from general French culture, however, through each of the five types; a student of law trains to be either an attorney or a judge. Therefore, French jurists are professional civil servants, not political appointees; they are nothing more or less than judges.

The American system of an independent judiciary has been tested many times over the years. In 1806 Chief Justice John Marshall came to the Supreme Court. Marshall's first year on the Court shows how unnecessary the Supreme Court was considered by the country as a whole. The Court only heard three cases that year; two involved disputes over ships captured as prizes on the high seas, and the third involved a title to a tract of western lands. These were the ordinary cases of that time. There was nothing extraordinary about these cases, but Marshall, a highly partisan Federalist, used them and others to build a judiciary independent of the executive and legislative branches. Federalist Marshall even occasionally ruled in favor of the majority Jeffersonian Party. Many of his rulings set definitive precedents because his reasons for his decisions seemed so different from either party's logic that he appeared to be acting at least semi-independently.

The greatest threat to the independence of the American federal judiciary came more than a century after death took John Marshall from the Supreme Court in 1835. In 1937 popular President Franklin D. Roosevelt, angered because he had been unable to name even one justice of the Supreme Court during his first four years in office and because holdover jurists from previous Republican and Democrat administrations had struck down so many New Deal statutes deemed necessary by Roosevelt for the United States to recover from the ravages of the nation's worst depression, sought to alter the High Court and other federal judicial bodies. After first toying with the idea of having his Congressional supporters sponsor a Constitutional Amendment to restrict the jurisdiction and authority of all federal courts, Roosevelt and Attorney General Homer Cummings decided to proffer a scheme for enlarging the Supreme Court and other levels of the federal judiciary. Specifically, through surrogates, Roosevelt and Cummings proposed to the Senate the appointment of an additional judge for each jurist at each bench level who, having reached the age of seventy years and six months, had not retired. Had their plan been legislatively enacted, Roosevelt would immediately have been able to nominate six additional justices for the Supreme Court. After lengthy debate, the "court packing" plan failed to pass the Senate and was never entertained in the House.

Had it succeeded, the Roosevelt-Cummings schemes would have demeaned the independence of the federal judiciary, especially the High Court, by lessening the importance of each judge. By reducing each's stature, the other branches, particularly the executive in this case, would correspondingly have been greatly enhanced in both power and prestige. Most of the plan's opponents stressed their opposition on grounds of preserving judicial independence and equality among the three federal branches of government. It is within the confines of such sentiments that both judicial independence and governmental balance of power continue to thrive in our federal system.

## COLUMNIST PATRICK BUCHANAN AGAIN CRITICIZES STATEHOOD FOR PUERTO RICO

### HON. JAIME B. FUSTER

OF PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. FUSTER. Mr. Speaker, as a Democrat I do not always agree with the viewpoints of the nationally syndicated conservative columnist Patrick Buchanan, but once again I have to tell my colleagues that he is right on target with his latest column on a proposed political status plebiscite in Puerto Rico. I inserted Mr. Buchanan's first such column on this issue in

the RECORD last February, and today I want to draw to the attention of my colleagues his second column, entitled "Future State or Nation?" which appeared in the May 16 edition of the Washington Times.

As you know, Mr. Speaker, there is legislation pending in both the House and Senate which would authorize a congressionally sanctioned plebiscite in Puerto Rico next year between the options of statehood, independence, or an enhancement of the existing commonwealth status. Although I have great respect for the institution of statehood, I favor the enhanced commonwealth option as being in the best interests of both Puerto Rico and the United States.

President Bush favors the statehood option. But Mr. Buchanan, himself a former key Reagan White House official with well-known conservative credentials, seems to be a voice in the wilderness among national Republicans on the issue of Puerto Rico's political status. Mr. Buchanan's voice ought to be heard more often in Republican councils; he is telling it like it is on the issue of statehood for Puerto Rico. The White House ought to pay particular attention.

FUTURE STATE OR NATION?

(By Patrick Buchanan)

In this age of nationalism, when provinces, "republics," and "occupied territories" are struggling to break free and be born again, as nations—Quebec, Kasmir, Lithuania, Latvia, Estonia, Slovenia, Croatia, Soviet Georgia, Azerbaijan, Palestine—a question arises: What, exactly, is a nation? In "The Major Governments of Europe" (1960), Professor Herman Finer provides a definition.

"A nation," Mr. Finer writes, embraces, "a common territory, common language and literature, common ancestry (sometimes erroneously called 'race'), characteristic common customs, a shared history and tradition, shared cultural achievement (songs, dances, poetry, painting, and sculpture, architecture, food, dress, etc.), and, finally, a public philosophy embodied in a political constitution . . . men are not born free; they are born national."

By that definition, the island of Puerto Rico is a nation in utero, and, making her our 51st state is an invitation to chaos.

Again, the passions surrounding this issue argue for greater reflection, before Congress authorizes a plebiscite that could give Puerto Rico automatic statehood by 1992.

Consider but a few of the comments called forth by a recent column opposing statehood: "Seldom has the image of America been soiled with greater injustice and prejudice," wrote former Gov. Luis Ferre. "It was a gratuitous attack on 6,000,000 Americans." "Plain bigotry," said a second; a "perversely xenophobic attack," said a third. Island politicians accused me of being on the payroll of drug companies that stand to lose tax privileges, should statehood come.

The hysteria, the hyperbole, the threats—one writer said the Americans had best "beware of what would happen" if they do not "honor" in their home "what they preach internationally"—fairly dictate second thoughts. Why should it be an insult to Puerto Rico, or her thousands of veterans, to suggest she has all the attributes of nationhood? Is it an insult to Cuban-Americans to say we ought not, post-Castro, annex Cuba, but keep her as a friend, ally, and partner, on equal terms with the United States?

We Americans preach self-determination. Just as islanders have a right to determine their destiny, so, too, does the mainland. Neither the island, nor 250 million Americans, should be blackjacked into a marriage likely to wind up in a divorce court.

The arguments of Puerto Rican nationalist Raul Serrano-Geyls, whence Mr. Finer's definition was taken, deserve a hearing:

Puerto Ricans are a Caribbean people of Spanish heritage, separated by 1,000 miles from the mainland. They did not petition to join the union; they were seized as war booty in 1898. The people there have resisted every attempt to "Americanize" them, to melt them down. As Mr. Serrano-Geyls writes, "The immense majority of all poets, novelists, playwrights, composers, painters, sculptors, artisans, in sum, nearly all Puerto Ricans with a true artistic creative spirit, are either 'independenistas' (most of them) or 'populares' that believe in free association. It is extremely hard to find a true Puerto Rican artist that believes in statehood. As someone has said: 'No one in Puerto Rico has ever written a poem to statehood, or the United States.'" This is a mark of nationhood.

With tens of thousands of Puerto Ricans believing fiercely in an independent island, supported by the intelligentsia, it would be an act of supreme folly to tell them their dream is dead forever. Why do it? Why bring into the American Union a state with a built-in secessionist movement, determined to break the Union apart?

Since 1948, Puerto Rico has had her own Olympic team. When do the islanders cheer loudest? When it challenges Team USA. As Sen. Velda Gonzalez-Garcia writes, "When Governor Carlos Romero Barcelo, tried to avoid playing our national anthem and raising the Puerto Rican flag at the Pan American Games in Puerto Rico in 1979, [he got] an Olympic booing the Puerto Rican people will not forget."

Should Puerto Rico become our 51st state, we will have the same trouble tomorrow Canada has today with Quebec. Puerto Ricans will demand to keep their Spanish language, to have all legislative and judicial proceedings translated into Spanish. These demands will be echoed by Hispanic leaders in Texas, California and New Mexico. Puerto Rico's congressional delegation would form the core unit of a militant new Spanish-speaking caucus. And, like the Quebeckers, Puerto Ricans will insist on their status as a "distinct society." And, why should they not? They are a distinct society. But, upon this issue, Canada is almost breaking up.

All the signs of future trouble are present. On St. Patrick's Day in New York, Irish-Americans carry the American Flag; on Columbus Day, Italian-Americans do the same; but, on Puerto Rico Day, it is the Puerto Rican flag that is carried by thousands, a manifestation of the islanders' defiant refusal to surrender their national identity, to dissolve themselves in a great American melting pot.

Peat Marwick estimates that, under statehood, between 1992 and 2000, federal outlays to Puerto Rico, with half the per capita income of Mississippi, might rise by $36 billion. Puerto Rico could become the Anacostia of the Caribbean—with welfare doing the same destructive work on that island people that it has done to black Americans, Native Americans, Micronesians.

The conservative adage there applies: When it is not necessary to change, it is necessary not to change.

## THE URBAN STATE UNIVERSITY: KEY TO 21ST CENTURY AMERICA

### HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. STOKES. Mr. Speaker, the education of our citizens is the cornerstone of our development as a nation. Our urban universities must improve, adapt and fit the needs of many constituents.

According to Dr. John A. Flower, president of Cleveland State University, "Urban state universities are now on the cutting edge of change confronting the educational, social, economic, technical and vocational issues of higher education." Dr. Flower recently had occasion to address the National Press Club in Washington, DC. His message focused on the unique mission of the urban state university.

Mr. Speaker, Cleveland State University, located in the heart of an urban area, currently serves apporoximately 18,500 regular students and an additional 14,000 who are enrolled as continuing education students. The university offers degree-granting programs in the arts and sciences, business, education, engineering, and urban affairs.

Mr. Flower, who rose from music professor to president of Cleveland State University, is one of a handful of college presidents in the United States from a fine arts discipline. He has addressed topics as diverse as ethics in academic, minority recruitment, and the role of athletics in college today.

Mr. Speaker, I am pleased to share Dr. Flower's remarks with any colleagues and hope they will take a moment to review his thoughtful analysis:

THE URBAN STATE UNIVERSITY

John A. Flower, a professor of music for four decades has been serving as President of Cleveland State University since July 1, 1988. An accomplished pianist, Flower is one of a handful of college presidents in the U.S. from a fine art discipline. For the 15 years immediately preceding his appointment, he served as CSU's chief academic officer.

As President, Flower has addressed topics as diverse as ethics in academia, minority recruitment and retention, and the role of athletics in colleges today. His attention to the symbiotic relationship of an urban university with its surrounding community has won high praise.

Located in the heart of an urban area, Cleveland State University currently serves approximately 18,500 students and has nearly 700 full-time and part-time faculty.

Flower's teaching career began in 1951 at the University of Michigan, and he while there rose from Instructor to Associate Dean. In 1966 he became dean of the College of Fine and Professional Arts at Kent State University, where he also served as associated provost and dean of the Blossom Festival School in cooperation with the Cleveland Orchestra.

A native of the State of Washington and a graduate of the University of Washington, Flower holds two master of music degrees (in piano and theory of music) and a Ph.D. in musicology from the University of Michigan. He also studied at the Conservatoire Americain in Fontainebleau, France.

Flower has worked on accreditation reviews of more than 125 colleges and universities and has presented scholarly papers around the world.

Flower served as a fighter-bomber pilot in World War II. He recently was elected to a two-year term as Chairman of the Ohio Aerospace Institute.

Locally, Flower is actively involved with numerous civic and cultural organizations including the Greater Cleveland Growth Association, the Cleveland Play House, and the Greater Cleveland Roundtable.

To search for truth and profess thought and advances in knowledge has always been the challenge of the American University. Teaching ever-changing skills to meet growing professional needs accompanies this challenge.

But as we move through the nineties and into the 21st century, that challenge is no longer enough. The Urban State University now has a vastly broadened mission. Impinging upon the historic teaching and research roles are a phalanx of problem issues. They include race relations, crime and violence, economic viability, and changing demographics. They require that higher education improve, adapt, and fit the needs of many constituencies.

The urban state university cannot be an ivory tower. It is part of the grit, grime, clamor, and violence of the city. Today there is no town-grown separation as there was for centuries. The critical mass of today's urban state university is the critical mass of its community.

This is the challenge:

To be seekers of the truth and protectors of the integrity of knowledge . . . but without the sanctuary of the historic campus as protection; to profess ethical and moral behavior . . . while being part of the swirl of the marketplace.

I am absolutely convinced this call to serving education and the urban citizenry draws dedicated students and faculty to urban state universities and community as mutually exclusive. They say the search for truth cannot occur amid the distractions of the marketplace and crackle of social change. I say, in the '90s and beyond, we have no choice.

Others continue, saying it is impossible to achieve the coupling of urban town and academic gown. Let them. The fact is that the necessity of effecting this synergism of cooperating is already upon us. That is why these campuses are the most vital, alive, and exciting places in America today.

The challenge is unique in the centuries-old history of universities.

Historically, the best and brightest—almost totally men until the last few generations—enrolled at mostly private and elite colleges and universities. They stayed for four years and then went home into preordained, family-based vocations. They married, became community leaders, and made preparations for their offspring to do the same.

But things changed after World War II. After the quite '50s, revolutionaries stormed campus gates in the 1960s. I know . . . I was there. I was an assistant professor at Michigan when Tom Hayden was working for the *Michigan Daily.* I was a Dean at Kent State in 1970. My office was in Taylor Hall. These events were cataclysmic.

However, universities settled back, adapted, and carried on.

They looked at little different . . . and acted a little different.

But they continued to keep Wall Street runing and Main Street viable, while law schools kept the lawyer pipelines filled. The best unversities maintained the flow of intellecutal Brahmins to serve Washington political leadership.

But that equation keeping private and elite universities . . . in the lead and hence America . . . leading the World . . . is now as out of date as the slide rule.

Urban state universities are now on the cutting edge of change and confronting the educational, social, economic, technical, and vocational issues created by the changing demographics of our pluralistic peoples.

By generally accepted definition, an American urban state university is government assisted, in a downtown locale, and surrounded by a diverse community with a historically strong industrial base in a metropolitan area of a million or more. In addition to serving traditional students, the university reaches out to minorities and to others in the workforce whose fathers and mothers never went to college.

A significant portion of the student body has historically had restricted access to higher education. The average student age is around 28, with most students having part-time or full-time jobs in addition to going to college. Many are already married and have family responsibilities. Many are enrolled part-time. They often take seven or eight years to earn their degrees.

Continuing education and skills training for older adults not in regular degree courses is also an increasingly important function. At my own university of over 18,500 regular students, an additional 14,000 are enrolled as continuing education students.

The urban state university is the vital cog in America's educational future; but it must obtain far greater government and business support to carry out its vital role and function.

Why?

America's urban centers are rapidly changing. Third-world and Hispanic immigrants and Blacks are growing in number. Women now make up nearly 50 percent of the workforce and should be two-thirds of the new workers in the early 21st century.

At the same time, it's no secret; the world economy is globalizing. Technological advances are accelerating exponentially. You don't have to go further than the pages of our daily newspapers to be astonished by the breakthroughs.

The skills we are now teaching in the urban state university today may not be relevant tomorrow. New skills are demanded by this breakneck change.

So who will create and impart a new curriculum for this one-world workforce? And continue to reeducate it?

Only one institution is capable of fulfilling such an agenda: the urban state university. Bascially a new form of higher education, it has come into its own only since World War II to meet the changes of the cities.

My own Cleveland State University is celebrating only its 25th Anniversary this year. Within the next quarter century, we could have 50,000 students taking classes in such courses as urban anthropology to ethics set forth by Aristotle.

Those and others will dominate a curriculum demanded by technological change. To meet these extraordinary challenges, the urban state university must experience its own perestroika.

Such change cannot be directed solely from inside ivy-covered walls. It will take a committed partnership of academia, business, and government to launch this restructuring-one that must be as comprehensive as is the nation's war on drugs, or any of other predicted megatrend problems of the coming century. In short, a campaign for uban higher education of enormous proportions.

There is precedent for this.

More than a century ago, the predominantly rural United States had a crying need for new knowledge and skills to improve farming. The classical upper-class education of the premier universities might have advanced Western thought, and by trickling down, helped energize industry, but it was not sufficient to spur farming and feed the growing populace.

At the height of the Civil War, with the backing of President Lincoln, Congress in 1862 passed the Morrill Act. The government deeded thousands of acres of land to states for agricultural and mechanical arts colleges. The Land Grant university grew in size and stature, reaching out to America's burgeoning middle class.

This special kind of campus stressed applied research and practical studies. In turn, A and M graduates primed the pumps of the rural economy and lent aid and comfort to the great industrial surge of the late 19th century. Land Grant universities served up poultry science with a side dish of Plato. And it worked. For almost a century.

But . . . Ohio in the last hundred years has gone from almost 85 percent rural to 80 percent urban. The rest of the nation did the same thing.

Private and state-owned institutions led the change. They encouraged enrollments of middle-class students and somewhat later, women and minorities. Some tried to hold on the finest in classical education while others stoked up graduate schools into monstrous research machines.

Latter-day urban state universities emerged after World War II. They provided opportunity for students traditionally excluded from higher education.

Their enrollment continues to grow, but these urban state universities are rapidly approaching a kind of academic gridlock. They will be unable to meet industry demands for an increasingly better-educated work force.

I am not advocating that we throw out the baby with the bath water or pitch out John Bunyan and John Milton, as have some with more fanatical academic agendas. Nor do I believe that the urban state university should become a glorified trade school. That would abrogate the elevated mission of the university.

The urban state university must continue teaching the disciplines of letters, sciences, fine arts, social services, and human health. These are requisite to keep civilization civilized. The radical changes must come in other aspects of curriculum and commitment. If this is a new model, so be it. If this tilts toward revolution rather than evolution, so be it.

Town and gown must come together. The urban state university can no longer be separated physically or emotionally from the broader community. Not if it purports to

take its rightful place in leading America competitively into the next century.

As a beginning, I have five prescriptions for urban state universities.

PRESCRIPTION 1: WORK IN A CLOSE ALLIANCE WITH BUSINESS

This is necessary to keep industry competitive and committed to stay in the geographic area. At Cleveland State University, we call this "partners in renewal." More than 85 percent of our graduates stay in the immediate area and keep banks, corporations, professional firms, and governmental institutions functioning.

The Cleveland State University Advanced Manufacturing Center does applied research for numerous clients, from small entrepreneurial ventures to the Ford Motor Company. You read stories about how Japanese car makers are out to render the United States auto industry outmoded. I tell you, we are helping area automotive plants to remain competitive because of new cost-saving technology from our labs.

What a beautiful blend of Adam Smith and John Henry Newman! In the coming years, such academic-business partnerships won't be a luxury, they'll be a necessity.

PRESCRIPTION 2: ESTABLISH STRONGER VOCATIONAL AND CONTINUING EDUCATION TRAINING

The jobs of tomorrow in an information economy will require exceptional skills. Many don't even exist today. What will workers do when forced to learn new skills or lose their jobs? Who will teach them? Business can't afford to do it alone. The urban state university must step in.

"The issue," predicted John Naisbitt and Patricia Aburdene in their best-selling *Megatrends 2000*, "is not poor-quality jobs or low wages. It's how to educate and train people to qualify for an abundance of good jobs. There are not nearly enough people with college degrees or advanced vocational and technical training to fill the more than two million new managerial, administrative, and technical jobs coming on-line annually," so say Naisbitt and Aburdene.

PRESCRIPTION 3: STRENGTHEN COMMUNITY LINKAGES

Let me brag a minute. Our College of Urban Affairs is a pioneer in this realm. It offers courses in public service and training programs for elected officials. We have proposed an Ohio Commission on Public Service patterned after the national Volcker Commission. It will study the personnel needs of government into the 21st century and then build a curriculum to educate future governmental administrators.

Cleveland State's biology department probably will not study the nesting habits of gooney birds in Guam, but we are working to keep the Lake Erie shoreline from eroding and studying ways to make the local rivers cleaner. Our College of Education has scores of programs reaching out to troubled Cleveland public schools.

PRESCRIPTION 4: EXPAND THE COMMITMENT TO MINORITIES

We all know the abysmal statistics on minorities in higher education. If we decry the cost of urban crime, drug addiction, and disease in human and financial terms, we are obligated to reach out to those most victimized by it: Blacks and other minorities.

The Black high school dropout rate in America's major cities is more than 50 percent. Minority enrollment and retention in higher education is appalling. But if urban state universities can't help minorities achieve a better education and a ticket to the American dream, who can?

There's no easy answer.

The minority student and faculty presence on campus must be improved. We have a Vice President for Minority Affairs and Human Relations who reports directly to the President. He's overseeing an $800,000 Cleveland Foundation grant for a new program to improve our ability to recruit and retain minority students.

This crusade must go beyond students. In 1988, more than 23,000 doctorates were granted by U.S. graduate schools. Only 805, I repeat, only 805, went to Blacks. If the Ph.D. is the passport to a faculty position, we also must help Blacks in obtaining postgraduate degrees.

PRESCRIPTION 5: FOSTER ETHICS AMONG STUDENTS, FACULTY, AND ADMINISTRATION SO THAT THEY TRANSLATE THIS BEHAVIOR TO THE COMMUNITY

If urban state universities are not setting the tone in the academics, athletics, and in their own business dealings, then we hardly can expect the business world to do much different. Degree programs, especially in the professions, must emphasize the importance of ethical behavior on professional practice. The same is true for the internal, daily interactions of faculty, administration, and staff.

These goals can't be accomplished on wishes. They will take money that cannot be generated solely from tuition or from begging the alumni or businesses or even state government. Cleveland State University is state-*assisted* not state-supported. Less then half our operating funds come from the state.

In that need, we're not much different from other urban state universities. That's why an enhanced federal commitment to the urban state university is so critical.

Congress in 1979 authorized money for an Urban Grant University Program to fund many of the same things I am talking about. But the money was never appropriated.

If we're serious about meeting this crisis, which has grown far more acute in the last decade, here's what should be done immediately to fill the aforementioned prescriptions.

1. *Congress should appropriate spending for the Urban Grant University Program*

Cleveland State University, a decade ago, felt this federal legislation was so important that we modeled our own College of Urban Affairs after it. I was responsible for its covenants and was attending physician at its birth. Armed with that federal blueprint, we went to the state legislature for line item funding assistance for our Urban University programs. Today, this College and the state's Urban University program stand as a successful and national prototype for urban state universities.

2. *President Bush should appoint a White House Commission on Urban State Universities*

Academic, business, and community leaders should be appointed to this panel to assess just how these institutions can obtain funds and work to solve the challenges outlined here. This would complement what the President has urged in his own sweeping education reform proposals.

They also would reinforce the six goals for higher education outlined by U.S. Education Secretary Lauro Cavazos to be reached by the year 2000. These include granting more degrees to minorities and improving proficiency in math, science, geography, history, and writing.

3. *Set up a national interdisciplinary committee of representatives from America's leading philanthropic foundations to study and fund urban state university programs*

4. *Encourage local, state, and federal funding of continuing adult education training at urban state universities*

Today, most of this is still self-supporting.

5. *Corporations must increase their support for urban state higher education commenstrate with the value received from our contributions of graduates and research*

Past formulas based on pretax profits are out of date and must be reconfigured upward. In the long run, this only makes good business sense.

Historically, colleges separated themselves from the community in which they resided so that scholars could seek and impart truth unencumbered by the marketplace and politics. Today in urban centers, the university and the marketplace are inseparable. We in urban academia no longer have the luxury of an ivory tower in which to retreat.

This nation turned to higher education over a century ago to meet a crisis. Universities did the job. Today's crisis is far more severe and far different from that earlier time.

Today, with a much vaster and diverse citizenry concentrated in urban centers, we must learn how to develop our human resources . . . human beings . . . many of whom in our inner cities are spinning in a vortex of despair. We must learn how to develop and as importantly manage our technical ability that in today's world grows at warp speed.

In human terms for the nation and world, this is a problem far more serious than that addressed by universities and colleges through the Morrill Act.

Today, only the urban state university can meet this challenge head on. With the committed support of business and government, we are ready and willing to lead the way for higher education in America.

## OLIN E. TEAGUE AWARD

## HON. G.V. (SONNY) MONTGOMERY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MONTGOMERY. Mr. Speaker, in a ceremony tomorrow in the House Veterans' Affairs Committee Hearing Room, Mr. Malcolm "Mac" Farmer, the vocational rehabilitation and counseling officer at the Huntington, WV, VA Regional Office and Ms. Helen Remington, a clinical nurse specialist at the Carl T. Hayden VA Medical Center in Phoenix, AZ, will be honored by the Department of Veterans Affairs with its 11th annual Olin E. Teague Award.

The Olin E. Teague Award is presented annually to a VA employee, or employees working as a team, whose achievements have been of special benefit to veterans with service-connected injuries.

Mr. Farmer has had a lengthy career in counseling and rehabilitation. His efforts to coordinate community, State, and Federal resources in the State of West Virginia have

been invaluable in providing employment opportunities to disabled veterans. Veterans of West Virginia have achieved a level of employment which would not have been possible were it not for Mr. Farmer's commitment. Earnings for these veterans increased as much as 500 percent from prerehabilitation to postrehabilitation status at a time when West Virginia had the highest unemployment rate in the United States.

Mr. Farmer has been a counseling psychologist with the VA since 1966 and prior to that was a rehabilitation counselor with the West Virginia Division of Vocational Rehabilitation. He served in the U.S. Air Force from 1951 to 1953. Attending college under the GI bill, Mr. Farmer completed a bachelors degree in psychology at the College of William and Mary. He then completed a master of science degree in rehabilitation counseling at the same school. Later, at Marshall University, he completed a graduate program in clinical psychology and was selected for membership in Psi Chi, a national honor society in psychology.

As an officer in VA's Vocational Rehabilitation and Counseling Division, his job is to assist eligible veterans in overcoming service-connected disabilities through vocational training, independent living services, and other rehabilitation counseling, plus employment assistance. Obviously, he has done his job exceptionally well.

Helen Remington, a rehabilitation clinical nurse specialist at the Carl T. Hayden Medical Center, Phoenix, AZ, has, through her personal commitment to meeting the needs of spinal cord injured veterans, made many contributions to rehabilitating spinal cord injured patients through an innovative education program which addresses the needs of patients and their families. Ms. Remington has designed and implemented workshops which provide up-to-date information to assist veterans and their spouses in the rehabilitation process. She has spent countless hours developing workshops, coordinating new materials and information from the fields of research, medicine, nursing, and social work, and locating notable speakers to present this information directly to veterans and their families.

Ms. Remington joined the VA in 1978 as an adult nurse practitioner in ambulatory care. Prior to that she held faculty, supervisory, and staff nurse positions in private sector hospitals in Idaho and in Phoenix, AZ. In 1977 she received a masters degree in nursing from Arizona State University, a bachelors degree in nursing from Idaho State University in 1970, and in 1978 was certified as a family nurse practitioner in the State of Arizona. She has been inducted into the Phi Kappa Phi National Honor Society and Sigma Theta Tau International Nursing Honor Society.

Throughout her career with the VA, Ms. Remington has consistently demonstrated dedication to providing high quality nursing care to disabled veterans and has been especially cognizant of the special needs of spinal cord injured patients. She was recognized by the Veterans of Foreign Wars with an Outstanding Service Award in 1986 and received the Barrier Buster Award from the Paralyzed Veterans of America in 1978. Ms. Remington's outstanding achievements exemplify outstanding Federal service. She is indeed worthy of being honored as a corecipient of the Olin E. Teague Award.

Mr. Speaker, there is no greater record of service to the Nation's veterans than that of the late Olin E. (Tiger) Teague, for whom the award is named. Tiger Teague served on the House Veterans Affairs' Committee for 32 years, 18 years as its chairman. No one before and no one since has had a greater understanding of veterans' concerns and needs nor has anyone done more to address them.

I know my colleagues will want to join me in offering our deep appreciation to Mac Farmer and Helen Remington. For their concern, dedication, and innovation in meeting the special rehabilitation needs of our disabled veterans, we congratulate them.

## PRESIDENT'S COMMISSION ON AVIATION SECURITY AND TERRORISM

### HON. WM. S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. BROOMFIELD. Mr. Speaker, the House Foreign Affairs Committee recently held a hearing on the findings of the President's Commission on Aviation Security and Terrorism. After the tragic loss of Pam Am 103 in 1988 over the skies of Scotland, President Bush established the Commission by Executive order and named Mrs. Ann McLaughlin, former Secretary of Labor, as Chairman. The following Commission members were also named: Senator ALFONSE M. D'AMATO, Representative JOHN PAUL HAMMERSCHMIDT, Senator FRANK R. LAUTENBERG, Representative JAMES L. OBERSTAR, Gen. Thomas C. Richards, U.S. Air Force—retired, and former Secretary of the Navy Edward Hidalgo.

I want to commend Mrs. McLaughlin for her excellent report. The Commission members and the professional staff also deserve our praise for their comprehensive and frank review of the deficiencies in the U.S. aviation security system. This report must not be read and forgotten. Our Government must ensure that the reports' recommendations are carefully reviewed and implemented. We owe the families of the victims of Pan Am 103 a commitment to excellence in the U.S. aviation security system.

The victims of the terrible terrorist act came from many countries and from many States. I would like to list the names of the Michigan residents who perished in that terrible disaster:

Lawrence Ray Bennett, Chelsea.
James Ralph Fuller, Bloomfield Hills.
Kenneth James Gibson, Romulus.
Pamela Elaine Herbert, Battle Creek.
Khalid Nazir Jaafar, Dearborn.
Gregory Kosmowski, Milford.
Louis Anthony Marengo, Rochester.
Anmol, Garina, and Suruchi Rattan, Warren.
Mary Edna Smith, Kalamazoo.
Arva Anthony Thomas, Detroit.
Jonathan Ryan and Lawanda Thomas, Southfield.

I believe that I can speak for other Members in saying that Congress will do everything that it can to enhance aviation security and put an end to terrorism in the air.

I want to share my statement from the House Foreign Affairs Committee hearing on the Commission's report with my colleagues in the Congress:

STATEMENT BY HON. WILLIAM S. BROOMFIELD

Mr. Chairman, I join you in welcoming our witnesses here today and look forward to their comments. Let me commend the President for establishing the Commission that prepared his comprehensive report. All of us owe a debt of gratitude to Ann McLaughlin, Chairman of the Commission, and its members and staff for their frank assessment of the weaknesses in the U.S. civil aviation security system. Let me also say that I look upon this report as a beginning, not an end.

This report must not be put on the shelf and forgotten. We owe the innocent victims of Pan Am 103 more than mere words and promises. The thoughtful recommendations in this study must not be ignored. We owe the families of those who perished over the skies of Scotland a commitment to excellence in aviation security. I don't want the release of this report to be a public relations event and nothing more. We owe the American travelers results and not mere fanfare. Security is a life and death matter and we must take it seriously.

We should look upon today as the beginning of the rebuilding of the American aviation security system. From the offices of the FAA to the security check points of Pan Am, it is time to be thorough and sophisticated about aviation security. Our efforts will take time, patience and funds and we must be ready to commit ourselves to the goal of making the skies safe for travelers. We must be creative in our approach to enhancing security. Our approach should include the use of available state-of-the-art detection technology to supplement existing screening techniques. We must also look at other tools in the fight against terrorists.

We must be willing to take a long, hard look at states that support international terrorism. Our air strike on Libya a few years ago produced surprising results. Qaddafi reduced his involvement in terrorism. There are times when covert action is an appropriate tool to use against terrorist-supporting states. International cooperation and the exchange of intelligence information are also critical if we are to win the battle against terrorism in the skies.

Let me commend the good work of the Scottish police and other police services in the United Kingdom for their brilliant investigative work on this tragedy and for their cooperation with our government. U.S. Government agencies involved in this painstaking investigation also contributed much to the overall investigative effort.

The citizens of Lokerbie, Scotland deserve our thanks for their caring and sensitive handling of a terrible experience for them, the victims' families and the American people.

I join the Chairman in promising to do everything possible here in Congress to help to dramatically improve the aviation security system. Today is the beginning of a security rebuilding effort. It is time to roll up our sleeves and get to work.

## PASS REPLACEMENT WORKER LEGISLATION THIS YEAR

### HON. THOMAS M. FOGLIETTA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. FOGLIETTA. Mr. Speaker, the use of replacement workers as a means for management to win labor disputes is becoming more and more prevalent. Most recently, we saw it used in the Greyhound strike.

I draw my colleagues' attention to the editorial in the Philadelphia Daily News below, from May 1, 1990, regarding the use of replacement workers to jeopardize the collective- bargaining process as designed in the National Labor Relations Act of 1935. It presents more reasons to cosponsor—and pass—replacement worker legislation this year. I sponsored a bill (H.R. 2969) which would bar the use of replacement workers, whose hiring would prejudice the status of legal strikers, during the pendency of a strike. My colleague, BILL CLAY, has also sponsored similar legislation, H.R. 3936.

I urge my colleagues to consider this editorial and consider cosponsoring this important legislation today.

THE "PERMANENT REPLACEMENT"

Some statements are "pinhead profundities." They sound like they mean something, but are just the popular wisdom of people who don't think very much.

The all-time leader in that category is "There was a reason for unions back in the 30s, but . . ." This is generally uttered by somebody about to advocate replacing skilled union workers with anybody willing to work cheap.

Like Ronald Reagan, who inspired a union-busting fad, most recently taken up by the blundering monopolists at Greyhound Corp. If you can't run a business, blame the workers and replace them. That's what Reagan did with air traffic controllers, and that's what more and more private companies are trying.

The National Labor Relations Act of 1935 gives workers the right to strike without fear of being fired or punished. Unfortunately, the 1938 Supreme Court, even more troglodytic than the current one, ruled that the protection didn't apply to strikes for "economic reasons," which covers virtually all strikes.

So companies now hire "permanent replacements," which is newspeak for scabs who stay on after the strike is over. These are usually young people too dim to understand that they'll be 40 or 50 some day and swept out by another wave of "permanent replacements."

Companies used to be afraid to hire these bums because they feared quality of work would drop. It tends to when you replace a skilled machinist with somebody working for half pay. They used to be afraid pro-worker customers would stop buying their goods and services.

However, two things have happened. Union membership has dropped off, at least partially because of the sentiments expressed in the pinhead profundity. And American companies have stopped caring much about quality.

The delicate balance between management and labor in this country has been destroyed. Economic violence against workers is sanctioned by practice and by the administration. Everybody expects any bill reversing that ancient Supreme Court ruling to face a veto by George Bush, the smiling plutocrat.

It will take more than the simple homilies union leaders have gotten accustomed to in good times to restore balance. Politicians must feel heat or they won't consider sending "permanent replacements" packing, let alone repeal the odious Taft-Hartley Act.

It might even take militance. It has been a while since we had an old-fashioned sit-down strike. At least that takes up the space where "permanent replacements" take other people's jobs.

## EARTH DAY 1990

### HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MAZZOLI. Mr. Speaker, I rise today to thank and commend all the country's citizens—particularly those in Louisville and Jefferson County—who helped make Earth Day 1990 an outstanding success.

The 20th anniversary of Earth Day renewed the environmental conscience of America and educated our younger persons of the importance of preserving our natural heritage. Moreover, the message was clear that each individual can make a difference in cleaning and protecting the environment.

In my district of Louisville and Jefferson County, one program I wish to commend particularly is Operation Brightside. Operation Brightside brings volunteers from the public and private sectors together for a variety of beautification and maintenance activities such as trash pickup, planting and caring for flowers and trees, and raising the public awareness on keeping Louisville and Jefferson County a clean and happy place in which I live and work.

I am also happy to announce that a significant number of elementary and high schools in my district are initiating recycling programs, and extending them to their neighborhoods.

It is critical that America not let the spirit and momentum of Earth Day 1990 wane. In fact, it must get stronger.

My own environmental priorities are several and among them is working to raise the Environmental Protection Agency to full Cabinet rank. I proudly voted for this measure in the House and I hope the President will eventually sign it into law.

The Federal Government should take the lead in the separation of rubbish and trash and in the use of recycled materials even if the Government has to make a market for such materials by altering its procurement and pricing practices.

Congress needs to pass tough Clean Air Act amendments and insist that the President accept these tough standards by adopting the bill with a veto-proof majority.

And, I feel true progress cannot be made on solving the Nation's solid waste generation and disposal problems unless they are the focus of a concerned, coordinated national effort. One way to target the problems and develop solutions is to convene a White House Conference on Solid Waste Management and Disposal. I have introduced such a measure, House Concurrent Resolution 269 and I invite my colleagues to cosponsor my bill.

Mr. Speaker, protecting and maintaining the environment cannot be achieved by the few, no matter how great their expertise. Every last single American must recognize that if we do not protect the Earth, the Earth cannot possibly protect us from a multitude of disasters. It requires vigilance from us each day, and every day.

## INSIDE THE NEW ALLIANCE PARTY

### HON. MERVYN M. DYMALLY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. DYMALLY. Mr. Speaker, I submit, for Members' review, a paper on the New Alliance Party, by Dennis L. Serrette, former 1984 candidate for President.

INSIDE THE NEW ALLIANCE PARTY AKA RAINBOW ALLIANCE AKA RAINBOW LOBBY AKA THE ORGANIZATION AKA

(By Dennis L. Serrette)

This paper comes after much thought and some distance from the New Alliance Party (NAP). When I broke ties with NAP after my 1984 presidential race, I felt I needed some time to evaluate the hodgepodge of contradictions, racism, sexism, and cultism that so revealed itself during the course of my campaign.

I knew when I joined NAP that it was not Black-led, and I knew when I left it was not Black-led. It took longer to understand that NAP was not even a progressive organization as it also portends.

Be that as it may, I probably still would not take the time to write about the organization. However, as a long-time activist who made the mistake of joining NAP, and who served on the organization's "Central Committee", I believe I have a responsibility to reveal the intense psychological control and millions of dollars Newman employs to get well-meaning individuals into our comunities (they target the Black community) to viciously attack Black leaders, Black institutions, and progressive organizations for purposes of building Newman's power base.

What follows is a relatively brief narrative on Fred Newman's operations, NAP being but one front. I have interchangeably used the names NAP, the organization, the International Workers Party (IWP), etc., for they are all run by, and consist of the same people. NAP is Newman's public electoral tactic, so it has many "members" (mostly who have been stopped on the street who paid a dollar for a paper, or some other come-on, who rarely actively participate, and often don't even know they joined) that are not a part of "the organization/IWP", i.e. Newman's followers.

I have attached some articles by Ken Lawrence, a progressive freelance writer. Lawrence began to watch Newman and his followers in 1974, when Lawrence, like many activists, was targeted by Lyndon LaRouche and his goons. As Lawrence explained, Newman and his followers had joined with LaRouche and remained with LaRouche in the aftermath of Mop-up. Reportedly, Newman even directed followers to partici-

pate in Operation Mop-up, a brutal attempt to destroy the left through intimidation and physical assaults.

I've also attached a recent article about LaRouche from the Washington Post. The similarities between the LaRouche and Newman operations are astounding.

At the outset, I want to answer the frequently asked question . . . Is Newman associated with LaRouche? I simply do not know. I understand that Newman originally completely denied having joined with LaRouche, claiming, instead, that it was his followers who had, but that he was forced to retract the denial in the face of overwhelming evidence. The story told to all organization members who were not with Newman at the time was that Newman and his followers were with LaRouche when he was "a leftist", "a split from SDS", pre-Operation Mop-up. I have since learned that this was a lie, that they joined after LaRouche had made a decisive right shift, and participated in the campaign to destroy the left. I did not see any direct evidence of a LaRouche connection while I was in NAP. But, I was never privy to what was going on at the top—Newman's household. Newman often bragged about how much he learned from LaRouche, and, as already noted, the reported organizational operations of LaRouche's group are frighteningly similar to those of Newman's group.

The New Alliance Party is but one of many front organizations controlled by Fred Newman.[1]

Newman is a man possessed with the need for power. Power at any cost to those around him and without regard to the political line. He will ruthlessly attack progressives without second thought, and reverse positions, if he deems it advantageous.

Like LaRouche's National Caucus of Labor Committees, Newman runs a very tightly controlled organization. Like LaRouche, Newman has created numerous organizations (most only paper) with divergent names; some to attract particular individuals, some solely to make money, many with names so similar to true left organizations that unknowing individuals are often fooled. (i.e. Rainbow Alliance and Rainbow Lobby which have no connection to Jesse Jackson's Rainbow Coalition; the Unemployed and Welfare Council which attacked the National Welfare Rights Organization, etc.)

Newman controlled all the resources, personnel, and policies of the organizations. When I left in 1984, he was living with three "wives". One was in charge of all the organization's finances, which Newman boasted well-surpassed $1 million; another controlled all personnel/members; and the third was in charge of "national operations."

The organization was elitist and oppressive, having set up its own internal caste system. Rank and file members worked 14 plus hours a day, often out on street corners raising money. Newman, on the other hand, spent most mornings reading in his large upper Westside apartment and jogging in Riverside Park. His workday began with his afternoon therapy sessions in his luxury Westside offices.

Newman and his chosen lieutenants often met and relaxed at his seaside mansion. The mansion was supported by a mandatory tax placed on members of the organization. Even if one could not afford food, the Long Island house tax had to be paid. Rank and file members were always taken along on trips to the mansion for the "honor" of cooking for and cleaning up after Newman and his chosen ones.

One of the big fights I had on my campaign, a fight which resulted in Nancy Ross and I thereafter travelling separately, reflects the racist, classist attitude that so permeated the organization's operations. Ross, myself, a white middle class female campaign worker, and a Black working class male campaign worker were staying at a Black reverend's home in the South. After a lovely breakfast, the white woman ordered the Black man to clean the kitchen while she and Ross relaxed. The reverend, embarrassed, asked that the kitchen be left as it was. It was his home, he stated, and he would take care of it. The white woman ignored the reverend and demanded that the Black man get up and clean. When I intervened, Ross indignantly insisted that they had every right to order such service from the worker.

Newman's/NAP's political positions vary according to what he believes he can best capitalize on at the time. The accompanying articles by Ken Lawrence document these shifting views, so I will not repeat this history. I personally witnessed this opportunism on a number of occasions. Quite notably, before it became obvious that Jesse Jackson's campaign would move grassroots folks nationwide, Newman harshly attacked Jackson. When it seemed as though Newman could exploit Jackson's movement, he used Jesse's name endlessly, in literature and elsewhere, and created the "Rainbow Alliance" and "Rainbow Lobby". Similarly, Newman strongly maintained that Louis Farrakhan was an insignificant right-winger. When it looked as though he could opportunize from Minister Farrakhan's popularity in the Black community, Newman's line took a 180 degree turn.

When progressive newspapers and individuals fail to support Newman, they become legitimate targets for destruction, even those he previously acclaimed. In my particular case, when I was promoting NAP, both the public and internal presentation of me was that of the leading Black progressive. When I raised issues of Newman's racism and exploitation of Blacks, I was labelled a nationalist (i.e. not a leftist). When I spoke honestly about NAP to persons outside the organization, articles began to appear in the National Alliance that would have made J. Edgar Hoover proud. I even received calls from friends that that NAP was calling up women friends of mine from years past to see if they could contribute "sexual" dirt to a paper about me. When they couldn't find the dirt, Lenora Fulani authored the article under the Theodore (Ted) Taylor, who NAP vociferously praised as a leading Black trade unionist when he associated with NAP, was attacked as a rank opportunist when he joined with SEIU. Gerena Valentine was lauded as New York's premier progressive elected official when he ran with a NAP affiliation, and harshly criticized when he broke with NAP.

Newman not only uses his paper, the National Alliance, to attack, but he uses the state in his attempt to destroy those he imagines to be his enemies. It has been widely reported how he sent his lackey attorney Harry Kresky to the FBI with the identification of a member of the weather underground who had taken his child away from the Newman cult.

Currently, Newman is using the state in his relentless efforts to destroy Charles Tisdale, the editor of The Jackson Advocate. Tisdale, a long time Black activist has risked his life to publish Jackson, Mississippi's only Black newspaper. Both his home and the Jackson Advocate offices have been firebombed by the KKK, who, like Newman, do not want to see a Black newspaper in Jackson.[2] Just this summer, Tisdale was shot at on two separate occasions.

Newman has brought a million dollar plus law suit against Tisdale and the Jackson Advocate. Why? When Newman saw the broad support Jesse Jackson received in the South, he decided to target some resources there. He assigned several New Yorkers to Mississippi. Tisdale, having knowledge about the Alliance, did not support NAP's claim on his community. Knowing the time and resources required to publish a newspaper, and the time and resources required to defend a law suit, Newman had Kresky slap a major lawsuit on Tisdale. After all, Kresky's services are free—he is a member of the organization, and accordingly, both he and his resources belong to Newman, as chair. It does not matter if NAP loses the case. NAP almost always loses. The suit serves its purpose of inflicting injury.

NAP had the audacity to ask me to testify against Tisdale. I told them that their request was outrageous. Next thing I knew, I too was in court, and receiving calls from Kresky threatening to have the Sheriff come to my home at night to arrest me. (The court dismissed their action against me.)

In short, Newman operates in total opposition to the movement. Both "the left" and "the movement" are considered enemies by Newman, just as they are by the right. Newman has labelled his suit against Tisdale a suit against the left, as though attacks on progressive institutions are a good thing. In fact, a review of the National Alliance will reveal far more venomous assaults on progressives than on reactionaries.

Newman uses left rhetroic well, and organizes with a left front. He appeals to what is good and progessive in people, and uses that to build his base. He will as quickly embrace as he will attack a movement, a progressive, an organization, a principle—based on how he can best opportunize from it. He unflinchingly lies to his membership, almost all of whom have absolutely no history in

[1] Others include New York Institute of Social Therapy and Research, Rainbow Alliance, East Side Center for Short Term Therapy, the Harlem Institute, Association of Better Communities, the New York City Unemployed and Welfare Council, George Jackson-Rosa Luxemberg Cultural Center, the National Alliance Newspaper, the New Black Alliance, Coalition of Grass Roots Women, the International Workers Party, and more. All are created and put to rest by Newman, according to the group or person he is targeting. (i.e. When they decided to go after me, they created the New Black Alliance (NBA)). Once I agreed to be the presidential candidate, the NBA was disbanded. Similarly, Newman created the New York City Unemployed and Welfare Council to pull in some welfare activists and attack the National Welfare Rights Organization. When Newman decided to switch the focus to electoral politics, he disbanded the New York City Unemployed and Welfare Council, deeply disappointing many of the "leaders" who had no say in the matter. James Scott, Alma Brooks, and Neter Brooks, whose names Newman continues to use, all left the organization. Newman creates the organization, chooses who among the inner circle will "lead" it, how it will be run, what it will do, and when it is no longer needed.

[2] It is relatively common for Newman's people to attack Black newspapers wherever they go if NAP isn't given extensive coverage.

the movement, and understand it exactly as Newman teaches.

Most members join "the organization" via politics or therapy. Once an individual has been drawn close, s/he is met by two lieutenants and told that there is a secret underground organization, the International Working Party (IWP), allegedly a left party organization. Membership in the organization requires that you reveal all your resources, and that you turn over everything to the organizations. (Even personal relationships are said to belong to the organization, so it is common for a member to report on his/her partner.) Mandatory bimonthly dues are assessed, and anything may be demanded at any time.

The IWP has been chaired by Newman since its inception. As far as I know, no one else has ever been considered as an alternative. The Central Committee members are all chosen by Newman. During the entire 2½ years I sat on the Central Committee, there was never a single policy debate by the CC once Newman made his position known. Once Newman asked who would rule if something happened to him. The CC chose a body of three. Newman said that they were wrong; Hazel Darren (his woman partner for the longest period) would be chair. It was so ordained.

There is an enormous amount of secret ritual surrounding the IWP—which, like most ritual, entices the members. Unlike most left organizations where the party is public and the membership is underground, Newman has created the reverse, and has used it as one of many isolating factors that maintain the membership.

Social therapy, Newman's creation, is considered the "backbone of the tendency." Every member is required to attend at least one social therapy (i.e. psychotherapy) session weekly, led by Newman's hand-picked, hand-trained therapists. (In most cases, Newman's top therapists are also his top spokespersons.) (Although the therapy is mandatory, members must still pay for the sessions.)

It was the IWP/Newman that assigned Nancy Ross to head NAP. It was Newman who decided that Ross would be moved into the Rainbow Alliance and that Emily Carter would be the head of NAP. It was Newman who decided that Carter would leave her child in New York, causing great pain to Emily, and be the Black face in the South.

WHAT IS THERAPY

What's a progressive guy like you doing in a organization like that? You must need your head examined . . . maybe some therapy will straighten you out.

Certainly, humor has its place, and I can at least add a bit of sarcasm, but believe me, NAP style, is no joke. It is a method for recruiting innocent, vulnerable, people, exploiting their vulnerabilities, and controlling their behavior.

As noted earlier, all members were required to attend therapy at least once/week. Some attend twice a week, or at times, even daily. Particular "patients" were targetted in sessions. The entire group then generally converged on the victim who generally broke down in tears. They are then forgiven, accepted, and praised. Topics range from the most personal aspects of one's life to the failure to give enough of oneself to the organization.

Almost every one of Newman's top lieutenants was recruited by Newman when they were suffering very severe emotional problems and had come as "patients" to Dr. Newman. None, but Carter, have a history in the movement, yet once they became completely subservient to and shaped by Newman, they were proclaimed leaders.

According to Newman, private time, private thoughts, "critical faculties," are all bourgeois. Once can only be cured of their bourgeois ideology in social therapy. If you disagree at all with one of Newman's Black lieutenants, the entire therapy group attacks you for being racist. If you disagree with a woman therapist, the entire group attacks you for being sexist. If you question the opinions of the therapists, you are resorting to your bourgeois critical faculties. When Newman is happy, everybody is happy. When Newman is mad, everyone is terrified.

Members are kept busy from sun-up, way past sun down. Family ties, at best, are strained. Members no longer have time to call family, to visit, even to attend funerals, holidays, or other special events. When members do visit their families, more often than not, another IWP member accompanies them. (Generally members have alienated themselves from all their other friends and all their close relationships are with fellow IWPers). Members generally share apartments, living communally, and often invite new recruits to move in with them. I cannot recall any member who lived with a non-organization person, unless there were designs to bring the non-member in. Members and potential members were often encouraged to quit their pre-IWP job, unless their job position was one Newman believed he could exploit. Absolute loyalty was due Newman and nobody else. One leading member of the CC proudly announced that if Fred told her to jump off a roof, she would do so, no questions asked.

Any problems that arise for members by this extreme regimentation wer dealt with in therapy. Bourgeois thinking, problems with "giving it all for the revolution" (i.e. for Newman), were dealt with by the group that had become the member's entire world; that knew their every vulnerability; that shaped their thinking and understanding of people, events, history. When I first joined, few members even read the newspaper. All history and politics were taught by Newman, or instructors taught by Newman.

Newman teaches that morality is bourgeois, and, places himself in the position of determining right and wrong for organization members. So, for example, monogamous relationships are deemed bourgeois. Members often sleep with the lovers of their best friends so that no personal relationships or loyalties surpass ones loyalty to Newman. As noted above, personal relationships are said to belong to the organization, and if deemed not to contribute will be terminated. Sex is often used, as well, to draw new recruits closer to the organization. A poignant example of Newman shaping the organization's morality was demonstrated in the last organization-wide meeting I attended in December, 1984. The theme of this meeting was "to kill." Members were given readings and attended small group sessions prior to the meeting to rev up their zeal for the two day event. The theme was that it was not enough to give your life for the cause, you had to be ready to kill for it. In an analogue to a religious revival meeting, member after member stood up and gave witness to the fact that they would not just give their lives for "Fred", they would kill for him also.

CONCLUSION

These few pages offer but an overview of a complex, dangerous organization. Dangerous, not only to the innocent, well-intentioned people who are caught in its grasp, but to the many it will try to exploit. Dangerous, because it uses a very progressive line, and untold millions of dollars, to prey on Black communities, to attack black leaders and institutions, and to assault progressive organizations at whim. Dangerous because it can lie outright—lie about being Black led when Blacks do not sit on the top, do not control the resources, do not control personnel; lie about its participation with LaRouche; lie about Charles Tisdale; lie about me; lie about whatever serves Newman's interests, and put forth spokespersons who come to believe these lies. Dangerous because members will do whatever they are told without ever evaluating what they are told. Dangerous because they have millions of dollars to infiltrate truly progressive organizations with members who are totally controlled by Newman, and a very slick newspaper that puts out a very progressive line while creating a completely false sense of who NAP is, prints blatant lies, as well as more subtle falsehoods and inneundos, about whomever Newman has targetted, (the vast majority of whom are progressives who have struggled for justice and freedom most of their lives and who haven't the resources to combat Newman's onslaught).

In conclusion, while I believe it is important that NAP be exposed for what it truly is, it is our job, not to dwell on NAP, which craves controversy, but to get into our communities and organize, organize, organize. It is the vacuum that has been left open that allows NAP and other oppressive organizations to abuse our communities. We must eliminate that vacuum with genuinely progressive, community-controlled organizations.

## WIC IN CRISIS

### HON. TONY P. HALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. HALL of Ohio. Mr. Speaker, research by the staff of the House Select Committee on Hunger reveals that more than 50,000 at-risk women and children will be removed from the Special Supplemental Feeding Program for Women, Infants, and Children, commonly called WIC. This is a crisis, Mr. Speaker. Medical professionals have determined these women and their infants and young children to be at a nutritional risk. The WIS Program—one of our most effective programs—was designed to safeguard the health and well-being of these vulnerable people. Remove them from WIC and we remove those safeguards.

The cause of this crisis, Mr. Speaker, is that more than half the States are experiencing serious midyear financial short falls, due primarily to significantly higher than anticipated inflation rates for food and lower revenues from infant forumla rebates. The States are doing the best they can with the funds they have, but it is estimated that an additional $67 million will be needed by State WIC agencies to avoid removing thousands of poor and at-risk women, children, and infants from the program.

I would like to submit the following Select Committee on Hunger staff report which deta-

lis the crisis in WIC. I urge my colleagues to keep this information in mind as they consider our Nation's budgetary priorities:

WIC IN CRISIS

Initial research by the staff of the Select Committee on Hunger reveals that unexpected program shortfalls in many state WIC programs may force the termination of thousands of program participants before the end of the fiscal year. Preliminary findings suggest that an additional $67 million will be needed by state WIC agencies in FY 1990 to avoid the mid-program termination of thousands of poor women and children.

Between April 23rd and May 1st, 1990, the staff of the Select Committee conducted a telephone survey of state WIC Directors. Respondents were asked: (1) monthly participation rate; (2) if they were experiencing a shortfall; (3) shortfall amount (est.); (4) whether they had placed any restrictions on any criteria of participants and; (5) how many participants would be eliminated.

There are a variety of causes for the fiscal crisis, however, the most significant was a higher than anticipated inflation rate for food. State agencies were encouraged to expand their caseloads based on revenue provided by infant formula rebates (see below). Applications for WIC participation grew, many believe, because of increases in unemployment, Medicaid referrals, and overall awareness of the program. However, overall food costs increased higher than 4.5 percent inflation rate for which Congress appropriated funds in fiscal year 1990. Many states are reporting inflation rates of 8 percent to 20 percent. Therefore, rising food costs have made many states unable to sustain their current expanded caseloads.

The Child Nutrition and WIC Reauthorization Act of 1989 encouraged agencies to use savings from cost containment measures to expand their caseload. One such measure was the infant formula rebate system. Under it, formula companies bid for contracts in states by promising per-can rebates on infant formula purchased by or for WIC participants. USDA estimated that $450 million would be realized from rebates in 1990.

Under WIC program rules, applicants are served according to a six-step priority system. Priorities 1-4 serve pregnant and breastfeeding women, infants and children with either medically-caused nutritional deficiencies or with an inadequate dietary pattern that puts them at nutrional risk. Priorities 5 and 6 serve children (under five yrs) and post partum women at nutritional risk. Under the current fiscal squeeze, states are reducing their caseloads according to these priorities, eliminating persons from the lowest categories first.

The following data show the states' current monthly caseload (caseload); the amount of money needed to meet their caseloads for fiscal year 1990 (deficit); the priorities the states are not serving in order to stay within their funding limits (restrictions); and the number of participants eliminated per month as a result of eliminating the respective priorities (reduction). Some states have placed restrictions on the priorities statewide; others only in certain local agencies. Figures are based on average monthly rates.

[Dollars in thousands]

| State | Caseload (per month) | Deficit | Restriction | Reduction (per month) |
|---|---|---|---|---|
| Alabama | NA | | | |
| Alaska | 10,000 | $600 | 5,6 | 3,000 |
| Arizona | 45,000 | 400 | [1] 3,4,5,6 | 1,000 |

| Wyoming | 9,500 | 37 | [1] 5,6 | 1,400 |
| Total | | 67,322,000 | | 52,700 |

[1] Denotes restrictions placed throughout local agencies only.

Note.—NA denotes States that either do not have a deficit or restrictions at this time.

## TRIBUTE TO THE WILSON AREA HIGH SCHOOL BAND

### HON. DON RITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. RITTER. Mr. Speaker, it is a pleasure for me to rise today to pay tribute to the Wilson Area High School Band from the Lehigh Valley of Pennsylvania.

The Wilson Area High School Band is in Washington this week to participate in the National Festival of the States Celebration—a musical salute to America. One band from each State in the Union was chosen to represent its State and the Mayor of the District of Columbia chose this group to represent the great State of Pennsylvania in this year's celebration.

The 110 members of the Wilson Area High School Band, under the direction of William Curnow, have participated in band competitions throughout Pennsylvania and around the country and have been recognized as one of the outstanding high school bands in America. The band will perform two concerts today in our Nation's Capitol—at 12 noon at Freedom Plaza and at 3 p.m. at the Lincoln Memorial.

Mr. Speaker, my colleagues, please join me in congratulating the student musicians of the Wilson Area High School Bank and their director, Mr. William Curnow, on receiving this distinguished national recognition.

## INTRODUCTION OF ADMINISTRATION'S WATER RESOURCES DEVELOPMENT ACT OF 1990

### HON. ARLAN STANGELAND

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. STANGELAND. Mr. Speaker, last week I introduced, by request, the administration's omnibus Corps of Engineers bill, the Water Resources Development Act of 1990.

This legislation, like its counterpart in the Senate, S. 2469 and S. 2470, will help provide House and Senate public works committees with a framework to enact into law an omnibus bill by year's end. So far this year, the House Public Works' Water Resources Subcommittee has held four hearings on corps' projects and programs. Members and public and private witnesses have testified about dozens of project proposals and program changes. Several are already included in the administration's package of legislative proposals.

This bill contains 18 proposals. Four are new projects that have made their way through the entire planning process and received the Secretary of the Army's approval and another is a project modification. The remaining proposals involve programmatic initiatives that range from increased cost-sharing and user fees to expanded research and development opportunities to personnel matters and emergency response authorities.

Personally, I have concerns about some of the provisions, such as the suggested changes to the successful section 22, planning assistance to States, and section 206, flood plain management services programs, as well as the proposal to more than triple the harbor maintenance trust fund fee. But the bill as a whole has some important initiatives, such as provisions on magnetic levitation transportation, and the corps existing section 1135 environmental demonstration program. These need to be part of the congressional debate.

Therefore, I'm pleased to introduce the Water Resources Development Act of 1990. I commend Assistant Secretary of the Army—civil works—Robert W. Page and others within the corps and OMB for their leadership. Committee chairman GLENN ANDERSON, ranking Republican JOHN PAUL HAMMERSCHMIDT, and subcommittee chairman HENRY NOWAK are also to be commended for their bipartisan long-standing support of the corps' program and their commitment to a 2-year reauthorization cycle.

Like me, they look forward to working with the administration and the Senate. I know all my colleagues on the Public Works Commit-

tee are eager to begin drafting comprehensive legislation. With continued guidance from the administration, I am hopeful we can enact a bill in the coming months that is environmentally sound, fiscally responsible, and responsive to the Nation's water resources needs.

## FINANCIAL REPORT

### HON. MARTIN FROST

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. FROST. Mr. Speaker, as I have done each year of my service in Congress, I am today placing in the CONGRESSIONAL RECORD a thorough personal financial report through December 1989. While these disclosures go well beyond what is required by the financial disclosure rules of the House, I believe it is appropriate information for the RECORD:

*Balance sheet: Martin and Valerie Frost*

[As of Dec. 31, 1989]

| | |
|---|---|
| Assets: | |
| Condominium, Dallas, TX | $47,500.00 |
| House and lot, Arlington, VA | 292,100.00 |
| Home furnishings and other personal effects | 35,000.00 |
| Savings, Wright Patman Federal Credit Union | 51.69 |
| Checking account, Wright Patman Federal Credit Union | 1,087.05 |
| Retirement, U.S. Congress | 38,031.81 |
| Thrift savings plan | 11,922.70 |
| IRA's (Martin and Valerie) | 23,656.00 |
| Subtotal | 449,349,25 |
| Automobiles: | |
| 1984 Toyota van | 3,525.00 |
| 1985 Pontiac 600 | 4,550.00 |
| Subtotal | 8,075.00 |
| Stocks and bonds: | |
| 596 Shares Central and Southwest | 23,318.00 |
| 816 Shares Exxon | 40,902.00 |
| 209 Shares General Motors | 8,934.00 |
| 300 Shares Houston Industries | 10,575.00 |
| 281 Shares Eli Lilly | 18,546.00 |
| 1062 Shares Fundamental Investors | 17,204.00 |
| U.S. Savings Bonds | 300.00 |
| 300 Shares Wal-Mart | 13,012.00 |

| Open charge accounts (balance) | 1,000.00 |
| Total liabilities | 244,150.43 |
| Net worth: | |
| Total assets | 620,283.25 |
| Total liabilities | 244,150.43 |
| Total net worth | 376,134.82 |

## TRIBUTE TO LT. COL. LINWARD APPLING

### HON. IKE SKELTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. SKELTON. Mr. Speaker, with great pleasure I rise today to recognize Lt. Col. Linward Appling, a dedicated leader of our Nation's young soldiers and a great American. Lieutenant Colonel Appling is the professor of military science at Lincoln University in Missouri. Because of his efforts, the Lincoln University Blue Tiger Battalion has become one of the top 10 ROTC programs in the Nation. In fact, just recently, the Blue Tigers became regional champions of the ROTC Ranger Challenge.

This was no easy accomplishment. Prior to August 1985, before Lieutenant Colonel Appling came to Lincoln University, the university's ROTC program suffered from weakness in training and academic performance, a situation which the Army was determined to resolve. The Army placed the program on probation and assigned Lieutenant Colonel Appling to the formidable task of revitalizing the program.

He arrived with orders to emphasize "quality rather than quantity," and he did just that. By training cadets according to active duty Army standards and encouraging them to live by the Blue Tiger motto, "training is everything and everything is training," he brought new spirit and skills to the battalion. Lieutenant Colonel Appling also initiated a program for community involvement in his pursuit of the high standards.

Through intense participation in community involvement, the Blue Tiger Battalion achieved the Department of the Army Community Relations Excellence Award. It has won that award for the past 4 years, every year since Lieutenant Colonel Appling took charge. In addition, the Blue Tigers' enthusiastic training brought the title to the Missouri Ranger Challenge in 1988 and 1989. And the Blue Tiger Battalion dominated this year's ROTC Ranger Challenge competition through its teamwork and overall performance.

I am sure my fellow colleagues in the House of Representatives will appreciate the dedicated duty that Lieutenant Colonel Appling has shown his cadets, the Army, and Lincoln University. I hope the Members of the House will join me in wishing Lt. Col. Linward Appling and his Blue Tiger Battalion as they move toward further accomplishments.

## TRIBUTE TO LINDA GOLD: FIRST-PLACE WINNER OF THE CONGRESSIONAL ARTS CAUCUS, AN ARTISTIC DISCOVERY COMPETITION FOR THE 14TH DISTRICT OF TEXAS

### HON. GREG LAUGHLIN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. LAUGHLIN. Mr. Speaker, it is a great privilege for me to say that for the second consecutive year, a student from the 14th District of Texas has received national recognition for an entry in the Artistic Discovery Art competition.

The Congressional Arts Caucus established this competition in order to encourage and recognize the artistic talents of young Americans throughout our great country, and I am proud to have Linda Gold represent the 14th District of Texas this year.

Linda Gold, a senior at Rice High School in Altair, Texas is one of many national winners who will have artwork displayed along the tunnel leading to the United States Capitol. Her talent and the guideance of her instructor, Ms. Sandra Benje, are indicative of the high quality of students and teachers the 14th District has to offer the State of Texas and the United States of America.

## A TRIBUTE TO REV. CANON JOHN T. MOORE, JR.

### HON. BEN GARRIDO BLAZ

OF GUAM

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. BLAZ. Mr. Speaker, I rise today to pay tribute to an outstanding Guam educator, the Reverend Canon John T. Moore, Jr., who is retiring as headmaster of St. John's School in Guam.

Reverend Moore has served more than 19 years as headmaster of St. John's School. Dramatic changes have taken place at the school during his tenure. He provided the vision, direction, and leadership that has made St. John's the most prestigious educational institution in Guam today. He did this not only through his exceptional administrative skills but also with his zealousness in keeping abreast of modern educational practices, concepts, and techniques. He is also solely responsible for upgrading the quality of teachers at the school; instituting policy for certification of teachers; increasing their salaries and benefits; and throughout the years encouraging faculty and staff to develop their own personal growth and development. He is also responsible for instituting a scholarship program which gives financial aid to students on basis of need and academic performance.

A native of Mobile, AL, Father Moore attended Marion Institute and graduated from West Point in 1944. He served as a fighter pilot and flew combat missions for the Air Corps in World War II, and the Air Force during the Korean and Vietnam wars. On

August 1, 1971, Father Moore retired from the Air Force with the rank of colonel. His military decorations include the Legion of Merit with one oakleaf cluster, Distinguished Flying Cross, the Bronze Star with one oakleaf cluster, the Air Medal with 4 oakleaf clusters, the Philippine Republic Presidential Unit Citation, and the United States Presidential Distinguished Unit Citation. He also received 12 foreign service medals during his military career.

In 1973, he was ordained to the priesthood and in 1983, was appointed canon to the bishop-in-charge of the Episcopal Church in Micronesia.

Father Moore has been very active in community affairs. He is a member of the Guam Rotary Club, the Guam Chamber of Commerce and former member of the Guam board of education. As a member of the latter, he fought for and won equitable treatment of private schools with regard to school textbooks.

His steady guidance at St. John's School has proved critical to the school's growth and vitality, going hand-in-hand with his concern for the future of private schools in the territory. That concern bears fruit this year with the expansion of St. John's from a primary to a full-fledged secondary educational institution, with its first high school graduation taking place later this month.

Reverend Moore and his wife, the former Dorothy Worden Ecuyer of New Orleans, LA, have two children: Mrs. John J. Ryneska [Judith], and John, III.

The American Territory of Guam has benefited enormously from the pioneering spirit and vision of this outstanding education missionary, whose devotion to his church and his total commitment to excellence in education have won him great admiration and respect.

Mr. Speaker, one of the yardsticks by which we in leadership positions are measured is the impact we have on those whom we serve. I know I am speaking for those who know and have been associated with Father Moore when I say that we are all better for having known him.

On behalf of a grateful community I bid him adios and Si Yu'os Maase.

## A TRIBUTE TO CHRISTINE A. MAGUIRE

### HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MACHTLEY. Mr. Speaker, it is my distinct pleasure to congratulate Christine A. Maguire, of Woonsocket, RI, this year's recipient of the Congressman Ronald K. Machtley Academic and Leadership Excellence Award for Woonsocket High School, in Woonsocket, RI.

This award is presented to the student, chosen by Woonsocket High School, who demonstrates a mature blend of academic achievement, community involvement, and leadership qualities.

Christine has clearly met these criteria while at Woonsocket High School. This year, Christine is receiving the Principal's Leadership Award. She has been a member of the school Honor Society for 3 years and is a candidate for the Rhode Island Honor Society. She has been the vice president for her class the past 2 years and has participated on the student council. During her junior year, Christine was the secretary for Students Against Drunk Driving [SADD] and a class marshall. Among Christine's other extracurricular activities are the float committee, school newspaper, and yearbook activities editor. Christine is also an outstanding athlete and plays volleyball and tennis for Woonsocket High School.

I commend Christine for her outstanding achievements and wish her all the best in her future endeavors.

## A TRIBUTE TO LARYN ELIZABETH IVY

### HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MACHTLEY. Mr. Speaker, it is my distinct pleasure to congratulate Laryn Elizabeth Ivy, of Middletown, RI, this year's recipient of the Congressman Ronald K. Machtley Academic and Leadership Excellence Award for Middletown High School, in Middletown, RI.

This award is presented to the student, chosen by Middletown High School, who demonstrates a mature blend of academic achievement, community involvement, and leadership qualities.

Laryn has certainly met these criteria while attending Middletown High School. She is a member of the National Honor Society. Laryn has also won several awards while at Middletown. Among these awards are the American Legion Oratorical Contest and the Future Problem Solving Writing Contest where she placed second in Rhode Island. In addition, Laryn was the Middletown High School ambassador for Rhode Island for the Hugh O'Brian Youth Foundation. Laryn has also participated in Project Insight, Project Live Arts, and Powderpuff football.

I commend Laryn for her outstanding achievements and wish her all the best in her future endeavors.

## A TRIBUTE TO JEFFREY STRUMAR

### HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MACHTLEY. Mr. Speaker, it is my distinct pleasure to congratulate Jeffrey Strumar, of North Providence, RI, this year's recipient of the Congressman Ronald K. Machtley Academic and Leadership Excellence Award for North Providence High School, in North Providence, RI.

This award is presented to the student, chosen by North Providence High School, who demonstrates a mature blend of academic achievement, community involvement, and leadership qualities.

Jeffrey has certainly met these criteria while at North Providence High School. He is graduating as the No. 1 student in his class with a 94 grade point average. Jeffrey has also been selected to the National Honor Society. He has participated in an exchange program between the United States and Japan. In addition, Jeffrey is a volunteer for the March of Dimes.

I commend Jeffrey for his outstanding achievements and wish him all the best in his future endeavors.

## A TRIBUTE TO MAISI ANNE PEARSON

### HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MACHTLEY. Mr. Speaker, it is my distinct pleasure to congratulate Maisi Anne Pearson, of Newport, RI, this year's recipient of the Congressman Ronald K. Machtley Academic and Leadership Excellence Award for Rogers High School, in Newport, RI.

This award is presented to the student, chosen by Rogers High School, who demonstrates a mature blend of academic achievement, community involvement, and leadership qualities.

Maisi has certainly met these criteria while attending Rogers. She is a member of both the Rhode Island and the National Honor Societies and has made the honor roll at Rogers. She has received the Brown University Alumni Book Award for English and has also earned a Bronze Medal in the Rhode Islands College Academic Decathlon. Maisi's extracurricular activities are also equally impressive. She is editor of the red and black literary magazine at Rogers and is a member of Amnesty International. In addition, she has participated in Project Live Arts, Close-Up Program in Washington, DC, and the Model United Nations Assembly in The Hague, Netherlands.

I comment Maisi for her outstanding achievements and wish her all the best in her future endeavors.

## A TRIBUTE TO SUZANNE CABRAL

### HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MACHTLEY. Mr. Speaker, it is my distinct pleasure to congratulate Suzanne Cabral, of Esmond, RI, this year's recipient of the Congressman Ronald K. Machtley Academic and Leadership Excellence Award for Smithfield High School, in Smithfield, RI.

This award is presented to the student, chosen by Smithfield High School, who demonstrates a mature blend of academic achievement, community involvement, and leadership qualities.

Suzanne has certainly met these criteria while at Smithfield High School. Suzanne has participated on the student council for 4 years and is currently the student council president. She has been a bandmember for 4 years as well. Among her other extracurricular activities

are the cheerleader squad, the Little Rhody Swim Team, softball, and track. In addition, Suzanne has been on the social committee and has participated in the Mentor Program.

I commend Suzanne for her outstanding achievements and wish her all the best in her future endeavors.

## A TRIBUTE TO LISA A. SCULLIN

### HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MACHTLEY. Mr. Speaker, it is my distinct pleasure to congratulate Lisa A. Scullin, of North Smithfield, RI, this year's recipient of the Congressman Ronald K. Machtley Academic and Leadership Excellence Award for North Smithfield Junior-Senior High School, in North Smithfield, RI.

This award is presented to the student, chosen by North Smithfield Junior-Senior High School, who demonstrates a mature blend of academic achievement, community involvement, and leadership qualities.

Lisa has clearly met these criteria while at North Smithfield. She is a member of the National Honor Society and has made the honor roll all 4 years. Lisa's extracurricular activities are equally impressive. She has participated on the student council for 4 years. Lisa has been a cheerleader for the football and hockey teams for 4 years and was the captain of both squads this year. In addition, Lisa is a member of the Lettermen's Club, the math team, and the yearbook's senior and financial committees. She is also the secretary for the French Club of which she was been a member for 3 years.

Besides her outstanding work at school, Lisa is an exceptional citizen in her community. She is a yearly canvasser for the Leukemia Society and the North Smithfield Ambulance and Cancer Drives. She also performs volunteer work for Save the Bay.

I commend Lisa for her outstanding achievements and wish her all the best in her future endeavors.

## A TRIBUTE TO LINDA BOTELHO

### HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MACHTLEY. Mr. Speaker, it is my distinct pleasure to congratulate Linda Botelho, of Tiverton, RI, this year's recipient of the Congressman Ronald K. Machtley Academic and Leadership Excellence Award for Tiverton High School, in Tiverton, RI.

This award to presented to the student, chosen by Tiverton High School, who demonstrates a mature blend of academic achievement, community involvement, and leadership qualities.

Linda has clearly met these criteria while at Tiverton High School. Linda is a straight "A" student and is graduating fifth in her class. She is a member of the National Honor Society as well. In addition, Linda is a member of the drama club, school newspaper, school yearbook, and school band. Linda has received several medals for solo and ensemble performances as a bandmember and is a member of the all-State band. Linda has also received the Governor's Inauguration Citation and an award for her foreign language essay.

I commend Linda for her outstanding achievements and wish her all the best in her future endeavors.

## A TRIBUTE TO KATHLEEN C. WEYMAN

### HON. RONALD K. MACHTLEY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MACHTLEY. Mr. Speaker, it is my distinct pleasure to congratulate Kathleen C. Weyman, of Barrington, RI, this year's recipient of the Congressman Ronald K. Machtley Academic and Leadership Excellence Award for Barrington High School, in Barrington, RI.

This award is presented to the student, chosen by Barrington High School, who demonstrates a mature blend of academic achievement, community involvement, and leadership qualities.

Kathleen has certainly met these criteria while at Barrington High School. An honor roll student for 4 years, Kathleen has been selected as a member of the National Honor Society and the Rhode Island Honor Society. In addition, Kathleen has been named a commended student in the 1990 National Merit Program and has received the Brown University Book Award.

Kathleen's extracurricular achievements are also equally impressive. She is the president of the student council and the Modern Music Masters Club. Kathleen is also a member of the choral ensemble and the Peer Education Group. Kathleen has been a member of the Women's Athletic Club for 3 years and played soccer for Barrington. Kathleen is also a volunteer at Women and Infant's Hospital and has participated in the Brown University Summer Program.

I commend Kathleen for her outstanding achievements and wish her all the best in her future endeavors.

## A TRIBUTE TO MR. BIETO BESELER

### HON. CHARLES WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. WILSON. Mr. Speaker, it gives me great pleasure to join with many of my friends and neighbors to pay tribute to a dedicated civic and community leader, Mr. Bieto Beseler of Nacogdoches, TX.

Bieto is a man of enormous talent, energy, and inspiration. It is possible that if I had not had the pleasure of getting to know him and work with him over 20 years ago that I would not be standing before you today, because Bieto ran the advertising agency that I employed for one of my early campaigns for the Texas Legislature. Whether or not our friends in Nacogdoches consider this to be one of Bieto's successes in life, it is one I share with him and for which I will always be grateful.

May 30, 1990, has been proclaimed "Bieto Beseler Day" by the Nacogdoches Rotary Club. In looking over the pages of biographical information I have for Bieto, it seems impossible that just one day can encompass the pride and gratitude his community feels for him.

This is a man of the caliber that we all strive to be. He is filled with kindness, spirit, eternal youth, and great integrity. He has the right kind of stubborn streak—flexible enough for compromise but strong enough to follow through until the job is done.

He has served Nacogdoches as a city commissioner, mayor, active Rotary Club member, Mason, and business leader. At the age of 87 he will be relinquishing his job as secretary-treasurer for the Nacogdoches Rotary Club this year and, I expect, devoting the extra time this gives him to new pursuits. Perhaps he will return to his first vocation—music—and revive the "Night Prowlers" orchestra of his high school days.

Whatever the future holds for Bieto, he and his wife Faye have built a legacy of good work that has helped make their part of the world a better place. That is the kind of bottom line we should all try for in our lives, because in the long run it's the only one that counts.

## CELEBRATING NATIONAL POLICE WEEK

### HON. MATTHEW G. MARTINEZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. MARTINEZ. Mr. Speaker, in this day and age real role models are scarce. Today, I rise to salute a group of people that are truly heroes and role models for all of us. Police officers remain the pride and joy of our community. These dedicated men and women exist as the front line force protecting our neighborhoods, schools, homes, and against elements that seek to disrupt our way of life. Personally, one of my proudest moments was when my son entered the Monterey Park Police Reserves. This week we salute the underrecognized police officers from across the Nation that put their lives on the line each and every day to safeguard our safety and freedom. National Police Officers Week celebrates these true heroes and role models.

The National Law Enforcement Officers Memorial, which is being built over at Judiciary Square, will serve as testimony, not only as an expression of our gratitude to the law enforcement community, but also as a memorial to those who gave their lives in service to their fellow man. It is a small tribute to those who walk the beat every day. Too often we take our local cop for granted.

We are all painfully aware of the soaring number of violent crimes and the number of felonies involving illicit drugs. In the past 5 years, the number of violent crimes increased by more than 20 percent. Street cops often face drug dealers and violent felons armed with automatic weapons and backed by so-

phisticated international organizations. Yet, due to budgetary pressures and lack of qualified applicants, most large cities face a crisis in police recruiting. We in Congress exacerbate the situation by passing more stringent laws and demanding harsher penalties, impervious to the reality that these laws cannot be adequately enforced. Due to personnel shortages many complaints and less serious cases are not answered in a timely fashion. In city after city, the ration of police officers to violent crimes dramatically plunged over the years, from 3 or 4 to 1 in favor of the police a few years ago to 3 or 4 in favor of the criminals. Low pay and high stress further dissuade highly motivated, college educated applicants from entering law enforcement. Thus, last year, over 80 percent of police chiefs in urban areas report a severe shortage of applicants.

To address this crisis I authored title VI section 602 of the Equity and Excellence in Education Implementation Act (H.R. 4379). This measure will improve the quality of police forces by encouraging college-educated individuals to pursue a career in law enforcement while enhancing the educational levels—and hence the quality—of America's police forces. Minority and disadvantaged youths would also be given the opportunity to obtain a college education and enter a satisfying and worthwhile career field.

The provision simply authorizes the Government to forgive loans to college students who commit to a career in local law enforcement. Once graduated, they would enter a local police force for a 4-year commitment. The program would put more and better qualified cops on the street—where they are most needed while providing a great assistance to those youths selected to the program. This concept builds on the precedent of student loan forgiveness for public service in the Higher Education Act for some categories of teachers, the armed services, and Peace Corps/Visa volunteers.

By supporting this provision, Democrats would prove that we are tough on crime and drugs while seeking to expand the opportunity for disadvantaged youngsters to pursue a higher education and serve the public at the same time. In our effort to enact tough crime laws we forgot the cops. Now is our chance to rectify the situation. I strongly urge my colleagues to celebrate National Police Week by supporting my educational program for law enforcement.

## FIFTY YEARS OF SERVICE

### HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. LAGOMARSINO. Mr. Speaker, I rise to commend and take note of an important event in the community of Santa Maria, CA. On Tuesday, May 22, citizens will gather to pay tribute to the founders and supporters of the Marian Medical Center.

Much of the credit for establishing Marian Medical Center should go to the Sisters of Saint Francis of Penance and Christian Charity, who opened St. Mary's School in Santa Maria in September 1939.

Msgr. Thomas V. Murphy, pastor of St. Mary of the Assumption Catholic Church, knew that the citizens of Santa Maria wanted their own hospital. Consequently, he contacted the provincial for the order, and requested that the sisters commit to the establishment of a hospital in Santa Maria. The sisters made that commitment.

In 1940, the sisters opened Our Lady of Perpetual Help Hospital in Santa Maria. The hospital soon became known as Sisters' Hospital.

As the area grew, the hospital expanded to meet the increasing needs of the citizenry. By the 1960's, it was clear that the numbers of patients served, as well as the services themselves, had outgrown the confines of Sisters' Hospital. Plans were made for a larger site.

In 1967, Marian Hospital opened its doors. The modern, new hospital was made possible by the loyal support and generosity of many friends and benefactors, among them Capt. Allan G. Hancock and his wife, Marian Hancock, who donated the land for the new building.

Marian Hospital became Marian Medical Center in 1982 when the major addition of the south side of the four-story hospital was completed and ready for use.

Today, Marian Medical Center is a full service, state-of-the-art medical center, complete with a new extended care center and children's day care center.

Mr. Speaker, it is my honor and pleasure to extend to the citizens of Santa Maria, on behalf of the U.S. House of Representatives, our sincere congratulations and best wishes as they commemorate 50 years of service to the community, and our best wishes for the future.

## THE BUDGET RESOLUTION

### HON. C. THOMAS McMILLEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. McMILLEN of Maryland. Mr. Speaker, today I rise to make a few remarks regarding the budget resolution passed by the House of Representatives on May 1, 1990. While I voted in support of this measure, I was gravely concerned about certain provisions in the budget resolution.

I particular, I have some reservations regarding the practicality of the proposed total cut in the defense budget for fiscal year 1991.

None of us can help but be amazed by the dramatic political reforms that have swept through Eastern Europe and the Soviet Union in recent months. All over the Eastern bloc, the people are rejecting communism and demanding social reforms and a voice in their governments.

The economic reforms in these countries provide potential new markets for U.S. goods, and offer an opportunity for the development of free political and economic institutions. In this way, then, United States assistance in Eastern Europe is in our best interest.

Presently, about 60 percent—over $180 billion—of our defense budget is spent directly, or indirectly, to protect Europe against an attack by the Soviet Union and the Warsaw Pact. In light of the new political developments in these countries, we now have an historic opportunity to significantly reduce our defense spending without endangering our national security—and in turn, reduce our own budget deficit.

At the same time, we need to keep a balanced view with respect to our interests and needs at home. The challenge to us in Congress is to take advantage of this opportunity to lower defense costs, ensure that our national security is protected, and find the funds required to support vital programs for our own people.

As we begin consideration of reductions in our defense outlays, we must be careful not to haphazardly cut programs without a well thought-out strategic plan. We must remember that as swiftly as the pendulum has shifted toward greater freedom in East Europe and the prospects for a lasting peace between the superpowers has grown, just as quickly could the pendulum swing back toward political situation characterized by animosity and mistrust. While I am convinced that the nation's of Eastern Europe are on a irreversible path toward democracy and economic freedom, this road may be litered with periods of oppression.

## U.S. NEWS AND WORLD REPORT RANKS U.A.B. AMONG AMERICA'S TOP HOSPITALS

### HON. BEN ERDREICH

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. ERDREICH. Mr. Speaker, we in Birmingham have long known that our U.A.B. Medical Center is tops, and once again, that fact has been acknowledged by a national publication. In the April 30, 1990 edition of U.S. News and World Report, our medical center was ranked among America's top hospitals, and was specifically ranked 1 of the top 12 hospitals providing cardiac care in the Nation.

U.S. News and World Report, with the assistance of Georgetown University's Department of Community and Family Medicine, identified 1,485 doctors as being leaders in their fields or as having achieved high professional or academic stature. Four hundred of those doctors were contacted and asked to list, in no particular order, the 10 leading hospitals nationwise in his or her own specialty. The doctors surveyed named a total of 277 hospitals. According to the statistical rules, to be named, a hospital had to have been cited by at least five physicians in that specialty, and the number of doctors who cited it must have accounted for at least 20 percent of the number surveyed in the specialty.

While the survey results did not imply that other hospitals cannot deliver excellent care, as U.S. News and World Report pointed out, they should help citizens find the very best care possible if serious illness strikes.

I am sure my colleagues will forgive me if I boast just a bit about the fact that U.A.B. Medical Center, in my own home district, is

one of those hospitals that offers the very best care possible.

I guess a lot of us in Jefferson County, AL, often take it for granted that our U.A.B. Medical Center is the best. And that's why, every now and then, it makes you feel mighty proud when other people confirm something that we have known all along.

## SYLVIA BROWN AND FRIENDS OF THE VIRGIN ISLANDS AROUND THE COUNTRY SHOW THEIR SUPPORT

### HON. RON de LUGO

OF THE VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. DE LUGO. Mr. Speaker, I come from a very small community, the U.S. Virgin Islands, but we enjoy a very big extended family throughout the United States.

I was reminded of that fact as I reviewed a petition signed by hundreds of Virgin Islanders and friends of the Virgin Islands who are concerned about the reconstruction of the Virgin Islands public schools after the devastation created by Hurricane Hugo. We are still living with that devastation and working pell mell to get our schools rebuilt by September so we are back in good shape for the next school year. The U.S. Department of Education, after considerable discussion, finally did come through. It conducted an accelerated review of the Virgin Islands grant application, made a significant grant of $43 million under its disaster aid program to make the repair and reconstruction possible, and waived the unusual 25-percent local matching requirement.

One special group has formed in the State of Kentucky to help us in the overwhelming job of reconstruction. Endeavors to Reinvest in Virgin Islands Education, under the able leadership of Sylvia J. Brown, has sprung up to offer national support to our reconstruction. ERVIE, as it is known, has circulated a petition throughout many States and hundreds of people have lent their name to our cause—rebuilding our schools and providing the best education possible to our students. They have forwarded their petition to President Bush, Education Secretary Cavazos, Virgin Islands Governor Farrelly, Virgin Islands Education Commissioner Creque, and president of the Virgin Islands Legislature, Bent Lawaetz, as well as myself.

Mr. Speaker, this sort of national concern is most welcome. I want to commend Sylvia Brown and her colleagues for their shared concern and determination to help their home in the U.S. Virgin Islands. It is heartening to see that Virgin Islanders who move to the mainland retain their strong commitment to the welfare of their home islands. Their efforts are a wonderful reminder that the Virgin Islands has many friends throughout this great country.

## TRIBUTE TO THE CLEVELAND ARCADE

### HON. EDWARD F. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. FEIGHAN. Mr. Speaker, I rise today to pay tribute to one of northeast Ohio's most outstanding landmarks—the Cleveland Arcade. On Friday, May 31, the Arcade celebrates its 100th anniversary as Clevelands premier building complex.

As the first cornerstone of the Arcade was being laid on May 31, 1888, Cleveland was making its mark as one of America's great industrial centers. Some visionaries for Cleveland's future saw an opportunity to create a state-of-the-art architectural structure, more elaborate than any other in the United States. Their idea was to construct an enclosed passageway, five stories high, that included a collection of shops and businesses. This forerunner to the shopping mall connected superior Street and Euclid Avenue, two of downtown Cleveland's main thoroughfares.

The Arcade was designed by the revolutionary architect John Eisenmann. His plans detailed a very unconventional design and drew great skepticism. Mr. Eisenmann designed a building of arches that used a system of trusses rather than the commonly used crossbracing—an unheard-of concept. Contractor after contractor refused to construct this building, until finally the Detroit Bridge Co. came forward and agreed to make this vision a reality.

On May 30, 1890, the work was finished. The Arcade was heralded as the largest and tallest building ever attempted in the United States. This magnificent building has provided generation upon generation of Clevelanders with a place to shop, to browse, to eat, and to get shelter from foul weather.

While the Arcade is no longer the tallest or largest building in Cleveland, it is still a very important fixture. Its brilliance and beauty has enabled it to stand the test of time. Today's Arcade, under the fine direction of Harvey Oppmann and Oppmann Properties, remains a place that every Clevelander enjoys and admires. I would like to congratulate the Arcade on its 100th anniversary and give my best wishes for another century of success.

## COINAGE REFORM

### HON. JIM KOLBE

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. KOLBE. Mr. Speaker, with the continuing success of Canada's new gold-colored dollar coin replacing its dollar note, and with House hearings on a new coin dollar for the United States scheduled for tomorrow, I would like to bring to the attention of this body the comments of Mr. David L. Ganz.

Mr. Ganz is the legislative council of the American Numismatist Association, the general counsel of the Professional Numismatists Guild, and a member of the Industry Council for Tangible Assets. He is regarded as perhaps the leading authority on coinage law in this country. His thoughts on coinage reform found in the May 16, 1990 issue of Coin World offer a well researched, fresh perspective of the $1 coin debate. I submit this article for the RECORD:

DOLLAR COIN CONTROVERSY BREWING ON FRONT BURNER—DECADE OF DISCUSSION AT END?

(By David L. Ganz)

Reissue of a mini-dollar and banning of circulating the dollar note brings to the forefront a controversy that has brewed for a decade, ever since the U.S. Treasury Department proposed it as part of the Susan B. Anthony dollar marketing plan in September 1979.

But it would hardly be the first time that a denomination of currency—or even coin—was retired by Congress to make way for progress as the nation's lawmakers defined it at that particular moment.

Advocated by The Coin Coalition, the new small-sized dollar would not bear the Anthony portrait, and would be issued with the intent of displacing the paper dollar that has circulated with the current familiar design and size since 1929.

Displacement of the dollar note by statute would be the essential difference between the 1990 strategy proposed to Congress and the manner in which the Anthony dollar was implemented a decade ago.

With congressional hearings on the new small-size dollar scheduled for mid-spring, the inevitable focus will be on the very issue that was divisive in 1979; whether the American people would tolerate elimination of their old friend, the dollar note.

Fortunately for serious numismatists, the proposal of The Coin Coalition does not prevent outright elimination of the $1 currency note in all forms; sheets would still be produced, as now, and offered to collectors.

But for the public at large, the proposal's sponsors believe that its only sure way of success is to eliminate competition and do what the Treasury Department itself proposed in 1979: "effect a displacement of $1 bills."

COLLECTOR SUPPORT

Coin collectors ought to be particularly interested in the proposal, and ought to be enthusiastic endorsers and supporters for the new mini-dollar coin, even if the price is elimination of the $1 paper note.

Reason one is that it will close off, with finality, the Anthony dollar series and create a new dollar coin in the process. Result: more interest in dollars ranging from Morgans to those of a century later.

Such a change will inevitably catch the attention of the regular media as well, which will likely feature numerous stories about coins and coin collectors, as well as paper money (and its collectors) together with the effect of money on society as a whole.

What that translates to is an opportunity to bring fresh blood into a group that desperately needs new members. Just as collectors of silver certificates (during their withdrawal from circulation in the late 1960s) attracted some to become paper money collectors, this entire program could serve to attract new blood to see coins and paper money in a historical, collectible context.

No one likes to kill off a coin, or a paper money issue, but it has certainly happened many times before. The half cent was eliminated in 1857, the 2- and 3-cent coins with the Coinage Act of 1873, and the 20-cent coins a very short life of just three years.

Fractional currency (paper currency of denominations less than $1) had a short life in several different series, denominations above $100 haven't been printed by the Bureau of Engraving and Printing since 1945, and the economy of the country has not been especially damaged by all this.

Visitors to coin bourse areas know that $1,000 notes and the occasional $5,000 note are still seen, though not used because of the modest premiums for their numismatic value. This would likely happen to $1 notes if Treasury were to withdraw them from regular issue.

They would remain legal tender, just as all coin and currency issued by the United States is by virtue of the provisions of the Coinage Act of 1965 that declare them to be so. But the paper dollar would, in general, no longer be used.

There is every reason to believe that the virtual elimination of the paper dollar, and the creation of a new mini-dollar, should spur growth in the use of a new coin and that, in fact, new use might occur with the $2 note, whose attractive Declaration of Independence signing scene has been used since 1976.

What all this probably points to is that after a honorable history, the dollar note is about passe—except to syngraphists—and that the future of the numismatic economy is most likely in a mini-dollar coin without the teletale paper counterpart.

As the congressional hearing process moves toward a recommendation, there will be moments of passion, but there would be no sense of loss.

For if numismatics is indeed history, then the dollar note that is retired will continue to be collected, and the new dollar coin will create new collectors, just as generations of numistmatic items have, and will continue to do.

## TO HONOR FATHER TELES

### HON. PETER J. VISCLOSKY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. VISCLOSKY. Mr. Speaker, I wanted to take this opportunity to inform my colleagues in the House of Representatives of a significant milestone that will occur in my congressional district. On May 29, Rev. Dennis Teles will celebrate his 25th anniversary as a Catholic priest.

Father Teles is a product of northwest Indiana, having been born in east Chicago and raised in the region. After graduating from Bishop Noll High School in Hammond, he attended St. Mary's College in Orchard Lake, MI, and Mount St. Mary's Seminary in Norwood, OH.

Father Teles returned to northwest Indiana, after seminary and was ordained as a priest for the diocese of Gary, IN, on May 29, 1965. His career has taken him to every corner of northwest Indiana. He has served as an associate pastor at St. Peter's in LaPorte, Our lady of Perpetual Hope in Hammond, St. Mary's in east Chicago, St. Paul's in Valparaiso, St. Stanislaus in Michigan City and St. Patrick's in Chesterton. The father has also served as the school administrator at St. Mary's in Crown Point and pastor at Sacred Heart in LaPorte. Currently, he serves as the pastor at SS. Peter and Paul in Merrillville.

Those who have come into contact with Father Teles know him to be a man who has dedicated his life to helping his fellow brothers and sisters. He understands the people of northwest Indiana, sharing in their jobs and helping them through their sorrows. In this era of constant change and fluctuation, Father Teles has been a pillar of stability and constancy.

On the anniversary of his ordination, the SS. Peter and Paul Parish will celebrate and honor this servant of the Lord. This festive gathering will allow the people of northwest Indiana to formally thank the father for his efforts to improve the quality of life for all the residents of northwest Indiana. Simply stated, the region is a better place because of the work and deeds of Father Teles. I am sure that my colleagues join me in congratulating Father Teles and wishing him another 25 years of good health and continued service.

## DEDICATION OF KOSCIUSZKO PARK IN HOLYOKE, MA

### HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. CONTE. Mr. Speaker, on Sunday May 20, Holyoke, MA, dedicated a park in the center of the city in the name of Tadeusz Kosciuszko—a hero, a patriot, and a friend to liberty who will never be forgotten.

There could be no better time for this ceremony. After 50 years of oppression, Poland's people have won the freedom for which Kosciuszko fought. And with the help and support of the United States and millions of Polish Americans, they are joining together to build a free and prosperous country. As Poland leads Eastern Europe toward democracy and the world watches every action Lech Walesa and Tadeusz Mazowiecki make, it is fitting that the city of Holyoke honors the Polish officer who helped us win our freedom long ago.

When the news of the American Revolution reached Europe, Tadeusz Kosciuszko was a 30-year-old captain in the Polish Army. He gave up his commission, left his home and family, and sailed from Paris to Philadelphia to defend a nation he had never seen.

It is difficult for us today to understand the dimensions of that sacrifice. Kosciuszko's voyage is a simple trip today; it takes a passport, a visa and a few hours by plane. But in 1776, it was a sea journey that lasted weeks.

Kosciuszko and the other Polish volunteers braved Atlantic storms in leaky wooden boats with canvas sails. They risked shipboard disease and injury, in an age when doctors used leeches to cure illness and saws to amputate broken limbs. Their ships sailed across the cannon of the British Navy, which was all but unchallenged on the sea in those days. And in an era lacking newspapers and radio, they traveled without knowing whether the newly born United States would still exist when they arrived.

Kosciuszko enlisted in the Continental Army and served for 6 years as a colonel of engineers, joining first with General Gates's army at Ticonderoga. His fortifications were a key to the Continental Army's victory over the British General Burgoyne at Saratoga—the battle which secured the United States its crucial military alliance with France.

He fought in the California, commanded transportation in the campaign against General Cornwallis of 1781, and supervised the American artillery at the Battle of Yorktown, when Cornwallis' surrender ended the war and guaranteed our independence. After the war, a special Act of Congress awarded him American citizenship and promoted him to brigadier general.

His selfless and brilliant service in the War of Independence earned him immortality. He ranks at the head of the roll of those who fought side by side with Washington in the cause of liberty—Lafayette, Pulaski, von Steuben, and the others. We owe him a debt we can never repay.

Kosciuszko returned home to a Polish nation under deadly threat. As his country's finest soldier, he was chosen to command the resistance in 1792 against the czar's invading army, and led the nation again in the March rising of 1794. He and his soldiers fought on against terrible odds for over 6 months. In military terms, it was a hopeless war, and superior numbers ended it at Maciejowice. But partition was not defeat; for Poland remained strong and free in the hearts of its people.

That spirit, that love for country and liberty which is so evident every time I visit Poland, sustained the Poles throughout the dark century of partition. In America—nowhere more than western Massachusetts—it helped Polish immigrants make our democracy an economic giant. And it brought Poland through the terror of Nazi occupation and the oppression of communism.

For 50 years, since the day Hitler's troops opened fire on the defenders of the Post Office at Gdansk, Poland's people waited for their freedom. The bravery and determination of Kosciuszko and his soldiers as they fought for Poland's freedom in 1794 echoed in the courage of the Polish officers who rode out on horseback to face the Nazi tanks in the fall of 1939. And it echoed again in the peaceful struggle of the Solidarity workers, who have won back their country's liberty.

We see it in all those who followed Kosciuszko as defenders of freedm and as Polish patriots. It is a long and honorable list.

We recall Ignacz Paderewski, who fulfilled Kosciuszko's dream as the architect of Poland's independence in 1918.

Josef Pilsudski, the victor of the Miracle on the Vistula which preserved that independence.

The martyrs of the Katyn Forest, whose memory will never fade.

Lech Walesa, the union leader and Nobel laureate who is more responsible than anyone else for Eastern Europe's freedom.

And His Holiness John Paul II, whose tireless defense of faith, liberty, and human rights exemplifies Polish idealism and courage.

Last Sunday, we the people of Holyoke remembered the American Revolution of 1776, and the Polish volunteers who fought to preserve it. We honored the Eastern European

revolution of 1989, and the leaders of Solidarity who stand at the head of it. And we dedicated Tadeusz Kosciuszko Park to a hero of two nations whose name is a symbol for bravery, sacrifice, and freedom.

## TIME FOR MEDIGAP REFORM

### HON. RON WYDEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. WYDEN. Mr. Speaker, on May 16, 1990, I introduced the Medigap Fraud and Abuse Prevention Act (H.R. 4840), with the support of my colleagues JOHN DINGELL, HENRY WAXMAN, DOUG WALGREN, ED ROYBAL, JIM SCHEUER, GERRY SIKORSKI, JIM BATES, LOUISE SLAUGHTER, and JOLENE UNSOELD. A similar measure (S. 2640) was introduced in the Senate with the support and leadership of Senators DASCHLE, HEINZ, RIEGLE, PRYOR, ROCKEFELLER, and DURENBERGER.

I particularly want to credit and thank Chairman DINGELL, whose hearings on this issue in 1989 demonstrated the extent of the ongoing abuses and fraud in the Medigap industry. It's been a pleasure to work with him and his fine staff.

More than 20 million seniors spend more than 15 billion dollars annually on Medigap policies and many are being ripped off and cheated out of their limited, fixed incomes. Many of the policies that promise to fill in the gaps in Medicare are worth little more than the paper they're written on. And what's particularly outrageous is that Medigap scams are targeted at the very poor, the very old, and very sick.

The Medigap lobby says that there are only occasional instances of abuse. But our recent hearings have shown otherwise. For example, an elderly couple in California was sold 30 policies over a 2½-year period, with total premiums amounting to over $24,500. This couple's entire monthly income amounted to only $838 per month. An elderly woman in Pennsylvania was pressured into buying 28 policies over a 5-year period, with total premium costs exceeding $58,000. A 72-year-old woman was convinced to purchase 21 Medigap policies over a 2½-year period, at a cost of over $16,900.

Recent surveys clearly indicate that there are more than just occasional incidences of abuse. A 1989 AARP survey found that over 50 percent of Medicaid beneficiaries—those least likely to need or afford it—own a Medigap policy. Even the Health Insurance Association of America's own senior counsel recently admitted that 30 to 40 percent of the elderly own two or more policies—even though their own promotional materials state that people only need one policy.

From coast to coast, hard selling agents generate high commissions for themselves while vulnerable seniors are stuck with policies that are low value and duplicative. With a majority of policies paying out less than 50 cents in benefits on every premium dollar connected, some seniors have a better chance of winning the lottery than getting their money's worth out of their Medigap policy.

The Medigap industry has long been tarnished by a history of fraud and abuse. In 1980, Congress took steps that the Members believed would address the problem. But flagrant abuses persist because the 1980 legislation is more loophole than law. It created a voluntary, unenforceable patchwork of legal mumbo-jumbo under which there has never been a single prosecution.

The bipartisan legislation which has been introduced is designed to clean up the Medigap mess and ensure that Congress finally puts in place a regulatory system that weeds out the sleazy practices in the Medigap market.

The bill establishes new consumer protection standards so that consumers can truly compare policies and make informed choices about the coverage that is best for them. Benefit packages and terminology would be simplified to facilitate comparison and force insurers to compete on the basis of price and service instead of incomprehensible, frivolous variations in benefit packages.

Policies would have to be guaranteed renewable and no longer could low-income seniors on Medicaid be sold Medigap policies with impunity. The legislation moves strongly against the mail order policies often sold by celebrities and closes the loopholes in the current duplication statute.

New standards would restrict sales commissions to reduce the financial incentives now provided to agents to "churn" seniors from old policies to new policies in order to generate higher commissions. The discriminatory practice of medical underwriting would be prohibited, and seniors would only have to meet a maximum one-time 6-month waiting period. In addition, funds would be made available to States desiring to establish counseling programs for Medigap purchasers.

In addition, the legislation establishes a process to bar Medigap rate hikes if a company doesn't meet the loss ratio requirements in the bill. Under the bill, loss ratios would be raised to 70 percent for individual policies and 80 percent for group policies and would set in place, for the first time, a process where Medigap companies would have to get prior approval before they could get a rate hike. Even if a company doesn't request a rate hike, if it fails to meet loss ratio standards, it will be required to make refunds.

The General Accounting Office has reported that Medigap rate hikes this year are averaging 20 percent, and I have heard reports of some as high as 80 percent. Our legislation puts the brakes on some of these rate hikes and it is high time.

There are good companies and good agents. But the good companies and the good agents aren't going to be affected by this bill because they already meet the required standards. The bill is aimed at ridding the market of the sleazy companies and practices which have given the Medigap industry its bad name.

This legislation is strongly supported by the Consumers Union, Families U.S.A., the National Committee to Preserve Social Security and Medicare, the National Council of Senior Citizens, the Older Women's League, the National Insurance Consumers Organization, and the Consumer Federation of America.

I urge my colleagues to help protect seniors against Medigap scams and ripoffs by cosponsoring the Medigap Fraud and Abuse Prevention Act.

## A TRIBUTE TO TOM FLYNN

### HON. JERRY LEWIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. LEWIS of California. Mr. Speaker, I would like to bring to your attention today the many outstanding achievements of Tom Flynn, the outgoing president of the Rancho Cucamonga Chamber of Commerce. In his 1989–90 service to the chamber, Tom has contributed enormously and made a tremendous difference to the people of Rancho Cucamonga.

Tom's accomplishments are many and varied. Following the theme, "Let's Make It Fun," he encouraged the chamber members to enjoy their many hours of volunteer service. Over his term, the business connection committee was extremely active. Two seminars were held, one on business people in the workplace and the second on advertising opportunities available to businesses. The committee also held four mini-seminars dealing with detecting substance abuse, drugs in the workplace, and two important sessions on earthquake preparedness. In addition, the "Check-It Program" was initiated, allowing businesses to take fingerprints as a form of identification from individuals using checks. The committee also sent letters to all new members, welcoming them to the chamber and enclosing complimentary tickets to the monthly networking breakfast.

The chamber's other committees remained very active under Tom Flynn's guidance. The ambassador corps committee worked a great deal with membership retention, surveying members 6 months after joining the chamber and encouraging new member involvement. The economic development committee worked with the city on economic issues, reviewed the National Electrical Code Enforcement on a citywide basis, and acted as liaison with other groups interested in economic development. The government relations committee implemented a Cucamonga and Ontario Chamber trip to Sacramento to discuss community issues with California State legislators. In addition, the committee also reviewed the false alarm ordinance dealing with businesses and residents who had too many false alarms causing fire and rescue personnel to respond without cause. In 1989, the Rancho Cucamonga Chamber also participated in the 50th anniversary celebration of the wine festival, dedicated to the heritage of the area.

Mr. Speaker, the accomplishments of the Rancho Cucamonga Chamber of Commerce under the leadership of Tom Flynn are numerous and certainly worthy of recognition by the House of Representatives. Please join me and my colleagues today in honoring his achievements and in wishing him the very best in the years ahead.

## ASIA-PACIFIC HERITAGE MONTH

### HON. ENI F.H. FALEOMAVAEGA

OF AMERICAN SAMOA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. FALEOMAVAEGA. Mr. Speaker, 2 weeks ago I was privileged to join other Members and colleagues to witness the signing of the official proclamation by our President at a special White House ceremony—to officially recognize the month of May as Asia-Pacific American Heritage Month.

Mr. Speaker, I want to share with our colleagues, the President's remarks and the tribute he made to the contributions of Asia-Pacific Americans to our Nation. Included also is the official proclamation itself that was signed by the President on May 7, 1990.

REMARKS BY THE PRESIDENT DURING SIGNING CEREMONY FOR ASIA-PACIFIC AMERICAN HERITAGE MONTH, MAY 7, 1990

First, let me just express a warm White House welcome to Prime Minister Namaliu from Papua, New Guinea. I just wanted to walk out with him, show him a little hospitality. I look forward, sir, to visiting with you this afternoon.

To Senator Inouye and Phil Gramm, welcome. To Representative Pat Saiki, my old friend, welcome back to the White House. And Norm Mineta, Ben Blaz; of course, Bill Broomfield; and Eni Faleomavaega—(laughter)—Eni, tough on your name, but I got close, didn't I? Okay. And all the Members of Congress who are with us here today, and a special welcome to Frank Horton. My heavens—Frank, because of your diligence in working with so many of your colleagues in the Congress in the support of Jeanne Jew and Ruby Moy, we established Asia-Pacific American Heritage Week.

Now, I'm proud to make one more step and proclaim this May to be the first Asia-Pacific American Heritage Month. (Applause). First, let me acknowledge with respect the gentleman in the Senate who was Frank's cosponsor—someone who has left us—a great man, a great friend who wrote both haiku and lasting legislation with that same graceful fluency. And I, of course, am talking about our beloved friend, the last Senator Spark Matsunaga of Hawaii. I think this ought to be his day. (Applause.)

We also have with us a number of Asian and Pacific American leaders from many walks of life: Virginia Cha, I.M. Pei, Dr. Taylor Wang, Nancy Kwan, Dr. Samuel Lee, Dr. T.D. Lee. And with us, also, some distinguished ambassadors. I also especially want to single out Governor Peter Coleman of American Samoa, and Lieutenant Governor Benjamin Manglona of the Northern Marianna Islands, and every member of their very distinguished delegations. Thank you all for being with us. You've come so far, and your presence is most welcome and deeply appreciated.

As I said, we're here in large measure because of the vision of Frank Horton and Spark Matsunaga. Spark's brilliant career was the culmination of a history that began 146 years ago with the arrival of Nisei, the first Japanese Americans to land on these shores. And now, people from Asia and the Pacific, from dozens of lands across a broad swath of the world that spans from the Middle East to the Philippines have found this new homeland called America.

They represent the whole range of religions—Christian, Muslim, Hindu, Buddhist. They're Arab, Iranian, Indian, Korean, Thai descent. But they will tell you that they are Americans first.

Look at the scope of America's demographic change. Cambodian, Laotian, Vietnamese neighborhoods flourish just across the Potomac River. The minaret of a mosque rises over the skyline of a Dallas suburb. The student body of a school in Southern California is made up almost entirely of Hmong children.

Pacific islanders have enriched the culture and heritage of Orange County. Filipinos have called America home since the first son of the Philippines arrived on these shores in 1763. All of these are subtle signs that Asian and Pacific Americans are our faster-growing minority population. They're changing America, and they are changing America for the better.

Some Asian and Pacific Americans come from families that have lived in America for more than a century. And others have literally just arrived—by boat or jumbo jet. But all can rely on strong communities, networks of family and friends, often with the support of a church, synagogue, mosque or temple.

So whatever their background, all enjoy strong communities—a great sense of community, too. These seven million Americans show us an example of how strong families can instill an abiding respect for the law, tenacity in the endeavor of life and work, and most of all, excellence in education.

Consider this: The latest U.S. Census showed that 75 percent of Asian Americans age 25 and over had at least a high school degree—well above the national average of 66 percent. This nation is incomparably richer because of great scientists like Nobel Price Winner Dr. Yuan Lee and the late An Wang. We are richer because of the talent of Michael Chang and the courage of the late Ellison Onizuka. And we are richer because of Asian Pacific American leaders, many of them with us here today.

Count among them Elaine Chao; number two in this enormous Department of Transportation of ours. Wendy Gramm, Chairman of the Federal Commission on Commodity Future Trading. Cindy Daub, Commissioner of the Copywright Royalty Tribumal; Kyo Jhin, who will be named shortly to a senior position at the Department of Veteran Affairs. My own—I say my own—our own Sichan Siv, on the White House staff, who fled the killing fields and is now doing an outstanding job for the White House in every way; and Julia Chang Bloch, U.S. Ambassador to Nepal, our first Asian-American Ambassador.

As shown by public-spirited leaders like Spark Matsunaga and those here today, Asian Pacific Americans are beginning to excel in the field of politics, just as they have excelled in every other field. While politics is often a second, third, or fourth generation profession, the time is coming when more and more Asian and Pacific Americans will seek office to lead our cities, our states and our nation. As America looks toward the Pacific in the century ahead, we will need your insights and your leadership as never before.

You know that the future of Europe has been very much on my mind of late. I think on the mind of all Americans. But America's destiny is also tied to the Pacific Rim. And I've lived in Asia, and I know that the fate of Asia and the Pacific is no less important to America than the future of Europe.

We are encouraged by the changes in Eastern Europe and by the rise of democracy to our south right here in our own hemisphere. Make no mistake about that. But we will not neglect Asia and the Pacific. (Applause.) My administration is committed to promoting open trade and fighting protectionism, so that the economic ties between the United States and Asia can continue to grow. Like Asian and Pacific Americans in the United States, these nations are a testament to the power of self-initiative. With time, we will create a true community of nations surrounding the Pacific Rim bound together by commerce, a shared commitment to democracy, and an abiding friendship.

And that's why we support the emerging Asian and Pacific democracies. And that's why we advocate peaceful change, why we will remain in solidarity with the aspirations of the peoples of these many lands. And that is why America must stand for more than mere material success. America must remain the beacon of liberty, a light of hope for the troubled, the oppressed, the downtrodden. The people of this land know that it is not enough to let a man purchase what he wants, he must be allowed to say what he believes. He must be allowed to go where he wants. He must be allowed to choose his government. Economic freedom alone will not provide sufficient room for the restlessness of the human spirit.

Let us, as we celebrate the contributions of Asian Pacific Americans to our precious freedoms, remember the restless millions who remain behind. In looking for inspiration they need look no further than the success of their grandchildren, their brothers, sisters and cousins, who found freedom in America.

And so it is in your honor that I sign this measure proclaiming this to be Asian Pacific American Heritage Month.

Thank you all. May God bless you. And may God bless the United States of America. [Applause.]

---

ASIAN/PACIFIC AMERICAN HERITAGE MONTH, 1990

(By the President of the United States of America)

A PROCLAMATION

The history of Asian and Pacific Americans in the United States is a long and honorable one. Determined to uphold America's promise of freedom and opportunity for all, generations of Asian and Pacific men and women have helped this Nation to grow and prosper. A century and a half ago, many of these Americans contributed to the economic development of the United States through their labors on the plantations of Hawaii and in the mines of California. The important role played by many Asian and Pacific Americans in the building of the first transcontinental railroad is well documented; their determination and hard work are well known. With diligent effort and abiding faith in the American Dream, Asian and Pacific Americans have steadily advanced, earning ever greater respect and admiration from their fellow citizens.

Today, men and women of Asian and Pacific ancestry continue to make many important contributions to our Nation. In science, commerce, education, and the arts, Asian and Pacific Americans are not only sharing with us their unique talents and ideas, but also setting high standards of achievement. For example, through their commitment to academic excellence and their superlative accomplishments in many areas of study, Asian and Pacific American

students have provided a model for the Nation.

Time and again throughout our Nation's history, Asian and Pacific Americans have demonstrated their dedication to ideals upon which the United States is founded. In times of war and in times of peace, they have faithfully defended the principles of freedom and representative government. They have worked for the advancement of human rights and democratic ideals around the world, and they have promoted greater appreciation for our system of self-government here at home.

This month, all Americans join with our neighbors of Asian and Pacific descent as they celebrate the unique customs and traditions of their ancestral homelands. These customs and traditions have deeply enriched the wonderful heritage we share as a Nation.

Now, therefore, I, George Bush, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim the month of May 1990 as Asian/Pacific American Heritage Month. I call upon the people of the United States to observe this month with appropriate programs, ceremonies, and activities.

In witness whereof, I have hereunto set my hand this seventh day of May, in the year of our Lord nineteen hundred and ninety, and of the Independence of the United States of America the two hundred and fourteenth.

GEORGE BUSH.

## THE 100TH ANNIVERSARY OF THE CLEVELAND ARCADE

### HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Ms. OAKAR. Mr. Speaker, I am pleased to note the birthday this week of a very special honoree. The architectural masterpiece, the Arcade in my hometown of Cleveland, OH, is 100 years old this Memorial Day weekend.

The Arcade, which has hosted Presidents and Presidential candidates, office parties, and proms, opened its doors to a wondering public on May 26, 1890. It was then, and is now, a spectacular engineering feat that linked two nine-story office buildings with a skylighted five-story gallery of retail shops and offices.

In 1975, the Arcade became the first Cleveland building to be registered on the National Register of Historic Buildings. Its modern day success, following several years of neglect, is due, in no small measure, to the passion and vision of its present owner, Harvey Oppman.

Mr. Speaker, I ask permission to include in my remarks a brief, but colorful, history of the Arcade which appeared recently in my hometown newspaper, the Plain Dealer.

THE ARCADE TURNS 100, STRUCTURE REMAINS ARCHITECTURAL JEWEL

(By Wilma Salisbury)

As the Arcade's owner, Harvey Oppmann, grooms the building for its 100th birthday celebration this week, the structure remains unrivaled as one of Cleveland's premier landmarks and one of the finest buildings of its type in the world.

"I take great pride in the building," said Oppmann. "The Arcade is an architectural gem. It's been here 100 years. It's going to be here another 100 years, and people will still marvel at it."

The structure—with its spectacular interior space enclosed within monumental facades on two major downtown streets, Euclid and Superior Aves.—was recognized as an architectural and engineering marvel when it opened on Memorial Day 1890. It has undergone alterations and suffered from periods of neglect, but structural changes, interior additions and inconsistent maintenance have not harmed the integrity of the superb architecture.

What makes the Arcade great is its sensitive blending of innovative 19th-century engineering, dramatic Victorian architecture and elegant decorative detail.

Designed by Cleveland architect George H. Smith and Case Institute of Technology architect-engineer John Eisenmann, the $867,000 project was built for visionary entrepreneurs Stephen V. Harkness, Charles Brush, Louis H. Severance and John D. Rockefeller. The Arcade, a pioneering mixed-used private developoment, links two nine-story office buildings—one facing Superior Ave., the other facing Euclid Ave.—with a skylighted five-story gallery of retail shops and offices.

From Superior Ave., the Arcade looks like a typical late 19th-century office building. A great Romanesque arch rising from the sidewalk gives the entrance a cave-like image. Red sandstone and pressed brick walls, now blackened with age, express a ruggest monumentality. Elaborate carved decorations add a Byzantine accent. Everything about the facade says power, strength, stability and endurance.

The heaviness of the exterior gives way to a light-filled space that soars 100 feet from mosaic marble floors to an arched skylight. Thin columns support the webbed glass, iron and steel roof. Iron beams at roof level terminate in gilded cast-iron griffin heads, whose mouths once held lightbulbs.

Ornamental streetlamps march rhythmically along lacy balcony railings, Storefronts gleam with polished brass and gilded metal. A grand marble staircase sweeps up to the Euclid Ave. entrance.

The Euclid entrance to the Arcade originally was designed much like the monumental Superior Ave. facade. The Euclid arch was narrower, though, and it rested on stone piers.

In 1939, the rounded sandstone arch was replaced with a polished granite Art Moderne front that exemplified the taste of the times and identified the Euclid entrance as the building's front door. Though the new entrance lacks the grandeur of the old, it does not destroy the dramatic sequence of spaces leading into the 233-foot-long shopping street.

Pedestrians entering from Euclid Ave. pass through a lobby with a coffered ceiling, then turn a corner into a rotunda. There, magnificently unfolding before the eye is the entire shopping street in all its architectural splendor.

When the Arcade was conceived in the late 1880s, the architects were faced with the challenge of connecting two office buildings on two city streets that do not run parallel. In addition, Euclid Ave. is 12 feet higher than Superior Ave.

Their solution was to build two shopping streets of equal importance and to construct a grand staircase and an artfully designed rotunda at one end of the spacious arcade.

The engineering that Eisenman devised was incredibly daring for its day. The building stands on cast-iron columns and spread footings embedded in sandy soil and quicksand. The spectacular roof is supported by lean columns and a revolutionary system of trusses that eliminate the need for traditional tie rods. So radical was the roof design that no Cleveland company bid on it, and the job went to a Detroit bridge-building concern.

A spectacular engineering feat in an age of brilliant new technology, the skylighted arcade relates to the grand industrial architecture of the Crystal Palace in London and the Paris Exhibition of 1878. Cleveland architect Robert Gaede describes the Arcade as "an exciting demonstration of the vigor and virility of steel, a breathtaking indulgence in the structural exhibitionism of the time."

The Arcade initiated a type of pedestrian passageway that allowed people to move comfortably from one street to another, protected from weather and automobiles. Cleveland architect Peter van Dijk calls the arcade "a unique urban design device that is so civilized, convenient and delightful in a northern city."

The Arcade was followed by the smaller Euclid and Colonial arcades as well as the superb public passageways in Terminal Tower, Huntington Bank, the Bulkley Building and other downtown banks and office buildings. Unfortunately, Cleveland's civilized arcade tradition was abandoned in the Erieview Plan drafted by I.M. Pei in 1960.

But the open plazas he proposed did not suit the city's climate, and the arcade as a desirable public amenity is once again becoming an integral part of new and renovated downtown buildings.

While the concept of a protected pedestrian street was new to Cleveland a century ago, the idea of constructing a building with a hole in the middle was commonplace. Before the advent of powerful electric lighting, large buildings typically were constructed around light wells that allowed natural light to penetrate into interior spaces.

The Perry-Payne Building in the Warehouse District was renowned for its glass-roofed light court. Society Bank on Public Square was designed with a nine-story light well topped with a vaulted skylight. In recent years, old light wells at Stouffer Tower City Plaza Hotel and the New England Life Insurance Building have been covered with skylights and transformed into pleasant contemporary atriums.

When van Dijk first stepped inside the overwhelming interior of the Arcade in 1961, he expressed his amazement to a resident barber, who replied, "They don't build 'em like this anymore—all that wasted space."

With the development of bright interior lighting, rooms in the middle of large buildings no longer needed windows, and the light well became a thing of the past. To make more efficient use of the "wasted" space, light wells were frequently filled in with office floors.

When Oppmann purchased the Arcade in 1978, a developer had made a competitive bid to tear down the historic building and put up something new that would make more lucrative use of the valuable downtown real estate.

By that time, however, buildings with holes in the middle had come back into fashion, thanks to Atlanta architect John Portman and his spectacular atrium designs

for urban luxury hotels. Today, the skylighted atrium has become an expected amenity in modern hotels and speculative office buildings.

Although the quality of the Arcade should have put Cleveland on the international architectual map 100 years ago, the unique building did not receive much local publicity at its opening because the Garfield Memorial in Lakeside Cemetery was dedicated the same day.

Over the next 50 years, however, the Arcade developed into the pride of the city. The downtown showplace to see and be seen in, the spacious building was the site of band concerts, political conventions and other public gatherings.

The owners upgraded the building piece by piece with the addition of a center bridge at the Euclid Ave. level, a graceful center staircase at the Superior Ave. entrance, electric elevators, brass storefronts in place of the original tin trim, gilded friezes above store windows and new lighting fixtures that replaced palm-frond electrogasoliers. Eisenmann designed some of the additions.

The new Euclid Ave. entrance was the work of Cleveland architects Walker and Weeks. Except for the defacing entrance, the new architectural and decorative elements were designed with sensitivity to the original concept.

Improvements continued to be made until the mid-1940s. After that, the building went into a period of decline. Because of a lack of maintenance, brass storefronts tarnished, and painted walls peeled. Leaks in the skylight were covered with thick black tar. Missing mosaic chips left dangerous holes in the cracked marble floors. Along the shopping street, storefronts in prime locations were converted to medical offices and repair shops. In the office towers, many spaces were abandoned.

In the 1950s and '60s, Cleveland was more interested in urban renewal than in historic preservation. Slow to recognize the value of its fine architectural heritage, the city allowed the destruction of irreplaceable buildings, and the Arcade was not immune to threats of demolition.

The tide began to turn in 1975 when the Arcade became the first Cleveland building to be listed on the National Register of Historic Places. The Cleveland Area Arts Council spearheaded the revitalization of the neglected landmark by presenting noontime concerts, and commissioning a study from a Boston preservation company that recommended public ownership and management.

When Oppmann bought the building in partnership with a San Francisco architect and developer three years later, he initiated a rehabilitation program that won a national award and landed him on the cover of Historic Preservation magazine.

His first steps were to replace the glass panes in the skylight and install a profusion of plants and banners that created a festive atmosphere and diverted attention from architectural details that had not been repaired.

The restored skylight still leaks periodically when the bridge-like roof structure expands and contracts, but natural light shines through the opaque white glass with a soft quality that is lost when old skylights are replaced with synthetic materials and artificial lighting.

Over the last 12 years, Oppmann's piecemeal program of patching, fixing and upgrading the Arcade has been tied to the economics of operating an aged highmaintenance building.

Though not a perfect landlord or an uncompromising preservationist, Oppmann wins high marks for revitalizing the Arcade and maintaining its basic architectural character. To make the building more inviting, he has brought in a good mix of independently owned stores and has provided tables and chairs that invite people to linger. In addition, he has offered the historic space to non-profit organizations, launched a continuing rehabilitation program and kept the building viable as a mixed-use complex with class.

## A JERUSALEM RALLY

### HON. ILEANA ROS-LEHTINEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Ms. ROS-LEHTINEN. Mr. Speaker, with the recent passing of the resolution recognizing Jerusalem as the undivided capital of the State of Israel, many citizens around the world are showing their support of the Holy City. In my district, on May 23, a rally will be held in Miami Beach to commemorate the capture of Jerusalem during the Six-Day War in 1967.

Yom Yerushalayim, or Jerusalem Day, will be held at Temple Emanu-El on Miami Beach. Sponsored by the American Zionist Federation of South Florida in cooperation with the Greater Miami Jewish Federation's Israel Affairs Committee, the 2 p.m. rally is sure to bring a crowd.

Speaking at the event is Israel's second-ranking envoy to the United States, Minister Plenipotentiary Oded Eran. Mr. Eran, who is the top assistant to Ambassador Moshe Arad, is a veteran career diplomat in the Israel Foreign Service.

Ambassador Moshe Liba, Israel's Consul General in Florida, also will participate in the program.

In Israel, a similar celebration will commemorate an undivided capital in Jerusalem. The ceremony at Ammunition Hill will recognize those who died in the Six-Day War.

I applaud Gerald Schwartz and Harriet Green of the American Zionist Federation of South Florida, and the greater Miami Jewish Federation's Israel Affairs Committee for the tremendous effort put forth towards the official observance of Yom Yerushalayim.

## PUSH FOR TAX HIKE NOW MAKES NO ECONOMIC SENSE

### HON. NEWT GINGRICH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. GINGRICH. Mr. Speaker, I would like to bring to the attention of the House an article written by Mr. Robert Akerman in the May 14, 1990, Atlanta Constitution.

Mr. Akerman correctly points out the need to keep the economy growing and that increasing taxes could push the country into "stagflation" like we experienced in the 1970's.

His perspective is useful as Congress and the administration begin the so-called budget summit talks.

PUSH FOR TAX HIKE NOW MAKES NO ECONOMIC SENSE

One of the points being overlooked in this talk about a possible deal to increase federal taxes is one that Ronald Reagan used to make. When his critics argued that a big government deficit puts pressure on credit markets and reduces the amount of credit available for the private sector, he would respond that when government cuts its borrowing needs by raising taxes, that money too is taken out of the private sector. If growth is to continue, then businesses and consumers just have to borrow more.

That's why he thought that the level of government spending was the real problem, and I never heard one of his critics respond effectively to his point. What sudden change has occurred that would lead the Bush administration away from that policy?

They talk about a change in the short-run outlook for the economy which has produced an upsurge in the projected deficit for the next fiscal year. Now I agree that deficit spending is bad in the long run, simply because whatever is bought with borrowed money costs more than whatever is paid for in cash. But that is no argument for raising taxes to avoid a crisis in the near future, since the government's impact on the private sector during the next fiscal year will be basically the same whether it takes the money out in taxes or in borrowing.

Apparently some people in the Bush administration are playing with perceptions. There is concern that inflation may be on the rise, and if the Federal Reserve Board tries to fight inflation by increasing interest rates even more, that will lead to a recession. But this is confusing to me, since the deficit projections seem to reflect a downward economic trend that already has begun. And if the deficit caused it by "crowding out" business expansion, it can't simultaneously be causing the economy to grow too fast and produce "inflation."

If there is crowding out, then whatever inflation we have must be due to cost-push factors rather than to the demand-pull force of easy credit. This in turn raises the question of whether higher taxes could be one of the cost-increasing factors. The payroll tax has just gone up again. The 1987 tax "reform" shifted more of the burden to corporations, and the end of the capital gains tax break in that year began an increase in the cost of capital for business expansion. In any event, neither supply-side nor Keynesian economics has ever held that a tax increase is an appropriate response to an economic slowdown, or the threat of one.

Because of government policies that ran in several directions at once, we did manage to achieve "stagflation" in the 1970s, when prices were rising but we were also constantly in or near a recession. That era ended only when Ronald Reagan began to reduce taxes, and it seems to me that a tax increase now is likely to take us "back to the future" rather quickly.

## A TRIBUTE TO DAVE MAUPIN, ACCOUNTANT ADVOCATE OF THE YEAR

### HON. JERRY LEWIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. LEWIS of California. Mr. Speaker, I would like to bring to your attention today the outstanding contributions of Mr. Dave Maupin of Redlands, CA. Mr. Maupin has recently been named Accountant Advocate of the Year by the Small Business Administration and will be honored by the city of Redlands and the Redlands Chamber of Commerce on June 5.

Mr. Maupin is a sterling example of community leadership as evidenced by his many contributions including his service as chairman of the Redlands Small Business Week for the past 5 years. In the city of Redlands, Maupin is widely known by citizens as "Mr. Small Business" because of his energetic leadership in promoting National Small Business Week.

Mr. Maupin organized the Inland Empire Business Youth Conference in 1988 and 1989, efforts to encourage young people to pursue business careers. During the conference, several hundred area teenagers are invited to a dinner and to hear young entrepreneurs discuss their own "Secrets of Success." Keynote speakers for the conference have included John Dean, former aid to President Nixon and Charles Plumb, a Navy Top Gun pilot and ex-prisoner of war. In addition, over 100 high school students competed for three $500 scholarships in 1989 by completing essays on "The Role of Business in Creating a Kinder and Gentler Community."

Over the past 5 years, Mr. Maupin has organized a very successful Business Expo, attended by over 60 area businesses, designed to develop an awareness of and to promote small business. His efforts on behalf of the SBA's Small Business Week have given our Inland Empire valuable and worthwhile national recognition. Indeed, inquiries from other chambers of commerce suggest that the Redlands event has become a national model.

Mr. Speaker, the work of Mr. Maupin has greatly contributed to a better economic and financial climate for area small business. He has taken a unique approach to small business by recommending creative solutions to financial problems. In addition, he has made enormous contributions of both time and energy to promote small business in the community.

I urge you to join me and my colleagues today, Mr. Speaker, in honoring Mr. Dave Maupin—widely regarded as "Mr. Small Business"—as the Small Business Administration's Accountant Advocate of the Year. His years of dedicated and selfless service to the community is well-known and certainly worthy of recognition today by the House of Representatives.

## INDIA-PAKISTAN CRISIS OVER KASHMIR

### HON. ENI F.H. FALEOMAVAEGA

OF AMERICAN SAMOA

IN THE HOUSE OF REPRESENTATIVES

*Monday, May 21, 1990*

Mr. FALEOMAVAEGA. Mr. Speaker, the crisis in Kashmir Province in India has become most critical in that there is now military movement of troops by the Indian Government along the India-Pakistan border lines—all because of the problems over Kashmir.

Mr. Speaker, I want to share with my colleagues several articles written on this crisis, and again I call upon our President and Secretary Baker to take appropriate measures to prevent another armed conflict between India and Pakistan.

Mr. Speaker, one of the newspaper reporters, Mr. Jansen, rightfully suggests—why don't we let the people of Kashmir decide for themselves what they want in the future?

Mr. Speaker, I fear this crisis is going to be another bloody conflict if we don't do something about it, and the administration certainly ought to take action now to bring the leaders of these two countries to the negotiation table.

[From the Washington Times, May 21, 1990]

INDIA'S MANEUVERS PROMPT FEAR OF WAR

NEW DELHI, INDIA.—India is moving tens of thousands of battle-ready soldiers to its borders with Pakistan, prompting fear among Western diplomats of another war over Kashmir.

Western military experts say India also is seeking to buy large quantities of movable bridges, troop transport boats and other equipment that could be used in an attack.

In addition, the government recently formed a paramilitary unit called the National Rifles, which could undertake counterinsurgency operations in the troubled state formally known as Jammu-Kashmir, freeing the army to go to the border.

In Cairo, Egypt, yesterday, Pakistani Prime Minister Benazir Bhutto held out an olive branch to India, offering talks and saying war is no solution to the Kashmir dispute.

"The conflict will not lead to a settlement. * * * We are prepared to start a dialogue with India for a peaceful and political solution to the Kashmir problem," she told reporters.

Meanwhile in Islamabad, Pakistan, two senior U.S. officials urged Pakistan and India to tone down their war of words over Kashmir before it ignites another armed confrontation.

"Our major objective is to help both sides avoid a conflict over Kashmir * * * and to begin the sort of political dialogue that would not only reduce tensions, but lead to a peaceful and permanent settlement," Deputy National Security Adviser Robert Gates and John Kelly, assistant U.S. secretary of state for Near East and South Asian affairs, said in a statement.

Interviews with military experts from the West and Asia indicated several countries are seriously considering the possibility of war between Indian and Pakistan. One Western officer said his embassy is discussing contingency plans for withdrawal of embassy personnel and their families.

A month ago, many of the same officers said war was impossible.

"We've changed our assessment," a high-ranking Western officer said, "We think there now is a 50-50 chance."

Experts say the developments are doubly disturbing because both countries are believed to possess nuclear weapons technology. India exploded a nuclear device in 1974.

Both also have medium-range missiles.

Kashmir, the cause of the dispute, is the only Indian state with Moslem majority.

Both nations claim the region of Himalayan mountain peaks and valleys, and they have fought two wars over it since winning independence from Britain in 1947.

[From the New York Times (International), May 21, 1990]

U.S. URGES PAKISTAN TO SETTLE FEUD WITH INDIA OVER KASHMIR

(By John F. Burns)

ISLAMABAD, PAKISTAN, May 20.—Robert M. Gates, a special envoy sent by President Bush in an attempt to defuse tensions over the disputed territory of Kashmir, appealed to Pakistan's leaders today to avoid taking any military moves or other steps that might make a third war with India more likely.

Diplomats who spoke to reporters about Mr. Gates's 16-hour visit here said the American officials had conveyed to President Ghulam Ishaq Khan and other high-ranking Pakistani officials Mr. Bush's concern that incautious moves could drive the two nations into war over the civil unrest in Indian-held Kashmir. The diplomats said Mr. Gates would carry a similar message to top Indian officials, including Prime Minister V.P. Singh, in meetings that are scheduled for New Delhi on Monday.

Mr. Gates, Mr. Bush's deputy national security adviser, arrived here from Moscow, where he took part in talks between Secretary of State James A. Baker 3d and Eduard A. Shevardnadze, the Soviet Foreign Minister. The Moscow talks were said by United States officials to have included a resolve by Washington and Moscow to use their influence to reduce tensions over Kashmir.

India and Pakistan have gone to war over Kashmir in 1948 and 1965. Pakistan has demanded that the residents of Kashmir, who are predominantly Muslim, be allowed to choose their future in a plebiscite. India has insisted that Kashmir is an inalienable part of its territory.

With Prime Minister Benazir Bhutto away in Yemen seeking Islamic countries' support on the Kashmir issue, Mr. Gates faced Mr. Ishaq Khan and Lieut. Gen. Mirza Aslam Beg, the army commander. A Pakistani official said that Mr. Gates delivered a letter from President Bush expressing anxiety about a new war and urging efforts to stop the situation from deteriorating. A similar letter from Mr. Bush is to be delivered in New Delhi.

TOUGH TALKING WITH ALLY

Although the United States and Pakistan are longtime military allies while India has maintained close ties with Moscow, officials said there was "tough talking" here over the way that Pakistan has responded to recent developments. In particular, the officials said, Mr. Gates urged the Pakistani leaders to tone down their public statements, to avoid new military deployments that could be viewed by India as threatening and to restrain political parties in the Pakistan-held part of the disputed territory

from inciting or arming Kashmiris who cross over from the Indian side seeking assistance.

A senior Pakistani official said Mr. Ishaq Khan and General Beg responded "with irritation" to some of Mr. Gates's appeals. The reference to toning down public statements appeared aimed in part at Prime Minister Bhutto, who recalled at a public rally in March in Muzaffarabad, the capital of Pakistan-held Kashmir, that her father, Zulfikar Ali Bhutto, once vowed to fight a thousand-year war for Kashmir. General Beg has been quoted as saying that the Pakistani Army is ready for war and will shock India if it comes.

The Pakistani leaders were said to have told Mr. Gates that the United States should concentrate on getting India to halt its "terrorism" against the population of Kashmir, where the Muslim majority has faced a sharp crackdown by Indian forces. As for Pakistani statements, the leaders were said to have remarked that they had been "moderate enough." They also told Mr. Gates that Pakistani military movements in recent weeks had been less threatening than India's.

Despite their differences, Pakistani officials said they made clear to Mr. Gates that Pakistan welcomes American efforts to head off a war, and that it supports anything that the United States can do to encourage India to enter into discussions on the issue with Pakistan.

The officials said they were particularly pleased by an American assertion that the Kasmir issue should be resolved along the lines of the Simia agreement reached between Indian and Pakistan in 1972, in which the two governments undertook to settle the issue "by bilateral negotiations, or by any other peaceful means."

---

[From the Washington Post, Apr. 29, 1990]

INDIA'S MOSLEM MINORITY FACING NEW ANXIETIES—THREAT OF WAR WITH PAKISTAN CREATES NEW FEARS OF PERSECUTION BY HINDU ACTIVISTS.

(By Steve Coll)

NEW DELHI, April 28.—The threat of war between India an Pakistan has created new pressures and anxieties for India's Moslem minority of 110 million people, many of whom fear persecution by Hindu activists if hostilities with Islamic Pakistan continue to escalate.

Talk of war now dominates bazaars and dinner tables from western Pakistan to eastern India, fueled by a popular insurgency by Moslems in India's disputed northern state of Jammu and Kashmir, as well as by heated threats form Islamabad and New Delhi about alleged hostile troop movements and interference in each other's affairs.

But nowhere are the anxieties about a fourth war between India and Pakistan more acute than among India's Moslems, who fear that resurgent Hindu conservatives are using tensions with Pakistan to mount increasing attacks against them. Some Indian Moslems say they fear large scale atrocities if war with Pakistan breaks out.

"The Moslems of India today feel a terrible sense of insecurity," said Syed Shahabuddin, a prominent Moslem leader and a member of India's parliament. "The 1980s were very bad * * *. The level of communal polarization is much higher than it was 10 or 20 years ago. Every Moslem is viewed with suspicion."

In the western state of Gujarat earlier this month, at least 60 people died when Hindus and Moslems attacked each other in a violent rampage lasting more than a week.

In the aftermath, a senior state government official reportedly accused local Moslems of harboring Pakistani agents. The charge was later contradicted by a Moslem member of Prime Minister V.P. Singh's cabinet after an inspection of the riot-torn area.

A tide of Hindu nationalism has lately altered India's politics by giving a prominent voice to Hindu religious leaders who sometimes accuse Moslems of disloyalty. And the surge in Hindu conservatism has been accompanied by a sharp increase in religious riots in which thousands have died in recent years.

Many of India's most important political leaders, including Singh, who is a Hindu, have taken pains to defend the rights of the country's Moslems even as the threats continue. These leaders insist there will be no official backlash against the minority if war erupts.

Among other things, they point out that Moslems are members of Singh's cabinet and are represented among the Indian army generals holding key commands along the Pakistan border. In fact, there are far fewer Moslems in the Indian armed forces than in the general population, where Moslems now make up about 13 percent of India's total of 820 million.

Many ordinary Moslems say they are not sure whether to believe the government's assurances that they will be protected, and they fear that vigilante attacks—supported by Hindu policemen or rightist politicians—could escalate sharply if the dispute over Kashmir continues.

"If there is war, there will be atrocities—not by the government, but by the Hindus," said Mohammed Yaseem, a tailor in a heavily Moslem neighborhood of north Delhi. "Ever since independence, the police and the Hindus have been cutting the Moslems' heads off. This time, it will only be worse."

Lower middle-class and poor Moslems interviewed here and in southern India in recent weeks drew a distinction between what they described as their loyal feelings toward the Indian government and their anger toward Hindu religious activists who help prop up Singh's minority administration.

"We will be with the government. We are faithful to the country to which we belong," said Mullah Mohammed Haroon, an activist in a New Delhi neighborhood rocked by Hindu-Moslem riots last month.

But if the uprising in Kashmir worsens or war with Pakistan erupts, he said, "Our trust of the Hindus will disappear."

There was relatively little conflict between India's Hindus and Moslems during the previous three wars with Pakistan, although tens of thousands of people from both communities were slaughtered in the religious violence associated with the partition of the British Empire in 1947, which immediately preceded the first Indo-Pakistan war.

During the second war, in 1965, a number of Indian Moslems were lynched and arrested on suspicion of being spies for Pakistan. Rumors swept through the country that Indian Moslems planned to poison the country's water supply, and at one point Moslems reportedly were removed from jobs at key water works.

But no evidence of widespread disloyalty by Moslems was ever presented, and the war ended before any major riots erupted.

A marked decline in public panic about Indian Moslems followed during the 1971 war. Indian government propagandists exhalted the achievements of Moslem officers and soldiers fighting in the Indian army on the western frontier with Pakistan in an effort to reassure both the Hindu and Moslem publics.

Today, the atmosphere appears to be far different. Some Hindu activists blame Indian Moslems for helping Pakistan foment trouble in Kashmir. Other activists urge that the northern state, whose sovereignty is disputed by India, Pakistan and China, be opened for Hindu resettlement, which would eliminate its Moslem majority.

---

[From the New York Times (International), May 21, 1990]

U.S. DELEGATION VISITING AN INDIA IN POLITICAL CRISIS

(By Barbara Crossette)

NEW DELHI, May 20.—When a high-level American delegation arrives here tonight for talks on Monday on the separatist war in Kashmir, it is likely to find the Government of Prime Minister V.P. Singh preoccupied by its worst domestic political crisis since coming to power in December.

The American team is headed by President Bush's deputy national security adviser, Robert M. Gates. Significantly, for India, Mr. Gates is coming here fresh from discussions in Moscow and Islamabad. India, accustomed to playing off American and Soviet interests, confronts for the first time what appears from here to be superpower consensus.

The Americans are expected to convey Washington's concern about what the White House described as a "deteriorating situation" involving mounting human rights abuses in Kashmir, and the consequent threat of war between India and Pakistan over the disputed territory.

But the Indian Government's ability to deal with the Kashmir crisis appears to be falling victim to Prime Minister Singh's worsening internal political problems.

Like the only previous Indian Government not formed by the Congress Party, the Singh administration is being undermined by disputes in the governing coalition. Twelve years ago when that earlier non-Congress Government faltered, there was nothing of the magnitude of the Kashmir rebellion confronting India.

While the Prime Minister's allies on both the pro-Hindu right and Communist left complain that he is not being tough enough on Kashmiri Muslims, thousands of people are being arrested or hounded by Government forces, Indian human rights groups and fleeing Kashmiris say. As a result, no new political initiatives are being proposed.

More damaging to Mr. Singh's standing is the growing embarrassment to his administration caused by the activities of Deputy Prime Minister Devi Lal and his son, Om Prakash Chautala.

Mr. Lal, a powerful leader in the northern farm belt, has a history of violence and corruption that makes him anathema to the clean-govenment voters who propelled Mr. Singh to power in December. Mr. Chautala has been linked to vote fraud and poll violence in Haryana state. The violence culminated last week in the killing of a rival candidate in coming state elections in a constituency where Mr. Chautala, an unelected Chief Minister who inherited his position form his father, is seeking a seat.

Mr. Singh's association with Mr. Lal and his son proved costly this weekend, when the Prime Minister suffered two significant blows to his authority: Mr. Lal's candidate, S.R. Bommai, was chosen as president of Mr. Singh's own party, the Janata Dal, and one of his chief economic and social planners, L.C. Jain, resigned.

Mr. Jain, one of Asia's best known development experts and a follower of Mohandas K. Gandhi, resigned to protest Prime Minister Singh's silence on the recent events in Haryana, and his unwillingness to force Mr. Chautala to step down in the face of accusations of criminality.

Leading Indian newspapers are calling on Mr. Singh to live up to his image as a clean politician. Critics say the Prime Minister's pursuit of investigations into allegations of corruption in the administration of the former Prime Minister, Rajiv Gandhi, begin to look like witch-hunting if he refuses to punish criminality within his own Government and party.

When Mr. Singh took office in December, he was expected to bring a fresh approach to the problem of separatism in Kashmir and in Punjab state. In both cases, there was little disagreement among political analysts that shortsighted policies of Mr. Gandhi, framed for partisan purposes, had led to the flourishing of rebel political movements.

But Mr. Singh has chosen not to lay the blame for Kashmiri and Punjabi rebellions on Mr. Gandhi, on the late Indira Gandhi, who preceded him, or on the Congress Party. Instead, Mr. Singh, a skilled politician, has continued to rely on the use of military force.

## SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Meetings scheduled for Tuesday, May 22, 1990, may be found in the Daily Digest of today's RECORD.

## MEETINGS SCHEDULED

### MAY 23

8:30 a.m.
Agriculture, Nutrition, and Forestry
Business meeting, to continue consideration of proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332

9:30 a.m.
Armed Services
Defense Industry and Technology Subcommittee
Strategic Forces and Nuclear Deterrence Subcommittee
To hold joint hearings on S. 2171, to authorize funds for fiscal year 1991 for military functions of the Department of Defense and to prescribe military personnel levels for fiscal year 1991, focusing on Department of Energy laboratory management.
SR-222

Commerce, Science, and Transportation
To hold hearings to review the Administration's technology policy and priorities.
SR-253

Energy and Natural Resources
Business meeting, to consider pending calendar business.
SD-366

Environment and Public Works
Superfund, Ocean and Water Protection Subcommittee
Business meeting, to mark up S. 203, to authorize research into ground water contamination and remediation.
SD-406

Labor and Human Resources
To hold hearings on S. 1912, to prohibit States from restricting the right of a woman to terminate a pregnancy before fetal viability or at any time if the termination is necessary to protect the health or life of the woman.
SD-430

10:00 a.m.
Banking, Housing, and Urban Affairs
To hold hearings on the semiannual appearance of the Oversight Board of the Resolution Trust Corporation.
SD-538

Environment and Public Works
Superfund, Ocean and Water Protection Subcommittee
To hold hearings on S. 1697, to require local educational agencies to conduct testing for radon contamination in schools.
SD-406

Foreign Relations
To hold hearings on S. 2296, to authorize supplemental funds for fiscal year ending September 30, 1990 and to authorize funds for fiscal year 1991, both for the Department of State.
SD-419

Joint Economic
To hold hearings to examine rising health care costs, focusing on how U.S. firms compete.
2257 Rayburn Building

10:30 a.m.
Appropriations
Treasury, Postal Service, General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Office of Management and Budget.
SD-116

1:30 p.m.
Appropriations
VA, HUD, and Independent Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Federal Deposit Insurance Corporation, the Resolution Trust Corporation, and the Office of Inspector General.
SD-138

2:00 p.m.
Agriculture, Nutrition, and Forestry
Business meeting, to continue consideration of proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332

Banking, Housing, and Urban Affairs
Housing and Urban Affairs Subcommittee
To hold hearings to examine the financial strength of the Federal Housing Administration.
SD-538

Energy and Natural Resources
Public Lands, National Parks and Forests Subcommittee
To hold oversight hearings on the "Report of the Interagency Scientific Committee to Address the Conservation of the Northern Spotted Owl."
SD-366

Governmental Affairs
To hold hearings on the nomination of Jerry D. Jennings, of Michigan, to be Deputy Director of the Federal Emergency Management Agency.
SD-342

Labor and Human Resources
To hold hearings on the nomination of Michael L. Williams, of Texas, to be Assistant Secretary for Civil Rights, Department of Education.
SD-430

Select on Intelligence
To hold hearings on the Jacobs Panel recommendations on counterintelligence.
SH-216

2:30 p.m.
Armed Services
Strategic Forces and Nuclear Deterrence Subcommittee
To hold hearings on the Department of Energy national security budget request for fiscal year 1991.
SR-253

### MAY 24

8:30 a.m.
Agriculture, Nutrition, and Forestry
Business meeting, to continue consideration of proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332

9:00 a.m.
Appropriations
Defense Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1991 for defense programs.
SD-192

Armed Services
To hold hearings on S. 2171, authorizing funds for fiscal year 1991 for military functions of the Department of Defense and to prescribe military personnel levels for fiscal year 1991, focusing on management strategies for the defense builddown.
SR-222

9:15 a.m.
Commerce, Science, and Transportation
To hold hearings in conjunction with the National Ocean Policy Study on S. 2228, to develop a comprehensive program to ensure the wholesomeness of fish products intended for human consumption and sold in interstate commerce.
SR-253

10:00 a.m.
Banking, Housing, and Urban Affairs
Business meeting, to mark up S. 647, to revise the Federal securities laws to revise the enforcement remedies for civil violations of those laws, S. 2058, to revise the Federal Deposit Insurance Act to regulate certain marketing activities engaged in on the premises of deposit-taking facilities of insured depository institutions, S. 1664, to establish a congressional commemorative medal for members of the Armed Forces who were present during the attack on Pearl Harbor on December 7, 1941, and proposed legislation to authorize funds for programs of the Defense Production Act of 1950, and to provide for fair trade in financial services.
SD-538
Commerce, Science, and Transportation
Foreign Commerce and Tourism Subcommittee
To hold hearings to examine ways to expand U.S. exports abroad.
SR-253
Finance
To hold hearings to examine the costs and health impact of cigarette smoking, focusing on how it affects children.
SD-215
Foreign Relations
Business meeting, to mark up S. 2296, to authorize supplemental funds for fiscal year ending September 30, 1990 and to authorize funds for fiscal year 1991, both for the Department of State, S. Con. Res. 124, expressing the sense of the Congress regarding human rights violations against the Albanian ethnic minority in southern Yugoslavia, S. Con. Res. 60, expressing the sense of the Senate that an impartial investigation of all alleged sightings of Raoul Wallenberg since 1947 be made, and to consider pending nominations.
SD-419
Judiciary
Business meeting, to consider pending calendar business.
SD-226
Joint Economic
To hold hearings on the economic status of African-Americans.
2175 Rayburn Building
10:30 a.m.
Appropriations
District of Columbia Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the District of Columbia.
SD-138
1:00 p.m.
Armed Services
Strategic Forces and Nuclear Deterrence Subcommittee
To hold hearings on S. 2171, authorizing funds for fiscal year 1991 for military functions of the Department of Defense and to prescribe military personnel levels for fiscal year 1991, focusing on space launch and command, control, communications and intelligence programs.
S-407, Capitol
2:00 p.m.
Agriculture, Nutrition, and Forestry
Business meeting, to continue consideration of proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332

MAY 25

8:30 a.m.
Agriculture, Nutrition, and Forestry
Business meeting, to continue consideration of proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332
2:00 p.m.
Agriculture, Nutrition, and Forestry
Business meeting, to continue consideration of proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332

MAY 29

10:00 a.m.
Judiciary
Antitrust, Monopolies and Business Rights Subcommittee
To hold hearings to examine competitive issues in infant formula pricing.
SD-226

JUNE 5

9:00 a.m.
Appropriations
Defense Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Defense.
SD-192
2:30 p.m.
Appropriations
Foreign Operations Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1991 for foreign assistance, focusing on organization and accountability.
SD-138

JUNE 6

9:00 a.m.
Armed Services
Strategic Forces and Nuclear Deterrence Subcommittee
To resume hearings on S. 2171, authorizing funds for fiscal year 1991 for military functions of the Department of Defense and to prescribe military personnel levels for fiscal year 1991, focusing on the B-2 program.
SR-253
9:30 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To hold hearings to examine the Federal Trade Commission's (FTC) antitrust jurisdiction over foreign companies.
SR-253
Veterans' Affairs
To hold hearings on the nominations of Donald L. Ivers, of New Mexico, and Jonathan R. Steinberg, of Maryland, each to be an Associate Judge of the U.S. Court of Veterans Appeals.
SR-418

JUNE 7

9:30 a.m.
Commerce, Science, and Transportation
Business meeting, to consider pending calendar business.
SR-253
Judiciary
To hold hearings to examine the effects on judicial nominees belonging to private clubs that discriminate.
SD-226
Veterans' Affairs
To hold oversight hearings on veterans prosthetics and special-disabilities programs.
SR-418
2:00 p.m.
Select on Indian Affairs
To hold oversight hearings to examine the Indian health service nurse shortage.
SR-485

JUNE 12

9:30 a.m.
Commerce, Science, and Transportation
To hold hearings in conjunction with the National Ocean Policy Study on proposed legislation authorizing funds for the National Oceanic and Atmospheric Administration's satellite programs.
SR-253
Select on Ethics
To hold hearings on matters relating to the investigation involving Senator Durenberger.
SH-216
10:00 a.m.
Environment and Public Works
Business meeting, to consider pending calendar business.
SD-406
2:30 p.m.
Appropriations
Foreign Operations Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for foreign assistance, focusing on eastern Europe.
SD-138

JUNE 13

9:30 a.m.
Commerce, Science, and Transportation
Communications Subcommittee
To hold hearings on S. 2358, providing U.S. consumers the opportunity to enjoy the technological advancement in sound recording by use of digital audio tape recorders.
SR-253
Rules and Administration
Business meeting, to consider proposed legislation authorizing funds for fiscal year 1991 for the Federal Election Commission, proposed legislation providing for the management of Senate official mail, proposed legislation authorizing the purchase of 1991 "We the People" calendars for the use of the Senate, and other pending calendar business.
SR-301
2:00 p.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To hold hearings on S. 1884, to establish a Bureau of Recyclable Commodities within the Department of Commerce to promote the use of recycled materials derived from municipal refuse.
SR-253
Foreign Relations
Western Hemisphere and Peace Corps Affairs Subcommittee
To hold hearings on proposed U.S. military training for Peru.
S-116, Capitol

JUNE 14

9:30 a.m.
Commerce, Science, and Transportation
To hold hearings in conjunction with the National Ocean Policy Study on

proposed legislation authorizing funds for the National Oceanic and Atmospheric Administration's ocean and coastal programs.

SR-253

Veterans' Affairs

To hold hearings on title II and section 402 of S. 2100, relating to veterans physician pay and health issues, S. 1860, to require the Secretary of Veterans Affairs to furnish outpatient medical services for any disability of a former prisoner of war, S. 2455, to provide for recovery by the U.S. of the cost of medical care and services furnished for a nonservice-connected disability, S. 2456, to extend expiring laws authorizing the Department of Veterans Affairs to contract for needed care and to revise authority to furnish outpatient dental care, and other proposed legislation.

SR-418

JUNE 19

9:30 a.m.

Veterans' Affairs

To hold hearings on the nominations of James W. Holsinger, Jr., of Virginia, to be Chief Medical Director, and Stephen A. Trodden, of Virginia, to be Inspector General, both of the Department of Veterans Affairs.

SR-418

2:30 p.m.

Appropriations

Foreign Operations Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1991 for foreign assistance, focusing on U.S. military assistance.

SD-138

JUNE 20

9:30 a.m.

Commerce, Science, and Transportation

Communications Subcommittee

To hold hearings on S. 1974, to require new televisions to have built in decoder circuitry designed to display closed-captioned television transmissions.

SR-253

JUNE 26

9:00 a.m.

Appropriations

Foreign Operations Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1991 for foreign assistance programs.

Room to be announced

2:00 p.m.

Judiciary

Patents, Copyrights and Trademarks Subcommittee

To hold hearings on S. 1772, to prohibit State lotteries from misappropriating professional sports service marks.

SD-226

2:30 p.m.

Appropriations

Foreign Operations Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1991 for foreign assistance programs.

Room to be announced

JUNE 28

9:30 a.m.

Veterans' Affairs

Business meeting, to consider pending legislation relating to veterans compensation and health-care benefits.

SR-418

JULY 12

9:30 a.m.

Select on Indian Affairs

To hold hearings to examine protective services for Indian children, focusing on alcohol and substance abuse programs.

SR-485

## POSTPONEMENTS

MAY 22

9:00 a.m.

Appropriations

Defense Subcommittee

To hold closed hearings on proposed budget estimates for the Department of Defense, focusing on classified programs.

S-407, Capitol

# HOUSE OF REPRESENTATIVES—*Tuesday, May 22, 1990*

The House met at 10 a.m.

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

Gracious God, as we view our lives with their opportunities and disappointments, we are aware of those that have special need of our prayers and intercessions. We remember those whose deep concerns may be known only to themselves and another few, and we pray that Your abiding spirit will bless them in any anxiety or apprehension. May Your love, O God, that surrounds us and renews us each day, be with all Your people now and evermore. Amen.

## THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

## PLEDGE OF ALLEGIANCE

The SPEAKER. The gentleman from California [Mr. FAZIO] will please come forward and lead the House in the Pledge of Allegiance.

Mr. FAZIO led the Pledge of Allegiance as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

## ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair will receive requests for 1-minute statements, limited to five Members on each side. Additional 1-minute requests will be received at the end of the legislative business today.

## "KINDER AND GENTLER" MEANS FREE LEGAL REPRESENTATION FOR GENERAL NORIEGA

(Mr. FAZIO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FAZIO. Mr. Speaker, General Noriega is in the news again.

For 10 years, the Republican administration declared war on the one program we have to provide legal services for the poor.

In budget after budget, Ronald Reagan tried to kill the Legal Services Corporation and deny working Americans their right to legal representation.

When Congress rejected his proposals, he appointed a board hostile to the Corporation's existence.

The "kinder and gentler" Bush administration has proposed deep cuts in legal services, and today's news may reveal why:

They needed the money to provide legal assistance to the Panamanian drug lord and money launderer, Manuel Noriega.

Does this mean we provide legal aid for the most notorious criminals while ignoring the needs of working Americans whose only crime is seeking equal justice under the law?

Manuel Noriega has discovered what kinder, gentler means to him. And now we know what it means to President Bush.

## PROGRAM OF CLEAN COAL TECHNOLOGY MUST BE FAIR TO ALL

(Mr. THOMAS of Wyoming asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. THOMAS of Wyoming. Mr. Speaker, this House is in the middle of great debates on clean air. I support H.R. 3030 and, in fact, am a sponsor of the Clean Air Act.

In at least one instance, however, we are trying to push and pull at the same time.

This Nation is undoubtedly dependant upon coal to meet its domestic demands for electricity, and to effectively compete in the international market.

To do so, we need to continue to develop new clean coal technologies.

Provisions of H.R. 3030 divert clean coal technology program funds for the purpose of subsidizing the cleanup of eastern powerplants as a reward for their not having done it themselves. And penalizing areas of the country who have taken positive steps to clean up their air.

These provisions will terminate Federal funding of numerous western and eastern clean coal technology projects, which were selected, although funds have not yet been fully obligated. This provision is unfair and a setback to our national efforts to develop a program of clean coal technology.

## NORIEGA: PAY FOR YOUR DEFENSE OR GET A PUBLIC DEFENDER

(Mr. TRAFICANT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TRAFICANT. Mr. Speaker, our Government has made yet another deal with Manuel Noriega. Uncle Sam recently said:

General, we will even pay your legal fees if you just keep your mouth shut. Because if the American taxpayers find out how much the CIA has paid you on their payroll to make drug peddlers and drug abusers and drug addicts out of our kids, they may even have a tax revolt in this country.

Furthermore, we will even go so far, we will even pay your legal fees. My god, don't say anything.

Mr. Speaker, this is a joke, an absolute joke. This is not even a CIA coverup any more. This is getting to be a buyout that is insulting the intelligence of the American people.

I say let General Noriega pay for that defense, or let him get a public defender, just like kids on the street. Who takes care of them? After all, General Noriega helped to make a lot of those drug addicts on the street.

## THE AMERICANS WITH DISABILITIES AMENDMENT

(Mr. BRENNAN asked and was given permission to address the House for 1 minute.)

Mr. BRENNAN. Mr. Speaker, as we vote today on the Americans With Disabilities bill, I think of a time when I was attorney general of my State of Maine and the then Gov. Jim Longley, came to my office to ask my advice on appointing a blind lawyer to be a trial judge.

I told the Governor, from my experience as a prosecutor and defense lawyer, it would be a mistake.

A blind lawyer could not do the job.

The Governor disregarded my advice and made the appointment anyway.

Six months later, I asked a number of lawyers and police officers how the blind judge was doing.

The answers were unanimous. He was doing a superb job. He was an excellent judge.

That was a big lesson for me in what people with disabilities can do.

And I believe that passage of the Americans With Disabilities Act will be a great lesson for more like me, all across this country.

I urge Members to vote for this very important civil rights bill.

□ This symbol represents the time of day during the House proceedings, e.g., □ 1407 is 2:07 p.m.

Matter set in this typeface indicates words inserted or appended, rather than spoken, by a Member of the House on the floor.

## INSURANCE POLICY FOR AMERICA'S FLYING PUBLIC

(Mr. LEWIS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LEWIS of Florida. Mr. Speaker, the Transportation, Aviation and Materials Subcommittee is today considering an FAA reauthorization bill I believe is an insurance policy for America's flying public.

The bill contains a variety of outstanding but long-overdue research programs. They include funding for The Aircraft Catastrophic Failure Prevention Research Act of 1990, a bill I wrote with the intent to end the flying experiment mentality at FAA.

Another research program in the FAA reauthorization is in drug and alcohol testing.

The incident earlier this year in which Northwest Airline pilots were allowed to fly while intoxicated is intolerable.

I have written a program that ultimately will protect the flying public from those pilots and air traffic controllers who abuse alcohol and drugs.

Other programs calling for improved airport security to avoid tragic losses like those at Lockerbie, Scotland, and for safe screws and fasteners, are contained in this bill that should have been written years ago.

## MILITARY AID TO EL SALVADOR

(Mr. AuCOIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. AuCOIN. Mr. Speaker, we have tried to send messages to the Government and the military of El Salvador. We sent telegrams. We sent letters. We sent congressional delegations. We sent diplomats. We even sent DAN QUAYLE.

We demanded that they prosecute a few, just a few, of the gross human rights violations by the military and armed forces of that country. But El Salvador has not gotten the message.

We in America buy weapons for the Salvadoran army. We train them. We bring them to American bases. We train them in human rights. They took that training and those weapons, and this is what they did with them. They smashed into the Jesuit residence in San Salvador. They ordered six priests to lie face down on the grass, and then they opened fire.

□ 1010

Mr. Speaker, there is something desperately wrong in El Salvador, and the American people cannot understand why this country is aiding this butchery in this Government.

Today the House will vote on the Moakley-Murtha amendment to limit the war, to encourage peace negotiations, and to promote human rights, and I urge the House to support the Moakley-Murtha amendment.

## PARLIAMENTARY INQUIRY

Mr. WALKER. Mr. Speaker, I have a parliamentary inquiry.

The SPEAKER. The gentleman will state his parliamentary inquiry.

Mr. WALKER. Mr. Speaker, the Speaker has recently announced a new policy with regard to the use of the Speaker's lobby for the recording by reporters by electronic device of interviews with Members. There has been some concern expressed about that particular policy with regard to the use of the recorders in the Speaker's lobby since that is regraded as a part of the floor. In particular, the concern is that you could have the use of very sensitive microphones there that could record private conversations that might be taking place in the Speaker's lobby, or even record conversations at the periphery of the House floor itself that were not meant for public consumption.

I was wondering, under my parliamentary inquiry, whether the Speaker could give the Members some assurance with regard to this policy that the recording devices will only be used for individual interviews, and would not be permissible for use as a means of recording conversations in the Speaker's lobby as a whole.

The SPEAKER. The gentleman is correct.

Mr. WALKER. So in other words, under this policy, this is strictly aimed at giving only the ability to interview individual Members at the table, and those recording devices would not be permitted to be on during other times that the reporter might be in the lobby?

The SPEAKER. The answer to the gentleman's parliamentary inquiry is that the gentleman is correct.

The Chair will ask the Clerk to read into the RECORD the guidelines established by the Chair for the conduct of this trial period of radio interview.

The Clerk read as follows:

POLICY FOR RADIO INTERVIEW TABLE IN SPEAKER'S LOBBY

(1) No tape recorder will be allowed inside the Speaker's Lobby, other than at a table set aside for the purpose. This table is provided for interviews, which should not disrupt the decorum of the House. Tape recorders must be taken immediately to the designated table.

(2) No more than four tape recorders will be allowed at the table at any one time. Reporters will be allowed to take tape recorders to the table on a rotating pass system. Passes will be distributed by the Radio/TV Gallery staff, who may, at their discretion, set a time limit on the use of the pass.

(3) The table can only be used for interviews of Members during House sessions. It cannot be used during joint meetings or joint sessions.

(4) Failure to honor restrictions placed on news organizations by the House gallery staff, or failure to return radio table passes at the designated time, may result in revocation of a news organization's right to use said passes in the future.

(5) The radio table and the policy for its use is available on a trial basis through the August recess of 1990. At that time the table and its use will be reassessed.

(6) All rules for broadcast coverage in the House will be reevaluated by the Speaker's Office and the Executive Committee at the beginning of each Congress.

Mr. WALKER. I thank the Chair.

## PERMISSION FOR COMMITTEE ON AGRICULTURE TO SIT ON TODAY AND BALANCE OF WEEK DURING THE 5-MINUTE RULE

Mr. DE LA GARZA. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture may be allowed to meet during the 5-minute rule on today and the balance of the week for consideration of H.R. 3950.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

## ANNOUNCEMENT OF DELAY OF VOTE ON S. 286, PETROGLYPH NATIONAL MONUMENT ESTABLISHMENT ACT OF 1990

The SPEAKER. The unfinished business is the question of suspending the rules and passing the Senate bill, S. 286, as amended.

The Chair wishes to announce to the House that the voting machines are in some state of inoperation at the moment, and while the problem is being assessed by the technical staff, the Chair wishes to announce the delay of the vote on the pending suspension bill considered yesterday.

## AMERICANS WITH DISABILITIES ACT OF 1990

The SPEAKER. Pursuant to House Resolution 394 and rule XXIII, the Chair declares the House in the Committee of the Whole House on the State of the Union for the further consideration of the bill, H.R. 2273.

□ 1015

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 2273) to establish a clear and comprehensive prohibition of discrimination on the basis of disability, with Mr. MCNULTY (Chairman pro tempore) in the chair.

The Clerk read the title of the bill.

The CHAIRMAN pro tempore. When the Committee of the Whole rose on Thursday, May 17, 1990, the

amendment offered by the gentleman from Texas [Mr. CHAPMAN] had been disposed of.

It is now in order to consider amendment No. 6 printed in House Report 101-488.

Mr. HASTERT. Mr. Chairman, I am the designee of the gentleman from Illinois [Mr. LIPINSKI].

Mr. HOYER. Mr. Chairman, I ask unanimous consent to strike the last word.

The CHAIRMAN pro tempore. Without objection, the gentleman from Maryland is recognized for 5 minutes.

There was no objection.

Mr. HOYER. Mr. Chairman, I make this request because of the fact that the gentleman from Illinois [Mr. LIPINSKI] has not arrived. The gentleman from Illinois [Mr. HASTERT] is here, but the Committee on Public Works and Transportation has not arrived. Members were under the belief that we would start at 10:30, so perhaps the gentleman from Illinois [Mr. HASTERT] could discuss the amendment.

Mr. HASTERT. Mr. Chairman, if the gentleman will yield, will our rights be protected?

The CHAIRMAN pro tempore. The rights of the gentleman from Illinois will be protected and he may offer the amendment. The gentleman is correct.

Mr. HOYER. Mr. Chairman, I would make it clear to the gentleman from Illinois that this is only for the purpose of having all of the parties come over from their offices. They expected to start at 10:30, and we are a little early.

Mr. HASTERT. I would agree to that.

The CHAIRMAN pro tempore. The gentleman from Maryland is recognized.

Mr. HOYER. Mr. Chairman, as the Members know, we are now embarking on the last day of consideration of the Americans With Disabilities Act, an act which has been designed to make accessible all of the services and opportunities that most Americans take for granted, but which for 43 million Americans who are disabled are not as readily accessible as they ought to be.

I think we are going to see today when this bill comes to a final vote an overwhelming vote from both sides of the aisle. President Bush has been a very strong supporter of this legislation. Members of the other side of the aisle, both in committee and on the floor, have been strong supporters, and of course this side of the aisle has been very strong in its support of the Americans With Disabilities Act.

We will consider today three amendments. They are the last remaining amendments. Two deal with transportation issues and one deals with the issue of remedies.

The issues dealing with transportation will deal with commuter rail and will deal with local options. We will be in opposition to both of those amendments on this side of the aisle. The proponents of those amendments will obviously argue their merits.

I might add that the administration is not supporting the two transportation amendments but is very strongly supporting the amendment to be offered by the gentleman from Wisconsin [Mr. SENSENBRENNER].

Mr. Chairman, the Sensenbrenner amendment deals with the issue of remedies. That is to say, what remedies will be available to those whose civil rights are violated under the Americans With Disabilities Act. Will those remedies be the same as will be available to persons who are discriminated against because of race, color, national origin, religion or sex, or will they somehow be limited to specific rights? In particular, the issue will be whether or not we will leave to the 1990 civil rights bill the issue of what remedies will be available under title VII and under title II.

I would hope that we would reject the Sensenbrenner amendment. I would hope that we would reject it and leave for the Civil Rights Act of 1990 the determination of what remedies will be available to all persons or any person who has their civil rights discriminated against.

□ 1020

I believe that is the appropriate place with which to deal and not to specifically target the disabled for more limited remedies than others would have.

I believe, for the information of Members, that we will probably have 40 minutes on the Lipinski-Hastert amendment, 40 minutes on the Shuster amendment, and 1 hour on the Sensenbrenner amendment. If we do not get a rollcall, if the machine is not working, it might take a little longer, but I am hopeful we can conclude consideration of the Americans With Disabilities Act by 2 o'clock this afternoon.

We are looking forward to having all the members of the Committee on Public Works join us for this debate in the very near future. I know Mr. LUKEN and Mr. MINETA on our side will be speaking to these amendments as they are offered and that the Committee on Public Works and the Committee on Energy and Commerce are essentially, that is the majority side, is essentially in agreement; although as Mr. LIPINSKI will point out, the Committee on Public Works adopted the Lipinski amendment in committee. There was a jurisdictional question, and the Committee on Rules determined that the jurisdictional claim with respect to commuter rail in this instance lay with the Committee on Energy and Commerce.

So the basic document has the Energy and Commerce alternative, which is the alternative to which the Lipinski-Hastert amendment will apply.

Mr. MFUME. Mr. Chairman, will the gentleman yield?

Mr. HOYER. Mr. Chairman, I yield to the gentleman from Maryland.

Mr. MFUME. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I just want to take a moment, recognizing that we have, on behalf of a great number of us who have coauthored the Americans With Disabilities Act, I want to express my gratitude to the gentleman from Maryland for his assistance on this issue, for his leadership, for seeing us through a very difficult process last week and for being here today to ensure that his amendment process does not weaken this bill as it is.

There are so many people who are affected by it, to say that it is not significant is to belittle, I think, the strong significance that this sort of civil rights legislation means to our Nation.

So I would simply thank the gentleman from Maryland [Mr. HOYER] for his leadership again and urge him, as I have throughout the course of this debate, to try to, as best he can, sensitize other Members as to how crucial this bill is.

Mr. HOYER. I thank the gentleman for his comments.

Mr. Chairman, I want to congratulate the gentleman for his expertise as he chairs the Americans With Disabilities Act consideration in the Committee of the Whole House on the State of the Union.

The bill, as we find it, is a very, very significant historical step for it in the extension of civil rights protection for the disabled.

As I said, I think it bears repeating that this has been largely a bipartisan effort.

The CHAIRMAN pro tempore (Mr. MCNULTY). It is now in order to consider amendment No. 6 printed in House Report No. 101-488.

AMENDMENT OFFERED BY MR. LIPINSKI

Mr. LIPINSKI. Mr. Chairman, I offer an amendment.

The CHAIRMAN pro tempore. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. LIPINSKI: IN SECTION 242(B), STRIKE PARAGRAPH (2) AND INSERT THE FOLLOWING:

(2) NEW COMMUTER RAIL CARS.—

(A) GENERAL RULE.—Subject to subparagraph (B), a public entity which operates a fixed route system providing commuter rail service does not have to purchase or lease readily accessible and usable commuter rail vehicles to meet the requirements of this title—

(i) if such entity is meeting the requirements of subsection (b)(1) of this section relating to one car per train being accessible to individuals with disabilities within five years of the enactment of this Act;

(ii) if such entity provides clear, concise, and adequate notice, in its stations, of which cars are so accessible and the location of such cars on its trains;

(iii) if, in any case in which additional services are offered in a nonaccessible car of a train, such entity makes reasonable provision to ensure that such services are available to individuals with disabilities in the accessible car or cars of such train.

(B) ADDITIONAL ACCESSIBLE CARS TO MEET DEMAND.—In order for a public entity to be exempt under subparagraph (A), in any case in which actual continuing demand for accessible service cannot be met by the public entity with one accessible car per train, the public entity must use additional accessible cars per train as may be necessary to meet such demand.

The CHAIRMAN pro tempore. The gentleman from Illinois [Mr. LIPINSKI] will be recognized for 20 minutes, and a Member opposed will be recognized for 20 minutes.

The Chair recognizes the gentleman from Illinois [Mr. LIPINSKI].

Mr. LIPINSKI. Mr. Chairman, do we have a Member opposed?

Mr. THOMAS A. LUKEN. Mr. Chairman, I am opposed to the amendment.

The CHAIRMAN pro tempore. The gentleman from Ohio [Mr. THOMAS A. LUKEN] will be recognized for 20 minutes.

The Chair recognizes the gentleman from Illinois [Mr. LIPINSKI].

Mr. LIPINSKI. Mr. Chairman, my amendment pertains to the public transportation section of the bill, specifically to the accessibility provisions for commuter rail.

As you know, the Committee on Public Works and Transportation took a long look at the ADA, with the goal of providing complete accessibility while maintaining the highest level of public transit service possible. In the process of marking up the bill, the Committee on Public Works adopted an amendment of mine pertaining to commuter rail and accessibility.

As we all know, in the final version of H.R. 2273 the issue of commuter rail will be addressed by the provisions of the Committee on Energy and Commerce. My amendment would essentially reinstitute the Public Works and Transportation version.

A primary element of the ADA's provisions for public transportation is the concept that all new purchases of public transportation vehicles must be accessible to the disabled after the bill's enactment. Clearly, this should be the approach for most public transit. In order to provide access to an intercity bus system, one must provide access to each bus. This will be the eventual result of the ADA. However, regarding commuter rail, I think it is reasonable and rational to take a slightly different perspective. When considering access to a train of four or five cars, it is reasonable to view the train as a whole. Access to one car per train, provided that the accessible car has sufficient capacity for the disabled ridership, qualifies the train as accessible. My amendment simply views the commuter train as a whole, demands that at least one car be accessible, and then provides a guarantee that additional accessibility will be provided if one car per train does not meet ridership demand.

First, the amendment maintains the one car per train rule, mandating that at least one car must be accessible as soon as practicable but no later than within 5 years. Additionally, it demands that the position of the accessible car on the platform be clearly indicated at all rail stations. This is designed to decrease train boarding confusion, allowing the disabled rider to expect the accessible car in the same place everyday. Furthermore, if any amenities are provided anywhere else on the train, such as bathrooms, diner or bar cars, they must be provided in the accessible car or cars. If these conditions are met in providing one accessible car per train, then commuter rail operators do not have to buy all new cars accessible.

The obvious objection to this one car per train rule is the question of whether all disabled riders will be accommodated in the one car. But with my amendment, the one car rule is by no means permanent. I point out to my colleagues section (B), which is the key to my amendment. It states that if continuing demand for accessible capacity is not met by one accessible car, then the operator must provide additional accessible cars as necessary to meet demand. In other words, if one accessible car meets demand, then one car constitutes accessibility. If it does not, then additional capacity must be provided.

I realize the leaders charging the ADA through Congress will frame this amendment as a weakening amendment. I encourage those claimants to take a close look at my amendment, which was the position adopted by the Committee on Public Works and Transportation, and compare it to the commuter rail provisions currently in the bill. I believe that this amendment along with my language detailing the intent of this provision offers far greater assurance that disabled riders will be comfortably accommodated.

To simplify this distinction: The current bill does mandate each new car must be accessible, but it allows a very broad interpretation of what qualifies as accessible. While my amendment only requires as many accessible cars as are necessary to meet ridership demand, it provides a strong interpretation of accessibility requirements on the train car.

You will notice my amendment requires that any services available anywhere on the commuter train, such as a bathroom, diner car or bar car, must be provided to the accessible car as well. The existing bill says no bathroom is required, even if every non-accessible car on the train includes a bathroom.

Also, in order to ensure the efficiency and workability of the one car per train rule, my amendment mandates that the rail operator must provide clear notice of where the accessible car on each train is located. This important provision will prevent the confusion on the train station platform which results from a person in a wheelchair having to wait for the approaching train and then moving on the crowded platform to the correct car to board. In most cases, the operator should be able to have the accessible car in the same place each day, which should make things easier for the disabled rider.

I can promise that the existing commuter rail provisions do not guarantee even these simple solutions. In fact, I think the existing requirements, when open to wide interpretation, do far less than my amendment to guarantee accessibility. To clarify this, I would like to describe briefly what the accessible commuter train will look like under my provision. As an example, I will use the current plan for accessibility adopted by Chicago's commuter rail service. I think it's appropriate to focus on Chicago's Metra, since many have claimed that this amendment is exclusively a Chicago amendment. That is simply not the case. I believe my approach is more reasonable, more rational, and guarantees accessibility. Illinois' plan for accessibility will provide complete accessibility, and Congress would be wise to use it as a model as my amendment does.

Under my amendment, each commuter train has one accessible car. As the train approaches the station, the disabled passenger would know exactly where to board, because it would be posted and the accessible car would be in the same place everyday. In Illinois, when the train pulls up, lifts on each side of the train would elevate riders into the car, where they would have adequate space to wheel in and secure their wheelchair. The car would have space for three or four wheelchairs. When these spaces are not occupied, fold down seats would be used by other passengers. There would also be a bathroom accessible to wheelchairs. Obviously, the accessible car is shared by passengers in wheelchairs and able bodied passengers. It is not a "cattle car" exclusively for the disabled. If those spots for wheelchairs are filled, my amendment requires that additional accessible cars are required on that train.

That is what accessibility would look like in Illinois. That is the scenario for providing accessibility on commuter trains under my amendment. Now lets take a look at what accessibility could look like under the current bill, as clarified by Energy and Commerce Committee report language.

Most important are the issues of lifts versus platform solutions and the accommodation of wheelchairs once aboard the train. Energy and Commerce report language makes clear that the existing bill does not require wheelchair lifts to provide accessibility at low platform stations. Rather, operators can use mini-platforms or movable ramps which wheelchairs ascend, and then enter the train. Well, in Illinois we looked at all the options for accessibility in coordination with the disabled community. The operators and the disabled agreed that these ramps, compared to lifts, are difficult to negotiate, more dangerous, and not preferred. Additionally, I point out that when a ramp is used to provide accessibility from a low platform, the ramp accesses only one train car. Theoretically, there is access to every car, but only by using the mini-platform or ramp. The de facto result is access to one car per train, a truism that opponents of my amendment would be wise to recognize. The most disturbing aspect of the current version is the fact that it may not really provide accessibility to an entire system. The Energy and Commerce report makes this clear, I quote: "there may be times at which a new car is itself accessible and usable but not able to be entered from every station it serves or from every point within a station. [This is not discrimination]." Obviously, a situation could arise where a person in a wheelchair can board the train but cannot exit at the desired stop. That is not full accessibility. In sharp contrast, the Public Works version along with my report language makes clear each station must be accessible, and even outline requirements for special events and other situations which will arise. With at least one car per train accessible, as my amendment guarantees, the disabled are ensured access to each train at every station. Apparently, the bill's language and its current interpretation offer no such assurances.

Under the bill and current report language, there is little to offer once the disabled passenger is aboard the commuter train. Access is required, but there need only be one spot in the car. So let's look at three people in wheelchairs who want to go to a baseball game, all boarding at the same station. Under my provisions, lifts elevate the riders into the accessible car, where they all have room. With only one space on an accessible car or cars, boarding via a platform ramp, one person boards at a time. I guess the train would have to move forward to access the next available door with an available wheelchair space inside. The three riders could not sit together. They would have no bathroom, even if every nonaccessible car on the train had a bathroom. In this situation, I believe my approach has clear benefits.

I point these scenarios out to highlight one important point. Mine is not a weakening amendment. Yes, it is a different approach than the current version, substantially different. But consider the two approaches, one approved by the Public Works and Transportation, one approved by Energy and Commerce. I want to provide one accessible car per train, more if necessary, but I want the definition of accessibility to mean lifts for low station platforms, with room for more than one wheelchair, and all the services offered anywhere on the train. The current bill provides accessibility to all newly purchased cars, but allows platform ramps, only requires one wheelchair slot, does not require equal services, and as report language indicates, does not even require every station be accessible.

I also point out that the vagueness of the current provision which is highlighted by the report will largely leave interpretation up to the courts. We should be working to limit, not promote, litigation on the ADA.

So anyone who would like to frame my provision as a weakening amendment should certainly acquaint themselves with the existing provisions for commuter rail and its interpretation by the Energy and Commerce report, which appeared in the RECORD May 15. It is a different approach, but I think it may be more successful in guaranteeing safe accessibility to every commuter train for the disabled.

Since the rationale of my amendment rests on section (B), which states that any continuing demand will be met by additional capacity, the logical question is what constitutes "continuing demand." When this provision was adopted by the Committee on Public Works and Transportation, I offered extensive report language to clarify the intent of this provision. The same would be necessary if this amendment is adopted. I'd be glad to explain the intent of this section and demonstrate how regulations will really put some teeth into this provision.

"Continuing demand" should be define as a regular demand on a given train line at a given period of the day. In interpreting demand, the definition must focus on demand being regular and consistent, not daily. If a given train's accessible car is filed daily to capacity, and on any given day or days of the week an additional person in a wheelchair waits for a ride and is not accommodated, that train cannot meet the demand. By no means does a given train need to operate over capacity five or seven days a week to be considered as "continuing demand." Rather, the demand, whether once a week or five times, must be regular or predictable. For instance, a person may have a part-time job and only ride a train three times a week. A student may ride to attend classes twice a week, or a person may travel to the hospital once a week. In all cases, if the demand is continuing and consistent to a train sometimes filled to capacity, the additional space must be provided.

While one-time special events which cause a sharp increase in wheelchair ridership would be a challenge, if special events which occur on a regular, scheduled basis (sporting events, concerts) were found to attract increased disabled ridership, increased accessible capacity must be provided. So, if the operator and the disabled community determined that trains downtown before Chicago Bears games, or before Civic Center concerts, did not accommodate the ridership, an adjustment in operations would be necessary, very similar to the adjustment for any other line's daily demand.

In both cases, regular demand and special events, cooperation between the operator and the disabled community will be vital to determining which trains at which times meet the criteria of "continuous demand." I believe it would be wise to mandate a consultation process or advisory committee for the determination of ongoing demand and new car need. Most importantly, such advisory committee would provide the mechanism for the disabled to call attention to a new regular demand, rather than relying solely on the conductor's reports. Metra, the commuter rail operator in Chicago, already uses such a committee to determine its budget and operations plans for accessibility. Such committee should be composed of representatives of the disabled community, but primarily wheelchair users as they are primarily affected by the commuter rail provisions of the ADA.

Finally, when it is determined that an increased demand cannot be met by one accessible car per train, the amendment states that the "public entity must use such additional accessible cars per train as may be necessary to meet such demand." I would like to clarify that the rail operator must do so promptly. When another car is determined necessary, this does not mean that the operator would have to purchase a brand new car from the manufacturer, which operators would argue takes 1 or 2 years. Rather, especially in large systems, providing an additional car is a matter of operational adjustments—rail yard changing to place another accessible car on a given train. For instance, in Illinois Metra will have over 180 acces-

sible cars in a fleet of roughly 650, and could make a car available without a problem. Unlike new purchases, these railyard changes could be adopted relatively quickly. DOT regulations could specify "When the provision of an accessible car to meet demand does not require new purchases from the manufacturer, but rather operational adjustments like rail yard switching, the additional accessible space or additional accessible car must be provided within 14 days of the determination of increased demand." In cases where increased capacity is provided by converting regular seating areas into additional wheelchair spaces, the turnover time could be even shorter, perhaps a week.

The points mentioned above—determination of continuing demand, providing for special events, mandated consultation between the operator and the disabled community, and the responsiveness of the operator to increased demand—are essential to the provisions for commuter rail in this amendment.

□ 1030

Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois [Mr. HASTERT], the cosponsor of this amendment.

Mr. HASTERT. Mr. Chairman, the amendment we offer today, to require that every commuter rail train have at least one handicapped-accessible rail car, is a practical, not political, solution to the transportation needs of the handicapped. This provision, which was made part of the Public Works Committee's ADA legislation, gives the handicapped needed access. What it does not do, however, is demand that every communter rail system across the Nation spend hundreds of millions of dollars to purchase or reconstruct all rail cars to be accessible. Many of our transit authorities, including our own in Chicago, are suffering ongoing financial hardship.

The Lipinski-Hastert amendment guarantees that every handicapped person that wants to ride, can ride. If at any time one car per train is not sufficient to meet capacity, additional cars must be provided as needed. For those who would attempt to tout civil rights to cloud this issue, and demand that every rail car on every train be handicapped-accessible, I would suggest they examine their collective consciences. The commuter rail language in the bill before us today is riddled with exemptions and exceptions.

For example: only "key" stations in a system must be accessible. In New York City, only 38 of 465 stations, 8 percent, are classified as key stations. In Philadelphia, fewer than 20 percent. San Francisco cable cars and New Orleans street cars are entirely exempt from accessibility requirements.

Those who support this amendment are acknowledging the vital need for handicapped accessibility and providing the most logical and cost-effective way to get there. If we impose unnecessary additional financial hardships on already pressed transit systems we will harm all riders, including the handicapped. Fewer dollars mean scheduling reductions and limitations on new capital expenditures to improve transportation services. Those attempting to block this proposal should reflect upon their true motivations.

□ 1040

Mr. HYDE. Mr. Chairman, will the gentleman yield?

Mr. LIPINSKI. I yield to the gentleman from Illinois.

The CHAIRMAN. The Chair would point out that the gentleman from Illinois [Mr. LIPINSKI] controls the time.

Mr. LIPINSKI. Mr. Chairman, I yield 1 minute to the gentleman from Illinois [Mr. HYDE].

Mr. HYDE. Mr. Chairman, I thank my friend for yielding time to me.

Mr. Chairman, the cost of having a lift on every coach is going to be passed off to the ridership. We are talking about a lot of people in Chicago who live in the inner city but whose jobs are out in the suburbs and who have to take public transportation to get to work. The fare is already prohibitive. This will only add to their burden. So while we are perhaps nominally helping one group, we are disadvantaging another group.

I will ask the gentleman from Illinois [Mr. LIPINSKI] this question: This will cost upward of $160 million, will it not, to make all the coaches on the Metra system accessible?

Mr. LIPINSKI. Mr. Chairman, if the gentleman will yield, it will cost about $150 million.

Mr. HYDE. Yes. It just seems to me that common sense and logic ought to obtain in this situation. If a train is accessible, then that ought to be sufficient until money is available to make every coach accessible.

Mr. LIPINSKI. Mr. Chairman, I want to thank the gentleman from Illinois [Mr. HYDE] and the gentleman from Illinois [Mr. HASTERT] for their statements.

The CHAIRMAN. The Chair wishes to advise the gentleman from Illinois [Mr. LIPINSKI] that he has 2 minutes remaining.

Mr. LIPINSKI. Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The Chair recognizes the distinguished gentleman from Ohio [Mr. THOMAS A. LUKEN].

Mr. THOMAS A. LUKEN. Mr Chairman, I yield myself such time as I may consume.

I rise in opposition to the amendment offered by the gentleman from Illinois [Mr. LIPINSKI]. There are three main reasons why I cannot support this weakening amendment.

First, the amendment represents a step backward for disabled Americans. When Congress passed the Rehabilitation Act 17 years ago, the law prohibited discrimination against disabled individuals by entities receiving Federal financial assistance. Under current regulations, commuter railroads that decide to purchase new rail passenger cars must buy accessible cars. The provision the Committee on Energy and Commerce adopted, which is in the bill before us, specifically requires commuter railroads to buy new cars that are accessible, in addition to complying with the one car per train rule. The amendment being offered thus represents an unequivocal retreat from years of established statutory and regulatory law governing commuter railroads.

Second, this amendment is not supported by the administration or the disability community.

The Energy and Commerce Committee spent many hours with representatives of the disabled community in considering the proper scope of provisions governing accessibility for Amtrak and commuter railroads. These lengthy and intensive negotiations and discussions produced a set of mutually agreeable provisions which will improve accessibility for the disabled on Amtrak and commuter railroads, taking into consideration the financial and operating realities of these transportation providers. We should not undo the agreement which our committee reached with the disability community and the administration after extensive and sensitive deliberation.

Third, this amendment sets accessibility requirements for commuter railroads at the lowest common denominator. Most commuter railroads and Amtrak already have made good faith efforts to comply with existing laws and regulations governing accessibility. If we adopt this amendment today, we will be lowering standards which all commuter railroads must comply with in planning for the future.

The amendment thus runs contrary to the key tenets of this landmark legislation—that we should strive to plan, design, and engineer accessibility into our basic services and operations and that we should eliminate the counterproductive mindset that accessibility means special, inordinate, or superfluous changes to accommodate the basic needs of disabled Americans. The amendment also encourages segregation instead of integration. Under the amendment, all disabled riders will be forced to ride in one designated car, thereby creating a cattle car environment. This is directly at odds with the primary goal of this legislation.

I also have reservations about the meaning of the amendment. What does "actual continuing demand" mean? Who will make that determination? What is the effective date of the amendment? How does the amendment apply to accessibility requirements other than for mobility impaired individuals? What does "additional services" mean?

In conclusion, Mr. Chairman, the bill before us sets clear, enforceable, and fair provisions for Amtrak and commuter railroads, which were negotiated by our committee, the disability community, and the administration.

Adoption of this amendment will only serve to muddy the waters and will undercut the purposes of the legislation. I strongly urge my colleagues to reject this unnecessary amendment.

Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. LIPINSKI].

Mr. LIPINSKI. Mr. Chairman, if the gentleman from Ohio has any other speakers, I would suggest that he proceed because I would still like to reserve my time since I only have 2 minutes left, unless the gentleman from Illinois wishes to yield some time to me. I could use it because I have other statements I would like to make.

The CHAIRMAN. The Chair will point out that the gentleman from Ohio [Mr. THOMAS A. LUKEN] retains the right to close debate. However, he may yield time to the gentleman from Illinois at his request if he wishes, and the Chair awaits some clarification.

Mr. THOMAS A. LUKEN. Mr. Chairman, I am glad to yield 3 minutes to the gentlewoman from Illinois [Mrs. COLLINS].±

Mrs. COLLINS. Mr. Chairman, I thank the gentleman for yielding.

I rise in opposition to the amendment offered by the gentleman from Illinois. This amendment is contrary to a basic goal which runs throughout this landmark civil rights legislation: that goal is to fully integrate disabled Americans into all aspects of life in our country.

Allowing commuter railroads to provide only one accessible car per train will ensure that disabled passengers are segregated from their fellow citizens well into the next century. There was a time in this country when I was required to ride in the back of the bus. I could not accept that kind of discrimination then, and I will not accept it now for any American. Allowing a few disabled passengers to ride a train is not enough. What disabled Americans seek with this legislation is the dignity which can only come with the full recognition of their civil rights.

To be segregated is to be misunderstood, even feared. If we have learned any lessons in the last 30 years, it is that only by breaking down barriers between people can we dispel the negative attitudes and myths that are the main currency of oppression. Imagine, if you will, that you are an employer deciding whether to hire someone with a mobility impairment; you may have concerns about whether that person can get to work every day on time. However, if you sit next to someone in a wheelchair every day on the train, I doubt that the question would enter your mind.

The amendment states that commuter railroads would be required to add additional accessible cars in response to actual continuing demand. Does that mean that if disabled citizens aren't buying tickets to ride on inaccessible trains that demand doesn't exist? If you used a wheelchair, would you show up for a ride on a train that experience tells you can't accommodate your needs? Of course not. Demand for services by the disabled can only manifest itself when the supply already exists. Train cars have a useful life of about 50 years. If we do not require accessibility for all newly purchased cars, we will not have achieved the goals of this bill for commuter railroads in the year 2000.

The costs of the changes required by this bill as it currently stands are modest; about what it costs for an air conditioner. Amortized over 50 years, the cost is negligible. Federal law already mandates accessibility for commuter railroads. Let us move forward, not backward, and vote against this weakening amendment.

Mr. DELLUMS. Mr. Chairman, will the gentlewoman yield?

Mrs. COLLINS. I am happy to yield to the gentleman from California.

Mr. DELLUMS. Mr. Chairman, I thank the gentlewoman for yielding.

Mr. Chairman, I would like to compliment my distinguished colleague for her eloquent statement. I thank her for her statement of dignity and integrity, and I associate myself with the gentlewoman's remarks.

I also compliment the gentleman from Ohio [Mr. THOMAS A. LUKEN] for his detailed explanation as to why the majority of this body ought to reject the amendment.

Mrs. COLLINS. Mr. Chairman, I thank the gentleman from California [Mr. DELLUMS].

Mr. HASTERT. Mr. Chairman, will the gentlewoman yield?

Mrs. COLLINS. I am happy to yield to the gentleman from Illinois.

Mr. HASTERT. Mr. Chairman, I certainly admire the gentlewoman in the well. I have worked with her on many occasions. But I would like to point out that in this situation we give access to every person on every train.

In the city of New York, for instance, less than 10 percent, only 8 percent of the stations, are so that people can get in and get on the trains. In Philadelphia, it is less than 20 percent of the people.

Mrs. COLLINS. Mr. Chairman, I reclaim my time. Let me say this: This amendment provides that only one car would be required in each group of cars that constitutes a train to be used for public service. That is unfair.

The CHAIRMAN. The time of the gentlewoman from Illinois [Mrs. COLLINS] has expired.

Mr. THOMAS A. LUKEN. Mr. Chairman, I yield 1 additional minute to the gentlewoman from Illinois [Mrs. COLLINS].

□ 1050

Mrs. COLLINS. I thank the gentleman for yielding more time. Mr. Chairman, to say that only one car could be used by the disabled is unfair; it is unjust. It is segregation. My colleagues may call it a money matter and give patterns in other cities. It still remains the same. It is unfair and unjust to disabled Americans who are seeking their full civil rights in this Nation.

Mr. THOMAS A. LUKEN. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. ANDERSON], the chairman of the Committee on Public Works and Transportation.

Mr. ANDERSON. Mr. Chairman, I rise in strong opposition to the amendment.

The disabled should not be segregated together in one commuter rail car as if they were being forced to sit in the back of the bus. They should have the same right to sit in any car on a commuter train as anyone else, so every new car should be accessible to the disabled.

Having each car accessible will also provide more capacity for wheelchair users on the train, since each vehicle would have space for wheelchairs rather than just on one car. Also foldup seats are commonly used on accessible vehicles to eliminate any loss of seating capacity involved in making cars accessible.

Different services, such as food or beverage services, are sometimes offered on different commuter rail cars and the car offering these services might not be the one which is accessible. Since wheelchair travel would not be possible between the cars, the disabled would be denied these services. Clearly, we should not pass a civil rights bill which provides a higher quality of service to one group of individuals and then deny these same services to individuals with disabilities.

For all of these reasons, I strongly urge a "no" vote on the amendment.

Mr. THOMAS A. LUKEN. Mr. Chairman, I yield 2 minutes to the gentlewomen from New York [Mrs. LOWEY].

Mrs. LOWEY of New York. Mr. Chairman, I rise in opposition to this amendment.

My colleague from Illinois is attempting to offer an amendment that he believes will help Chicago, and most of the debate about this amendment has centered around the question of whether this amendment is truly in the interests of the disabled or not. Many believe it is not.

However, I would like to introduce another important concern into this debate. The approach that is being pursued here—with one car on each train accessible, and the accessible car arriving on the same place on the platform each time—will prove extremely difficult to manage for many other commuter railroads around the country.

The commuter railroad in my district, Metro-North, is adamantly opposed to this amendment because of the severe difficulties it would pose to the management of their system. The cars on Metro-North trains are reordered frequently during each day in order to meet ridership demands. If Metro-North is forced to keep one accessible car in a specific place on each train, it will increase costs and interfere with their schedules. In fact, they consider this requirement to be more burdensome than the requirements that are already in the bill.

I think we ought to oppose this amendment, not only because of the serious concerns it raises about segregating the disabled in a separate car on each train, but also because this amendment would wreak havoc on other commuter railroads in this Nation, who have indicated to me in strong terms that they prefer the language that we have already wisely written into this bill.

I would urge my colleague to oppose this amendment and preserve the text of the bill, which is not only in the interests of the disabled, but in the interests of other commuter railroads around the Nation.

Mr. THOMAS A. LUKEN. Mr. Chairman, I yield 3 minutes to the gentleman from California [Mr. MINETA].

Mr. MINETA. Mr. Chairman, I am afraid I must oppose very vigorously the amendment offered by the fine gentleman from Illinois.

Why should we grant a special exemption from the provisions of the ADA for commuter rail vehicles? These are public transit vehicles just like buses and metrorail type vehicles. They receive urban mass transportation funds just like buses and metrorail vehicles. Of course, then why should we grant this exemption? The obvious answer is that we should not.

I am also told that when leaving the train storage yards, it will be difficult to guarantee that one car per train is accessible. By passing this amendment, you will be ensuring that transit authorities continue to have this problem of matching an accessible commuter rail car to each train in perpetuity.

In the final analysis that means we would be perpetuating, perhaps forever, the denial of commuter rail service to individuals with disabilities.

It makes much more sense to buy new, accessible commuter rail vehicles and to make existing commuter rail cars accessible when they are remanufactured, as the ADA currently requires. The bill is very clear, all new cars and all new stations are made accessible and to that extent, the bill is consistent. In this way, over a period of time, individuals with disabilities will have access to all commuter rail cars, just like everyone else. They will not be segregated in a single, accessible rail car—a practice bearing an uncomfortable and unacceptable similarity to the days when blacks were forced to ride in the back of the bus.

That is why I urge my colleagues to defeat the amendment.

Mr. LIPINSKI. Mr. Chairman, I yield such time as he may consume to the gentleman from Texas [Mr. BARTLETT] so that the gentleman may ask a question or two.

Mr. BARTLETT. Mr. Chairman, I appreciate the gentleman from Illinois [Mr. LIPINSKI] yielding to me for two questions, and let me say at the outset that I have some sympathy for this amendment, but I have some concerns about the specific draft. So, I have two questions.

First, should this bill be referred to a conference, would the gentleman from Illinois [Mr. LIPINSKI] work with the conferees to insure, first, that a mechanism is reinstated in the amendment, as it was in the Committee on Public Works and Transportation, a mechanism to enforce the required accessibility on demand standard?

Mr. Chairman, the amendment of the gentleman from Illinois [Mr. LIPINSKI] has a requirement that, if there is a demand, then additional cars be purchased.

Mr. LIPINSKI. Very definitely I will do that. In fact, we have report language, if this amendment were to pass, covering that.

Mr. BARTLETT. Mr. Chairman, my second question is: Again, should we go to conference, the comments of the gentleman from Illinois [Mr. LIPINSKI] on the floor indicated that he wished his amendment to require more than the one or two seats per accessible car, but the number of seats on the car per train that is accessible be demand responsive, so it would be more than one or two seats. Would the gentleman also work with us on both of those amendments, not for report language out of the conference, but for statutory language in the bill as passed out of conference?

Mr. LIPINSKI. I would be more than happy to do that. Absolutely.

Mr. BARTLETT. Mr. Chairman, I thank the gentleman from Illinois [Mr. LIPINSKI] for his clarification, and, based on that, I do think the amendment does need to be clarified in statute where we tighten it up somewhat, but I would be prepared to support it as it moves off the floor here.

Mr. LIPINSKI. Mr. Chairman, I yield the balance of my time to the gentleman from Illinois [Mr. HASTERT].

Mr. HASTERT. Mr. Chairman, I just want to say, "Thank you, sir, for yielding."

My colleagues, I am offended, this saying this is a racial piece of legislation, that it is civil rights legislation. If my colleagues put a person in any designated spot in any car, they are setting him in a designated spot.

Mr. Chairman, I say to the gentleman from California that talks about this being an exception, "What about the exception in California and the cable car exception?"

The gentlewoman from New York [Mrs. LOWEY] talks about exemptions. What about 300 stations in her home State of New York that are being exempted out of this?

Mr. Chairman, this is access to everybody, and I think that is the whole underlying tone of this amendment.

□ 1100

Mr. LIPINSKI. In conclusion, Mr. Chairman, I simply want to say that if you really want to help out the disabled, if you really want to help out the transportation systems in this Nation, you will support this amendment. If you just read our amendment, our language, the Energy and Commerce Committee amendment and its language, you will see that for transportation and the disabled, we are far superior.

Mr. THOMAS A. LUKEN. Mr. Chairman, I yield myself 30 seconds to comment on the previous colloquy, which admits the point that I made in the opening statement that the actual continuing demand is a vague term which has not been defined. It has been admitted now by the other side that there is a defect which would have to be cured at a later time, and there are no assurances that it would be cured. That is an additional reason why this amendment should be rejected.

Mr. Chairman, I yield the balance of the time to the distinguished gentleman from Maryland [Mr. HOYER], the author of the principal legislation before us, to close debate.

Mr. HOYER. Mr. Chairman, I thank Chairman LUKEN for yielding me this time. I rise in strong opposition to the Lipinski amendment.

The Americans With Disabilities Act is premised on the notion that this society will no longer buy new or build new vehicles and buildings that are not accessible. Nobody, not New York, not Los Angeles, not New Jersey, nobody will buy cars which are not accessible. There are no exemptions for new cars. This amendment seeks to do that.

Furthermore, this amendment seeks to retreat from today's law. The regulations now pending, issued by the administration, require commuter rails to buy accessible new cars. Therefore, this not only is not consistent with the ADA protections that are being extended, it is not consistent with existing law and the administration's pending regulations.

Now, let me say that the administration does not support the Lipinski-Hastert amendment. They believe it is not consistent with their agreement of support for the Americans With Disabilities Act.

So point No. 1, the administration is opposed to this amendment.

Second, this amendment is opposed by the mayor of Chicago, with whom I talked last night.

Mr. LIPINSKI. Mr. Chairman, will the gentleman yield?

Mr. HOYER. I yield to the gentleman from Illinois.

Mr. LIPINSKI. Mr. Chairman, let us get that straight.

First of all, the mayor of the city of Chicago has nothing to do with commuter rail, No. 1.

No. 2, the mayor of the city of Chicago issued a letter stating he supports this bill. I am a cosponsor of this bill. I have some problems with it. He may or may not have some problems with this amendment.

Mr. HOYER. Well, I talked to him last night.

Mr. LIPINSKI. I spoke to him last night, too.

Mr. HOYER. He is talking to all of us.

Mr. LIPINSKI. He is a very expressive man.

Mr. HOYER. The President is opposed to the amendment. Mayor Daley is opposed to the amendment because he believes it is inconsistent with the protections extended by this bill.

Let me say further that the committee who has responsibility over this bill, and the chairman have all spoken on this issue.

New cars ought to be accessible. All new cars ought to be accessible. We ought to build in our society the psychology of accessibility to all people in our society.

The premise of the cost projections by the proponents of the Lipinski-Hastert amendment, I suggest, are incorrect in their assessment. First of all, they premise that two lifts on every car is essential. The bill does not say that. You can make cars accessible by changes at stations, even if they are not at grade. We have pictures depicting that. I do not have time to go through that show, but the fact of the matter is the premise of the cost projections is incorrect.

Second, it projects that all new cars have to have rest rooms. That is not required by this legislation. As a matter of fact, it specifically says it is not required in the report language.

The gentleman speaks of key stations. In fact, all key stations will need to be accessible. We do give time for that. We give up to 20 years for that, as the gentleman knows.

Why? Because we are sensitive to the cost involved and we want to give people the opportunity; but the bottom line of this legislation is that we are opening America to the disabled, not except here or except there or only if it is convenient here, we are opening America to the disabled.

I would urge the House to reject this amendment, reject it because it is a retreat from today's law, a law passed in 1973, the Rehabilitation Act that said we are going to make America accessible, and anybody who gets Federal funds needs to comply.

What is the problem here? The problem is, unfortunately, that one system uniquely in America has not made significant steps toward accessibility.

Now, I am sorry about that and I understand that may cause some problems, but this law has been on the books since 1973. One could have contemplated that.

Now, this system, particularly the Chicago system, as I understand it from the cost projections submitted to me by the sponsors of this bill, projects substantial acquisition of cars in the very near term.

Why? Because they have not purchased cars to date, because they were concerned about purchasing accessible cars.

In fact, I understand, I may be corrected, that there are three suits pending against that system for violation of State law, notwithstanding the Americans With Disabilities Act.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from Illinois [Mr. LIPINSKI].

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. LIPINSKI. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 110, noes 290, not voting 32, as follows:

□ 1131

The Clerk announced the following pairs:

On this vote:

Mr. Craig for, with Mr. Nelson of Florida against.

Mr. Thomas of California for, with Mr. Anthony against.

Messrs. VOLKMER, FLAKE, BROOMFIELD, and CAMPBELL of California, Mrs. ROUKEMA, and Mr. PETRI changed their vote from "aye" to "no."

Mrs. BENTLEY, Mr. McMILLAN of North Carolina, and Mr. COBLE changed their vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. It is now in order to consider amendment No. 7 printed in House Report 101-488.

AMENDMENT OFFERED BY MR. SHUSTER

Mr. SHUSTER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. SHUSTER: At the end of section 222, insert the following new subsection:

(d) WAIVER.—

(1) GENERAL RULE.—The Secretary may waive application of this section on an annual basis with respect to any public entity which operates a fixed route system in an urbanized area (as defined under section 12 of the Urban Mass Transportation Act of 1964) with a population of 200,000 or less or in an area other than an urbanized area if the following requirements are met:

(A) The public entity submits in writing, and the Secretary approves, a plan for meeting the transportation needs of individuals with disabilities in the service area of such system.

(B) The public entity demonstrates to the satisfaction of the Secretary that under the plan the transportation needs of such individuals will be met at least as effectively as such needs would be met by the fixed route system if all the vehicles on such system were readily accessible to and usable by such individuals.

(C) The public entity demonstrates to the satisfaction of the Secretary that it has established an advisory committee which is representative of individuals with disabilities in the service area.

(D) The public entity demonstrates to the satisfaction of the Secretary that it has held a public hearing, provided an opportunity for comment, and consulted with the advisory committee in preparing the plan.

(E) The public entity demonstrates to the satisfaction of the Secretary that there is no substantial opposition to such plan by individuals with disabilities in the service area of the fixed route system.

(F) Under the plan, the public entity will provide transportation to all individuals with disabilities in the service area of the fixed route system who cannot otherwise use the fixed route system.

(2) SUSPENSION OR REVOCATION.—The Secretary shall suspend or revoke a waiver granted to a public entity under this subsection if the Secretary determines that such entity is not providing transportation for individuals with disabilities in accordance with the plan of such entity approved by the Secretary under this subsection.

(3) DISCRIMINATION.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a public entity to fail to provide transportation in accordance with its plan as approved by the Secretary under this subsection or to fail in any other manner to comply with such plan.

(4) DESCRIPTION OF TRANSPORTATION.—A plan to provide alternative transportation to individuals with disabilities under this subsection may provide for the provision of such transportation through either paratransit and other special transportation services or through a combination of such services and the use on the fixed route system of vehicles which are readily accessible to and usable by individuals with disabilities.

(5) RELATIONSHIP TO SECTION 223.—

(A) GENERAL RULE.—Except as provided in subparagraph (B), section 223 shall apply with respect to any paratransit and special transportation services provided under a plan approved by the Secretary under this subsection.

(B) EXCEPTIONS.—Subsections (c)(1) and (e) of section 223 shall not apply with respect to any paratransit and special transportation services provided under a plan approved by the Secretary under this subsection. In lieu of subsection (c)(1)(A) of section 223, paragraph (1)(F) of this subsection shall apply with respect to such services.

(6) DUPLICATION OF EFFORT.—The Secretary shall take such action as may be necessary to minimize duplication in plans submitted under this section and section 223.

(7) ISSUANCE OF REGULATIONS.—The Secretary shall issue such regulations as may be necessary to carry out this subsection. Such regulations shall take effect at the same time as the regulations issued under section 223 take effect.

(8) TEMPORARY EXEMPTION.—Until the effective date of regulations issued to carry out this subsection, this section does not apply to any public entity which operates a fixed route system in an area described in paragraph (1).

In section 229(a), strike "section 223" and insert "sections 222(d) and 223".

In section 229(b), strike "section 223" and insert "sections 222(d) and 223".

The CHAIRMAN. The gentleman from Pennsylvania [Mr. SHUSTER] will be recognized for 20 minutes, and a Member opposed will be recognized for 20 minutes.

The Chair recognizes the gentleman from Pennsylvania [Mr. SHUSTER].

Mr. SHUSTER. Mr. Chairman, ladies and gentleman, I would hope that you would focus on the substance of this amendment rather than on the emotional rhetoric against it. I would also emphasize that I am offering this amendment not only on behalf of myself but also on behalf of Congressman PEASE of Ohio, Congressman PETRI of Wisconsin.

First and foremost, this amendment provides a very restricted annual waiver on mandating 100 percent lift-equipped buses for those small communities and rural areas, small areas of 200,000 or less as defined by the Urban Mass Transit Administration, or rural areas.

It is important, Mr. Chairman, to note that there are several conditions which must be met before this waiver can be granted to a local transit authority.

This limited local option waiver can be granted only if certain conditions are met: First, the local transit authority must submit in writing a plan for meeting the transportation needs of the disabled in its community. Second, they must demonstrate that the needs of the disabled will be met at least as effectively as a 100 percent lift-equipped system.

Third, they must establish an advisory committee of local disabled representatives and must hold public meetings and consult with the advisory committee and, perhaps most importantly, get this, that there can be absolutely no waiver whatsoever unless the local disabled community has not substantial opposition to the plan.

Now, this is a fundamental difference between this amendment and the previous amendment which was offered. In this amendment, the local disabled community have a veto over such a waiver.

In effect, this shifts the power and the authority and responsibility away from the Washington disabled lobby to the local disabled community. For that reason alone, this amendment should receive very substantial support, in my judgment.

The Secretary must suspend or revoke the waiver if the entity is not providing service to the local disabled that meets all the requirements of the plan.

Now, Mr. Chairman, it is important to realize that when we talk about a lift mandate, mandating 100 percent-equipped lifts, that for thousands of disabled a 100 percent lift-equipped mandate on buses is zero accessibility for thousands of Americans who cannot get to and from the bus stop but rather who must have accessibility through what is called paratransit from their homes.

It is important to recognize, Mr. Chairman, that 100 percent lift accessibility is zero accessibility for thousands of the disabled who cannot get to the bus stop but who must have paratransit, minibus service to and from their homes.

It is also important to recognize that this bill does not provide one cent, one penny of money to support the very substantial requirement costs levied upon our transit authorities across the United States.

The American Public Transit Association, which represents our local transit authorities, says that the cost of this bill, the rail and fixed-route bus costs, range from $7.9 to $11.6 billion over the next two decades. The paratransit cost is $13 billion. So we are looking at a price tag on the transportation provisions alone of this bill of $20 billion over the next two decades, and this bill does not provide one penny to address that. What this bill does, unless it is corrected by this amendment, it mandates that every bus must have a lift.

□ 1140

The bill also says that we must supply paratransit, but there is a loophole. This is extremely important. There is a loophole that says we do not need to have paratransit if it there is "undue financial burden." Think about it for a minute. If we must, without exception, put lifts on every bus, if we do not get one cent more money to do this, and if we have a loophole that says we do not have to use paratransit if it is an undue financial burden, then obviously it is the paratransit that is going to suffer.

It is the people who need to get from their home to where they want to go, the people who cannot get to the bus stop, are the people who are going to suffer. There are thousands, hundreds of thousands of such disabled across America.

So what we should do is have at least a little confidence in our local communities, a little confidence in the local transit authority, a little confidence in the disabled community back home in our communities, and let them make a decision as to whether this must be 100 percent mandated lifts, or whether there can be some exceptions to this, so long as we provide accessibility for the disabled in a manner in which they agree is acceptable.

It is very important also to note that there are those who say this is a civil rights issue, and there can be no exceptions. Well, ladies and gentleman, there are many, many exceptions in this bill. The problem is the big cities have been taken care of. They have been given exceptions. But the small cities and rural America has not been given any exceptions. Consider this: In New York City, under this bill, only 38 of the 465 subway stations need to be equipped for accessibility. So 427 subway stations in New York City will not be equipped for the disabled. These are exceptions which have been given to the big city. In Philadelphia, only 31 of the 172 commuter rail stations need be equipped to serve the disabled. So 140 of those stations cannot serve the disabled. This is an exception. We have been given exceptions to the big cities. In San Francisco the cable cars do not need to provide accessibility. In New Orleans, the street cars do not need to provide accessibility. There are many, many exceptions to this bill. The big cities have been taken care of with their exceptions, but small community America, rural America, has been given absolutely no latitude at all.

We have said by this bill that we do not care what the local disabled community thinks, we are going to tell Americans, from Washington, DC, here, what Americans must do. We are going to mandate exactly how communities must proceed. I think it is very instructive, Mr. Chairman, to note that my dear friends and colleagues who put out a letter yesterday opposing this amendment, the two gentlemen from California, Mr. MINETA and Mr. ANDERSON, in their letter have noted that many cities have already stated that if this amendment prevails they will seek to take advantage of it. Think about that for a minute. What a terrible thing—cities across America have said that they think this is a good idea. What an awful thing for Washington, DC, to say, "No, local cities, no, rural America, no, local disabled community, you cannot decide what is best for you. We here in Washington, DC, know what is best for you."

Under the guise of calling it a civil rights bill, under the guise of saying there can be no exceptions, we have given numerous exceptions to the big cities, but no exception whatsoever to small city America and to rural America. Why do we not have at least a little confidence in our local areas? Why do we not recognize that very clearly this modest amendment gives a veto to the local disabled community? That is the heart of it. That is the guts of it. That is why the modest amendment should be supported.

Lastly, my friends in their letter say when they refer to those cities that are having 100 percent lift accessibility, and that is fine if a city wants to do it, let a city have 100 percent lift accessibility. They say, referring to those cities, if these cities can operate successful lift equipment systems, why can others cities not do so? Yes, sir, that is the bottom line, Members, let Washington, DC, decide what is best for your community. Let Members decide here on the banks of the Potomac what is good for Wisconsin or Pennsylvania or Utah. Let Members tell communities, let Members have no confidence in our local communities, let Members have no confidence in the local disabled community. Let Members rely on Big Brother, because Big Brother knows all.

This is a modest amendment. I urge Members to support it. Support it so that the local communities can have some say in this legislation, and most importantly, so that a veto over any waiver will be held in the hands of the local disabled community and not controlled by the Washington lobby here.

Mr. ANDERSON. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in strong opposition to the amendment.

I strongly believe that every public transit bus, most of which are paid for with 80 percent Federal funds, should have a wheelchair lift so the disabled can ride these buses just like their friends, fellow employees, and families. My State, California, has required lifts on every bus in cities of all sizes for over a decade. Long Beach Transit which is in my congressional district has a very successful wheelchair lift program. Johnstown, PA, Champaign-Urbana, IL, and Oshkosh, WI, are all cities of less than 60,000 yet each has a lift-equipped bus fleet. If these cities can operate successful lift-equipped systems, why can't other cities?

More importantly, how can anyone believe that the disabled have less of a right to transportation if they live in a city of 200,000 or fewer than those who live in larger cities. How can we let the latest census dictate the rights of individuals with disabilities? Why

should the disabled in these cities have to call in advance to receive paratransit service—often days in advance—just to do simple things like go to a restaurant or go to see a movie? Remember, separate but equal is inherently unequal.

Many transit systems in cities across America are already buying 100 percent of their buses wheelchair lift-equipped because this approach is more cost effective than providing the same, high level of needed passenger trips on paratransit vehicles.

When we are presented with an amendment which is not cost effective, and which establishes a "separate but equal" doctrine under the law, we should—and must—reject it.

Finally, Mr. Chairman, how can we pass an amendment which takes away a civil right which the Senate, the White House, and even the Department of Transportation in its recent notice of proposed rulemaking are willing to extend to individuals with disabilities. The answer is—we cannot.

I strongly urge a "no" vote on the amendment.

Mr. SHUSTER. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. I yield to the gentleman from Pennsylvania.

Mr. SHUSTER. Mr. Chairman, if my good friend argues that there should be no exceptions, then why in New York City are there 427 stations which the disabled cannot get to? And why in Philadelphia, 140? Why did the big cities have these exceptions where the disabled, according to my friend, are having their civil rights abridged because they cannot get to these stations? Why have we made exceptions to the big cities and not for rural and small town America?

Mr. ANDERSON. Mr. Chairman, in my State the big cities, every one of them, are doing it and they seem pleased. I know in my own city of Long Beach they are not only doing it but they are proud of doing it.

Mr. SHUSTER. If the gentleman will continue to yield, what is good for Long Beach is good for America, and we should have stuffed down our throats what the gentleman's community has decided to do for their community?

Mr. ANDERSON. Mr. Chairman, I reserve the balance of my time.

Mr. SHUSTER. Mr. Chairman, I yield 5 minutes to my friend, the gentleman from Ohio [Mr. PEASE].

Mr. PEASE. Mr. Chairman, I rise in support of the Shuster amendment. I do so, and let me emphasize, as a supporter of the Americans With Disabilities Act. As a Member who has opposed all previous amendments to the bill, and as a Member who will vote yes on final passage.

□ 1150

But I support the Shuster amendment enthusiastically. It will add another measure of practicality and common sense to the bill.

Mr. Chairman, Congress faces a particular challenge when considering civil rights bills like ADA. That challenge is to strike a balance between protecting a civil right and maintaining a standard of practicality in the process. The great temptation is to throw all notions of workability to the wind in the belief that with civil rights there can be no compromise, that a person either has a civil right or a person does not. When that temptation is yielded to, the result is legislation noble in concept but unreasonable or burdensome in practice.

To their credit, the committees considering ADA seldom yielded to the temptation. By and large, ADA is a reasonable bill. It is a carefully balanced bill which attacks discrimination against the disabled without unrealistic, impractical, or burdensome requirements.

There is one area, I believe, where improvement can yet be made, and it is highlighted by the Shuster amendment.

Consider, Mr. Chairman, that transit systems in cities under 200,000 are marginal operations. They are struggling to make ends meet. They desperately need new equipment and are chronically short of money. It does not make sense to require them to spend extra money for wheelchair equipped buses if they can provide paratransit services which will fully meet the needs of the disabled. We should keep in mind that wheelchair equipped buses cost more money, and that the Congress has been unable to provide additional funds for transit system capital needs. That has been true over the last 10 years; it is true this year.

Fixed resources and more expensive buses mean few buses. Yet transit systems need more, not fewer, buses.

As others have said in this debate, referring to my good friend and colleague, the gentleman from Pennsylvania [Mr. SHUSTER], the handicapped in each community are fully protected by the Shuster amendment. No waiver to the accessibility requirement can be made if there is any substantial opposition to the plan by persons with disabilities in the area to be served.

That being the case, what purpose can be served by forcing smaller communities to buy more expensive buses out of fixed or even declining capital budgets?

Mr. Chairman, I realize that ADA supporters are urging all-out opposition to all allegedly weakening amendments, but no one requires that we check our common sense at the door when we come into the House Chamber. The Shuster amendment passes the test of common sense, and I urge its adoption.

Mr. ANDERSON. Mr. Chairman, I yield 2 minutes to the gentleman from New York [Mr. FISH].

Mr. FISH. Mr. Chairman, I thank my friend for yielding this time to me.

Mr. Chairman, let me say to my colleagues that this amendment is directly contrary to the goals and purposes of the Americans With Disabilities Act. The act is designed to open up mainline transportation systems to people with disabilities. It is designed to make the America of the future accessible to all our citizens.

Mr. Chairman, to make this a reality requires mainstreaming of American citizens into mainline transportation systems everywhere.

Mr. Chairman, one of the great goals of this legislation is employment opportunities. Jobs will open up, but transportation is essential to the fulfillment of this dream and hope. But the proposed amendment does not address the issue of increased demand for transportation.

As disabled people become mainstreamed and employed, no transportation system can effectively and efficiently accommodate the large numbers of persons who are needed without accessible fixed route systems.

Finally, Mr. Chairman, the alternative is that this amendment would allow a huge number of communities to avoid the goals of integration of the ADA and to continue the segregation of their own residents through the use of inadequate and demeaning handicapped transit services.

Mr. Chairman, I urge a "no" vote on the amendment.

Mr. ANDERSON. Mr. Chairman, I yield 4 minutes to the gentleman from California [Mr. MINETA].

Mr. MINETA. Mr. Chairman, I regret to say I must strongly oppose the amendment offered by my good friend and distinguished colleague from Pennsylvania.

How can we sit here today and tell that pupil who is in a wheelchair and has attended elementary and secondary school with his or her friends for 10 years that mainstreaming doesn't include the right to ride on a public transit bus? How can we tell a disabled individual gladdened by the recent notice of proposed rulemaking issued by DOT, which will allow that individual to use a public transit bus for the first time, that this Congress is withdrawing that promise of access?

The answer is—we cannot, and that is the ADA requires every new fixed route public transit bus to be accessible to the disabled.

A civil right to equal transportation service does not diminish according to a city's population in the latest census. In fact, this latter aspect of the amendment could result in some par-

ticularly absurd situations. A disabled individual living in a community of 199,000 population would be denied equal transportation services for an entire decade—and for 20 years if more than 1,000 residents failed to move into the city in that first decade.

Where is the logic, much less the fairness, in that? How can we let the census control someone's civil rights?

No, to pass this amendment would be taking a step backward for this country—a country in which half of the buses bought annually are already accessible to people with disabilities who use wheelchairs.

On the other hand, the defeat of this amendment will help us reach the goal of 100 percent accessibility in all cities across America in a cost-effective way, at the same time we advance achievement of the civil right of equal transportation services.

Remember, no retrofitting of buses is required under the ADA. Unfortunately, this means that the disabled will continue to wait, probably for at least another decade, for 100 percent accessibility. But at least, by defeating this amendment today, we will eventually reach full accessibility.

The amendment also includes an endorsement of local option for meeting the transportation needs of individuals with disabilities.

Mr. Chairman, we have had variations of local option with regard to accessibility for people with disabilities in effect in cities across America for many years.

So, I raise a very basic question—if local option works, then why are we still debating the issue of accessibility for the disabled today?

I have seen "Dear Colleague" letters dating back to 1980 regarding this issue and here we are today—10 years later—still debating.

Why has a sizable majority of the disability community said that their needs are not being met by paratransit programs established under the policy of local option?

The answer is very clear to me—local option simply does not work as a national policy.

On the other hand, this ADA bill has the support of virtually every national organization which represents people with disabilities.

Can so many be so wrong? The answer is no; because it is the policy of local option which is wrong, and not the millions of Americans with disabilities who simply want to use public transit service.

I strongly urge a "no" vote on this amendment.

□ 1200

Mr. SHUSTER. Mr. Chairman, I yield 2 minutes to the gentleman from Wisconsin [Mr. PETRI].

Mr. PETRI. Mr. Chairman, I rise in support of the amendment proposed by my colleague from Pennsylvania, [Mr. SHUSTER]. In my opinion, that amendment further increases the transportation options available to disabled people.

The ADA bill before us seeks to improve access to transportation for the disabled. The Shuster amendment takes nothing away from the requirements already in the bill. It simply provides that if the local disabled community in any smaller city, without significant opposition within its ranks, believes that an alternative service would serve its needs better, and the local transit agency is willing to provide that service, then they can have it. This is an attempt to empower local disabled residents rather than dictating to them from Washington what they should want. If they want what the bill requires in its current form, they can have it. But, if they want something that they think is better, the amendment allows them to have that.

I repeat, this amendment takes nothing away. If the local disabled citizens want what is required in the bill—lifts on all buses—they can have that. If they prefer something else, however, we should not preclude that option. If these groups inside the beltway who claim to speak for all disabled people in the country are right about what disabled people really want then this amendment does nothing to prevent the installation of lifts on all buses nationwide. But if the disabled people in some cities want something else, this amendment allows them to have it. Clearly, for disabled people this is an improvement in the bill.

In my home town of Fond du Lac, population 35,000, the public transit authority currently operates an extensive paratransit service well beyond the operating hours for its main-line bus service. To ensure that its needs would be adequately met, the local disabled community was actively involved in structuring this successful plan. If Fond du Lac and hundreds of other small cities are forced to incur the additional expense of equipping and maintaining lifts on all of their buses, resources will necessarily be diverted from alternatives which in some cases are preferred by local disabled residents. In Fond du Lac, that means that paratransit will be cut back to only that which is required by the new ADA law: that is, service comparable to the existing main line bus service. In other words, for Fond du Lac and other cities the new ADA law without the Shuster amendment will result in a reduction rather than an increase in service for the disabled.

Some have suggested that unless a specific standard is imposed from Washington, access requirements will be circumvented at the State level. While I am aware of the limitations of the local option system we now seek to replace, I believe this amendment would ensure compliance with access requirements while still allowing for input from the very people this bill seeks to serve. We seek only to empower disabled residents so that they might have have some say in the type of system they prefer to meet their local transportation needs.

Mr. ANDERSON. Mr. Chairman, I yield 2 minutes to the gentleman from Ohio [Mr. MCEWEN].

Mr. MCEWEN. Mr. Chairman, I call all of my colleagues' attention to this very responsible, commonsense amendment. This amendment says very simply to the small towns of America that, "If you can provide superior service for the disabled community that they choose, you should be permitted to do that."

Mr. Chairman, we have just heard some statements that somehow or another that, if we provide this special door-to-door treatment in the community, that that is a disservice to them.

Let me repeat what we just heard on the floor. it said that, if we gave door-to-door service to the disabled communities in small towns, that somehow or another we were doing them a disservice because we were not mainstreaming them. If we did not force them to sit in the wheelchair in the snow on the corner there and wait for the bus, then, if we went to the house and picked them up, that that somehow was unfair.

Mr. Chairman, I would submit that the Rockefellers, and the Carnegies and the Vanderbilts did not feel it was unfair to have door-to-door service, personalized service, and, when these local communities, as in Chillicothe, OH, have the facilities to pick them up and take them directly to where they are going, and the local disabled community prefers, that, who in the world are people in Washington to outlaw such a service?

Mr. Chairman and my colleagues, we just heard some statements from the larger cities. They do not have that problem because in New York they exempted themselves, Ninety-two percent of all the subway stops in New York were exempted. They do not have to provide this access service. In Philadelphia 80 percent were exempted. They do not have to provide that service, but what this law says, unless the amendment of the gentleman from Pennsylvania [Mr. SHUSTER] passes, that, "If you are a small town, if you are a rural community, and if you care about the disabled, and you provide this service for them, unless you mainstream them and make those changes to all the buses, or none at all, then your service will be disallowed," and that, my colleagues, is exactly the wrong step to take.

Mr. Chairman, if we care about the disabled and trust their judgment, let them decide. Let the local community make the decision, and this commonsense amendment, this amendment of the gentleman from Pennsylvania [Mr. SHUSTER], says that the local disabled community will make that decision.

Mr. Chairman, I encourage my colleagues to allow it to happen and support the amendment of the gentleman from Pennsylvania [Mr. SHUSTER].

Mr. ANDERSON. Mr. Chairman, I yield 2 minutes to the gentleman from Pennsylvania [Mr. CLINGER].

Mr. CLINGER. Mr. Chairman, I thank the gentleman for yielding me this time.

I rise in support of this amendment because it will provide communities the flexibility they will need to meet one of the really essential functions of this bill—providing accessible transportation for the disabled—without unnecessarily eliminating existing services offered to the general public and without limiting access for the nondisabled population with mobility problems, particularly the elderly.

It is my feeling that the citizens in my rural district would be better served by having an alternative method of meeting their needs for mobility.

It should be obvious to all of my colleagues that smaller communities have fewer resources than urban mass transit systems and the effects of this bill on smaller communities would be severe.

It is important to realize that this amendment does not exempt a smaller community from meeting the needs of the disabled.

Rather any alternative service must meet the transportational needs of persons with disabilities as effectively as the fixed system would if all its vehicles were accessible.

This amendment requires any alternate plan to be approved by the Department of Transportation and there must be no significant opposition from the disabled community.

I think all of us are committed to providing access for disabled individuals. By supporting this amendment, you enable a community to more easily meet the accessibility needs of the disabled community that at the same time doesn't jeopardize services for the entire community.

Mr. SHUSTER. Mr. Chairman, I yield myself the balance of my time.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. SHUSTER] is recognized for 4 minutes.

Mr. SHUSTER. Mr. Chairman, in conclusion I would emphasize that the facts of the matter are that our public transit service systems across America in this decade have suffered a 50 percent reduction in real money, real funding from the Federal Government—a 50 percent reduction, my colleagues, and this bill does not provide one penny, not 1 cent, to provide for the increased costs that the bill mandates. So, our public transit authorities across America which have already faced a crunch are going to be facing an even greater crunch.

Now I know the powerful Washington disabled lobby, without regard for what local community disabled leaders think apparently, say that they want to mandate a 100 percent lift without regard for the cost, without regard for where the money is going to come from, without regard for the fact that, if more money must be spent this way, mandated by Washington in this way, it will mean less money will be left to provide paratransit services to other disabled, as well as general, service.

We hear that we should mainline the disabled. Well, of course we have heard several times here today that in the big cities we provided exceptions. There is no mainlining for 90 percent of the people who get on the New York subway. They will not be accessible. There are exceptions for them, but for small town America, for rural America and for small city America the Washington disabled lobby has not seen fit to support flexibility so the local disabled community can make those decisions back home.

□ 1210

Indeed, the most important point about this amendment, Mr. Chairman, is that it has in it an ironclad veto whereby the local disabled lobbies, if they are opposed to this waiver, then the local transit authority cannot get the waiver. It is that simple. What more can we ask for? Let us support our localities, rather than letting Big Brother here in Washington make all these decisions.

Mr. ANDERSON. Mr. Chairman, I yield the balance of my time to the gentleman from Maryland [Mr. HOYER], who has done such a tremendous job on this bill.

Mr. HOYER. Mr. Chairman, I thank the committee chairman for yielding me this time.

I rise in very strong opposition to the amendment offered by my good friend, the gentleman from Pennsylvania.

First of all, let me speak to a couple of the arguments that have been made. New York exemptions—all vehicles in New York must be accessible.

Mr. SHUSTER. Mr. Chairman, if the gentleman will yield, you just cannot get on them.

Mr. HOYER. All vehicles in Los Angeles must be accessible. All vehicles in every large city and every small town and every byway of America must be accessible, without exception.

Why? Because this Congress is saying the disabled are welcomed in, without exception, in New York or in a small town in the smallest place in America. That is what this bill is all about. This bill is about not segregating people who have felt segregated, about not discriminating against people who feel discriminated against. That is what this bill is about.

Section 504 which now exists, adopted in 1973, what does it say? It has been interpreted by the courts. It says that if you get Federal moneys, as all these systems do, you must be accessible. Forget about ADA. Forget about the Shuster amendment. It says you must be accessible.

This is a retreat from present law. This is saying that what we said in 1973 we did not mean. This is saying that although we say we want accessibility, we are going to hedge.

The requirements for public buses under section 504 were described in an en banc decision by the third circuit, and the premise that the local community could have a local option and paratransit only was specifically rejected by the court as inconsistent with the mandate of section 504.

Now in effect this is a retreat from that which we extended in 1973. Let us not back up on the disabled.

This is a bill to extend, not to restrict.

Mr. McEWEN. Mr. Chairman, will the gentleman yield?

Mr. HOYER. I will yield briefly to the gentleman from Ohio.

Mr. McEWEN. Mr. Chairman, I just want to clarify, the gentleman mentioned that all the subways in New York were going to be accessible.

Mr. HOYER. All new cars purchased by New York will be accessible.

Mr. McEWEN. The gentleman mentioned the cars. The fact is on the subway to get to the cars is exempted, so therefore they will never get to the cars. I am sure the gentleman did not want to leave that misunderstanding floating out there. They will not be able to get to the car because 92 percent of the subway stops are exempted under this bill, just as 80 percent are in Philadelphia.

Mr. HOYER. They are not exempted.

Mr. McEWEN. No; they are exempted.

Mr. HOYER. Mr. Chairman, I reclaim my time.

What we say is that key stations must be made accessible. Correct?

Now, why do we say that? Because we are concerned about cost. We are not irresponsible people. We understand clearly.

Now, if you get on a bus not at a station, then you say, "Well, we don't have a station."

All new vehicles must be accessible. We want to look toward the future. We want to say to manufacturers that you can make accessible vehicles. That is what we want to buy in America, be-

cause we want to service all—all of our people, including even those who are disabled. It is apples and oranges.

Now, obviously, there is a relationship. I understand that.

The gentleman indicated we need to be practical. We were practical. We think that making all new vehicles accessible not only as required by section 504 with respect to public entities, but it makes sense.

This amendment, Mr. Chairman, revisits the old and tired argument, the notion that localities should have the option of deciding to maintain segregated facilities and practices. We rejected that a long time ago. Let us reject it today.

Now, for those who raised the specter of paratransit being eliminated, nothing in this bill, I say to my good friend, the gentleman from Pennsylvania, in any way adversely affects paratransit to senior citizens to disabled folks, to anybody. In fact, if a system only has paratransit, if it chooses only to offer paratransit, then in that event its system is looked at. It does not even require that every vehicle in that system be accessible if it is only a paratransit system.

So I say, Mr. Chairman, first, do not give local options to exclude. Everybody in America is included in this bill right now, without exception. Do not pit big against small. Everybody is included.

Second, do not back up from present law.

Third, do not weaken one of the most important provisions that we have. This amendment will affect 80 percent of the communities of America. Do not say to the disabled of America that in 80 percent of the communities we are going to let you opt out of protections.

Mr. Chairman, this amendment weakens this bill. My good friend, the gentleman from Ohio, who is one of this body's strongest supporters of civil rights, and I disagree on this bill.

I hope this amendment is defeated, as was the last one and that we make the strongest possible statement for accessibility.

Mr. PEASE. Mr. Chairman, will the gentleman yield?

Mr. HOYER. I yield to my good friend, the gentleman from Ohio.

Mr. PEASE. Mr. Chairman, I appreciate the gentleman yielding to me.

I just want to emphasize that the point we are trying to make here is whether transit is going to be available at all. I do not think it helps our disabled very much if we say there is going to be a bus equipped with a lift for you if there are any buses at all, but there may not be any buses at all on your line, because our local transit system will have to cut back on purchases of buses because it lacks the money.

Mr. HOYER. Mr. Chairman, I will reclaim my time.

As the gentleman knows, local systems get 80 percent support from the Federal Government on these kinds of changes.

My time has expired. Vote no on the Shuster amendment.

Mrs. COLLINS. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from: Pennsylvania. Equal access to transportation is the linchpin of this legislation. Inaccessible transportation is the primary obstacle for 43 million Americans who seek full participation in our society, and economy. By denying access to transportation, we keep millions of disabled citizens out of the workforce and locked in a state of unwanted dependency. That dependency costs our Nation $300 billion annually, and we can't afford it any longer.

This amendment would exclude the majority of disabled Americans from the equal transportation access provided by this bill. Seventy percent of our State capitals would be excluded, as well as, the cities where most of our major universities are located.

The amendment states that our smaller cities must provide alternative, para-transit systems in lieu of mainline transit accessibility. Such segregation not only undermines the intent of this legislation, but experience has taught us that separate is never equal. Currently, paratransit service to the disabled in Chicago requires a minimum of 48 hours advance notice. How many job prospects are eliminated by that requirement? Could any lawyer, or reporter, or businessperson perform on the job with such restrictions? The answer is an obvious no.

Many small cities currently operate accessible mainline transit systems successfully. The cost of lifts on buses, when amortized over the life of the vehicle, are minimal. And as demand and usage grow, accessible buses become even cheaper. It is estimated that acquiring just one additional rider will pay for a lift equipped bus within 1 year. The costs for para-transit systems can only grow. Mainline access may be the best bargain in town.

If passed, this amendment will roll back progress already made by the disabled. Recently, the Department of Transportation indicated that mainline access will be required for transit systems which receive Federal funds to comply with section 504. I hope that my colleagues will not allow this legislation to be used to hurt those Americans it was designed to help. I urge your opposition.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from Pennsylvania [Mr. SHUSTER].

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. SHUSTER. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 148, noes 266, not voting 18, as follows:

The Clerk announced the following pair:

On this vote:

Mr. Craig for, with Mr. Nelson of Florida against.

Messrs. TAUKE and PAXON changed their vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. SENSENBRENNER

Mr. SENSENBRENNER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. SENSENBRENNER:

Strike section 107 and insert the following:

SEC. 107. ENFORCEMENT.

(a) IN GENERAL.—The remedies and procedures set forth in sections 706(a)-(f), 707, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-5(e)-(f), 2000e-6, 2000e-8, and 2000e-9) shall be available under this title, with respect to the Commission, the Attorney General, or any indivdiaul who believes that he or she is being subjected to discrimination on the basis of disability in violation of any provision of this title, or regulations promulgated under section 106, concerning employment.

(b) REMEDIES.—If, in any action brought pursuant to subsection (a) of this section, the court finds that the respondent has engaged in or is engaging in unlawful employment practices prohibited by this was charged in the complaint, the court may enjoin the respondent from engaging in such unlawful employment practice, and order such affirmative action as may be appropriate, which may include, but is not limited to, reinstatement or hiring of employees, with or without back pay (payable by the employer, employment agency, or labor organization, as the case may be, responsible for the unlawful employment practice), or any other equitable relief as the court deems appropriate. Back pay liability shall not accrue from a date more than two years prior to the filing of a charge with the Commission. Interim earnings or amounts earnable with reasonable diligence by the person or persons discriminated against shall operate to reduce the back pay otherwise allowable. No order of the court shall require the admission or reinstatement of an individual as a member of a union, or the hiring, reinstatement, or promotion of an individual as an employee, or the payment to him of any back pay, if such individual was refused admission, suspended, or expelled, or was refused employment or advancement or was suspended or discharged for any reason other than discrimination on account of disability.

(c) APPLICATION OF OTHER LAW.—The provisions of the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes," approved March 23, 1932 (29 U.S.C. 101-115) shall not apply with respect to civil actions brought under this section.

(d) PROCEEDINGS TO COMPEL COMPLIANCE.—In any case in which an employer, employment agency, or labor organization fails to comply with an order of a court issued in a civil action brought by the Commission or an individual under this section, the Commission may commerce proceedings to compel compliance with such order.

(e) APPEAL.—Any civil action brought under this section and any proceeding brought under subsection (d) shall be subject to appeal as provided in sections 1291 and 1292 of title 28, United States Code.

(f) EXCLUSIVITY OF REMEDIES.—The remedies and procedures set forth in this section shall be the sole remedies and procedures for violations of this title, except that the principles of construction set forth in subsections (a) and (b) of section 501 are fully applicable to this title.

The CHAIRMAN. The gentleman from Wisconsin [Mr. SENSENBRENNER] will be recognized for 30 minutes, and the gentleman from California [Mr. EDWARDS] will be recognized for 30 minutes.

The Chair now recognizes the gentleman from Wisconsin [Mr. SENSENBRENNER].

MODIFICATION TO AMENDMENT OFFERED BY MR. SENSENBRENNER

Mr. SENSENBRENNER. Mr. Chairman, I ask unanimous consent to make a technical change in the amendment as reported in House Report No. 101-488. On line 4 of section (b), the word "was" should be changed to "as."

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The CHAIRMAN. The amendment is modified.

The text of the amendment, as modified, is as follows:

Strike section 107 and insert the following:

SEC. 107 ENFORCEMENT.

(a) IN GENERAL.—The remedies and procedures set forth in sections 706 (a)-(f), 707, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-5(e)-(f), 2000e-6, 2000e-8, and 2000e-9) shall be available under this title, with respect to the Commission, the Attorney General, or any individual who believes that he or she is being subjected to discrimination on the basis of disability in violation of any provision of this title, or regulations promulgated under section 106, concerning employment.

(b) REMEDIES.—If, in any action brought pursuant to subsection (a) of this section, the court finds that the respondent has engaged in or is engaging in unlawful employment practices prohibited by this title as charged in the complaint, the court may enjoin the respondent from engaging in such unlawful employment practice, and order such affirmative action as may be appropriate, which may include, but is not limited to, reinstatement or hiring of employees, with or without back pay (payable by the employer, employment agency, or labor organization, as the case may be, responsible for the unlawful employment practice), or any other equitable relief as the court deems appropriate. Back pay liability shall not accrue from a date more than two years prior to the filing of a charge with the Commission. Interim earnings or amounts earnable with reasonable diligence by the person or persons discriminated against shall operate to reduce the back pay otherwise allowable. No order of the court shall require the admission or reinstatement of an individual as a member of a union, or the hiring, reinstatement, or promotion of an individual as an employee, or the payment to him of any back pay, if such individual was refused admission, suspended, or expelled, or was refused employment or advancement or was suspended or discharged for any reason other than discrimination on account of disability.

(c) APPLICATION OF OTHER LAW.—The provisions of the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes," approved March 23, 1932 (29 U.S.C. 101-115) shall not apply with respect to civil actions brought under this section.

(d) PROCEEDINGS TO COMPEL COMPLIANCE.—In any case in which an employer, employment agency, or labor organization fails to comply with an order of a court issued in a civil action brought by the Commission or an individual under this section, the Commission may commence proceedings to compel compliance with such order.

(e) APPEAL.—Any civil action, brought under this section and any proceeding brought under subsection (d) shall be subject to appeal as provided is sections 1291 and 1292 of title 28, United States Code.

(f) EXCLUSIVITY OF REMEDIES.—The remedies and procedures set forth in this section shall be the sole remedies and procedures for violations of this title, except that the principles of construction set forth in subsections (a) and (b) of section 501 are fully applicable to this title.

Mr. SENSENBRENNER. Mr. Chairman, I yield myself 6 minutes and 15 seconds.

Mr. Chairman, the amendment which I am sponsoring addresses the remedies provisions of the employment title of the Americans With Disabilities Act, H.R. 2273.

Currently, the ADA adopts the remedies provided by title VII of the Civil Rights Act of 1964. After pursuing the mandatory EEOC process, a plaintiff can bring a lawsuit in a local Federal district court to get back pay, with interest, injunctive relief, reinstatement, and attorneys' fees.

The purpose of this amendment is to clarify that the ADA calls for equitable relief as a remedy for employment discrimination. The amendment will neither expand nor contract the employment remedies currently available under the ADA which are the same as those afforded to women and racial minorities.

The intention of the amendment is not to provide lesser remedies for individuals with disabilities nor is it to put persons with disabilities at risk with respect to their rights under law, as some have alleged. On the contrary, I have wholeheartedly supported the Americans With Disabilities Act and have been working since the Subcommittee on Civil and Constitutional Rights first held hearings last summer to ensure that the bill provides meaningful opportunities for the disabled through elimination of discrimination.

This amendment will simply delink the remedies for employment discrimination in the Americans With Disabilities Act from the remedies contained in title VII of the Civil Rights Act of 1964.

Presently, the proposed Civil Rights Act of 1990—H.R. 4000—would amend title VII to provide for jury trials and compensatory and punitive damages remedies for intentional discrimination.

If H.R. 4000 is passed in its present form, punitive and compensatory damages would be back in the ADA. Not only does this break the deal previously agreed to, it would be quite a hit to the business community to subject them to punitive and compensatory damages for a newly enacted and comprehensive piece of legislation.

As originally introduced, the Americans With Disabilities Act would have provided greater remedies for the disabled than provided under current title VII law. H.R. 2273 originally contained a provision calling for the "remedies and procedures available under section 1981" of the Civil Rights Act of 1866. Section 1981 has been interpreted by the courts to allow for recovery of punitive and compensatory damages and jury trials in certain cases of employment discrimination. Inclusion of this language in the original version of the ADA would have allowed the recovery of expanded damages and jury trials for employment discrimination against the disabled under the ADA.

After intense negotiations between the other body and the Bush administration, an agreement was reached in August 1989 to, among other items, delete the reference to section 1981 procedures from the employment remedies provision in exchange for broadening the coverage under the public accommodations title. Thus, the ADA's employment remedies were limited to current title VII remedies. The decision was made to provide traditional "make whole" remedies in order to avoid the excessive and unnecessary litigation the original remedies provision would have caused. With this significant change, the other body passed the bill on September 7, 1989, by a vote of 76 to 8 and it was sent to the House for consideration.

This understanding of the deal reached on the ADA was expressed in a letter from Attorney General Thornburgh, on March 12, 1990. The letter stated:

A very critical element of this bill was that, as under title VII of the Civil Rights Act of 1964, the remedies it made available for violations of the employment title were limited to nondamage remedies that can be obtained in a trial before a judge. That formulation was crucial to the thrust and structure of a number of critical sections of the legislation. Because we were emulating the remedial scheme of title VII, those remedies were simply incorporated by reference. In return, the administration agreed to broad coverage under the public accommodations title, e.g. retail stores, doctors' and lawyers' offices, drug stores, and grocery stores—all establishments necessary for people with disabilities to be truly in the mainstream. This coverage is much broader than title II of the Civil Rights Act of 1964, which essentially prohibits discrimination on the basis of race in hotels, motels, restaurants, gas stations, and places of public entertainment.

The Kennedy-Hawkins bill would greatly expand the remedies available under title VII and hence, by reference, the remedies in the employment title of the ADA. The administration is opposed to that aspect of Kennedy-Hawkins. The ADA need not be held hostage to the legislative outcome on Kennedy-Hawkins, however, in order to ensure that a critical element of the agreement struck previously will be observed.

We want to work with Congress to resolve this problem. Accordingly, we have proposed that [the] incorporation by reference of title VII remedies be amended to spell out the precise remedies available under the ADA.

We . . . actively support such a clarifying amendment and continue to support expeditious passage of the ADA with this clarification.

Four committees of the House reviewed the Americans With Disabilities Act. Of those four, the Committee on Education and Labor, and the Committee on the Judiciary specifically considered the employment remedies provisions of the ADA. When the Committee on Education and Labor held its markup of H.R. 2273, the understanding was that the ADA's employment remedies were the equitable remedies of title VII—no more, no less. Again, when our Subcommittee on Civil and Constitutional Rights held hearings last fall, we understood that the remedies had previously included punitive and compensatory damages, but that the make-whole remedies of title VII had been agreed to be the disability and business communities, the White House, and the other body in order to ensure passage of the legislation. There was no indication that "if those remedies [would be] amended in the future, such remedies [would] also apply to the ADA."

The argument now raised in opposition to this amendment, that through the committee process, the House has somehow lent its support to the inclusion of title VII remedies in the ADA, "as they exist now or as they may be amended in the future" is simply not true. It was not until the introduction of H.R. 4000, in fact, that this Orwellian rewrite of legislative history appeared.

In addition, expansion of remedies, especially in the context of a new and comprehensive piece of legislation is illadvised. Employers and employees have had more than 25 years of experience with the procedures and remedies of title VII for discrimination based on race, color, religion, sex, or national origin. In enacting title VII and other employment discrimination statutes, Congress has consistently pursued a policy of encouraging mediation and conciliation in resolving disputes and in avoiding unnecessary litigation.

Although Federal agencies and recipients of Federal funds have been covered under the Rehabilitation Act prohibiting discrimination against the disabled since 1973, the mainstream of society, the retail stores, doctors' and lawyers' offices, drug stores, and grocery stores have no experience in compliance with antidiscrimination laws against the disabled. The possibility of a compensatory and/or punitive damages award and a jury trial in employment disputes, therefore, raises the stakes much higher without any corresponding increasing benefit to the disabled.

In order to be effective at eliminating discrimination against the disabled, the active cooperation of business will be required. I believe it is sound policy is to have the money that businesses spend to comply with the

ADA used to make facilities accessible and provide additional employment opportunities for the disabled rather than to provide a windfall to ambulance chasing attorneys.

Last week, at a Rose Garden ceremony honoring the U.S. Commission on Civil Rights, President Bush reaffirmed this principal stating:

> Our civil rights laws . . . should not be turned into some lawyer's bonanza, encouraging litigation at the expense of conciliation, mediation, or settlement.

I am convinced that this coupling of title VII remedies in the ADA with those in the Civil Rights Act of 1964 will unnecessarily open the door for the diversion of funds into the courtroom by padding the pockets of the lawyers rather than providing access to the disabled.

In conclusion, I want to stress that this is a modest amendment which in no way forecloses any of the rights of the disabled. It may be that the disabled should be accorded the benefit of expanded remedies—although I agree with President Bush that the make-whole remedies currently embodied in title VII are the better policy—however, there is virtually no legislative record in the House on which to base that determination. The issue was simply not considered in any reasoned manner by any of the committees having jurisdiction over the matter. In the future, if such a determination is deemed appropriate it should be consciously decided on the basis of a clear and comprehensive legislative record, not boot-strapped to another piece of legislation.

The administration supports House passage of H.R. 2273 and strongly urges the adoption of the amendment to include the specific employment discrimination remedies of title VII of the Civil Rights Act of 1964, rather than to incorporate those remedies by reference. I urge your support of the amendment as well.

□ 1250

Mrs. SCHROEDER. Mr. Chairman, will the gentleman yield?

Mr. SENSENBRENNER. I yield to the gentlewoman from Colorado [Mrs. SCHROEDER].

Mrs. SCHROEDER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I want to make sure I understand what the gentleman is saying. It sounds to me like the gentleman's complaint is about the legislation dealing with title VII that may or may not come on later on. But if we adopted the gentleman's amendment and then later on the House decided there should be more expansive remedies for title VII, you would be precluding the disabled, treating them differently if we adopt this amendment.

Mr. SENSENBRENNER. Absolutely not. If H.R. 4000 is to expand remedies in the ADA, the adoption of my amendment will simply require you and the other supporters of H.R. 4000 to state how the remedies in the ADA will be expanded less than 2 or 3 months after President Bush signs this bill.

Mr. Chairman, I reserve the balance of my time.

Mr. EDWARDS of California. Mr. Chairman, I yield such time as he may consume to the gentleman from Minnesota [Mr. VENTO].

Mr. VENTO. Mr. Chairman, I rise in opposition to the Sensenbrenner amendment and in strong support of the Americans With Disabilities Act and urge my colleagues to vote for this critical legislation to extend basic civil rights to 43 million disabled Americans.

I thank my colleagues from the four House committees who have worked hard to bring this legislation to the floor today. The modifications made by these committees have improved and clarified the bill. I commend the chairman of the Democratic Caucus STENY HOYER for his leadership in shepherding this bill through the House. Finally, I would like to thank our former colleague Tony Coelho whose early and strong support of rights for the disabled is in large part responsible for our actions here today. Tony felt the effects of discrimination first hand when he was prevented from entering the priesthood because he had epilepsy. Although he won't be voting for this bill today, his vision and hard work have certainly paved the way for our consideration of this landmark legislation.

The late Senator Hubert Humphrey spoke about the moral test of government being how it treats those in the shadows of life, the sick, the needy, and the handicapped. For too long, the disabled have lived in the shadows of American life. They have been denied rights and opportunities afforded to others in our society. They have had a vague and imperfect imitation of the rights we take for granted—the right to work, the right to communicate, the right to live in the community—without fear of discrimination.

Mr. Chairman, disabled Americans are stepping out of the shadow world of the past. They are dismantling the physical and psychological barriers which get in the way of their full participation in our society. Who can forget the students at Gallaudet University who rose up in a stirring protest for equal rights for the disabled. Their actions led to the selection of a deaf president for the first time in the university's history and inspired people all over the world. Every day, other barriers are broken in less public though no less important ways. These heroic efforts are changing the way we think and treat the disabled.

Today we have an opportunity to shine the bright light of equality and justice onto the shadow world of discrimination. The Americans With Disabilities Act provides a comprehensive national mandate to end discrimination against individuals with disabilities and brings these people into the mainstream of social and economic life in the United States.

The bill prohibits discrimination in employment in a fair and realistic way. The daily discrimination against the disabled in employment situations is not only harmful to the individuals involved but also to the productivity of the Nation as a whole. Although two-thirds of disabled Americans age 16 to 64 are unemployed, 66 percent of the nonworking disabled want to work. Disabled Americans who are qualified to work in a position should not be discriminated against. This bill will put an end to this practice without disrupting business. Businesses have 2 to 4 years to make reasonable accommodations for a person with a disability unless those accommodations would impose an undue hardship on the employer.

The bill has important provisions for improving the accessibility of public transportation as well. It requires transit authorities to make transportation facilities accessible to persons with disabilities, including those in wheelchairs. Lifts must be provided for all new vehicles but no retrofitting is required. Paratransit services, which have been quite successful in my state of Minnesota, must be provided for those individuals who cannot use mainline service.

Other provisions of the Americans With Disabilities Act will improve the quality of life for the disabled. The bill provides for relay services to ensure telephone communications for the speech and hearing impaired. The measure also requires that all television public service announcements that are produced with Federal funding include close captioning for the hearing impaired. I am pleased that Congress is including itself under all parts of this important bill.

Mr. Chairman, I am glad that this bill has received strong bipartisan support in Congress and from the President. I expect the President to sign this bill and hope he will be supporting other civil rights legislation in the future. I urge my colleagues to support the Americans With Disabilities Act and oppose any amendments to weaken the bill. Our fellow disabled Americans deserve no less, they have long waited for this day when public law and policy recognize their needs indeed their rights to be a full participant in our society today and tomorrow.

Mr. EDWARDS of California. Mr. Chairman, I yield such time as he may consume to the gentleman from California [Mr. BERMAN].

Mr. BERMAN. Mr. Chairman, I thank the gentleman for yielding time to me.

Mr. Chairman, I also rise in opposition to the Sensenbrenner amendment and in support of the legislation.

Mr. Chairman, I rise in strong support of the Americans With Disabilities Act. Specifically, I wanted to discuss the public accommodations requirements of this legislation, which are critical provisions for ensuring the right and ability of disabled citizens to participate equally in the life of their communities.

This section of the legislation builds on many successful precedents in State and local law. States like California, Pennsylvania, New York, North Carolina, Massachusetts, Connecticut, Iowa, Illinois, and others have offered models on which many aspects of the ADA are based. Thus, these locations can serve as a laboratory for judging the success or failure of such requirements, both in terms of how much accessibility is provided, and whether or not the requirements posed too

great a burden on operators of public accommodations, including small businesses.

On both questions, these experiments have been a big success, laying the groundwork for the ADA to increase benefits derived from such policies to millions of disabled Americans nationwide, on a uniform basis, in every State.

Mr. Chairman, the ADA's requirements are especially modest in regard to existing accommodations. Facilities in operation today must remove barriers only if doing so is easily accomplished and able to be carried out without much difficulty or expense.

If removing a barrier is not readily achievable, the service available to other patrons of the public accommodation must be provided the disabled persons via alternative methods if this can be done easily and inexpensively.

It should be noted that there are existing tax deductions that business operators can take advantage of, providing an incentive for compliance with this aspect of the ADA. A deduction of up to $35,000 can be taken for money spent on access features.

The provision of auxiliary aids and services are required, but only if providing them does not pose an undue burden.

In determining whether removing a barrier is readily achievable, the ADA lays out certain factors that are to be considered. They include:

First, the overall size of the business, including number of employees; number, type, and location of facilities; and the financial resources of the business and its individual facilities;

Second, the type of operation, including the composition and structure of the work force; and

Third, the nature and cost of the barrier removal.

The ADA explicitly allows businesses to consider the resources not only of the overall parent company to remove barriers, but the possibly more limited resources available at the particular location the barrier is to be removed.

The reason this standard is so important is because, contrary to common belief, many times, architectural barrier removal is not very expensive. Virtually every facility can greatly enhance its usability by disabled people without bearing an economic burden.

To give a few examples, facilities can: Install a permanent or portable ramp over an entrance step; install offset hinges to widen a doorway; relocate a vending maching to clear an accessible path; install appropriate handrails at stairs; create a designated parking space reserved for disabled persons; install a grab bar in an existing restroom; relocate stall partitions to make one restroom stall large enough to provide wheelchair maneuvering space; make closet rods adjustable for use at multiple heights; install signals to indicate accessible routes and features within buildings; install raised tactile labels on existing elevator panels; install an adapted elevator control panel or a wand for access to high control buttons; and install a Telecommunications Device for the Deaf [TDD] for use by deaf people.

These modest efforts can make a world of difference for persons with disabilities. The ADA's provisions on existing buildings are designed to make the owners of public accommodations think about the types of barriers which people with disabilities encounter, and to remove them if it can be done easily.

Mr. EDWARDS of California. Mr. Chairman, I rise in strong opposition to the amendment offered by the gentleman from Wisconsin [Mr. SENSENBRENNER].

Mr. Chairman, the heart of the Americans With Disabilities Act is to give the same civil rights protection to persons with disabilities that racial minorities and women have.

These rights include remedies available to the victims. The victims of discrimination based on disability must not have lesser rights than others. This would amount to discrimination against persons with disabilities.

The Sensenbrenner amendment looks into the future and says that if the remedies for minority and women victims are strengthened, these remedies won't apply to persons with disabilities. Women and minorities will get better treatment than persons with disabilities. That is gross discrimination, in advance.

The remedies for employment discrimination in this bill are the same as the remedies of title VII of the Civil Rights Act of 1964: equitable relief—injunctions, reinstatement, hiring, and backpay.

Compensatory and punitive damages are not available to victims of employment discrimination, under both title VII and the ADA.

However, in a few weeks, if approved by the House Judiciary Committee, we will be voting on H.R. 4000, the Civil Rights Act of 1990.

As approved by the Education and Labor Committee, H.R. 4000 would provide compensatory and punitive damages for victims of intentional discrimination under title VII.

If H.R. 4000 is enacted with this provision, the remedies under this bill we are considering today, the ADA, would be strengthened, to be parallel with the remedies provided in H.R. 4000.

And they should be parallel. The remedies for victims of discrimination because of disability should be the same as the remedies for victims of race, color, religion, sex, and national origin discrimination.

Otherwise, persons with disabilities would be discriminated against.

The remedies should remain the same, for minorities, for women, and for persons with disabilities.

No more. No less.

Mr. SENSENBRENNER's amendment provides for a two-tier system, where women and minorities get a better break than persons with disabilities.

That's not fair. That's not equitable. That's discrimination.

Finally, Mr. Chairman, Mr. SENSENBRENNER's amendment is premature. We will in all probability be addressing the question of remedies for title VII in a few weeks when H.R. 4000 is before us.

We should not be doing it now. When H.R. 4000 is before us, that will be the appropriate time to consider the remedies for employment discrimination.

This bill, the Americans With Disabilities Act, provides for the same remedies as for a title VII violation—injunctions, reinstatement, hiring, and backpay.

Let's not discriminate in advance against persons with disabilities. Let's debate and vote on this issue at the proper time, when the change to title VII is considered as we vote on H.R. 4000.

I urge a "no" vote on the Sensenbrenner amendment.

Mr. SENSENBRENNER. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of California. Mr. Chairman, I yield to the gentleman from Wisconsin, [Mr. SENSENBRENNER].

Mr. SENSENBRENNER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, if the gentleman from California had been listening to my prepared remarks, he would have heard me state that my amendment merely states the remedies that are available in title VII within the ADA. The gentleman has alleged in his remarks that I am treating disabled people less favorably than women and other minorities.

Specifically, I inquire of the gentleman from California where in my amendment are women and other minorities given more favorable treatment than disabled people?

Mr. EDWARDS of California. Mr. Chairman, in response to the gentleman, the gentleman's amendment is locking out persons with disabilities for stronger remedies than women and minorities will receive in the event H.R. 4000 is approved, as approved by the Committee on Education and Labor.

Mrs. SCHROEDER. Mr. Chairman, will the gentleman yield?

Mr. EDWARDS of California. Mr. Chairman, I yield to the gentlewoman from Colorado [Mrs. SCHROEDER].

Mrs. SCHROEDER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I think the gentleman from California is making a very important statement. What he is saying is we have said there are no rights without remedies. But you have lesser rights if you have lesser remedies. And the committee is soon to determine whether we are going to expand remedies. At that point that is where the gentleman should be debating this issue. In the interim, we should not preemptively decide that disabled are not going to be able to participate at that time. I think the

gentleman is making an excellent statement.

Mr. Chairman, I rise in opposition to the Sensenbrenner amendment.

I thank the gentleman from California for making this so clear.

Mr. EDWARDS of California. Mr. Chairman, I reserve the balance of my time.

Mr. SENSENBRENNER. Mr. Chairman, I yield 2 minutes to the gentleman from Pennsylvania [Mr. GOODLING].

Mr. GOODLING. Mr. Chairman, I must preface my remarks by saying the last debate blew my mind. I thought we always legislated here on the floor of the House dealing with the legislation that is presently on the books. I did not know that we legislated based on what we think might happen down the track. If something happens down the track, then we come back and deal with that issue, but we certainly do not deal with it in advance.

Mr. Chairman, I rise in support of the amendment, and I do it for two basic reasons. First of all, the issue here today is a straightforward issue. It was agreed to by the administration, by the other body, by the disabled community. That is what was agreed to when, in a bipartisan fashion, the Senate fashioned the legislation 76 to 8.

□ 1300

That is exactly what we dealt with in the Committee on Education and Labor, not something else. We dealt with what the understanding was when the Senate passed the legislation.

So first of all, it seems to me we must stick with what it was we were dealing with and what we understood was the agreed-to agreement. That did not say anything more than title VII remedies of lost backpay and injunctive relief. It was a unanimous vote out of my committee simply based on that. That vote would have been different in my community, had we thought that we were talking about something different than what we agreed to by the other body, by the disabled community, and by the White House.

The second concern that I have I think deals with the whole body concept of trying to do what is best for the persons for whom we are trying to legislate. I have some problems here if we do not go along with the Sensenbrenner amendment. It seems to me what we basically say is we are not looking for reconciliation, we are looking for confrontation. I am not sure that helps the disabled person we are trying to help. It seems to me we want to quickly get them back on the job, backpay, and all that they have coming to them.

For instance, in my district, a gentleman hired a blind young woman. She is now his best drill press operator. He modified the drill press so that she could become his best drill press operator. Would she have ever gotten that opportunity with this legislation?

Mr. EDWARDS of California. Mr. Chairman, I yield 2 minutes to the gentleman from Kansas [Mr. GLICKMAN].

Mr. GLICKMAN. Mr. Chairman, I rise in opposition to the Sensenbrenner amendment. The whole purpose of the Americans With Disabilities Act is to recognize that discrimination against the disabled is just as wrong as discrimination on the basis of race, gender, or national origin. Ironically, this amendment would take a big step backward in the battle against discrimination by setting the disabled apart from other protected classes under the civil rights laws.

There may be legitimate debate on the issue of what remedies should be available under the civil rights laws, but it is unfair to lock the disabled into a lesser set of remedies. Let's debate the issue of remedies available to all protected classes when the Civil Rights Act of 1990 comes to the floor. It would be a serious blow to the disabled community to adopt this amendment.

I hope that the focus on lawsuits and remedies does not distract us from what this bill is about: new rights for the disabled. Rights and remedies are not the same thing, and I believe a court of law should be the place of last resort, not first resort, to enforce civil rights. A lawsuit is time consuming and expensive. I believe Americans are generally too prone to rush into court to resolve disputes that should be resolved through conciliation. I want to issue a challenge to the business and civil rights communities to find informal and creative ways to exercise the new rights granted under the ADA, so that people's precious time and money is spent on reasonable accommodation instead of litigation. In that regard, this bill includes an amendment I offered in the Judiciary Committee which encourages and provides for alternative resolution techniques, including mediator, conciliation, arbitration, and other dispute resolution methods to resolve disputes under this act before a decision to go into expensive litigation is made. While the language is purely voluntary, it establishes an important principle that we ought to try to avoid litigation under this bill, if possible, and that encouraging dispute resolution between the parties is a positive idea.

Mr. SENSENBRENNER. Mr. Chairman, I yield 1 minute to the gentleman from Virginia [Mr. PAYNE].

Mr. PAYNE of Virginia. Mr. Chairman, I have consistently supported in subcommittee and committee the Americans With Disabilities Act, and will certainly support it when it comes to final passage, because I believe this legislation will not only benefit the disabled, but ultimately all of America, as more disabled find it easier to enter the mainstream of American life and the mainstream of employment.

I support the Sensenbrenner amendment because I believe it is the most reasonable and least confrontational way to implement the very worthy objectives of this legislation. If this legislation is to be successful, it needs not only a consensus among those of us responsible for making the laws in Washington, but a broad consensus of all people throughout our country. The Sensenbrenner amendment removes a potentially overly punitive portion of this bill which may get in the way of this necessary broad consensus.

I urge my colleagues to support this important amendment.

The CHAIRMAN. The Chair will advise the author of the amendment, the gentleman from Wisconsin [Mr. SENSENBRENNER] that he has 20 minutes remaining, and the gentleman from California [Mr. EDWARDS] in opposition has 21 minutes remaining.

Mr. EDWARDS of California. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from New York [Mr. FISH].

Mr. FISH. Mr. Chairman, I do not even think I will use the entire 3 minutes because I think it is difficult not to be repetitious, since the issue here is so simple.

My colleague, the gentleman from Wisconsin [Mr. SENSENBRENNER], the author of the amendment, has very properly stated the law for Members, and I think we both share a sore throat and other ailments at this juncture, too. However, the Sensenbrenner amendment would freeze current title VII remedies into ADA for people with disabilities. Now, let me emphasize that word "current."

The bill before Members incorporates title VII remedies available today, this very minute, available to women and to minorities. It does not enlarge these remedies. It provides immediate parallel remedies. However, the amendment before Members would mean that if Congress chose to change the remedies under title VII for all other minorities, people with disabilities would simply not automatically have access to these same remedies.

Therefore, as the gentleman from Wisconsin properly said, his amendment neither expands nor contracts remedies but, in fact, he does freeze those remedies unnecessarily and forces the Congress at a later date to revisit this issue and undo that freeze if it so chooses.

Now, we have been told about H.R. 4000, the Civil Rights Act of 1990 that has been introduced that will be before Members eventually. This expands the remedies of title VII to include damages for intentional discrimination. So if there are changes to title VII, as a result of this legislation, and only at that time, all individuals who are covered under civil rights laws, people of different races, sex, religion, and now people with disabilities, would have the same remedies. By contrast, if we adopt this amendment, by freezing current title VII remedies for the disabled, we set up at that time a different system of remedies.

Mr. Chairman, it is inconceivable to me that future changes in title VII remedies would not automatically apply to disabled citizens as it is inconceivable to me that a future expansion in title VII will be denied people because of their race or their sex.

Mr. SENSENBRENNER. Mr. Chairman, will the gentleman yield?

Mr. FISH. Mr. Chairman, I yield to the gentleman from Wisconsin.

Mr. SENSENBRENNER. Mr. Chairman, I thank the gentleman for yielding.

If my amendment is adopted, what is there to prevent the House, when it considers H.R. 4000, from amending the remedy section in the ADA?

Mr. FISH. Nothing whatsoever, except it is just an unnecessary step, in my judgment. The remedies under the law should flow to all the protected covered classes.

Mr. SENSENBRENNER. Mr. Chairman, I yield 5 minutes to the gentleman from Texas [Mr. BARTLETT].

Mr. BARTLETT. Mr. Chairman, I rise in strong support of the amendment offered by my colleague from Wisconsin.

Mr. Chairman, I have taken an interest in the Americans With Disabilities Act since it was introduced last Congress, and I have always strongly believed that legislation is needed to extend basic civil rights to the disabled. I was, therefore, gratified when negotiations this past summer between the administration and the disability community, with input from the business community, produced a bill which seemed to resolve the most significant obstacles to enacting legislation in this Congress. That bill, S. 933, passed the Senate last year in early September, Mr. Chairman, while S. 933 contained many important changes, I can say quite categorically that the most important change which formed the keystone to the agreement was the express deletion of a provision allowing for punitive and compensatory damages from the employment remedy provisions and the retention of existing title VII remedies of lost backpay and benefits and injunctive relief such as reinstatement to a lost job.

Mr. Chairman, when the Education and Labor Committee marked up H.R. 2273, it took as a substitute to that bill a modified version of S. 933 as passed by the Senate. The modifications contained in that substitute were the result of lengthy, intense negotiations between the minority and majority on the committee together with the leading sponsor of the legislation, Mr. HOYER. I was very much involved in those negotiations and can state that the issue of proper remedies for employment discrimination rarely, if ever, came up. Why? Because all parties considered the issue completely resolved in the Senate-passed bill. Had there been any doubt as to whether the ADA still included punitive and compensatory damages, the issue would have been raised, endlessly debated, and never conceded. Indeed, the inclusion of such damages has proven to be one of the most contentious issues surrounding the Civil Rights Act of 1990.

Mr. Chairman, when the ADA was unanimously passed by the Education and Labor Committee last year—November 1989—it was months before the civil rights reform bill was even introduced—Feb. 1990. Again, the assumption at that time, as we were considering the Senate-passed version, was that employment remedies were to be backpay and injunctive relief. Mr. Chairman, the Sensenbrenner amendment simply codifies what the committees reported out.

None of this is to say, of course, that should the Congress ultimately choose to pass the civil rights reform bill with punitive and compensatory damages, that Congress could not, ultimately also decide that the ADA should also include such damages. But this sort of major change in a new, sweeping piece of legislation should not be done automatically by the flip of a switch. It should be done, if at all, after hearings within the appropriate committee structure.

Finally, Mr. Chairman—and I won't dwell on this because it should be raised at a different time and a different forum—I simply wish to note that there are good policy reasons why the inclusion of punitive and compensatory damages in the ADA would be inappropriate.

The remedies codified by the Sensenbrenner amendment have been in title VII of the 1964 Civil Rights Act for 25 years, and they have worked well. These remedies are basically the same as those in all other labor and civil statutes, for example, the National Labor Relation Act, the Rehabilitation Act of 1973, the Davis-Bacon Act, the Equal Pay Act, the Fair Labor Standards Act, the Age Discrimination in Employment Act, and, most recently, the Worker Adjustment and Retraining Notification Act—plant closings. These statutes, and I could list others, provide for injunctive relief and lost backpay, with only one providing for double lost backpay in certain kinds of cases. None provide for punitive and compensatory damages.

There are sound policy reasons why Congress has consistently adopted these types of remedies in employment law statutes. Remedies allowing for injunctive relief and backpay, and excluding punitive and compensatory damages, both deter discrimination and promote the prompt resolution of disputes, a resolution which puts the employee back to work in his or her rightful position as soon as possible. This has always been the goal of title VII and other employment law statutes and, I think everyone would agree, is the goal of the ADA. Employment laws must balance first, the need for employers to operate their workplaces without fear that a refusal to hire a single applicant or the discharge of one employee may lead to a six-figure, or higher, jury trial and second, the need to provide an adquate remedy once a wrong is shown to make the employee whole. Interwoven with this balancing is the concept that it is in everyone's interest—including society's—to get an applicant or employee unlawfully discriminated against back to work as soon as possible. Remedies of injunctive relief and lost backpay and benefits do exactly this while punitive and compensatory damages may only encourage employees to go to court for the "big win" and to resist settlement and resolution of the underlying issues. This is not some prediction made up yesterday; it is a well-recognized result arising from these kinds of damages, as reflected by the analysis in numerous courts which considered, and ultimately rejected, compensatory and punitive damages under the Age Discrimination in Employment Act [ADEA]. For example, the third circuit, in *Rogers* v. *Exxon Research & Engineering Co.*, 550 F.2d 834, 841 (1977) reasoned that compensatory damages would:

> Introduce an element of uncertainty which would impair the conciliation process. Haggling over an appropriate sum could become a three-sided conflict among the employer, the [EEOC], and the claimant. . . . [T]he possibility of recovering a large verdict for pain and suffering will make a claimant less than enthusiastic about accepting a settlement for only out-of-pocket loss in the administrative phase of the case. The net result can only be to substantially increase the volume of litigation in the trials.

The fifth circuit echoed that compensatory damages would:

> Introduc[e] a volatile ingredient into the tripartite negotiations involving [EEOC], employee, and employer which might well be calculated to frustrate rather than to "effectuate the purposes" of the Act. [*Dean* v. *American Security Insurance Co.*, 559 F.2d 1036, 1039 (1977), *cert. denied*, 434 U.S. 1066 (1978)].

The second circuit has said:

If an individual alleging discrimination knew he could recover compensatory damages if he refused to settle during the administrative process and commenced a civil suit, he would have little incentive to resolve the dispute during the conciliation process. [*Johnson* v. *Al Tech Specialties Steel Corp.*, 34 FEP Cases 861, 864 (1984).

One trial court observed:

If large tort recoveries are allowable under the ADEA, it is doubtful that alleged age discriminatees will enter into good faith conference and conciliation when around the corner lies the possibility of large dollar pain and suffering recoveries. [*Sant* v. *Mack Trucks, Inc.*, 424 F. Supp. 621 (N.D. Cal. 1976)].

Mr. Chairman, the Sensenbrenner amendment adopts the remedies which formed the basis for the broad bipartisan support of the ADA. These remedies, which are reflected in all other labor statutes, will both deter discrimination and promote the employment of the disabled. I therefore support the amendment.

□ 1310

Mr. EDWARDS of California. Mr. Chairman, I yield 3 minutes to the gentleman from Texas [Mr. WASHINGTON].

Mr. WASHINGTON. Mr. Chairman, I would like to say to my colleagues, the gentleman from Wisconsin [Mr. SENSENBRENNER] and the gentleman from Texas [Mr. BARTLETT], that I am going to yield to them during my time because I want to engage in some conversation. It did not appear to me that the other side wanted to yield any time for that purpose.

Let me just ask the gentleman this question. I have 3 minutes, and I think between the two gentlemen they ought to be able to answer these questions.

Are you opposed to compensatory and punitive damages by any kind of civil rights violation, a violation of any kind or character? I assume the answer is going to be yes.

My second question is, if you are so opposed, in the likely event that the Congress in its wisdom decides, notwithstanding your objections, to provide that a jury, the same people who elect you and I, may make a determination whether in a proper case there should be punitive damages and compensatory damages allowed for other kinds of discrimination, are you then in favor of discriminating against people who have disabilities?

Mr. BARTLETT. Mr. Chairman, will the gentleman yield?

Mr. WASHINGTON. I yield to the gentleman from Texas.

Mr. BARTLETT. Mr. Chairman, I know that the gentleman did not intend to word his last question that way. I am not in favor of discriminating against persons with disabilities. I am strongly for a law that would prohibit discrimination. The question is, how much can someone sue for, not whether I am in favor of discriminating.

Mr. WASHINGTON. Mr. Chairman, let me elaborate on my question. I only have 3 minutes, and I do not want there to be any misconception.

If the Congress, over the gentleman's objection, adopts the language in H.R. 4000 that provides in a proper case for a jury to make a determination, or for the judge, if he or she is the trier of the facts, that there will be in such a proper case punitive and compensatory damages for race, gender, age discrimination, and the other provisions that are covered under title VII, would you not agree that it is not provided for people with disability, and if you so agree, are you in favor of discriminating against them or are you not in favor of discriminating against them?

Mr. BARTLETT. Mr. Chairman, if the gentleman will yield, I do not agree with the premise of the gentleman's question. I do not believe that is discriminatory. What I do believe is that we ought to consider the damages and the remedies and the right to sue in landmark legislation like this after some careful consideration, based on all the facts, and we do not have all the facts. We ought to consider it at that time.

I further say to the gentleman that I have a list which I am going to submit for the RECORD of other civil rights and labor statutes that have been enacted by the Congress of the United States, none of which include compensatory or punitive damages. They include the National Labor Relations Act and the Rehabilitation Act of 1973.

Mr. WASHINGTON. Mr. Chairman, the gentleman can put those in the RECORD later. Let me reclaim my time, and then I will yield further to the gentleman.

We have had hearings, as the gentleman well knows, on H.R. 4000, because the gentleman has been a part of them. So the gentleman cannot say that there has not been any record made on whether we should have compensatory or punitive damages. We can say that it has not been made as far as ADA has been concerned, but we have had a record made, and I think Congress is of a mind to provide compensatory and punitive damages as they relate to other areas of civil rights.

And the gentleman cannot tell me that it is not discriminating. If we have apples and oranges, and you choose one remedy for the apples and a different remedy for the oranges, if that is not discrimination, I do not know what is.

Mr. SENSENBRENNER. Mr. Chairman, I yield 4 minutes to the gentleman from Illinois [Mr. FAWELL].

Mr. FAWELL. Mr. Chairman, the Americans With Disabilities Act of 1990 is well intentioned, but it is more than that. It is an effort to lift the conscience level of us all to be more aware that the disabled, like all of us, have aspirations and talents and hopes and dreams. This bill is an idea whose time has come.

Yet, as Albert Schweitzer once observed, hardly anyone ever gets a good idea that they do not carry it too darned far. It is for that reason that I rise to support the Sensenbrenner amendment.

The amendment literally adopts the traditional remedies of EEOC conciliation, back pay, and court injunctions as the remedies for the enforcement of employment-related discrimination under title I of the ADA. As such, it is a replica of the remedies found under title 7 of the 1964 Civil Rights Act.

The Sensenbrenner amendment simply says that what you see and what is advertised as the enforcement remedies in the ADA is what you get. It is true that it attempts to guarantee that the enforcement provisions of title I of ADA will not be automatically changed simply by passage of the Civil Rights Act of 1990. If this amendment is not passed and if the Civil Rights Act were to pass in its present form, the remedies of title I of the ADA would be immediately broadened in effect to create or to add, I might say, a new negligence type of liability against all employers of this land of ours with a 2-year tort statute of limitations.

This new action, also calling for jury trials, would authorize potential million-dollar compensatory damages for emotional distress, pain and suffering, medical fees, fees for expert witnesses, ad infinitum, and punitive damages, including callous indifferences as a basis for awarding punitive damages. These types of awards could be obtained against employers for any violations of the ADA. And as I read it, it also includes unintentional violations. If Members do not think so, I ask them to read section 107. I assure the Members that most employers all across this land, public or private, do not realize that they could be sued for such damage awards as a result of any violations of the ADA.

In the past, Congress has invariably limited remedies in the employment law area to conciliation, lost backpay, and injunctional relief, and the examples include not only title 7, but the Age Discrimination in Employment Act, the National Labor Relations Act, the Fair Labor Standards Act, the Equal Pay Act, the Davis-Bacon Act, the Service Contract Act, and the Rehabilitation Act of 1973.

□ 1320

In addition, Mr. Chairman, it has been mentioned that, as originally introduced, it was the understanding between the parties who were negotiating that we would not have compensatory and punitive damages and jury trials with all of the explosion of lawsuits that go with them. When we look at the Civil Rights Act, that is another issue, but we certainly did not want those kinds of potential damage awards in the ADA. And that is only right, especially for a new employment-related discrimination law of the ADA's dimensions.

Surely, Mr. Chairman, there are going to be countless violations of this act made unintentionally and in good faith as the EEOC, public and private employers, employees, and unions strive to detemine what in the world is the congressional intent and the scope of the ADA's understandably subjective provisions.

Under these circumstances, the traditional employment discrimination enforcement provisions of title VII, which have been successful for over 26 years, are certainly in order as we launch the ADA. If 3 or 4 years from now my colleagues think we have to have that kind of intimidation against employers, well, OK, we can consider that then. But when we are comparing, enforcement provisions, we should look at, for instance, the 1973 Rehabilitation Act which binds the Federal Government. Are there any compensatory damages there or any punitive damage awards there against the Federal Government or, for that matter, against Members of Congress as to their employment practices? Of course not.

Now we are going to have to debate the Civil Rights Act, but let us not with a brand new act like this, let us not pile those kinds of potential damage awards upon America's employers. It wasn't necessary in the 1973 Rehabilitation Act nor is it necessary in the ADA. Rather it is a kind of intimidation upon the employers. It simply puts a chilling effect upon what has really been good will of all parties involved in this act up to this date.

Mr. EDWARDS of California. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Connecticut [Mr. MORRISON].

Mr. MORRISON of Connecticut. Mr. Chairman, I thank the gentleman from California [Mr. EDWARDS] for yielding me this time.

Mr. Chairman, I rise in strong opposition to this amendment. This amendment is about discriminating against the disabled, or it is about nothing at all. This amendment would not be needed in any way, shape or form unless there is a desire down the road to have different remedies, different protections for the disabled from the protections we give in our other civil rights legislation under title VII.

This bill, as it comes to the floor, is very clear. It says the remedies in title VII apply. That is a principled statement. That says that this law will treat the disabled the same as we treat others who are subjected to discrimination in employment and in public accommodations and the like. This is an antidiscrimination bill.

Mr. Chairman, it is an abomination that we are being faced with an amendment that suggests that right in this antidiscrimination bill we plant the seeds of discrimination, discriminatory treatment before the courts, discriminatory treatment before the law.

We will have a debate later in this session about whether to extend or modify the remedies under title VII, and, when we have that debate, we will hear the arguments about whether there should be jury trials, whether compensation and punitive damages are appropriate, and that is a fair debate. It is an appropriate debate. But it should apply to all those who are protected under Federal law against discrimination. It ought not to be one rule for the disabled, another rule for other minorities, religious minorities, racial minorities, ethnic minorities.

Mr. Chairman, we are about to pass landmark legislation to obtain a goal that I think Americans wholeheartedly support, real and antidiscrimination protection for people with disabilities. Let us not sully that result with an amendment that undercuts the principle. Let those who believe that present title VII remedies, as misinterpreted by the Supreme Court, are adequate. Let them vote against H.R. 4000 at the time it is presented. Let those of us who believe that the Supreme Court got it wrong and that H.R. 4000 is the correct policy; we will support that legislation.

Mr. Chairman, let us not today, as we make a strong statement against discrimination to the disabled, let us not put into that law a new discrimination in the justice that these individuals can get in our courts.

Mr. SENSENBRENNER. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. STENHOLM].

Mr. STENHOLM. Mr. Chairman, I rise in favor of the amendment offered by the gentleman from Wisconsin [Mr. SENSENBRENNER] to H.R. 2273, the Americans With Disabilities Act.

The real questions before us as we consider this amendment are whether we can have certainty about what we are voting on and whether all the possible interactive effects between this bill and proposed changes to the Civil Rights Act of 1964 will receive full, due consideration.

I believe both these questions can be answered "yes" only if we adopt the Sensenbrenner amendment today.

I don't want to get caught up in an argument about the semantics of an agreement on remedies among proponents of this bill, the administration, and the business community. We all are agreed, however, that the title VII remedies in the Civil Rights Act today are the remedies we want in the ADA today. The Sensenbrenner amendment clarifies that position without prejudice to further evaluation of ADA remedies when H.R. 4000, making changes in the 1964 Civil Rights Act, is further considered. However, rejection of the Sensenbrenner amendment leaves us with a good deal of uncertainty over just what we really are voting for.

We have not debated increasing the penalties and upgrading the remedies in the ADA to include pain and suffering and punitive damages. We have not debated whether these penalties and remedies should be upgraded to parallel H.R. 4000 remedies exactly, if H.R. 4000 passes.

At least on first impression, it strikes this Member that such a debate would be reasonable.

Identical remedies on paper do not necessarily translate into identical results in the real world. For example, under current title VII remedies, injunctive relief for a race, religion, or sex-based violation could include simple placement in the job the plaintiff sought. Under the ADA, current title VII injunctive relief could require expensive alterations for accessibility in order to accomplish that job placement. Maybe we do want ADA remedies to be exactly the same as whatever remedies are available under title VII. Or, maybe we would want, after careful consideration of how the two laws could interact, to fine tune some differences, for purposes of equity and more consistent results.

If we reject the Sensenbrenner amendment today, we can't know that these questions will ever be addressed. If we adopt the Sensenbrenner amendment, we know they will be considered, and perhaps resolved in the very same way the opponents of the Sensenbrenner amendment hope. But we shouldn't put the legislative process on autopilot by dismissing the request for considered debate. We shouldn't avoid reasonable questions with a superficial one-size-will-fit-all attitude.

Moreover, this body has never made uniformity of remedies within a body of law sacrosanct. That's why, every time we take up a new labor bill, like family and medical leave 2 weeks ago, we wind up reopening debates about restitution versus punitive damages. Two weeks ago we were told the Family and Medical Leave Act should have remedies and damages that don't

exist elsewhere in labor law, but today we are being told we should not debate the issues the Sensenbrenner amendment would ultimately force us to debate, because all civil rights laws simply should look the same.

If the intent of the opponents of this amendment is to defer questions of remedies and damages and take them up all at one time, then I submit that a vote for the Sensenbrenner amendment accomplishes that better than a vote against.

A vote for the Sensenbrenner amendment ensures that, when we consider H.R. 4000, we will consider the remedies and damages that may be specifically or uniquely appropriate to ADA violations. A vote against Sensenbrenner means we are buying a legislative pig in a poke.

Mr. EDWARDS of California. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from California [Mr. HAWKINS], the chairman of the Committee on Education and Labor.

Mr. HAWKINS. Mr. Chairman, I thank the gentleman from California [Mr. EDWARDS] for yielding this time to me.

May I simply rise to set the record straight with respect to the references to the Committee on Education and Labor and the individuals who seem to anticipate action in the House on H.R. 4000?

Mr. Chairman, it is true that in its wisdom the committee, after extensive hearings, did make changes in the remedies under title VII and will, if approved by the House, extend the protections and the rights under title VII to other groups, particularly to women.

Now it seems that those who oppose that extension would today now oppose the extension to the disabled. The original theory of title VII was that rights and remedies should be uniformly available to all who suffer discrimination, and we have over a period of time under various administrations added the groups that are protected by title VII.

Now it just seems to me unreasonable to say that every other group that we have attempted to extend the protections to, that the disabled are somehow a second-class group that should not be considered.

Mr. Chairman, it is not only the matter of civil rights, and human rights and protection of groups in the American society. We extended title VII, and we originated title VII, because we considered that all Americans are needed in our society today.

□ 1330

We need the disabled, as we need women and we need minorities and other groups in the economy. We need them in our society as productive citizens. We need them as taxpayers so that they can produce the revenues to reduce the budget deficit. We do not want them to be dependent on other taxpayers. We want them to stand in a way equal to other taxpayers.

So it would seem to me that since we need them, they also need this protection.

Remedies have been dragged into this debate for some reason. I cannot conceive of individuals who are willing to say that individuals should be given legal protections and then not remedies. If protection is needed, so are remedies, and the two cannot be separated.

Having, it seems to me, lost the merit of the debate that certain citizens can be discriminated against in contrast to others, and having lost the debate on the question of dividing the protection among American citizens, someone has suggested that some deal has been made. I do not know how many in this House were parties to any deal that was made, but it certainly seems to me that any suggestion that a deal was made, and most of us are not aware of that deal, that those who made that deal should at least admit what type of a deal they entered into that would deal away the legal protections and the rights of over 24 million American citizens. I think we are entitled to know that.

Mr. SENSENBRENNER. Mr. Chairman, I yield 2 minutes to the gentleman from Florida [Mr. JAMES].

Mr. JAMES. Mr. Chairman, I rise in support of the Sensenbrenner amendment.

You know, I sit here with a little surprise and concern because I was in the Judiciary Committee when Chairman EDWARDS and the group on that side of the aisle pretty much made a very convincing argument that remedies were not to be discussed because it was title VII remedies without punitive damages and compensatory, and that was the understanding in relationship to our discussion, which was true. That was the law under title VII, and is.

Now, I see nothing fair about attacking the Sensenbrenner amendment as being discriminatory, because if there is to be discrimination, it will be later on when you file an amendment that will be different than the existing remedies.

The Sensenbrenner amendment says, leave the remedies like they are. It does not say anything about different remedies for someone else, but the anticipation is that it will be necessary to discriminate against the disabled, by the arguments I have heard here. So the reverse is true. The discrimination comes against the disabled by those who would separate the remedies that are already in title VII, which are incorporated by reference.

It is especially repugnant to pass a bill and then to wait later for the remedies.

Mr. Chairman, what we are talking about is bringing our citizens to their knees, to their knees when you give the plaintiff the right to open-end damages, open-end damages in the form of compensatory and in the form of punitive damages.

I have heard the remark made that it is only for intentional acts. I have heard lawyers say that. Lawyers know that an intentional act is always when you breach the law. There is no such thing as negligent breach of the law. So when the businessman goes out there and makes a mistake, that is not negligence. That is an intentional breach of the law, even though the regulations have not been put forth.

Mr. Chairman, the amendment is in order and I am for it.

Mr. Chairman, I rise in strong support of the Sensenbrenner amendment. The amendment would make a critical clarification by making the remedies for discrimination under the ADA identical with the remedies that currently exist under title VII of the 1964 Civil Rights Act. Those remedies include back pay with interest, injunctions, orders of reinstatement or promotion, and other equitable relief which a court may fashion. These remedies are designed to put the individual into the position that he or she would have been in but for the discrimination. They provide real redress to a victim of discrimination without creating an incentive to go to court in hopes of winning a windfall damage award.

Another bill pending in Congress, the Supreme Court reversal bill sponsored by Mr. HAWKINS, would change those remedies so that plaintiffs could seek punitive and compensatory damages. Punitive damages, which are awarded to the plaintiff, are designed to punish the employer for its acts. There is no dollar limit in the amount that can be awarded. Compensatory damages, also known as pain and suffering damages, are awarded to the plaintiff to compensate for things such as mental anguish. There is no dollar limit on these damages either.

It is important to note that the Federal courts have been deciding cases under title VII for more than 25 years. As such, they are in a particularly good posture to assess the potential negative impacts of adding punitive and compensatory damages to title VII, and by reference to the ADA. I have examples here of what some of these courts have said about including expanded damages under title VII, and they are very revealing.

One court has stated that: "The possibility of a large verdict for pain and suffering will make a claimant less than enthusiastic about accepting a settlement." Another court has said that, and I quote again, "A system which would permit complainants potentially to recover considerably larger sums if they resist settlement and initiate litigation would undermine the central features of title VII."

Mr. Chairman, the lesson in this is clear. We should defer to the wisdom of the courts and keep remedies for employment discrimination designed to redress the victim without encouraging costly litigation. That is what the amend-

ment does, and I urge all of my colleagues to give it their full support.

Mr. EDWARDS of California. Mr. Chairman, I yield 2 minutes to the gentleman from Kentucky [Mr. MAZZOLI].

Mr. MAZZOLI. Mr. Chairman, let me first extend congratulations to the committee chairman, the gentleman from California [Mr. EDWARDS], and the gentleman from Maryland [Mr. HOYER] and others, including the gentleman from California [Mr. HAWKINS], for the work the have done on this bill.

I rise in opposition to the gentleman's amendment, with great respect to him as one of the more thoughtful Members of our body, but it just seems to me in the sense of what is symmetrical and what is balanced here, and I happen to like symmetry and balance in architecture and other things, I think it would be unbalanced if we were to accept the Sensenbrenner amendment, because we would say that one class of people who are entitled to protection because they have been discriminated against would get one body of remedies, where another class of people, the same thing, they have been discriminated against, would get a second class of remedies.

So it seems to me, Mr. Chairman, to maintain the balance that there ought to be a reflection of that in the sense of the kind of remedies that are applied.

Let me also go beyond this to say that I think the bill itself is a wonderful piece of legislation. It is one of the major civil rights bills that this body will grapple with in the next Congress. I think it reflects a growing awareness, not just of altruism and charity and of doing something for people who need to have our attention, but this is a very important piece of legislation from our own self-interest as a nation. As we look down the road to the year 2000, and if we read the demographic studies, we will need people in the work force, people with talent, people with initiative, people with energy, and based upon my observations back home in Louisville at the Center for Successful Living, where I have had many opportunities to meet people who are disabled, I see in them this very pool of people with talent, energy, and intellect, that we need to accomplish our work as we go down toward the year 2000 to be competitive with the other nations of the world.

So I think this is a good bill from kind of a laboratory setting. It is a good bill because it does good things, but even more important than that, it does good things because it does smart things.

So again I oppose the gentleman's amendment, but rise in very strong support of the bill.

Mr. SENSENBRENNER. Mr. Chairman, I yield 2 minutes to the gentleman from Texas [Mr. SMITH].

Mr. SMITH of Texas. Mr. Chairman, I thank my friend and colleague for yielding me this time.

Mr. Chairman, last week President Bush said that our civil rights laws should not encourage litigation at the expense of conciliation, mediation, or settlement. Yet if we don't adopt the Sensenbrenner amendment, that is exactly what could happen to the ADA.

First let me stress that the Sensenbrenner amendment guarantees to victims of discrimination the same rights and remedies that are available to other protected classes under title VII. It takes absolutely nothing away in terms of its protection. It is simply designed to state that Congress believes that title VII remedies are appropriate for both the ADA and for title VII and that they should remain as they are.

Many people do not realize that the actual award given in a lawsuit is just the tip of the iceberg in terms of the total litigation costs. The more the incentive to litigate—as would surely be the case if the ADA is expanded to include punitive and compensatory damages—the higher the litigation costs.

What happens if employment discrimination damages get expanded under ADA and title VII? Under title VII with its current remedies, only 6 percent of the charged filed with the EEOC end up as lawsuits. The rest are disposed of through title VII's mediation and conciliation procedures. Of those cases that go to trial—an average of over 1,500 cases litigated each year—the attorneys fees average more than $96,000 per case.

A recent study by the Employment Policy Foundation estimates that title VII litigation will triple if it includes punitive and compensatory damages. If ADA is included, with its 43 million potential plaintiffs, even more lawsuits are sure to result.

The ADA with the addition of the Sensenbrenner amendment, will assure that the law will open the door to the workplace, rather than the door to the courthouse.

Mr. Chairman, a vote for the Sensenbrenner amendment is a vote for continuing an effective policy with respect to remedies for employment discrimination which has been in effect for over 25 years. I urge its support.

Mr. EDWARDS of California. Mr. Chairman, I yield 1 minute to the gentleman from Florida [Mr. BENNETT].

□ 1340

Mr. BENNETT. Mr. Chairman, I have just two points to make. One of them has been made many times before. But I want to accentuate how deeply those who are disabled appreciate this legislation.

Mr. Chairman, it is a very compassionate, very fine piece of legislation, and I am grateful on behalf of all others, very grateful, for this having occurred.

The second point I would like to make is that it would be, in my opinion, very poor taste and improper for us to make a distinction between those who are physically disabled under the civil rights concept of our country and those who have other civil rights situations that are addressed by civil rights legislation. I say that with hesitancy, because I love the gentleman from Wisconsin. I served with him on the ethics committee, and he is a magnificent legislator. It is a great pleasure to have served with him.

But I do think that the committees are correct in approaching this matter by giving equal opportunity for all people who are disabled or who have any other problem which would require civil rights attention.

Mr. Chairman, I thank the committee for doing it. I do say, from the bottom of my heart, however, I think it would be a mistake to distinguish in some way between the various people whose civil rights are being addressed in this legislation.

Mr. SENSENBRENNER. Mr. Chairman, I yield 2 minutes to the gentleman from Florida [Mr. MCCOLLUM].

Mr. MCCOLLUM. Mr. Chairman, I thank the gentleman for yielding me this time on this point.

Mr. Chairman, I rise in strong support of the Sensenbrenner amendment. I think we need to understand, as we conclude this debate, what it is really all about. It is about a question of whether we are going to codify in the law the present remedies or leave them as the bill currently has it, tied ambiguously to whatever fate title VII has in the future as far as the remedies sections are concerned.

It seems to me, under the circumstances, it is eminently reasonable to do what the gentleman from Wisconsin [Mr. SENSENBRENNER] wants to do and spell out what the remedies are, and they are in existing law under title VII, are going to be the remedies for ADA regardless, at the moment at least, of what we do with title VII, that is, injunctive relief and those things that have been spelled out here before.

The reason I say that is fairly simple. The proposals that are out there now to change title VII are going to allow compensatory and punitive damages. The real problem I have had with the ADA bill altogether, and I am going to vote for this bill, even though a lot of people think that I am out here with a lot of amendments and I am opposed, I am not, because I think the disabled need to have a civil rights bill like this one.

I think the problem we have had all along has been costs. It has been a question of how do we mitigate, how do we reduce, costs. It is far more complex under the civil rights legislation for the handicapped than it is for race or sex or any other kind of discrimination. There may be as many as 900, some people say, 900 different disabilities covered by this legislation. There are innumerable different situations in the workplace where the handicapped of different types will intermesh, and those situations will have to be resolved hopefully through processes that are short of litigation. It will be expensive, and even if there is a resolution occasionally by litigation, that will undoubtedly be a very expensive route.

I am suggesting, I think, we ought to have the same remedies as title VII. I think we want to do that. But I am not sure. I do not see any harm to letting us put into law now for the short run, at least, the solid, clear examples we know of the kind of relief, injunctive relief, that is presently in the law, and make sure as we go through this complex law, as it becomes effectuated, that we are not making a mistake by broadening it too soon.

I urge adoption of the Sensenbrenner amendment. It is a commonsense approach. I believe it ought to be adopted, and that we ought to pass the bill.

Mr. EDWARDS of California. Mr. Chairman, I yield 3 minutes to the distinguished chairman of the Committee on the Judiciary, the gentleman from Texas [Mr. BROOKS].

Mr. BROOKS. Mr. Chairman, I oppose this amendment. It makes no sense to provide to disabled individuals remedies that are different from the remedies available to women, racial groups, and religious groups. People with disabilities have been second-class citizens for far too long. The fundamental purpose of the Americans With Disabilities Act is to correct that situation, but this amendment would perpetuate that second-class status.

Referencing the Civil Rights Act of 1964, which I supported and helped draft, as the ADA does now, assures that the remedies provided to the disabled will continue to parallel the remedies provided to these other groups. This is a fair concept and a good one.

A no vote on this amendment will be a vote for first-class citizenship for the disabled. I urge the Members to defeat the amendment.

Mr. SENSENBRENNER. Mr. Chairman, I yield 2 minutes to the gentleman from California [Mr. Cox].

Mr. COX. Mr. Chairman, 13 years ago a Jeep that I was driving through a muddy rain forest in Hawaii flipped, pinning me underneath. My spine was shattered, and for several weeks I lay in a hospital paralyzed from the waist down. Life seems very different from the perspective of one who cannot walk or even use a restroom normally. I was lucky enough to recover fully.

That brief taste of a lifetime handicap showed me how courageous are the people who must live with these disabilities every day, and that is why I am so delighted that President Bush has been pushing so hard for passage of the Americans With Disabilities Act.

President Bush was led to understand that this bill did not include punitive damages, and that was the understanding of most of us here. That is important, because in many respects this legislation is vague. The definition of who is disabled is in large measure left to the courts. The definition of what is a reasonable accommodation is in large measure left to the courts.

In that context, punitive damages just do not make sense. The Sensenbrenner amendment will give the disabled the same remedies currently available to women and minorities under title VII. The Sensenbrenner amendment will assure that with this bill we empower the disabled, not the lawyers.

Mr. Chairman, I urge a "yes" vote on the Sensenbrenner amendment.

Mr. EDWARDS of California. Mr. Chairman, I yield 1 minute to the gentleman from New York [Mr. OWENS].

Mr. OWENS of New York. Mr. Chairman, I rise in opposition to the amendment and in support of this magnificent piece of legislation, which is probably the most beneficial legislation we will pass in this session of Congress.

I want to emphasize the fact that, as the subcommittee chairman responsible for launching this legislation, we held many hearings, and we worked with a volunteer group of people from the community of people with disabilities. it was their great wish that we couple this bill and bind it tightly with the rest of the civil rights legislation. They wanted to make it quite clear that this is a completion of the civil rights agenda for America.

Justin Dart, who chaired the volunteer task force, held meetings all over the country in every State. People came out, and they wanted to emphasize the fact that this is a rights bill; it is a civil rights bill. It is not another set of one of those thousand points of light. This is not charity. This is a clarification and reaffirmation and establishment of certain basic civil rights.

At their requests, the first hearing we held here in Washington we invited Jesse Jackson as the leadoff witness. It was their request that everything possible be done to make it clear to everybody that this is the completion of the agenda for civil rights in America.

I hope we clearly understand that and vote no on this amendment.

Mr. SENSENBRENNER. Mr. Chairman, I yield myself the balance of my time.

Mr. Chairman, those who are opposed to my amendment seem to think that protections and rights are synonymous with remedies and lawsuits. I strongly disagree with that.

If anyone wants remedies in lawsuits, vote no on the Sensenbrenner amendment. If they want protections and rights, vote aye on the Sensenbrenner amendment.

Let us have the money that business spends on the ADA used to make places of employment and places of business more accessible to the disabled rather than using that money in the courtroom to pay lawyers' fees and litigation fees.

Support the Sensenbrenner amendment. Give the disabled something that they truly deserve, protections and rights.

Mr. Chairman, I yield back the balance of my time.

Mr. EDWARDS of California. Mr. Chairman, I yield the balance of my time to the gentleman from Maryland [Mr. HOYER].

□ 1350

Mr. HOYER. Mr. Chairman, I wish to thank the distinguished chairman of the subcommittee and also want to thank the chairman of the Committee on the Judiciary.

Mr. Chairman, we are about to take a historical action on the floor of this House. It is akin to the action we took in 1964, when we said to all Americans that you are not to be discriminated against, irrespective of your race, your color, your national origin, your sex, or other arbitrary distinctions.

We did not, however, in 1964, say that the disabled would be in that same category. So for 26 years, from that date, we have continued to allow both conscious and unconscious, unthinking, discrimination.

In a very bipartisan way with the leadership of the President and the leadership of the chairmen of the House and Senate committees, both sides of the aisles, we are going to say to the disabled, 43 million strong in America, that we no longer are going to allow that process to occur.

In the course of the consideration of that legislation, in the course of the discussions between the White House and the Senate, there was an agreement. There was an understanding. There was a commonsense resolution to a thorny issue.

In the original presentation of the bill punitive damages and compensatory damages had been included. Some said no, that is not fair. We ought to have parallel rights. All persons discriminated against ought to have the same remedies. As a matter of fact, Attorney General Thornburgh said ex-

actly that. He said, "The ADA wisely parallels in the disability area Title VII of the Civil Rights Act of 1964."

What did that mean? It meant, ladies and gentlemen, that we hold these truths to be self-evident, that all men are created equal and are endowed by their creator with certain unalienable rights, and among these are life, liberty, and the pursuit of happiness. Because they are all created equal, in the eyes of our law we will treat them equal.

This is the wrong amendment at the wrong time on the wrong bill. The gentleman from Pennsylvania got up and chastised us for talking about a bill that is to come. All of the debate in favor of the Sensenbrenner amendment I suggest has been on a bill that is yet to come to this floor.

Let us not say by adopting the Sensenbrenner amendment that the disability community remains in a second-class status in America. That is not what this bill is about. This bill is about all men and women being created equal, endowed not by the State, not by Congress, as some of our Communist friends tried to sell the world and are now failing in doing so, but by their creator, with certain unalienable rights. If those rights are transgressed, then their remedies ought to parallel the remedies of a black citizen or a female citizen or an ethnic minority citizen or any other citizen in America who was not treated consistently with the principles that has made this Nation the object of envy throughout the world, because we have pledged and our law stands ensconced in the world as standing for the proposition that every individual will be granted equal rights and equal remedies.

The CHAIRMAN. The question is on the amendment, as modified, offered by the gentleman from Wisconsin [Mr. SENSENBRENNER].

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. SENSENBRENNER. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 192, noes 227, not voting 13, as follows:

The Clerk announced the following pairs:

On this vote:

Mr. Craig for, with Mr. Nelson of Florida against.

Mr. Thomas of California for, with Mr. Oberstar against.

Mr. ACKERMAN changed his vote from "aye" to "no."

Messrs. VOLMER, QUILLEN, DAVIS, and SPENCE changed their votes from "no" to "aye."

So the amendment, as modified, was rejected.

The result of the vote was announced as above recorded.

Mr. STAGGERS. Mr. Chairman, during the Judiciary Committee's markup of the Americans With Disabilities Act, I entered into a colloquy with the distinguished chairman of the Subcommittee on Civil and Constitutional Rights, Mr. EDWARDS, regarding my concern pertaining to the impact of the ADA on the temporary worksite. This concern stemmed from conversations I've had with constituents in the construction industry. They pointed out that making certain types of accommodations on a temporary worksite, such as a construction jobsite, would be very difficult due to the frequently changing circumstances, structure, and terrain of such worksites.

I am pleased to say the Judiciary Committee report language, as well as the Education and Labor Committee report language, discuss the special circumstances of the temporary worksite. Both reports clarify the intent of the ADA, with regard to consideration of the type of operation maintained by the entity, in determining whether or not an accommodation would pose an undue hardship. Specifically, the Judiciary Committee report states an employer on a construction jobsite, for exam-

ple, would not be required to made accommodations which would fundamentally alter the nature of the site, or be unduly costly to implement or maintain. Furthermore, the committee recognizes that certain types of accommodations which may be easily made in a more traditional work setting, such as an office building, would impose an undue hardship on the nontraditional, temporary worksite.

The contractors I mentioned came to me because they are not sure what will be expected of them under the employment title (I) of the ADA. They raised the point that a construction jobsite is an ever-changing place of employment. As a project enters different phases of completion, points of accessibility change. An accommodation made today won't necessarily provide access tomorrow. In addition, many of the employees are temporary, in that they work for a particular employer only for the duration of that project. Employers on temporary worksites want assurances that this legislation will take into consideration the realities of their unique industry. I believe the committee report language addresses this situation, and I thank Mr. EDWARDS for his assistance on this important matter.

Certainly, this legislation will benefit the entire Nation by prohibiting discrimination against the estimated 43 million persons in this country with disabilities, and I strongly support that intent. However, Mr. Chairman, I think it is important to raise the issues during this debate which have concerned those who will have to comply with the act, particularly small businesses, and point out the steps the committee of jurisdiction have taken to clarify their obligation.

Mr. FISH. Mr. Chairman, as we consider the Americans with Disabilities Act [ADA] today, I would like to offer some comments on six amendments which I introduced and which were accepted by the Judiciary Committee during its consideration of the bill. These provisions have been incorporated into the bill before us. I would like to briefly describe the purpose of each of these amendments, as I believe that will be useful for Members of this body.

Section 101(8): Qualified individual with a disability ("Essential function of the job"):

The ADA, like section 504 of the Rehabilitation Act, defines "qualified individual with a disability" as an individual with a disability who, with or without reasonable accommodation can perform the essential functions of the job. The term "essential functions" is included in order to ensure that persons with disabilities are not disqualified because they cannot perform duties which are only marginal to the job. Employees often include tasks in job descriptions which are incidental to the actual job or are performed infrequently or not at all. A common example of this is the requirement that applicants possess drivers' licenses for non-driving jobs. Such a driving requirement serves to disqualify persons with disabilities which preclude driving. Employers often include this requirement because of the convenience of having an employee who drives do an occasional errand or because the employer believes that an employee who drives will not be late to work or will be able to work more overtime. These would not be valid reasons to exclude a person whose disability prevented him from driving, if the person was able to do the tasks of the actual job.

In addition, the essential function requirement focuses on the desired result rather than the means of accomplishing it. For example, in one case under the Rehabilitation Act, the employer required each employee to be able to perform the job with both arms. *Prewitt* v. *U.S. Postal Service,* 662 F.2d 292 (5th Cir. 1981). The plaintiff was unable to do this because his disability resulted in limited mobility in his left arm. The court found that the essential function of the job was the ability to lift and carry mail which the employee had proven that he could do, not the ability to use both arms. Moreover, the court found that the employer was required to adapt the work environment to determine whether the employee with the disability could perform the essential requirements of the job with reasonable adaptations.

Likewise, in a job requiring the use of a computer, the essential function is the ability to access, input, and retrieve information from the computer. It is not essential that the person be able to use the keyboard or visually read the computer screen, if the provision of adaptive equipment or software would enable the person with the disability—for example, impaired vision or limited hand control—to control the computer and access the information. The relevant question would be whether the acquisition of the equipment would be a reasonable accommodation, given the factors to be considered in making that determination.

The committee adopted addition language which states that consideration shall be given to the employer's judgment as to what functions of the job are essential. This amendment was added because of concerns that the essential function provision would be read to mean that the employee alone could define the essential functions and that the employer's judgment would be disregarded. The amendment simply clarifies that the employer's judgment should be considered, along with all other evidence. An amendment which would have created a presumption in favor of the employer's judgment was rejected. Hence, the amendment is neutral as to the weight that should be given to the employer's judgment about which functions are essential. Similarly, an amendment was approved on the floor which states that job descriptions developed by the employer shall be considered evidence of the essential functions of the job. Again, this amendment is neutral as to the weight to be given this evidence. Writing down a job function does not elevate its weight. The weight given to a written job description will depend on how closely it is tailored to the actual functions of the job. Moreover, a plaintiff may use the job description as evidence of discrimination. Hence, both amendments to the essential functions provision should be read to conform to existing law which considers evidence from both the plaintiff and defendant on the issue of essential functions.

Section 103(b)(3): Direct threat to others:

The committee adopted amendments to the employment and public accommodations sections of the bill to ensure that entities which excluded persons with disabilities from their programs on the basis of risk of harm to others did so based on the standard of a direct threat that could be proved to be a significant risk to the health or safety of others that cannot be eliminated with reasonable accommodation.

While the committee does not foresee that the employment or participation of an individual with disabilities would generally pose any risk, much less a significant risk, to the health or safety of others by the status of having a disability, the committee added this provision to allay the fears of those who believe that the nondiscrimination provisions of the bill could force employers and providers of benefits or services to employ or to interact with those individuals who pose such a risk.

In adopting this standard, the committee drew on case law developed under section 504 of the Rehabilitation Act of 1973, as amended. Under this case law, a person would not be considered qualified if he or she posed a direct threat to the health or safety of others. The formulation of this standard parallels the provision added to the Civil Rights Restoration Act of 1988 (Public Law 100–259, 102 Stat. 28) and the provision added to the Fair Housing Amendments Act of 1988 (Public Law 100–403, 102 Stat. 1619). Congress added both provisions in order to codify the Supreme Court decision in *School Board of Nassau County* v. *Arline,* 107 S.Ct. 1131, n.16.

Any claim that an individual poses a direct threat and a significant risk of harm to others must be established on the basis of objective evidence. Generalized assumptions, subjective fears and speculation are insufficient to prove the requisite direct threat to others.

If the employer determines, by objective evidence that is sufficiently recent as to be credible, and not from unsubstantiated inferences, that the applicant will pose a direct threat that is a significant risk to the health or safety of others, and that the threat cannot be eliminated by the provision of a reasonable accommodation, the employer may reject the applicant as an employee. Providers of public accommodations are intended to be held to the same standards as employers, with regard to denying services or benefits to persons with disabilities.

The applicant or participant is not required to prove that he or she poses no risk. Further, the determination of significant risk for persons with disabilities must be based on the current condition of the applicant, participant or employee. The decision to exclude cannot be based on merely an elevated risk of injury. See, *Mantolete* v. *Bolger,* 736 F.2d 1416 (9th Cir. 1985). This amendment adopted by the committee is intended to set a clear, defined standard which requires actual proof of significant risk to others.

Section 308(a)(1): The futile gesture doctrine:

Another amendment offered and accepted in the Judiciary Committee clarified the language in the title III enforcement provision which states that a person may file a civil action if he or she has reasonable grounds to believe that he or she was about to be subjected to discrimination. Concerns were raised as to the meaning of this provision in cases other than new construction or alterations of buildings. The explicit language describing the futile gesture doctrine was inserted to clarify

the circumstances when the "about to be" language would be applicable. This has been a well-established doctrine in title VII case law and is implied in title I.

Section 302(a): Prohibition of discrimination by public accommodations: General rule:

The committee adopted an amendment which clarifies that the prohibition against discrimination "in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations," applies to "any person who owns, leases (or leases to), or operates a place of public accommodation."

This amendment was added in order to make it clear that the prohibition against discrimination applies to the owner of the building that houses the public accommodation, as well as the owner or operator of the public accommodation itself. For example, an owner of a building that contains retail stores would be required to make readily achievable changes to accomplish access in common areas under the building owner's control. Without this provision, the purpose of title III could be undermined. A person with a disability could be prevented from entering the public accommodation because of an inaccessible entrance—which could be made accessible easily, without much difficulty or expense—i.e. in a readily achievable manner. Likewise, the owner would be required to modify policies which exclude people with disabilities, such as a no pets rule, in order to allow entrance to a person who uses a guide, signal or service dog. Any actions of the building owner which affect the ability of a person with a disability to use the public accommodation would be covered, to the extent provided in the non-discrimination provision of section 302.

The amendment also makes it clear that the owner and operator of the public accommodation are prohibited from discriminating in accordance with this title. Corporate headquarters would be covered to the same extent as the operator of the accommodation. For example, corporate headquarters could not continue to design new stores in an inaccessible manner in violation of section 303.

Finally, organizations which lease public accommodations for events which are open to the public are prohibited from leasing those public accommodations which discriminate against people with disabilities as defined by this title. This provision addresses concerns that were raised about the inability of people with disabilities to attend public events because of lack of access or discriminatory policies. This provision does not require organizations to lease only accessible facilities. It does, however, require organizations to lease facilities which are in compliance with this title. For example, an organization could not lease a conference center for a public event which refused to admit blind people who use guide dogs or refused to serve people who used wheelchairs.

Section 303: New construction and alterations in public accommodations and commercial facilities:

The Committee also approved an amendment which extended the obligation to carry out building alterations so that they result in accessibility in commercial facilities, as well as in public accommodations. This amendment was intended to correct an oversight in previous bills where the alterations section only applied to public accommodations. The intent of the ADA is to assure that construction performed in the future results in accessibility and useability by people with disabilities. In order to accommodate the concerns of businesses, a line was drawn between existing buildings where only those accessibility changes which are readily achievable are required, and new construction which must be accessible. In keeping with this purpose, it made sense to require that alterations which affect usability also be accessible in all commercial facilities. The bill does not require that existing buildings be altered for accessibility purposes. It simply requires that if and when alterations are performed that they incorporate accessibility requirements. Without this amendment, the anomalous situation could arise that a new commercial facility which was required to be accessible under the ADA could be altered to make it inaccessible.

Section 309: Examinations and courses:

The committee adopted an amendment which creates an obligation on all entities which provide tests and courses related to applications, licensing, certification or credentialing for secondary or post-secondary education, professional, or trade purposes to offer the examinations or courses in a place and manner that is accessible. This amendment was critical to the purposes of the ADA, to create equal opportunity for persons with disabilities. This purpose would be undermined if people with disabilities would be foreclosed from the same opportunities to prepare and qualify for educational and professional positions. For example, a law school graduate who used a wheelchair would be at a disadvantage if his classmates could take a bar preparation course that was held in an inaccessible site. Likewise, a person who is blind may be unable to compete in the S.A.T. exam without the assistance of a reader. The courses and examinations covered in this section were considered so critical to the intent of the ADA that the committee wanted to ensure the participation of people with disabilities.

CONCLUSION

In conclusion, the amendments that I offered and that were accepted by the Judiciary Committee are consistent with the purpose of the ADA—to open equal opportunities to people with disabilities. I look forward to the passage of the most historic piece of disability civil rights legislation of our times and feel honored to have had a part in drafting it.

Mr. HAYES of Illinois. Mr. Chairman, I rise in strong support of the Americans with Disabilities Act before us today. Ever since this great country was formed over 200 years ago Americans have had one common goal in life—democracy. After all this time it is a sad commentary that with all of our know how and all the advancements that we have made throughout our history, that we have not been able to achieve that goal for a vast number of citizens.

We have legislated against roadblocks for equal education, equal employment, equal opportunity and equal rights. Still, discrimination persists to eat away at the fabric of our society. One day we will overcome the hatred and bigotry that is harbored by a declining few in this country. Until that time, it is important that we go through the exercise we are involved in today. When enacted, the ADA bill before us will bring much of what society has to offer to those who can least afford to be denied full membership—I am talking about those with mental and physical disabilities.

Given the fact that there are over 43 million Americans suffering from some form of disability, this legislation will have a wide and far reaching impact on the lives of countless citizens. There simply is no excuse why these citizens should not have the full protection accorded everyone else in society.

While I am not so naive as to think this legislation alone will end the discrimination these individuals face each and every day, just as the Civil Rights Act of 1964 and the Rehabilitation Act of 1973 have changed our society for the better, the ADA will also have a profound positive impact on the quality of life of millions of Americans.

I urge my colleagues on both sides of the aisle to vote in support of this bill.

Mr. MORRISON of Connecticut. Mr. Chairman, this is a historic day. Twenty-six years after the enactment of the Civil Rights Act of 1964, which barred discrimination based on race, religion, national origin and gender, we are about to pass legislation that will bar discrimination against one of the Nation's largest minority groups—Americans with disabilities.

This bill extends to Americans with disabilities the civil rights that are guaranteed to all Americans. I am delighted that we are moving forward to empower Americans with disabilities, not only so that they may have access to the opportunities so many of us take for granted, but also so that we all may have access to their talents and productivity.

Mr. Chairman, one of the key accomplishments of this bill is the prohibition of discrimination on the basis of public accommodation. With the passage of this bill no individual shall be discriminated against on the basis of disability in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodation of any place of public accommodation.

The mandate provided in the ADA for architectural accessibility will be extremely important, particularly in States which have no access requirements today. In these places, disabled people and their advocacy organizations have long been frustrated by unsuccessful attempts to achieve access to public accommodations through voluntary efforts by the operators of those accommodations.

One refrain disabled people have heard over and over again is, "Why should we make our building accessible when we have no disabled customers?" This reflects an erroneous assumption. Disabled people tend to not even try to use a public accommodation that is inaccessible; therefore, the manager doesn't know what the demand for services would be among people with disabilities if the facility was accessible.

As society becomes more accessible, and disabled people become more fully integrated, most public accommodations will tend to have disabled customers.

Sometimes, managers of public accommodations don't contemplate the use by disabled

persons because of the unique physical nature of the public accommodation or the physical requirements for participation. But again, this is based on erroneous assumptions.

For example, at one time, it was unheard of for individuals using wheelchairs to play tennis, and tennis court designers and managers never contemplated disabled players wanting courts. However, wheelchair tennis is now an accepted athletic event, and it can be assumed that tennis courts should be wheelchair accessible.

In general, when participation by disabled persons isn't contemplated at a place or activity, erroneous assumptions about the skills and inclinations of disabled persons are being made. This is why the ADA requires access to all public accommodations.

One of the ADA's public accommodations requirements is that, when buildings are altered, the altered area must be made accessible to people with disabilities. Alterations include remodeling projects of all kinds. Additions to buildings should be considered alterations.

A related requirement is that an accessible path of travel must be provided to the altered area, if providing one would not be disproportionate in cost and scope to the overall alteration. An accessible path of travel should include whatever elements are necessary so that a disabled person can enter the facility, whether the person arrives by driving a car into the building's parking lot, or whether the person comes up the public sidewalk.

Also, facilities serving the altered area, like accessible restrooms, telephones, and drinking fountains, should be provided if they are not disproportionate in cost and scope to the overall alteration.

The "disproportionate" language in the bill is provided to offer operators of public accommodations relief in the situations where providing an accessible path of travel to an altered area would be so overwhelmingly expensive, in comparison to the originally intended scope of the alteration, that it would make the alteration financially infeasible. In this way, the bill offers a well-crafted requirement for accessibility, and balances it with the necessary financial protections for the operators of commercial establishments covered by the ADA.

For the Americans With Disabilities Act to provide a successful mandate for eliminating disability discrimination, it will be critical for it to be regulated and implemented very carefully. Implementation must take into account the actual problems that face disabled people on a daily basis in our society.

Two good examples include hotels and grocery stores, which present special challenges for implementation.

Disabled people are frequently frustrated by the inaccessibility of hotel rooms. Very few rooms, even in new hotels, are made fully accessible. The rest of the rooms often feature restroom doors too narrow to enter. Often, it has been impossible for disabled persons who need to fly to a city on short notice to do business, to find a usable hotel room. For the same reason, organizations of disabled persons are often stymied when trying to find a hotel for a conference, because virtually all hotels feature too few rooms to accommodate the organizations' disabled members.

For this reason, the ADA requires new hotels to meet a number of requirements. Common-use areas like lobbies and restaurants must be accessible, a few rooms must be fully accessible—including grab bars and wheelchair turning space in the restroom—and audio loops for the use of hearing-impaired persons must be available in meeting rooms. In addition, doors to all guestrooms, and doors to the restrooms in all guestrooms, must be of a standard wheelchair-accessible width.

This is a reasonable way to solve the problem. While it might not be reasonable to propose that every guestroom in a new hotel be fully accessible—including restroom grab bars and turning space—it is reasonable to require a percentage of fully accessible rooms and simply the appropriate door widths in the other rooms. Then, many wheelchair-users and other people with physical disabilities will be able to use those guestrooms which are not fully accessible. It will be much easier for disabled persons to book usable rooms when they don't have a lot of time in advance, and also it will greatly relieve the difficulties of organizations of disabled persons finding hotels to accommodate large groups.

Grocery stores present similar frustrations and sometimes complete discrimination. One practice which renders many grocery stores completely inaccessible is the placing of pole barriers around the entrance to the store in order to prohibit the removal of grocery carts. This practice is also found in other kinds of stores where carts are used. This will be illegal under the ADA; there must be at least one entry/exitway with a standard wheelchair-accessible width.

Also, in new grocery stores, supermarkets, convenience stores, and other stores with checkout stands, checkout stands should permit passage by wheelchairs through the customer pathway. This is not a new idea; but rather is the existing policy in Connecticut, California, and several other States.

It is not sufficient to provide only one accessible checkout stand per store. This practice has been shown ineffective in many existing locations, for two reasons. First, at various times of the day, some checkout stands are not in use. Often, this includes the accessible stand. Many times, disabled persons go to leave the store, only to discover that the only accessible checkout stand has a chain across it, with a sign saying "Please use another checkout stand."

Second, different checkout stands can have different functions. For example, some are express lines—"10 items or less" or similar rules—while others are not. Requiring all checkout stands to be accessible is not burdensome and achieves the necessary degree of accessibility.

Under the Americans With Disabilities Act, when facilities are altered, the altered area must be made accessible, and a path of travel and restrooms serving the altered area must also be made accessible, if not disproportionate in cost and scope to the overall alteration.

It is also important to note that, if the aggregate cost of an accessible path of travel, restrooms, telephones, and drinking fountains would be disproportionate to the overall alteration cost, the operator of the public accommodation is not relieved of the obligation to provide a subset of such features up to the point which would become disproportionate. The goal is to provide the maximum amount of accessibility that doesn't exceed the disproportionality limit.

If a selection must be made between accessibility features, those which provide the greatest use of the facility should be selected. For example, an accessible entrance would generally be the most important path of travel feature, since without it, the facility would be totally unusable by many persons with disabilities. An accessible restroom would have greater priority than an accessible drinking fountain.

One very important requirement of public accommodations under the ADA is the requirement to make reasonable accommodations in policies, practices, and procedures to afford services to disabled individuals, and to provide services through alternative methods if the removal of architectural and communication barriers in existing facilities is not readily achievable. This is a mandate for common sense. Logical changes which would enhance participation by people with disabilities are required, which sometimes will demand some ingenuity, but will rarely if ever be burdensome on the business operator.

For example, if a pizza parlor is on the second floor of a building with no elevator, an employee must be willing to bring a disabled persons' phoned-in order to them at the bottom of the steps. In a store, a salesperson must be made available for a reasonable length of time to assist a blind person in reading labels of items for sale.

In a movie theater, if some screens are upstairs and some are downstairs, movies should be rotated periodically so disabled patrons can see all the available films, even if they can't climb the stairs. And these rotations must be advertised so that the public knows what they can see when. In an elevator, if the buttons are too high and it would not be readily achievable to lower them, a wand or other device should be provided with which disabled persons can operate the elevator controls.

In an existing two-story restaurant which has no public elevator, but does have a freight elevator, if disabled persons who can't climb stairs wish to go to the second floor and wish to use the freight elevator, it must be made available to them, even if normal policy prohibits the public from such use.

Mr. McDERMOTT. Mr. Chairman, I rise in support of the Americans With Disabilities Act. This legislation represents the first comprehensive piece of civil rights legislation for people with disabilities—extending necessary protections that have long been denied to such individuals.

I am particularly pleased that this act will finally also extend necessary protection to people with HIV disease. These are individuals who have any condition along the full spectrum of HIV infection—asymptomatic HIV infection, symptomatic HIV infection or full-blown AIDS. These individuals are covered under the first prong of the definition of disability in the ADA, as individuals who have a

physical impairment that substantially limits a major life activity. As a physician, I know that although the major life activity that is affected at any point along the spectrum by the HIV infection may be different, an effect on some major life activity exists from the time of HIV infection.

As a physician, I also know all too well that we need to be in a fight against a disease, not in a fight against people with a disease. But, unfortunately, while much of America has responded with compassion and dignity to individuals with HIV disease, many others have not. For those individuals who still experience discrimination on the part of those who react out of ignorance and fear, the ADA will finally extend critical protection in the areas of employment, transportation and public accommodations.

In employment, the protections that exist in all aspects of employment decisionmaking, and with regard to the provision of reasonable accommodations, will be critical for people with HIV disease. The requirements regarding medical examinations are thoughtful, comprehensive, and will provide necessary protection. Finally, the protections regarding fringe benefits will be important for people with HIV disease. And, in public accommodations, the protections of the act will ensure that people with HIV disease receive necessary goods and services.

I am pleased that Congress is finally taking this historic step to extend protection to all people with disabilities—including people with HIV disease. I urge my colleagues to join me in voting for this important piece of legislation.

Mr. FAZIO. Mr. Speaker, I strongly support H.R. 2273, the Americans With Disabilities Act. It is long-overdue legislation, which will prohibit discrimination against Americans with disabilities in employment, public accommodations, transportation, and telecommunications.

The Civil Rights Act of 1964 barred discrimination on the basis of race, sex, color, religion, and national origin. Unfortunately, it does not address the very real problem of discrimination on the basis of disability. Every day, millions of disabled Americans face discrimination based solely on their disability, and have no recourse or remedy against those who are discriminating against them.

H.R. 2273 is a fair bill which was carefully drafted to take into consideration concerns from both sides. While it includes provisions to ensure that individuals with disabilities receive the rights and protections they deserve, it also makes certain that businesses will not be required to make unreasonable and excessive changes.

The time for passage of this legislation is long overdue. The 43 million Americans who are physically or mentally disabled have been treated as second class citizens for too long. This measure provides us with the opportunity to guarantee to those individuals with disabilities, the same broad-based protection against discrimination that all Americans enjoy. I urge my colleagues to support this legislation.

Mr. VENTO. Mr. Chairman, I rise in support of H.R. 4807, the "Americans With Disabilities Act of 1990."

Mr. Chairman, the committee of the whole adopted an amendment to section 507 of the bill that addresses the question of the right of disabled persons to enter wilderness areas by the use of wheelchairs.

Because there may be unresolved questions, I believe that it would be useful to clarify the current state of agency policies regarding this subject.

Central features of wilderness areas are their roadless character and the opportunities they afford for recreation that does not involve use of motorized devices such as motorcycles or all-terrain vehicles. Apparently, this has led some to believe that wheelchairs, too, are precluded even when their use is a medical necessity.

In the past, slight differences in regulations of the agencies managing wilderness areas may have added to the impression of some that such use was not permitted. The National Park Service and the Forest Service today have policy statements that specifically authorize the use of wheelchairs by mobility-impaired persons in wilderness areas. The National Park Service policy is spelled out in chapter 6, section 8 of the NPS Management Policies, while the Forest Service's 1986 Manual included an exemption of "wheelchairs when used as necessary medical appliances" from the general restrictions on motorized transport in wilderness areas, but in the past the regulations of the Bureau of Land Management [BLM] have been silent on wheelchair access to wilderness.

However, according to BLM Director Jamison, last year the BLM adopted an explicit policy confirming that wheelchair use in wilderness is permitted and BLM is revising its existing management regulations for wilderness areas to include language specifying that the use of wheelchairs by persons with mobility impairments is not considered as being use of mechanical transport or motorized equipment within the intent of those regulations.

Any lingering doubts about how the agencies view this matter should soon be removed, especially since the Forest Service has drafted new language for its manual that will even more clearly reflect the permissibility of wheelchair use.

Thus, Mr. Speaker, as a matter of record it has been clear for some time that there is no need to amend the Wilderness Act to accommodate wheelchair access. The agencies have correctly concluded that the Act does not prohibit use of wheelchairs in wilderness areas when such use is necessary because of a person's medical condition or disability.

For the further information of Members, I am here including a May 17, 1990, memorandum by the Congressional Research Service concerning the Forest Service's new manual language, a copy of a letter from BLM Director Cy Jamison to Representative RHODES, a member of the Committee on Interior and Insular Affairs, concerning that agency's revisions of its regulations, and a copy of the relevant portion of the National Park Service Management Policies.

CONGRESSIONAL RESEARCH SERVICE,
THE LIBRARY OF CONGRESS,
*Washington, DC, May 17, 1990.*

To: House Committee on Interior and Insular Affairs, Subcommittee on National Parks and Public Lands, Attention: Stan Sloss.

From: Betsy A. Cody, Analyst in Natural Resource Policy, Environment and Natural Resources Policy Division.

Subject: Wheelchair Access in Wilderness Areas.

Attached is a copy of the U.S. Forest Service's definition of "mechanical transport" as it appears in the agency's 1986 manual describing management policies. As you will note, the Forest Service definition "does not include wheelchairs when used as necessary medical appliances" (Title 2320.5).

Additionally, the Forest Service has drafted new language for its manual:

* * * mechanical apparatus that is medically necessary for basic mobility of any individual is considered to be part of that person and not subject to restrictions on mechanical transport.[1]

The above represents the Forest Service's current policy on wheelchair access in wilderness areas. As far as I know, this language has not been published in the Code of Federal Regulations.

---

TITLE 2300—RECREATION, WILDERNESS, AND RELATED RESOURCE MANAGEMENT

10. Inform wilderness visitors that they face inherent risks of adverse weather conditions, isolation, physical hazards, and lack of rapid communications, that search and rescue may not be as rapid as expected in an urban setting in all publications and personal contacts.

11. Manage primitive areas as wilderness areas consistent with 36 CFR 293.17 until their designation as wilderness or to other use is determined by Congress.

*2320.5—Definitions*

1. *Wilderness.* An area of wilderness is defined in Sec. 2(c) of the Wilderness Act (16 U.S.C. 1131-1136). The term "wilderness" shall be applied to all National Forest System lands included in the National Wilderness Preservation System (NWPS). See 36 CFR 261 and 293.

2. *Untrammeled.* In the context of the Wilderness Act, an untrammeled area is where human influence does not impede the free play of natural forces or interfere with natural processes in the ecosystem.

3. *Mechanical Transport.* Any contrivance for moving people or material in or over land, water, or air, having moving parts, that provides a mechanical advantage to the user, and that is powered by a living or nonliving power source. This includes, but is not limited to, sailboats, hang gliders, parachutes, bicycles, game carriers, carts, and wagons. It does not include wheelchairs when used as necessary medical appliances. It also does not include skis, snowshoes, rafts, canoes, sleds, travois, or similar primitive devices without moving parts.

4. *Motorized Equipment.* Machines that use a motor, engine, or other nonliving power soruces. This includes, but is not limited to, such machines as chain saws, aircraft, snowmobiles, generators, motor boats, and motor vehicles. It does not include small battery or gas powered handcarried devices such as shavers, wristwatches, flash-

U.S. DEPARTMENT OF THE INTERIOR,
BUREAU OF LAND MANAGEMENT,
*Washington, DC, Oct. 13, 1989.*

Hon. JOHN J. RHODES III,
*House of Representatives,*
*Washington, DC.*

DEAR MR. RHODES: Thank you for your letter of October 6, 1989, regarding current Bureau of Land Management (BLM) policy concerning the operations of certain types of mechanical transport in designated wilderness areas. As you know, the BLM's policy for wilderness area management is based on the Wilderness Act of 1964 (Public Law 88-577), the Federal Land Policy and Management Act of 1976 (Public Law 94-579), and subsequent legislation that may contain specific language for the management of a given designated area.

The BLM policy determination is that existing wilderness legislation generally prohibits the use of motorized equipment and other forms of mechanical transport. Using this interpretation, mountain bikes and other non-motorized bicycles are prohibited because they are considered to be a form of mechanical transportation. H.R. 3172 would amend the Wilderness Act of 1964 to allow for the use of non-motorized bicycles. We are presently managing designated wilderness areas to exclude non-motorized bicycles. A copy of the BLM wilderness management regulations on motorized uses and mechanical transport prohibitions is enclosed.

The issue of the operation of wheelchairs by persons with mobility impairments in designated wilderness aeas is not as clear. As stated above and as a general rule, public use of motorized equipment or any form of mechanical transport is prohibited. As a policy exception, the BLM does not prohibit the use of wheelchairs by persons with mobility impairments in wilderness. The other National Wilderness Preservation System managing agencies (i.e., Forest Service, National Park Service, and the U.S. Fish and Wildlife Service) use this same approach. During 1990, the BLM will be revising the existing management regulations for the BLM wilderness areas, and we propose to include language that will specify that the use of wheelchairs by persons with mobility impairments are not considered as mechanical transport or motorized equipment within the intent of the regulations. Hopefully, this regulatory change should clarify the matter.

Let us assure you of our commitment to providing a variety of recreation and other types of use opportunities on lands managed by the BLM. Although wilderness areas may not be appropriate for all types of activities, lands outside wilderness areas can and are being used to provide for a broad range of activities including mountain biking. We will continue our efforts to improve legal and physical access by the mobility impaired to public lands administered by the BLM.

Thank you for your interest.

Sincerely,

CY JAMISON,
*Director.*

---

NATIONAL PARK SERVICE

Wheelchair access is addressed in section 6:8 of Management Policies: U.S. Department of the Interior, National Park Service, 1988, as follows: *"Mobility impaired persons may use wheelchairs (as defined in 36 CFR 1.4) in wilderness."* [Emphasis added]

36 CFR 1.4(a) defines manual wheelchairs as ". . . a device that is propelled by human power, designed for and used by a mobility-impaired person." Motorized wheelchairs are defined as ". . . a self-propelled wheeled device, designed solely for and used by a mobility-impaired person for locomotion, that is both capable of and suitable for use in indoor pedestrian areas."

In addition, 36 CFR 1.2(3)(e) states:

The regulations in this chapter are intended to treat a mobility-impaired person using a manual or motorized wheelchair as a pedestrian, *and are not intended to restrict the activities of such a person beyond the degree that the activities of a pedestrian are restricted by the same regulations.* [Emphasis added]

Mr. GEJDENSON. Mr. Chairman, I rise in support of H.R. 2273, the Americans With Disabilities Act of 1990.

This is one of the most important bills the Congress has voted on since the Civil Rights Act of 1964. It builds on the great American traditions of equality and equal opportunity. It breaks down barriers which have insensitively segregated America's 43 million disabled citizens, literally stopped disabled people in their tracks, and held them back from opportunities other people take for granted. This bill opens new doors of opportunity for our disabled citizens and for our cumulative potential for growth and development as a society.

Because it eases disabled persons' access into the work force and other central community activities, the Americans With Disabilities Act of 1990 is good for American business and growth. Approximately two-thirds of disabled Americans are unemployed, but this tragic statistic can be drastically altered by simple measures, such as widening of doorways and construction of ramps to accommodate wheelchairs, and improving the accessibility of public transportation. The talents and contributions of disabled Americans are too often wasted because these citizens simply lack adequate access to the workplace.

The concerns of business are also reflected in this thorough and thoughtful legislation. For existing facilities, the standard is to make reasonable accommodation which does not cause the employer undue financial hardship. Indeed, the greatest impact of the Americans With Disabilities Act may be in the future, because the act requires that future construction of public facilities, large office buildings, and public transportation be accessible.

It is important to remember that any of us could join the ranks of the disabled at any time. Accidents and illnesses are equal opportunity disablers. I am pleased to support this important legislation to ensure equal opportunity for the disabled.

Mr. WOLPE. Mr. Chairman, I rise in strong support of the Americans With Disabilities Act. This critical legislation would extend basic civil rights protection to a highly important yet often neglected segment of society—persons with disabilities.

For too long, persons with disabilities have been excluded and denied meaningful opportunities to participate in the economic and social mainstream of American life. This must be changed.

The need for this legislation is clear. Studies show that millions of Americans with disabilities are still subjected to widespread discrimination and segregation in all significant areas of their lives.

Despite existing disability rights and services, Federal and State laws are inadequate to address the discrimination faced by people with disabilities.

The forced dependency of our increasing population of people with disabilities has resulted in escalating economic burdens on Government, business, families, and taxpayers. It has been estimated that excluding 10 million citizens with disabilities from the workplace costs our society about $300 billion annually.

The Americans With Disabilities Act is the product of years of study and compromise. I am confident that this legislation, in its final form, will reflect both the urgent needs of persons with disabilities and the interests of employers and busineses who are concerned with the potential costs of compliance. In that connection, I am pleased that Chairman ROSTENKOWSKI has provided assurances that a small business tax credit for expenses associated with this measure will be considered by the Ways and Means Committee as it develops legislation later this year.

The Americans With Disabilities Act is a landmark affirmation of human rights for the 43 million Americans with disabilities. Partial equality is no longer tolerable for persons with disabilities. Partial equality, written into law, simply guarantees more segregation, more unemployment and more public and private expenditures for welfare. I strongly urge passage of this critically needed legislation.

Mr. DELAY. Mr. Chairman, the American people ought to see what is going on in this Chamber and outside these halls. Everyone is running around patting each other on the back, feeling wonderful about this bill, about how they are going to bring fairness to the disabled by the passage of ADA. We are going to stop discrimination against the disabled and this bill is going to do it.

I think it is very sad that we had an opportunity to pass a piece of legislation that could have made a statement by this country against discrimination against the disabled, giving them full opportunity and not hurting anyone in the process; yet those proponents who have worked on this bill find fault with what is happening here. The disabled community showed little or no compassion for people on the side when they were demanding compassion for their side.

The bill went through the entire process with people having sit-ins in our offices, calling people that would dare question the authors of this bill "devils incarnate."

The disabled community did not want compassion, did not want compromise, did not want to work out a deal so that there would be fairness on all sides. They demanded—they demanded that you vote for this bill without amendments. I think that what has happened during this process is very unfortunate.

It went through the Senate that way. Our administration made a deal on this bill back when it was in the Senate and our administration knew that there were some things in this bill that needed to be corrected, yet they failed to take a position on those issues. I will talk about the issues as we get into the

amendments, but I think this is really unfortunate because they are Americans out there who are trying to make a living, creating jobs, creating a future for this country, that have been abused, have been discriminated against in this bill, have been ignored when they have tried to work out some sort of way of knowing who is disabled, and how they comply with this bill.

The answer by the disabled community and the proponents of this bill is, "Well, let the courts decide."

Well, if you are a mom and pop operation out there trying to make a living, you cannot afford the lawyers that you will have to hire to defend yourself in court.

No consideration, only eight amendments brought to this floor and limited time to discuss those amendments. I think it is glossy unfair. I think this is a horrible piece of legislation. It could have been a good piece of legislation if Americans would have worked together in fairness and compassion.

I would like to take a few minutes to point out to my colleagues several of the provisions of the ADA that will adversely affect businesses in this Nation.

Small business are the backbone of America's economy. Yet, small businesses are curently facing a full array of legislation that they, not the public in general, are expected to pay for. Mr. Chairman, it is not inaccurate to say that businesses in this Nation are at risk. From the mandated increase in the minimum wage, to the mandated parental leave bill, to the clean air bill, to the Americans With Disabilities Act, the American businessman is being confronted with the stark reality of the 1990's—that if the liberals can't get the government to fund their new programs—they will require businesses to fund them. "Put it on the employer's nickel." That's what we're being told. Well, Mr. Chairman, this Member from Texas doesn't agree.

The Americans With Disabilities Act could be a very positive step, a landmark piece of legislation that would enable the disabled to fully participate in jobs and public facilities. But I'm afraid that instead, the bill will create frustration for business owners and employers who will not understand how to comply with the requirements of the bill. I'm also afraid that the bill will create bitterness against the disabled because of the spending mandate that it places on businesses. Mr. Chairman, mandating access for the disabled is a reasonable requirement. Mandating that a business spend money to provide that access is something different. But leaving the spending mandate open ended—with the courts determining how much small businesses must spend to accommodate the disabled—is unheard of. And this open-ended spending mandate is exactly what the ADA requires of small businesses.

Mr. Chairman, this Congress should not pass the ADA unless it also allows for a tax credit for businesses who will be forced to spend money on accommodations for the disabled. A bipartisan bill to provide a tax credit to small businesses has been introduced and enjoys the support of 186 cosponsors. H.R. 3500, the Small Business Access Improvement Act of 1989, would provide a tax credit for some of the businesses that will be forced by the courts to spend money because of the ADA. Mr. Chairman, this tax credit is not just a good idea, it is essential.

It is essential because the accommodations mandated by the ADA will cost money. Many advocates of the bill have maintained that the costs of the accommodations mandated by the bill will not be expensive, but the fact remains that the courts and the regulators will make that determination.

Even though opponents of the bill claim that the accommodations are no big deal, even the most frequent accommodations can prove costly for the small business. According to the National Federation of Independent Business, the following are average costs of the most frequent accommodations: $1,000 to $10,000 for a concrete ramp; $3,000 to widen and install a new exterior door; $300 to $600 to widen and install a new interior door; $200 to lower an existing water fountain; $300 to $3,000 to modify an existing rest room; $23/hour to hire a certified sign language interpreter; $2.50 per page to translate written text into Braille form; $5,000 to purchase a computer with speech synthesizer and appropriate software for the blind.

Mr. Chairman, it is clear that even frequent accommodations that will be mandated will cost money. Therefore, a tax credit must be provided for businesses that will be required to make accommodations under the ADA! I would like to insert into the record at this time, an article explaining the importance of this tax credit. The article explains that many of the costs of accommodations that were projected during consideration of the Fair Housing Amendments of 1988 turned out to cost much more than the proponents of the bill projected.

The article follows:

LAW MAY HANDICAP HOUSING EFFORT

(By Carolyn Lochhead)

Back in August 1988, when Congress was about to pass a law requiring that new apartments be made accessible to the disabled, particularly persons in wheelchairs, Sen. Edward M. Kennedy, a Massachusetts Democrat, assured colleagues that it would add just $27 to the construction cost of each new apartment. Sen. Tom Harkin, an Iowa Democrat, further admonished skeptics, who, he said, would tell "a Vietnam veteran who has lost his legs . . . that 10 bucks or $4 to widen the door to a bathroom is too much" to spend to make housing accessible.

Passage of the Fair Housing Amendments Act of 1988 was swift, and its full implementation is set for next March. But the law has already begun to take effect nationwide. Builders who have secured building permits since Jan. 13 are operating under the new rules. These require wheelchair accessibility to and through all new apartments in buildings with elevators and all ground-floor apartments in other new multifamily projects. Builders who fail to conform could face charges of housing discrimination.

As it turns out, the cost figures tossed about during the congressional debate—$27 here, $4 there—are in reality closer to $4,000 per apartment, on average. What were thought to be simple definitions of access—"usable, maneuverable"—are instead the subject of debate. What were considered minor changes in construction—wider doors, larger bathrooms—could in practice scuttle thousands of apartment projects by raising the size of entire buildings and making many sites impractical.

The regulatory crunch on apartment housing comes even as Congress frets over a shortage of affordable housing for poorer households. Affordable housing usually means multifamily housing. To some groups representing the disabled, affordability is a key ingredient in accessibility; if the law sharply raises housing costs, its very purpose would be defeated. The disabled, who generally have lower-than-average incomes, are among the first to see higher housing prices restrict their options.

"If the cost of all these accessibility features raises the cost of the apartment so high that [disabled people] can't afford it, then what have you achieved?" asks Fred Cowell, national advocacy director of the Paralyzed Veterans of America. A law's prohibitively expensive requirements that are too impractical and inflexible for builders to follow, the group argues, would merely create another barrier to access.

Notably, the housing act may be a harbinger of the Americans with Disabilities Act, a bill likely to pass Congress this year that would extend disability access rules to all existing commercial establishments, from beauty shops to bakeries. While everyone agrees that the bill's intentions are lofty, critics warn of skyrocketing costs and vague language whose meaning will ultimately be settled by the courts. Lawyers are already discussing "wrongful design" suits under the new law for multifamily housing.

So far, bureaucratic delay in issuing guidelines that tell builders exactly what they have to do to comply with the fair housing law has brought apartment construction to "a screeching halt," says Henry Hirsch, chairman of Engineered Concepts Inc., an Atlanta construction company. Building permits soared to beat the Jan. 13 deadline, as builders rushed to get clearance for projects under the old rules, and then dropped sharply in February as the new law took effect. Multifamily housing "really can't be built today," Hirsch says, "because nobody knows how to build it. Whoever does choose to build is taking a very major risk."

Preliminary drafts of guidelines from the Department of Housing and Urban Development (the final version is already more than a year behind schedule) promise to add thousands of dollars to the price of every new apartment covered by the law. That translates immediately into higher rents. about 1 percent per month for each $1,000 in higher costs. So a $4,000 increase in construction costs raises the rent roughly $40 a month.

A task force that brought together the National Association of Homebuilders and the National Coordinating Council on Spinal Cord Injury (led by the Paralyzed Veterans of America) estimated that HUD's draft guidelines would add $3,202 to $4,252 to the cost of each apartment in buildings with elevators, and $1,288 to $3,666 to each ground-floor apartment in walk-up projects.

The home builders and veterans, seeking a compromise that would hold down costs and achieve accessibility, came up with a detailed set of guidelines that lower those costs to a range of $1,318 to $2,256 for mid- to high-rise units and $674 to $2,564 for walk-ups. They contend that their plan would achieve better accessibility. "We can't make developers build units that aren't marketable, that won't sell and are expensive, because that doesn't make for a deal, and they won't enter into it," says Kim Beasley, director of barrier-free design for

the Paralyzed Veterans. "If we can't make these provisions easy to understand and relatively easy to apply and achieve the degree of accessibility that Congress intended, then it's a lost cause."

The HUD approach, these groups argue, is counterproductive and inflexible. The agency, for example, would make all bathrooms not only accessible but also large enough so that a wheelchair could be maneuvered in them. The task force says one "maneuverable bathroom" would suffice. To determine how to make units built on hilly terrain accessible, HUD proposes a vague formula that promotes second-guessing and litigation. With the HUD approach, says Beasley, "someone will say, 'Well, you could have raised the building 12 inches or moved it this much closer to the parking lot, and because you didn't and we think you could have made it accessible, we're going to sue.'"

Several other groups for the disabled argue that the home builders-veterans task force has overstated costs. Bonnie Milstein, senior staff attorney for the Mental Health Law Project, argues that the law's requirements are "minimal."

Nonetheless, builders say higher construction costs will arise primarily in two areas: added floor space in the interiors of apartments and site improvements to provide access to the units themselves, particularly on hilly terrain.

Although no one knows what HUD will ultimately require, it seems clear that bathrooms, kitchens and doorways, as well as areas next to doorways, will have to be wider to accommodate wheelchairs. As these elements grow, the building expands. While some groups for the disabled dispute this, builders note that the only way to maintain a constant building size is to take the space from other areas, by reducing the size of bedrooms or closets, for example, or by eliminating pantries. Rhond Roth, vice president of the National Multi Housing Council, calls this the "rob Peter to pay Paul approach to design."

The effect, he says, is to reduce the appeal of the unit by removing such desirable features as bedrooms that accommodate a queen-size bed—features that market research indicates renters want. To maintain marketability, he says, the size of the unit must grow, and "your costs are inevitably going to increase."

Beasley agrees. "If you take a foot out of the bedroom to increase the size of the bathroom, you can no longer say that you achieved accessibility at no cost. Something was sacrificed." In many cases, that sacrifice will be the developer's ability to rent the unit.

As the size of the apartments grows, density, or the number of units in the building, falls. A lower density spreads the cost of the project among fewer units, significantly raising the price of each apartment, especially in high-rise buildings.

Site access problems are more prominent for walk-up units, especially those built on hilly terrain, which is often the only vacant land left in cities. Hills usually mean steps. New draft accessibility rules could require extensive earth-moving or building massive ramps to entrances. When the task force applied one of the draft HUD rules to an actual building site in Northern Virginia, one result was a ramp 60 feet long. Site grading, particularly on rock, is extremely expensive. As soon as a sites' slope gradient reaches 10 percent, says Roth, "then your cost curve for making the buildings accessible just goes ballistic."

Costs will vary widely by site, and until HUD issues guidelines, no one knows exactly how high they might run. But it is clear that thousands of planned apartment units marginally profitable under the old rules will not be built. The more onerous the requirements and the greater the litigation exposure, the higher costs—and rents—will rise. The higher the cost, the fewer the apartments. As new construction drops, demand for apartments will be diverted to existing stock, fueling rent increases there.

An exemption in the regulations for town houses could turn the Fair Housing Amendments Act into something like a Town House Creation Act, as builders divert construction to buildings that are not covered by the law. Already, some developers are requesting rezonings.

I believe that this article accurately describes why a tax credit is in order. This article, by the way, is an excellent example of why the gentlemen from Virginia's [Mr. OLIN] amendment is needed.

There is another issue that could adversely affect small businesses. As introduced, the legislation states that the term "qualified individual with a disability" means an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the employment position that he or she holds or desires.

Mr. Chairman, the term "essential functions" is too vague. Senate report language states, "The phrase 'essential functions' means job tasks that are fundamental and not marginal." It also states "In determining what constitutes the essential functions of the job, consideration should be given to the employer's judgment regarding what functions are essential as a matter of business necessity."

An amendment that passed in the House Judiciary Committee mark-up, put into the statute similar language contained in the Senate report. It clarified that ". . . consideration shall be given to the employer's judgment as to what functions of a job are essential."

But this clarification is not adequate either. The business community advocates further clarification of this phrase because businesses will be required to analyze the tasks of each job. Determining the essential functions will involve a painstaking analysis of job functions by the employer in order to determine which functions are essential and which functions are marginal.

Mr. Chairman, most businesses do not have the staff to undertake such an endeavor. I offered an amendment before the Rules committee which stated that if an employer required all applicants to perform a function, and could show that the current employees performed a function, then that function shall be deemed essential.

I would like to insert into the RECORD at this time, testimony given at a hearing held by the Republican Study Committee earlier this year on this issue. At the hearing an attorney here in Washington, Mr. Ronald Lindsay, explained the need for such an amendment.

Testimony of Mr. Ronald Lindsay follows:

TESTIMONY OF RONALD A. LINDSAY BEFORE THE REPUBLICAN STUDY COMMITTEE ON THE AMERICANS WITH DISABILITIES ACT

I am an attorney who practices in the area of employment discrimination. For the past ten years I have defended companies against charges of employment discrimination, including charges involving allegations of handicap or disability discrimination. Based on that experience, my own research in this area of the law and concerns that have been expressed to me and to other attorneys in my firm by a number of businesses, I would like to outline some suggestions on how the Americans with Disabilities Act, in particular, Title I of the Act, might be improved to limit the negative impact it may have on employers, especially small to mid-size employers.

Before I begin with some specific suggestions, I want to emphasize the dramatic differences between this bill and other employment discrimination legislation. The ADA has been described as just another civil rights measure that extends to the disabled the protections that have already been given to blacks, women and the elderly. It is not. Unlike Title VII of the Civil Rights Act of 1964 of the Age Discrimination in Employment Act which, at least theoretically, only require businesses to make decisions based on merit, the ADA expressly imposes costs on employers. The ADA tells employers that they must offer "reasonable accommodation" to the known physical or mental disabilities of a qualified applicant or employee. This is a significant departure from other civil rights legislation. At a time when we are legitimately concerned about the competitiveness of American business, it is questionable whether we should impose additional burdens on employers, especially if the magnitude and scope of these burdens is unclear.

There is another significant difference between the ADA and other federal civil rights legislation. Other civil rights legislation protects individuals in classes that are fairly readily definable. It is usually fairly easy to determine whether someone is a black or not, a woman or not, elderly or not. Not so with the disabled. The disabled are a class in name only. There are over a thousand different impairments that could render a person disabled, and, therefore, protected for purposes of the ADA. Moreover, an impairment that is disabling for one person might not be for another. A particular job might be suitable for a person with a moderate form of a given disability, but not a severe form of the same disability. At least as the legislation is currently written, determining whether a given accommodation to a person's disability is "reasonable" will entail evaluation of a whole host of factors. In short, for a business to determine whether it is engaging in unlawful discrimination against a disabled person may require a detailed, fact-specific, individualized inquiry. This case-by-case analysis would by itself result in a significant expenditure of time and money.

Let me now turn to some specific suggestions. A number of proponents of the ADA have contended that most of the accommodations that employers will be required to make will cost little or nothing and that, in any event, the bill indicates that employers do not have to accommodate a disabled worker if doing so will impose an "undue hardship" on the employer. I think it is fair to say that most accommodations are going to cost under a couple of hundred dollars. However, that is not going to be any consolation to the business that has to hire a $15,000 a year proofreader to assist a clerical worker who has developed a neurological disorder that substantially impairs his ability to complete paperwork. See *Arneson v.*

*Heckler*, 879 F.2d 393 (8th Cir. 1989). Similarly, the fact that the ADA indicates that the size and budget of a business will be taken into consideration in determining whether a given accommodation is reasonable will be small comfort to those employers who guess wrong about how the courts will view their resources.

I think the best way to deal with this problem is to put a statutory cap or ceiling on the costs an employer has to incur in accommodating disabled employees. One possibility would be to indicate in the bill that an employer will not be required to expend more than 5% of the salary for a particular position in accommodating a disabled employee. Thus, to accommodate a disabled employee in a position which pays $30,000 per year, the employer would not be required to expend more than $1,500. If the costs of accommodating the disabled are as small as the proponents of the legislation suggest, then this should not impede the entry of the disabled into the work force. A cap would, however, remove much of the uncertainty regarding the extent of an employer's duties. To take care of the situation in which an employer is asked to accommodate several disabled employees, a similar cap could be imposed on the total costs an employer has to incur on an annual basis to comply with the ADA (*e.g.*, no more than .05% of the employer's payroll).

Of course, a disabled individual is entitled to protection against employment discrimination only if he or she is "qualified," which is defined in the bill as being able to perform, with or without reasonable accommodation, the "essential" functions of the position the individual holds or desires. But what are the "essential" functions of a position? The report issued by the Senate Committee on Labor and Human Resources in conjunction with the Senate version of the bill states that "essential functions" means "job tasks that are fundamental and not marginal." This is defining the obscure by the vague. Unless we want courts requiring employers to provide a painstaking and minute analysis of all the tasks an individual might perform in a given job and then concluding that a function was not "essential" because it took up "only" 10 percent of the employee's time, see *Ackerman v. Western Electric Co.*, 643 F. Supp. 836 (N.D. Cal. 1986), aff'd, 860 F.2d 1514 (9th Cir. 1988), the definition of "essential" job functions should be clarified to indicate that deference will be given to an employer's judgment regarding what functions are "essential." The efficiency of American business will clearly suffer if we have judges or administrative agencies telling employers how they should operate their business.[1]

Some might contend that the suggestions I have made, particularly this last one, place too much trust in employers. I do not think so. The genius of the free enterprise system is that those who operate a business are given a powerful incentive to make employment decisions on the basis of merit: they make more money if they do so. Because of this incentive, and because of the uncertainty surrounding employers' obligations under the ADA, I feel confident in predicting that the overwhelming majority of the cases in which employers will be found to have violated the Act will involve good faith mistakes, for example, a mistake about whether the person is disabled or is qualified for the job. For that reason, it would clearly be improper to impose compensatory or punitive damages on employers for violations of the Act. The remedies provision of the ADA should explicitly indicate that a prevailing complainant may obtain only back pay or other equitable relief. In this regard I note that the Senate version of the ADA incorporated by reference the remedies provision of Title VII of the Civil Rights Act of 1964. The intent of this cross-reference was to limit relief under the ADA to back pay or other equitable relief. Unfortunately, there apparently will be an attempt in the near future to amend Title VII to provide for compensatory and punitive damages. If that happens, an important modification to the ADA that employers thought they had achieved will be lost. Therefore, in the version of the bill passed by the House there should be an express statement of the relief available under the ADA, rather than a mere cross-reference to Title VII.

These suggestions are certainly not the only ones that could be made to improve this bill. (I have not even touched on the public accommodations section of the Act.) Nonetheless, if these suggested modifications, or similar ones, are incorporated into the bill, I think they will significantly lessen the detrimental impact the ADA might otherwise have on the competitiveness of American business.

Mr. Chairman, the House Education and Labor version of the ADA defines undue hardship as, "an action requiring significant difficulty or expense." Readily achievable is defined as, "easily accomplishable and able to be carried out without much difficulty or expense."

Mr. Chairman, I believe that further clarification of the terms undue hardship and readily achievable is necessary. ADA proponents oppose providing further criteria for these terms by claiming that they are already defined in section 504 of the Rehabilitation Act of 1973. However, the appropriateness of section 504 regulations to be applied to the ADA is in question as the section 504 regulations apply to entities that are not primarily profitmaking enterprises. These entities are supported by the Federal Government and have the deep pockets that small businesses don't have.

The lack of clarification of this term unnecessarily puts disabled individuals at odds with business owners. Representative OLIN's amendment will specify that if an employer spends 10 percent of the annualized wage of the employee, then it will constitute an undue hardship. This amendment is necessary and should be passed. The NFIB has indicated that this will be one of their key business votes for this Congress.

Mr. Chairman, I would now like to address an issue which unfortunately has not received much attention on the House floor. Mr. Chairman, the bill defines discrimination as "excluding or otherwise denying equal jobs or benefits to a qualified individual because of the known disability of an individual with whom the qualified individual is known to have a relationship or association."

This language is intended to cover job applicants whose dependents are disabled, and persons who offer care to the disabled. For example, it is intended to provide that a father of a disabled child could not be discriminated against in employment because his child's disability may increase the cost of his employer's health insurance.

Mr. Chairman, this language is too broad, and will, I believe, result in coverage for nondisabled persons. Of particular concern is the potential for providing coverage for unmarried partners of the disabled, for unmarried partners of persons with HIV, and for unmarried partners of those individuals regarded as having the HIV.

My colleagues, Representative BARTLETT, Representative MCCOLLUM, and I have offered amendments to clarify that coverage of individuals who have a relationship or association to the disabled is limited to factors such as blood, marriage, adoption, or legal guardianship, or is based upon the provision of social service assistance or health care services to an individual. However, the Rules Committee did not allow these amendments to be offered on the House floor.

This amendment is, therefore, not part of this debate, but it is one very important example of why this bill must substantially improve before it is passed by this body.

Mr. Chairman, the ADA's protections for persons with mental impairments will prohibit civil and military authorities from adequately screening applicants who may suffer from mental, emotional, or behavioral disorders.

My colleague, Representative CHUCK DOUGLAS, offered an amendment before the Rules Committee allowing a government unit, charged with protecting the public safety, the ability to ask questions and conduct examinations that it feels necessary in order to determine whether an applicant possesses sufficient mental stability to perform job-related functions before an offer of employment is extended. The amendment was not allowed by the Rules Committee and is therefore not part of this debate. However, this is another example of why the bill needs further improvement before it should be passed by this body.

Mr. Chairman, as pending, the ADA exempts private clubs from the definition of employer, but includes churches and nonprofit organizations. My colleague from New Hampshire, Representative DOUGLAS, and I both offered amendments before the Rules Committee to exempt religious organizations from the definition of employer. Certainly, our churches deserve the same treatment we give to our country clubs. Groups supporting these amendments were the National Association of Evangelicals, the Association of Christian Schools International, the General Conference of Seventh-day Adventists, the International Church of the Foursquare Gospel, and the Concerned Women for America.

Mr. Chairman, I would like to briefly address the issue of contagious diseases. Current law, and the ADA, classify contagious diseases as disabilities. I disagree with this policy. I acknowledge that the infected have rights, but believe that sound public health policy must give priority to protecting those not infected, rather than those infected.

Mr. Chairman, I would also like to point out that the House Education and Labor version

[1] One possible way to clarify the current definition would be to add to the current definition of "qualified individual with a disability" the following language: "If an employer produces evidence showing that other individuals holding the employment position in question are required to have the ability to perform a specific function and have in fact performed this function, this will constitute prima facie evidence that the function is essential."

of the ADA allows for Congress to be covered by the bill. However, I believe that there is a weakness with the enforcement mechanism. The enforcement mechanism is through the Office of Fair Employment Practices [OFEP] which was established by House Resolution 558 in the 100th Congress. The OFEP is chaired by House Members and staffed by employees appointed by members of the House Administration Committee. The Education and Labor version of the ADA provides that an appeal to the OFEP is the only option for House employees who are victims of discrimination.

House employees may not take their case to a court of law. Many Members echo the concern of Senator CHUCK GRASSLEY, "Why should it be acceptable for Congress to be the defendant, trier, and judge in a suit against itself? Victims of discrimination should not be forced to move their claims within the very institution that has discriminated against them."

My colleague, Representative BILL DANNEMEYER, offered an amendment in the Judiciary Committee markup to specify that any determination made by the OFEP be subject to judicial review in the appropriate U.S. district court, and to require the accommodations mandated by the ADA to be paid for from Members' official expense accounts.

Under his amendment each congressional office would be required to make any accommodation that would be required of any small business. The amendment was defeated by the committee. Representative DANNEMEYER offered this amendment before the Rules Committee as well, but it was defeated there also. This amendment should be debated today. It is hypocritical that every small businessman is required to accommodate the disabled, but our congressional offices are not.

Finally, Mr. Chairman, I would like to point out to my colleagues that there is a problem with the ADA bill that has surfaced in response to the introduction of H.R. 4000, the Civil Rights Act of 1990.

The ADA and H.R. 4000 both propose that it shall be discrimination for an employer to use qualification standards or criteria that screen individuals unless the criteria is "Consistent with business necessity." "Consistent with business necessity" is too severe a standard to use for such purposes. The Supreme Court agreed with this in the recent Wards Cove decision.

A better standard would be "* * * unless the criteria serves legitimately an employment goal," or "unless the criteria is consistent with reasonable business practice".

The administration, which opposes H.R. 4000, holds that "consistent with business necessity" is too difficult for employers to prove in court, and that it would lead to the enactment of employment quotas. But, the ADA seeks to implement this standard also. Thus, the ADA seeks to overturn the Wards Cove decision, a decision that the Bush administration supports. Mr. Chairman, this issue has not been adequately addressed by Members from either side of the aisle, yet it is one more example of how much more work must be done on the ADA before it is passed by this body.

The last issue that I want to address is the issue of costs. Advocates of the legislation are quick to point out that the costs of the bill will be offset over time through the savings to the U.S. Treasury of the billions of dollars currently spent on Federal programs that support disabled individuals. However, as the costs of the bill to businesses, State and local governments, and the Federal Government are presently unknown, this justification cannot be accepted as valid.

Mr. Chairman, I agree with the intent of the legislation. Ending discrimination against the handicapped is a noble cause. However, the legislation as reported from the House committees, and as considered by the full House, is wrought with uncertainties. These uncertainties pose real and sobering consequences to businesses, to families, to the disabled, and to America's competitiveness. Mr. Chairman, until more can be known of these very serious consequences, I have no choice but to oppose passage of the ADA.

Mr. GINGRICH. Mr. Chairman, today the House will vote on H.R. 2273, the Americans With Disabilities Act. This historic measure is designed to bring some 43,000 Americans into the mainstream of our society.

Since 1973, Federal law has prohibited Federal agencies and recipients of Federal funds from discriminating against persons with disabilities. H.R. 2273 would extend that prohibition to the private sector, in employment, service and public transportation, public accommodations, and telecommunications.

Some may ask why a Republican President and Republican Members of Congress have actively worked for this expansion of civil rights law. To answer the question, look to the very foundation of conservative philosophy—individual opportunity.

Mr. Chairman, throughout our Nation's history, our disabled citizens have not been provided the opportunity to participate in all phases of society. Designed to provide 43,000 Americans with enhanced opportunities, this bill, then, embodies the conservative ideal of individual opportunity.

In August 1862, President Abraham Lincoln said, "It is difficult to make a man miserable while he feels he is worthy of himself and claims kindered to the great God who made him." What greater way to make a man feel "worthy of himself" than to give him hope through opportunity. Mr. Speaker, that's what this bill is all about.

I hope all Members will take time to review the bill before us today and compare it with the Senate-passed measure. The four House committees involved have made some key improvements to the legislation. The language has been tightened up in several important areas:

Current users of illegal drugs are not protected by the bill;

Anticipatory discrimination claims are limited to new construction;

Employers and public accommodations are only liable for discriminatory actions against their own employees or customers, not for actions taken by their contractors; and

Site-specific factors and parent-company factors must be considered when determining if a reasonable accommodation for a disabled employee is an undue hardship, or a barrier removal is readily achievable.

Improvements were also made in other sections of the bill, including public transportation. A full list of the major improvements is attached. By proceeding through its normal committee process, the House has crafted a superior bill to its Senate counterpart.

In adddition, last week on the floor, the House adopted two amendments which serve to further improve the bill. An amendment to allow small businesses an extended phase-in period for the public accommodations section of the bill was approved unanimously. Finally, an amendment to allow employers to move an employee with a communicable disease out of a food-handling position, provided the employee sustains no economic damage, was adopted.

Mr. Chairman, while major improvements have been made, there are still some problems. Any piece of legislation this complicated and far reaching is certain to create serious questions and concerns from those who ultimately will have to comply with its provisions. This is no exception.

But just as the committees worked their will, the House, and then the conference committee will work its will. We must send the President the best and most workable law we can write, so that 43,000 Americans will have more hope and opportunity for tomorrow than they have for today.

The House committee improvements made to the Senate bill.

IMPROVEMENTS IN THE EMPLOYMENT AND PUBLIC ACCOMMODATIONS TITLES

Drugs: Current users of illegal drugs are not protected by the ADA and the Rehabilitation Act of 1973.

Contract liability: Employers and public accommodations are only liable for discriminatory actions against their own employees or customers, not such actions taken by one of their contractors against other individuals.

Undue hardship and readily achievable: Site specific factors and parent company factors must be considered when determining if a reasonable accommodation for a disabled employee is an undue hardship—"significant difficulty or expense"—or a barrier removal for a disabled customer is readily achievable—(easily accomplishable without much difficulty or expense.)

Direct threat and safety: An individual with a disability who poses a significant risk to others cannot claim a right under the ADA to be in a workplace or public accommodation.

Anticipatory discrimination: Such discrimination claims are limited to new construction.

Damages: In pattern and practice cases brought by the Attorney General, when the Attorney General asks for monetary damages, such damages cannot include punitive damages.

PUBLIC TRANSPORTATION

Commuter rail: One car per train, rather than an unspecified number, must be made accessible.

Intercity private transit—buses: Although such companies must provide accessible transportation, they do not have to meet specific assessibility requirements for 6 or 7 years, depending on their size.

Key stations: These could have up to 30 years, as opposed to 20 years, to be made fully accessible.

Intercity rail: These would now have specific accessibility requirements, rather than unspecified requirements. Intercity rail would be expected to meet these capacity requirements: within 5 years, one space for an occupied wheelchair and one space for a folded chair in 50 percent of the coaches. Within 10 years this requirement would have to be met in 100 percent of the coaches. Doubling up to meet these requirements would be allowed, thus permitting nonaccessible coaches.

Mr. OWENS of New York. Mr. Chairman, it is important that the following clarifications relevant to employment be offered for the record.

The employment nondiscrimination provisions of the Americans With Disabilities Act define the term "qualified individual with a disability" as an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the job that such individual holds or desires.

"Essential functions" means job tasks that are fundamental and not marginal. The point of including this phrase is to ensure that employers can continue to require that all applicants and employees, with or without disabilities, can perform the essential—that is nonmarginal—functions of the jobs in question.

This concept was also addressed in the 1977 section 504 regulations issued by the Department of Health, Education, and Welfare which said, "inclusion of this phrase is useful in emphasizing that handicapped persons should not be disqualified simply because they may have difficulty in performing tasks that bear only a marginal relationship to a particular job." 42 Fed. Reg. 22686 (1977). In determining the essential functions of a job, consideration should be given to the employer's judgment, because an employer may require that every employee be qualified to perform the essential functions of the job.

The inclusion of the term "qualified" underscores the employer's perogative to choose and maintain qualified workers. The employer is free to select the most-qualified applicant, and is under no obligation to prefer applicants with disabilities over other applicants. But if two applicants are equally qualified, an employer is not permitted to select the nondisabled applicant solely due to the other applicant's disability, even if the disability means the employer would have to provide some kind of accommodation.

"Qualified" means whether the individual is qualified at the time of the job action in question. The mere possibility of future incapacity does not render the individual not qualified.

Employers may devise physical tests and other job criteria and tests as long as the criteria and tests are job-related and consistent with business necessity. For example, an employer can adopt the physical criterion that an applicant be able to lift 50 pounds, if that ability is necessary to an individual's ability to perform the essential functions of the job in question. But even if the criterion is legitimate, the employer must determine whether a reasonable accommodation would enable the applicant with a disability to perform the essential functions of the job without posing an undue hardship on the business.

The ADA prohibits the use of a blanket rule excluding persons with certain disabilities, except in the very limited situation where, in all cases, a physical condition by its very nature would prevent the person with a disability from performing the essential functions of the job, even with reasonable accommodations.

EMPLOYMENT—SOME FORMS OF DISCRIMINATION PROHIBITED

In addition to a general statement prohibiting employment discrimination on the basis of disability, the Americans With Disabilities Act goes into some detail on the various forms of discrimination which are prohibited.

One section specifies that discrimination includes segregating, limiting, or classifying an employee in a way that adversely affects his or her opportunities or status because of his or her disability. Employment decisions are to be based on facts, not on presumptions as to what a class of individuals with a particular disability can or cannot do.

It would be a violation of the ADA to deny employment to an applicant based on generalized fears about safety or absenteeism. Such fears are, by their very nature, based on averages and group-based predictions. Moreover, many studies have proven these fears to be myths which are statistically untrue. The famous study by the Du Pont Co. in 1973 was the first of many to show that disabled employees don't raise insurance costs and have equal or better attendance, performance, and safety records than average.

Employers may not deny health insurance coverage based on diagnosis or disability. Any limitations in insurance coverage must be limitations that are placed on all emloyees equally.

It is also considered discrimination under the ADA if an employer participates in a contractual or other arrangement or relationship with an organization that has the effect of subjecting a qualified applicant or employee with a disability to discrimination. This includes benefits and personnel-related contracts. For example, if a company contracts with another organization to provide personnel services, the contractor cannot treat the company's applicants or employees in any way that would be prohibited by the ADA if the company operated its own personnel functions.

The act also prohibits discrimination against any individual because of the known disability of another individual with whom the first individual has a relationship or association. For example, it would constitute discrimination for a nondisabled woman to be denied a job by an employer because she is the mother of a disabled child and the employer fears she would be absent too frequently due to her child's disability. However, if the hire was made, and the woman violated an across-the-board company policy relating to attendance or tardiness, she would not be protected because of her child's disability. The company does not owe its nondisabled employees accommodations under the ADA.

The act includes a requirement that employers must post notices in an accessible format to applicants and employees describing the ADA's relevant provisions.

EMPLOYMENT—MEDICAL EXAMINATIONS AND INQUIRIES

Historically, employment application forms and interviews have requested information concerning applicants' physical and mental condition. This information has often been used to exclude applicants with disabilities, particularly hidden disabilities like epilepsy, diabetes, emotional illness, heart disease, and cancer, before their actual ability to perform the job was even evaluated.

In order to eliminate these discriminatory practices and assure that misconceptions do not bias the employment selection process, the ADA sets forth a process which begins with the prohibition to preoffer medical examinations or inquiries. The requirements are parallel to the regulatory requirements under section 504 of the Rehabilitation Act of 1973.

What is prohibited is any identification of a disability by inquiry or examination at the prejob offer stage. Employers may ask questions which relate to the applicant's ability to perform job-related functions, but not whether they have a disability. For example, an employer can ask an applicant for a construction job if he or she can climb scaffolding and operate heavy construction tools, but cannot ask if he or she has a disability.

The only exception is that postoffer medical examinations may be conducted if they are given to all entering employees in a particular category, if the results are kept confidential, and if the results are not used to discriminate against individuals with disabilities—unless such results make the individual not qualified for the job. This rule meets the employer's need to discover job-related disabilities.

Once an employee is hired, the person's performance on the job is the best indicator of the person's qualifications. An inquiry or medical examination that is not job-related serves no legitimate employer purpose, and stigmatizes the individual with a disability.

Mr. ROWLAND of Connecticut. Mr. Chairman, I wish to indicate my unequivocal support for the Americans With Disabilities Act.

The disabled community has suffered for far too long. Time and time again, they have been told that they must conform to standards set by what is considered by others to be "normal." I am pleased that those days are finally over. From now on, the disabled will be protected from discrimination under Federal law. Passage of H.R. 2273 will enable the disabled to greatly expand their lives and enhance their quality of living. This is long overdue.

America is all about opportunity. However, the disabled have been denied full opportunity in this country. And this has not been because of the disabilities which these persons have, which in and of themselves can be daunting. Rather, it has been a result of external barriers which have prevented disabled individuals from fully participating in daily living. Let me briefly quote from a recent report of the United Nations Expert Group Meeting on Barrier-Free Design:

"Despite everthing we can do to assist each disabled person achieve his or her maximum potential in life, our efforts will not succeed until we have found the way to remove the obstacles to this goal: the physical bar-

riers we have created in public buildings, housing, transportation, houses of worship, centers of social life, and other community facilities, and the social barriers we have evolved and accepted against those who vary more than a certain degree from what we have been conditioned to regard as normal. More people are forced into limited lives and made to suffer by these man-made obstacles than by any physical disability."

Passage of this bill will remove the physical barriers to the disabled. Once the physical barriers have been eliminated, it is my hope and expectation that the social barriers will take care of themselves.

I do appreciate the concern voiced by some that the cost of compliance with this bill would be too high. However, I do not believe that cost should be an issue when it comes to providing civil rights protection for the disabled. Frankly, the present and future costs of disability to the country without this legislation would be much greater than any cost of this bill. Increased independence means increased productivity and greater self-sufficiency. This translates directly into a bigger and stronger work force, a more productive economy and less dependence on Government programs.

Mr. Chairman, this legislation is long overdue. I am pleased that Congress is finally addressing the rights of the disabled, and urge my colleagues to join with me in full support for H.R. 2273.

Mr. LEVINE of California. Mr. Chairman, I rise today to comment upon an important aspect of the bill before us.

One important contribution of the Americans With Disabilities Act is its rendering illegal and discriminatory program, service, or activity of State and local government.

Ever since section 504 of the Rehabilitation Act of 1973 was passed, it has been the law of the land that all programs and activities receiving Federal financial assistance cannot discriminate against people with disabilities. After the section 504 regulations were published and implementation efforts occurred, our Nation learned how beneficial these requirements were. Disabled people began to enter colleges, utilize social service programs, and take advantage of the wide spectrum of federally funded programs and activities in our Nation. Previously inaccessible courthouses and post offices were made accessible, and disabled persons could more fully participate in civic life.

However, comparable activities offered by State and local government have often been out of reach to disabled persons, because many States have no nondiscrimination mandates, and some which do are very poorly implemented.

In mandating nondiscrimination by State and local government, the ADA incorporates the section 504 regulations. This means that the entire spectrum of protections and considerations which have been successfully used to regulate Federal programs and activities will be available for State and local government. This includes requirements for program access, transition plans, nondiscrimination in employment and contracts, and all the other 504-related requirements.

One area that should be specifically addressed by the ADA's regulations should be the issue of nondiscrimination by police. Regretfully, it is not rare for persons with disabilities to be mistreated by the police. Sometimes this is due to persistent myths and stereotypes about disabled people. At other times, it is actually due to mistaken conclusions drawn by the police officer witnessing a disabled person's behavior.

For example, it is not unusual for a person with cerebral palsy, who might walk in a staggering manner, to be mistaken for someone who is drunk. Persons with epilepsy who are having seizures are often inappropriately dealt with by the police. Many times, deaf persons who are arrested are put in handcuffs. But many deaf persons use their hands to communicate, either through sign language or by writing a note to a nondisabled person who does not know sign language. The deaf person thus treated is completely unable to communicate.

Although I have no doubt that police officers in these circumstances are acting in good faith, these mistakes are avoidable and should be considered illegal under the Americans With Disabilities Act. They constitute discrimination, as surely as forbidding entrance to a store or restaurant is discrimination.

One way to cut down on these incidents is for police officers to receive training about various disabilities. Training programs are a good way to relay accurate information about disability. Some cities and States have already integrated this type of training, and their films, materials, and experience can serve as models.

Mrs. SCHROEDER. Mr. Chairman, the Americans With Disabilities Act will remove architectural and communication barriers that keep people with disabilities from fully participating in society. And it will also go a long way toward removing what may even be a more pernicious and destructive kind of barrier: barriers in attitude.

The attitudes nondisabled persons have toward fellow disabled citizens are often the most important factor leading to segregation, exclusion, discrimination, and unemployment. In the era we live in, we are witnessing a long-overdue shift, during which old prejudices are changing. The ADA will change these attitudes even more.

Some have claimed that, despite unfortunate prejudices, actual cases of discrimination against people with disabilities are rare. However, congressional testimony has revealed a picture of rampant, daily discrimination in every sphere of American life.

Mentally retarded persons are kept out of restaurants. Persons with cerebral palsy are turned away from theaters. Children with Down syndrome are not allowed to visit zoos. Employers cite fears of hiring disabled persons because their customers will feel uncomfortable or even repulsed. These cases reflect deep-seated misunderstanding which require the force of law to change.

One very important aspect of the Americans With Disabilities Act of 1990 is its broad sweep of coverage. The act correctly recognizes that disability discrimination is not limited to government offices and train stations; it is not limited to restaurants and hotels; it is not limited to places covered by other civil rights statutes.

Disability discrimination occurs in stores, auditoriums, and theaters, as well as doctors' and lawyers' offices. It is very important that the definitions in the ADA not be narrowed to exclude facilities which are crucial to carrying out one's daily life.

The requirement for access in new construction, like all requirements in the ADA, contains certain limitations and exemptions which are tailored to take into account the financial burdens on developers. These exemptions are provided despite the fact that, in new construction, the average cost of accessibility is less than one-half of 1 percent of the overall building cost. Often, access adds nothing at all to the overall building cost. But even so, the ADA has provided for an elevator exemption in buildings under three stories or under 3,000 square feet per story, if the building is not a health care facility or shopping center.

This exemption is intended to apply to a limited number of situations. It concludes only two-story or two-level buildings, or buildings with less than 3,000 square feet per level. Buildings with three or more stories or levels are not exempt unless they have less than 3,000 square feet per level. Basements are not to be included in this calculation. So, for example, if a new commercial building is to have a ground floor and a second floor to be occupied by stores and restaurants, but no basement, it needn't have an elevator. However, if a storage basement is included, the total of levels in the building is three, and it must have an elevator.

It is also important to note that, when the exemption does apply, it applies as an exemption for one feature only: the elevator. All other features related to accessibility must be provided on every level or story of the building.

This means that, in every new commercial building, the first floor must be fully accessible, including the entrance. One story must be designated as the first story, and include an accessible entrance.

All other floors must include access features, even if the elevator is exempted. This includes restroom accessibility and handrails on the stairs, features which are often needed by ambulatory disabled persons, even those who can climb steps to the second floor. This also includes hazard-warning provisions needed by people with visual impairments.

Another important note about this exemption is that it does not apply to one-story buildings. Since one-story buildings have no need for elevators, they must be fully accessible.

This exemption includes the important provision that the Attorney General can add occupancy types to the list of those kinds of facilities which cannot be exempted from elevators under any circumstances. This list already includes three occupancy types, delineated in the statute: shopping centers, shopping malls, and health care facilities. But the Attorney General can add others, which are found to be so compelling in their importance to the community, that they need to be accessible.

Particular attention should be paid to facilities which offer unique services or opportunities. For example, banquet rooms are often located on the second floor of restaurants or

motels, up a flight of steps. In a small town or city, the only banquet room could be inaccessible, rendering unavailable any group dinners, annual celebrations, or business luncheons to disabled persons in that town. In a situation like this, the town's brandnew two-story restaurant with upstairs banquet facilities should install an elevator.

Another important example is airports. There is generally only one airport in a city or town; no airport should be inaccessible to a person with a disability. It is expected that the Attorney General will assure that the elevator exemption does not serve to bar people with disabilities from such basic opportunities.

The requirement in the ADA for accessibility to newly constructed commercial facilities will make an enormous difference in integrating people with disabilities more thoroughly into all aspects of society. It will help fulfill the ADA's promise to extend civil rights protections to millions of disabled Americans.

One way in which many disabled persons have experienced discrimination is seating restrictions in theaters and other assembly areas. At times, overprotectiveness, misguided concerns for safety, and other myths and stereotypes have resulted in policies which limit disabled persons to seating only near exits.

What should be available to disabled persons, just as to nondisabled persons, is a variety of possible locations which are options for the disabled patron.

To achieve integrated seating in a variety of locations, there can be a few accessible spaces in the back, some in the front, and some alongside aisles, including the centermost aisle, in a row—or rows—located roughly midway back from the screen. Such placement has been a practice in some theaters for years, and poses no safety problems.

Current U.S. Government policy in Federal facilities specifically reinforces this concept. The Uniform Federal Accessibility Standards [UFAS], which have existed for several years and were developed by the Federal Government to regulate construction under the Architectural Barriers Act, explicitly requires seating in assembly areas like theaters to be in a variety of locations, and doesn't mention any restriction to the area near an exit. UFAS section 4.33.3 reads:

Wheelchair areas * * * and shall be located to provide lines of sight comparable to those for all viewing areas.

And the UFAS appendix, section A4.33.3 reads:

The location of wheelchair areas can be planned so that a variety of positions within the seating area are provided. This will allow choice in viewing and price categories.

The ADA recognizes that it is important to stop a violation of the act's access provisions before it occurs. It is a lot cheaper to make a building accessible to people with disabilities in the design stage than once the building is erected. For situations where discriminatory architectural barriers violate the ADA, the concept of anticipatory discrimination has been included.

Take the example of a new restaurant. The designers, for whatever reason, have designed a restroom which is not accessible to patron who uses a wheelchair, because it has a very narrow passageway. If the ADA did not have the anticipatory discrimination provision for just this circumstance, nothing could be done until the building is not only built but in actual operation.

On opening day, if a wheelchair-using patron tried to avail themselves of the restroom but found it to be wrongly designed, a case could be filed. If the court issued an injunction for the restaurant to provide wheelchair access to the restroom, a great deal of money might need to be spent to widen the passageway, not to mention losses from closing the facility during the period of reconstruction.

However, under the ADA as currently written, a complaint could be filed against this restaurant as soon as the design error is discovered—hopefully, as early as the blueprint stage. This is because the anticipatory discrimination clause allows for action in a situation where it is clear that the architectural barrier, when built, will preclude access by disabled persons. In this case, correcting the error could involve no more than the designer's time to redraw the passageway in an accessible fashion.

The ADA contains provisions addressing the possibility that interim accessibility regulations might be necessary, in case final regulations to be published pursuant to the ADA are delayed. These provisions provide direction to builders who might otherwise be caught with requirements to follow and no guidance as to how to carry out the ADA's mandate.

For new construction or alterations for which a State or local building permit is obtained prior to the issuance of final accessibility regulations by the Department of Justice [DOJ], and for which the construction or alteration begins within 1 year of the receipt of the permit, compliance with the Uniform Federal Accessibility Standards in effect at the time the permit is issued will satisfy the ADA's accessibility requirements.

The exception is that if DOJ's final regulations have not been issued 1 year after the Architectural and Transportation Barriers Compliance Board [ATBCB] has issued their supplemental minimum guidelines also required in the ADA, compliance with these supplemental minimum guidelines issued by the ATBCB shall be necessary to satisfy the ADA's accessibility requirements.

Mr. STOKES. Mr. Chairman, I rise today in strong support of H.R. 2273, the Americans With Disabilities Act, which seeks to eliminate discrimination against persons with disabilities. This bill is a landmark piece of legislation. The Americans With Disabilities Act will guarantee equality of opportunity and participation in our society to the approximately 43 million disabled Americans.

The Americans With Disabilities Act [ADA] has been the subject of numerous hearings in Congress, and has been debated, modified, and approved by overwhelming bipartisan majorities in four different House committees. In fact, the ADA has passed these four committees by a combined vote of 152 to 11. At each stage in the legislative process, the questions and concerns of the business community have been taken into consideration, and the language of the bill amended to address these concerns. The result of these hearings is that we now have before us a bill that takes strong action to eliminate barriers to the full participation of the disabled in our society, without placing any undue burdens on businesses to accommodate the disabled.

Mr. Chairman, this bill also has the strong backing of the President, who has said, "ADA will form the foundation for policies and programs that can create opportunities for Americans with disabilities to find and hold jobs, and to enjoy the income and satisfaction that participation in society brings to us all."

Discrimination is a daily experience for individuals who have disabilities. It is time for our Nation to address the reality that Americans with disabilities are relegated to second-class citizenship. This bill will afford civil rights protections to all individuals with disabilities. The ADA states that people with disabilities are entitled to the same rights that all other Americans take for granted—the right to communicate, the right to work, the right to go wherever they wish. In short, the ADA grants to disabled Americans the right not to be left out anymore.

Passage of the Americans With Disabilities Act will increase the acceptance, dignity, and full participation of citizens with disabilities. By breaking down barriers in stores and offices, it would enable more disabled people to purchase goods and services. The act would free hundreds of thousands of citizens who are virtually prisoners in their homes because of inaccessible transportation and public accommodations.

Mr. Chairman, it is appalling that under the present Federal law, it is legal for a restaurant to refuse to serve a mentally retarded person, for a theater to deny admission to a person with cerebral palsy, for a dry cleaner to refuse service to someone who is deaf or blind. Today, we have the chance to correct this injustice by passing the Americans With Disabilities Act. I strongly urge my colleagues to join me in supporting the bill on final passage.

Mr. BORSKI. Mr. Chairman, I rise in strong support of H.R. 2273, the Americans With Disabilities Act.

As a member of the Public Works and Transportation Committee, I am particularly pleased with the bill's sections on public transportation.

The Americans With Disabilities Act represents a major breakthrough in ensuring that citizens who have been robbed of their mobility by disabilities or accidents can get to work, can pursue their interests, and broaden their lives with the access our Nation's public transportation facilities offer.

The acts' provisions on public transit accessibility will help greatly to break down the barriers that disabled Americans confront every day in their efforts to be self-reliant and productive members of society.

Mr. Speaker, giving access to America and everything it offers is the primary purpose of our transportation system.

Extending that access to every American is a major purpose of the Americans With Disabilities Act. ADA is first and foremost a basic civil rights protection.

Enactment of this very important legislation will help assure that disabled Americans have

access to America's buses, trains and other transit services.

The time for delay is over. I urge my colleagues to support H.R. 2273, and ensure that Americans with disabilities will be able to live full lives as workers and as citizens.

Mr. BONIOR. Mr. Chairman, I am honored to be an original cosponsor of the Americans With Disabilities Act and am pleased that we overwhelmingly passed this landmark legislation earlier today.

This is a proud day for the Nation when Congress finally extends to the disabled community the full rights of citizenship. Millions of people throughout the country have worked long and hard for this legislation. I want to take this opportunity congratulate all the people—especially those in the disabled community—who brought us to this historic moment.

For too long, our society has put up barriers to the disabled. Whether through fear of the unknown or ignorance of our own handicaps, we deny jobs or equal opportunities to those who appear to be different from us. More than two-thirds of our fellow citizens with disabilities who are of working age are unemployed. The vast majority want to work. To deny them the opportunity is intolerable.

There is not a disabled American alive today who has not experienced some type of discrimination. Discrimination erodes human aspirations and the human spirit. Not only does it destroy the self-worth of individuals, it undermines the economic and democratic integrity of our society. And this, too, is intolerable.

Today, after great effort by many distinguished Americans we have the opportunity to help right these wrongs. The Americans With Disabilities Act will extend the protections of the Civil Rights Act of 1964 to provide clear, strong, consistent, and enforceable standards addressing discrimination on the basis of disability.

This is a necessary and affirming step for all of us, both currently able-bodied and disabled. With this legislation, we can help remove this barrier to both an individual's and our entire country's potential for human and economic growth.

Mr. Chairman, I would also like at this time to discuss title IV of the ADA which is of extreme significance to the deaf community.

More than 55 years ago, Congress passed the Communications Act of 1934, requiring telephone companies to provide universal telephone service for all Americans. Despite this, in 1990, millions of deaf, hard of hearing and speech impaired citizens still do not have full accessibility to our Nation's telephone system.

Title IV will ensure full accessibility by requiring all common carriers to provide telephone relay services for both local and long distance calls within 3 years after enactment of the ADA. A relay service enables individuals who use telecommunication devices for the deaf [TDD's] to carry on telephone conversations with persons who use voice telephones.

The relay systems that exist in a few States fall short of meeting the basic telephone needs of individuals with hearing and speech impairments. These systems are often underfunded and understaffed. They impose restrictions on the number, length, and types of calls that can be relayed in their States.

Title IV requires relay services to be available 24 hours a day, 7 days a week, without restrictions on the type, length, or number of calls made by any relay service. The service provided must be functionally equivalent to that available to individuals without hearing impairments. This means that the rate that relayed calls are blocked should be no greater than the blockage rate for all telephone users. It also means that relay centers must be staffed by highly qualified operators who are skilled in typing, spelling and grammar. Operators must also be familiar with American sign language and other aspects of deaf culture that might have a bearing on the proper relaying of calls.

Relay systems must be able to accept relayed calls originating from TDDs that use either the ASCII or Baudot formats. Individuals, both hearing and deaf, must be able to easily access information about relay telephone numbers. In any given State, an individual must be able to find out the local relay number by calling a toll-free number, by checking local telephone directories, or by calling telephone operator information numbers.

The ADA provides telephone companies ample time for compliance. The bill requires that relay operations begin within three years after enactment. The technology needed to begin relay operations already exists. At House hearings, AT&T testified they could begin operations of a nationwide relay systems within 1 year. It is our intent that relay services begin as soon as possible.

The nationwide relay system envisioned by the ADA will dramatically improve the lives of hearing impaired and speech impaired Americans. Finally, these citizens will achieve a level of independence that will enable them to fully participate in society.

The Deaf President Now movement at Gallaudet University has made us all vividly aware of the aspirations for equal opportunity for qualified disabled Americans. I am proud to say that King Jordan, president of Gallaudet University, has shown by his example that in his words, "Deaf people can do anything but hear." But he, like other disabled Americans, sometimes needs a reasonable accommodation, such as a qualified interpreter, to perform on a level playing field. The ADA will finally give all disabled Americans the equal opportunity to compete and participate in the mainstream of American life.

Mr. CLEMENT. Mr. Chairman, I am pleased to see the Americans With Disabilities Act pass the House and I would like to insert some additional comments on some of the bill's provisions for the benefit of my colleagues.

TRANSPORTATION—USED AND REMANUFACTURED VEHICLES; HISTORIC VEHICLES

In addition to new vehicles, the ADA also poses requirements relating to used and to remanufactured vehicles.

Cities purchasing used vehicles must make a demonstrated good faith effort to ensure accessible used vehicles are bought. This provision is intended to provide some relief to small cities and rural regions which often buy used buses. If accessible vehicles cannot be found, inaccessible ones can be purchased.

The demonstrated good faith effort requirement means that a nationwide search must be made, multiple vendors contacted, and advertisements placed. Also, transit trade associations can be contacted to look for accessible used vehicles.

As time goes by and more buses are accessible due to the ADA, more of the used vehicles on the market will be accessible, and it should become progressively easier for transit authorities to find used accessible vehicles to purchase.

When buses are remanufactured, or remanufactured buses are leased, the vehicle shall be accessible to the maximum extent feasible. This applies to vehicles where the remanufacturing extends the vehicle's life by five years or more.

There is an exception for vehicles of historic character. If any portion of a transit system is included on the National Register of Historic Places, vehicles remanufactured for the system only must be accessible to the extent that making them accessible does not significantly alter their historic character. However, whatever accessibility features are consistent with the vehicles' historic character must be made.

PARATRANSIT—CURRENT SERVICE PROVIDERS ENCOURAGED TO CONTINUE

The pattern of paratransit service provision varies widely from city to city. There are many different kinds of organizations providing these services, with funding from private organizations, State and local government, Federal grants, and other sources. Those organizations which are private, and are not government transit entities operating fixed-route operations, are not directly governed by this title.

It is not the intent of the ADA to in any way reduce the paratransit services currently provided by a variety of organizations. Organizations are encouraged to continue, and to exceed the minimum requirements posed by the ADA whenever possible.

TRANSPORTATION—PARATRANSIT ELIGIBILITY

The transportation provisions of the ADA require that fixed route systems become accessible to people with disabilities over time, mainly through the requirement that newly purchased equipment be accessible. In addition, fixed route providers are to ensure the provision of supplementary paratransit services to persons who can't independently use the fixed route services.

The requirement for supplementary paratransit recognizes that there will always be some disabled persons who are unable to navigate the fixed route systems on their own. The reasons for this will vary widely. Some blind individuals who haven't received appropriate mobility training, or are traveling in a new area, or for a variety of other reasons, need paratransit. Some people with mental disabilities who need assistance getting where they're going, may need paratransit. Persons whose disabilities cause fatigue or those who cannot tolerate outdoor exposure may be completely unable to proceed on their own to bus stops, or from bus stops to their final distination, and need door-to-door service. Some persons who have uncontrolled convulsive

seizures will need specialized paratransit service. Some persons with AIDS may be too ill to negotiate the bus independently.

For these circumstances, publicly funded authorities which are charged with providing transportation to the general public, must ensure the provision of alternate paratransit service to those members of the general public who cannot use the mainline system. These persons are to be eligible for paratransit which is provided pursuant to the ADA.

Another category of eligible paratransit recipients will be persons traveling to places where the transit district has mainline bus routes but where no accessible buses are running within a reasonable period of their travel time. Logically, the paratransit service should also be extended to persons who cannot ride the fixed route service because lifts are disfunctional due to poor maintenance.

At least one associate may ride with any recipient of paratransit services. Paratransit operators are encouraged to allow additional riders if they are associated with a disabled individual and need to travel with him or her.

The CHAIRMAN. The question is on the amendment in the nature of a substitute, as amended.

The amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker pro tempore (Mr. TRAXLER) having assumed the chair, Mr. MFUME, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 2273) to establish a clear and comprehensive prohibition of discrimination on the basis of disability, pursuant to House Resolution 394, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the amendment in the nature of a substitute adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. DE LAY

Mr. DELAY. Mr. Speaker, I offer a motion to recommit.

The SPEAKER pro tempore. Is the gentleman opposed to the bill?

Mr. DELAY. Mr. Speaker, in its present form, I am.

The SPEAKER pro tempore. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. DELAY moves to recommit the bill, H.R. 2273, to the Committee on Rules with instructions to report the same to the House forthwith with the following amendment:

In section 104(c), add at the end the following new paragraph (and make appropriate conforming changes at the end of paragraphs (4) and (5));

(6) may take into consideration an individual's history of drug addiction or alcoholism, the period of time the individual has been free of drugs or alcohol, and whether the individual has successfully completed treatment for such condition before assigning or continuing to assign such individual to a safety sensitive position.

In title V, insert after section 509 the following new section (and redesignate subsequent sections, and conform the table of contents, accordingly):

SEC. 509A. EXECUTIVE AND JUDICIAL INCLUSION.

(a) IN GENERAL.—Notwithstanding any other provision of this Act or of law, the purpose of this Act shall, subject to subsections (b) and (c), apply in their entirety to the executive and judicial branches of the Federal Government.

(b) EXECUTIVE BRANCH.—

(1) IN GENERAL.—The rights and protections under this Act shall, subject to paragraph (2), apply with respect to the conduct of the executive branch of the Federal Government.

(2) ESTABLISHMENT OF REMEDIES AND PROCEDURES BY EXECUTIVE ORDER.—The President shall, by executive order, establish remedies and procedures to be utilized with respect to the rights and protections provided pursuant to paragraph (1). Such remedies and procedures shall apply exclusively.

(3) REPORT TO CONGRESS.—The President shall, after establishing remedies and procedures for purposes of paragraph (2), submit to the Congress a report describing the remedies and procedures.

(c) JUDICIAL BRANCH.—

(1) IN GENERAL.—The rights and protections under this Act shall, subject to paragraphs (2) and (3), apply with respect to the conduct of the judicial branch of the Federal Government.

(2) ESTABLISHMENT OF REMEDIES AND PROCEDURES BY ADMINISTRATIVE OFFICE OF UNITED STATES COURTS.—The Director of the Administrative Office of United States Courts shall establish remedies and procedures to be utilized with respect to the rights and protections provided pursuant to paragraph (1). Such remedies and procedures shall apply exclusively, after approval in accordance with paragraph (3).

(3) APPROVAL BY JUDICIAL CONFERENCE.—For purposes of paragraph (2), the Director of the Administrative Office of the United States Courts shall submit proposed remedies and procedures to the Judicial Conference of the United States. The remedies and procedures shall be effective upon the approval of the Judicial Conference.

(4) REPORT TO CONGRESS.—The Director of the Administrative Office of the United States Courts shall, after establishing remedies and procedures for purposes of paragraph (2), submit to the Congress a report describing the remedies and procedures.

Mr. DELAY (during the reading). Mr. Speaker, I ask unanimous consent that the motion be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas [Mr. DELAY] will be recognized for 5 minutes, and the gentleman from Maryland [Mr. HOYER] will be recognized for 5 minutes in opposition.

Mr. DELAY. Mr. Speaker, I offer this motion to recommit, and it has two sections in it. The first section deals with drug addiction and alcoholism and in that it allows the employer a little more discretion in taking into consideration the record of the employee as to how he has become rehabilitated in his drug habit or alcoholism.

What this amendment does is give employers a little more discretion in looking at the record of those drug addicts and alcoholics that may have been rehabilitated, and take a period of time as far as proving whether they have been rehabilitated or not, especially in safety-sensitive areas.

□ 1420

The other part of my motion deals with the judiciary branch and the executive branch of our Government and expands—expands—the remedies to those that are disabled, that are not covered, in my opinion, in the Civil Rights Act of 1964.

Mr. Speaker, I yield to the gentleman from Washington [Mr. CHANDLER] to explain the drug section of my motion.

Mr. CHANDLER. Mr. Speaker, I want the Members of the House to have the opportunity to answer a very important question. Do Members want to pass legislation that would require an employer, we will say it is a construction company, to immediately return to the job of crane operator or dump truck driver, someone who has been perhaps three or four times through drug rehabilitation treatment, or even alcohol? Do Members want to require that?

Now, statistically, I can tell Members we are not dealing with black and white. There is a broad area of gray. About two-thirds of the people who get off drugs for a while go back to using drugs again. Do Members want to run the risk of giving an employer no flexibility whatsoever to deal with that?

This amendment was carefully crafted to allow an employer to take into consideration how long has the individual been free of drugs or alcohol? Did they go through treatment? Are they making progress? This is not an attempt to discriminate, but to just allow some common sense to be applied in cases where we know people have caused serious injury in the past, and an employer desperately needs the protection of some flexibility to deal with this kind of eventuality.

If we do adopt this amendment, I think the bill would be far more defensible than it is without it. There is even some question about whether a

schoolbus driver is involved in this. No, an airline pilot is not, because that comes under Federal regulations. But rest most assured that a crane operator, a dump truck driver, someone who drives pizzas from the pizza-to-home delivery service, those kinds of jobs would be affected by my amendment.

Mr. HOYER. Mr. Speaker, will the gentleman yield?

Mr. CHANDLER. Mr. Speaker, I yield to the gentleman from Maryland.

Mr. HOYER. Mr. Speaker, just to clarify, I want to advise the gentleman that the schoolbus drivers that the gentleman just mentioned also are covered by the DOT regulations.

Mr. DELAY. Mr. Speaker, I yield myself the balance of my time.

Let me just say as far as the schoolbus driver is concerned, if they are an alcoholic and were fired for their alcoholism, went to a rehabilitation program, the school would have to rehire them immediately without any sort of proof that they had been successfully participating in the program.

The second part of my motion, Mr. Speaker, is No. 1, the judiciary is not covered under the ADA bill. Under the motion we cover the judiciary and give them a procedure by which they can comply with the bill. As Members well know, Congress is covered under the ADA bill. We also apply the ADA bill to the executive branch and give them procedures by which they can comply with the bill.

I might point out, by the way, that under the present remedies of the Rehabilitation Act of 1973, the only remedy to the Federal Government is the termination of Federal funds. If someone goes to the Social Security office, is discriminated against, is discriminated against and brings suit, the only remedy that the executive branch can bring is terminated funds for the Social Security office.

What we are simply doing is expanding the ADA bill to the judiciary branch and the executive branch, as it is to others, as we include it into this bill. Second, I just will finish with the point that if Hazelwood had been found to be an alcoholic, he would have to be rehired today to run the *Valdez*, if that job was open.

I am telling Members of the House that all we are doing is expanding, for safety-sensitive jobs, the opportunity for an employer, and in some cases it can be in temporary employment, just temporary employment, to see that they are receiving the benefits and rehabilitation and expanding the ADA to the executive branch and the judiciary branch.

Mr. EDWARDS of California. Mr. Speaker, I rise in opposition to the motion.

The bill has been carefully drawn with regard to drug and alcohol provisions, and we are satisfied that the provisions regarding drugs and alcohol are taken care of adequately in the bill. The direct threat is the test, and if any person poses a direct threat to the health or safety of others, then that person does not have to be hired.

Now, the second part of the bill, of the suggestion in the motion to recommit would include the judiciary and the executive branch, they are already covered by the Rehabilitation Act of 1973. This would be confusing and unnecessary to include them.

I urge a "no" vote on the motion to recommit.

Mr. HOYER. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of California. I yield to the gentleman from Maryland [Mr. HOYER].

Mr. HOYER. Mr. Speaker, I rise in strong opposition to the motion to recommit and would urge the body to reject this motion.

First of all, let me make it very clear that I think all Members know the use of drugs, the illegal use of drugs is not, not protected by the ADA. Any person on the job that uses illegal drugs can be fired without reference to ADA. The use of alcohol on the job is not covered by any protections in the ADA. We made that very clear and careful. It is not covered, so that there is no fear that any Member will have that we are imposing on an employer, either someone who is abusing alcohol or abusing illegal drugs or any other drugs, for that matter, that impacts on their performance.

Second, and let me finish with this if I may, we have heard during the course of this debate some lamentations from the other side of the aisle, particularly some from this side, about carefully crafting amendments so that we do not open it for lawsuits. Listen to this language, "not of your judiciary branch and executive branch, which is now covered under the Rehabilitation Act of 1973."

□ 1430

With respect to the specifics of the amendment, by adding the addition of a paragraph 6 to section 104(c), we may take into consideration an individual's history of drug addiction or alcoholism, a history of 15 years ago, as our distinguished sponsor of the amendment has, and he is certainly very able and ought not to be discriminated against. He ought to be protected against arbitrary and capricious discrimination.

It then goes on to say, "The period of time the individual has been free of drugs or alcohol." There is no standard for business in there. There is no telling them that 1 year is sufficient or 5 years is sufficient or 10 years is sufficient. I could go through each part of this amendment. There is no specificity, notwithstanding the fact the sponsors of this have said we ought to specify.

In fact, what it does is subject those who may have been alcoholics at some point in time or those who may have used drugs some time ago to discrimination. That is not what we want to do.

This bill is very carefully crafted from the Rehabilitation Act. The President supports the bill in its present form and has said this amendment is not necessary.

Mr. DELAY. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of California. I yield to the gentleman from Texas.

Mr. DELAY. Mr. Speaker, would the gentleman from Maryland agree that this is a drug vote?

Mr. HOYER. Absolutely not.

Mr. DELAY. That because it obtains to the executive branch and the judiciary branch——

Mr. HOYER. Mr. Speaker, reclaiming our time and if the gentleman will yield further, in answer to the gentleman's question, I would specifically reject the premise that this is a drug vote. This is a vote with respect to those who have been rehabilitated.

Mr. DELAY. Then, Mr. Speaker, will the gentleman answer this question? Would he explain the remedies under the Rehabilitation Act of 1973? There are no remedies in that act as they apply to the executive branch and the judiciary branch.

Mr. HOYER. I am sure the executive is going to carry out the act and is in fact carrying it out.

Mr. DELAY. I refer to the law, and it says to refer to title 6 of the Civil Rights Act of 1964, which states that the only remedy is to terminate Federal funds. The ADA bill has more remedies in it than the Rehabilitation Act of 1973. All we are doing is expanding the remedies offered to the disabled community.

Mr. HOYER. When you say, terminate Federal funds——

Mr. DELAY. I mean the executive branch and the judiciary branch.

Mr. HOYER. Reclaiming our time, just to clarify this for everybody's understanding, the gentleman presumably is referring to the executive and the judiciary to which he spoke. Obviously we are not going to cut off funds to the judiciary or the executive for a violation. That is not the remedy. The gentleman is incorrect on that.

Mr. DELAY. So there is no remedy?

Mr. HOYER. Mr. Speaker, I would urge a no vote on the motion to recommit.

The SPEAKER pro tempore (Mr. TRAXLER). The time of the gentleman from California [Mr. EDWARDS] has expired.

Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER pro tempore. The question is on the motion to recommit.

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

RECORDED VOTE

Mr. DELAY. Mr. Speaker, I demand a recorded vote.

A recorded vote was ordered.

The SPEAKER pro tempore. Pursuant to the provisions of clause 5 of rule XV, the Chair will reduce to a minimum of 5 minutes the period of time within which a vote by electronic device, if ordered, will be taken on the question of the passage of the bill.

The vote was taken by electronic device, and there were—ayes 143, noes 280, not voting 9, as follows:

[Roll No. 122]

□ 1453

The Clerk announced the following pairs:

On this vote:

Mr. Craig for, with Mr. Nelson of Florida against.

Mr. Thomas of California for, with Mr. Ford of Tennessee against.

Mr. BUECHNER changed his vote from "aye" to "no."

Mr. HALL of Texas and Ms. ROS-LEHTINEN changed their vote from "no" to "aye."

So the motion to recommit was rejected.

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. The question is on the passage of the bill.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

RECORDED VOTE

Mr. HOYER. Mr. Speaker, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 403, noes 20, not voting 9, as follows:

[Roll No. 123]

□ 1500

The Clerk announced the following pair:

On this vote:

Mr. Nelson of Florida for, with Mr. Craig against.

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

Mr. DELLUMS. Mr. Speaker, I rise today to express my sincere joy at the final passage of H.R. 2273, the Americans With Disabilities Act. I feel deeply that in voting for this legislation, Members of this body have acted to enfranchise an entire class of Americans whose rights and liberties are finally on a par with every other citizen.

It is incredible that action on this vitally important civil rights issue has evaded us for so long. The story of our Nation's disparate treatment of disabled individuals is a sad conclusion. As a black American, I am especially proud to stand here as part of the coalition that has brought equal standing for the disabled in the eyes of the law. All minority Americans have shared the suffering of "separate but equal," and we rejoice collectively when that unjust standard can no longer be legally applied.

It is at moments like these, Mr. Speaker, when I am proud to be a Member of this body. We must remember that we are empowered with a special responsibility by the 14th amendment to the Constitution to ensure that every citizen, not just those of particular ethnic groups, not just those who arguably are "able-bodied," not just those who own property—but every citizen shall enjoy the equal protection of the laws.

Indeed, as the Supreme Court has noted:

It is fundamental that in no organ of government, state or federal, does there repose a more comprehensive remedial power than in the Congress, expressly charged by the Constitution with competence and authority to enforce equal protection guarantees. (448 U.S. at 483)

Our action in this area is therefore long overdue. The history of different, separate, and unequal treatment of persons with disabilities, especially those with severe disabilities, could not be clearer. That history is in fact a stark reminder of the prejudice and misunderstanding that has characterized the treatment of minority citizens. This disparate treatment establishes an abundant factual predicate for the relief granted by H.R. 2273. The Americans With Disabilities Act is a plenary civil rights statute designed to halt all practices that segregate persons with disabilities and those which treat them inferior or differently. By enacting the ADA, we are making a conscious decision to reverse a sad legacy of segregation and degradation.

The significance, historic and legal, of our decision to establish disability as a basis for civil rights protection cannot be overstated. We have been moved by the continuing destructive effect of segregation, and we are acting now to reverse those practices, root and branch, and to eliminate their legacy. In short, what we are saying is that a severe, lifelong disability may be handicapping, but more handicapping has been the practice of congregating services for persons with disabilities in settings different or separate from those in which the rest of us are provided those services.

Through the various hearings we have held in this body, not only in connection with the ADA, but also in connection with the Rehabilitation Act, the Education of the Handicapped Act, and the Developmental Disabilities Act, we have come to a knowledge of the capabilities and prospects for persons with disabilities entirely different from that which underlies the historic legacy and that continues today still to be boldly offered in justification of services that are separate or different. We have found that persons with severe disabilities, as a matter of fact, can live and work productively in the same settings in which their neighbors live and work.

Which brings us, Mr. Speaker, to what I view as the highest and best purpose for which this body can convene itself—to protect the fundamental rights and liberties of our citizens and to enact those measures necessary to guarantee their equal treatment under law. Today we have accomplished that purpose.

---

Mr. HOYER. Mr. Chairman, H.R. 2273, the Americans With Disabilities Act, which is before the House today, is a bill which reflects an extensive process of deliberation and refinement. The bill was referred to four committees in the House of Representatives; the Education and Labor Committee; the Committee on Public Works and Transportation; the Energy and Commerce Committee; and the Committee on the Judiciary. A number of changes that were made by the Senate to the original ADA were adopted by the House committees. Then, in each of the House committees, there was extensive discussion and work on the provisions under the particular jurisdiction of that committee. The bill before the House today is an amalgam of the four bills that were reported by committee. On May 14, I introduced H.R. 4807, cosponsored by the four committee chairs and ranking members, which is a clean combination of the four bills. The rule which accompanied H.R. 2273 made in order the text of an amendment in the nature of a substitute consisting of the text printed in part one of the report accompanying the rule. That text is H.R. 4807, plus some technical corrections and language concerning congressional coverage.

I was privileged to be a part of the extensive work on this bill at all of its various stages in the House of Representatives. I believe that the process this bill has undergone has resulted in a strong act that sets forth clear, enforceable guidelines for businesses, employers, transportation providers and operators of telephone services across this country regarding the prohibition of discrimination on the basis of disability.

I would like to describe, therefore, the provisions of this bill, as I view them, as it now appears before the House and to note, where appropriate, changes that were made during the committee process and changes that were made in order to merge the four bills.

DESCRIPTION

SECTION 2: FINDINGS AND PURPOSES

As noted, the bill sets forth the findings and purposes of the act. These have not changed

since the original introduction of the bill. In fact, unfortunately, the findings that Congress made during the extensive hearings held on this bill, have not changed for generations. People with disabilities have encountered various forms of discrimination—from outright exclusion to overprotective rules to segregation due to attitudinal, architectural, transportation, and communication barriers. People with disabilities have experienced a history of unequal treatment and have formed insular groups, segregated from the rest of society. In addition, people with disabilities have lacked political power. For this reason, it is 26 years after the 1964 Civil Rights Act, that the ADA—the first comprehensive piece of civil rights legislation for persons with disabilities—is finally before us today.

The purpose of this bill, as set forth in section 2(b), is to provide a clear and comprehensive mandate for the elimination of discrimination against people with disabilities, to provide clear standards addressing discrimination and to ensure that the Federal Government plays a central role in enforcing these standards on behalf of people with disabilities through the issuance of clear and effective regulations and through strong administrative enforcement where provided by the act.

Section 2(b) of the bill also notes that Congress—in passing this bill—is invoking the sweep of its congressional authority, including the power to enforce the 14th amendment and the power to regulate commerce. Section 5 of the 14th amendment gives Congress the power to enforce that amendment through appropriate legislation. Congress has authority under this section to prohibit discrimination by State and local governments, see, for example, *Katzenbach* v. *Morgan,* 384 U.S. 641 (1966), and to prohibit discrimination in nongovernmental activities that has resulted from societywide discrimination, see, for example, *Heart of Atlanta Motel* v. *United States,* 379 U.S. 241, 279–286 (1964) Douglas, J., concurring; 379 U.S., at 291–93 (Goldberg, J., concurring).

Congress also, of course, has broad authority to pass antidiscrimination laws under the commerce clause, article I, section 8 of the Constitution. See, for example, *Heart of Atlanta Motel* v. *United States,* 379 U.S. 241 (1964); *Katzenbach* v. *McClung,* 379 U.S. (1964); *EEOC* v. *Wyoming,* 460 U.S. 226 (1983). The extensive hearings on the ADA amply demonstrate how discrimination against people with disabilities has made it difficult for them to participate in the commerical life of this country. The Harris polls, cited in a number of the committee hearings, set forth clearly the myriad ways in which people with disabilities have been precluded, through various forms of discrimination, from using public accommodations, from traveling, and from gaining employment. See Louis Harris and Associates, "The ICD Survey of Disabled Americans: Bringing Disabled Americans Into the Mainstream" (1986); "Implications for Federal Policy for the 1986 Harris Survey of Americans With Disabilities" (1988).

SECTION 3: DEFINITIONS

Section 3 of the bill includes definitions of "auxiliary aids and services," "disability," and "State." These are terms that appear in more than one title of the bill and therefore are defined in this section for purposes of the whole bill.

The definition of the term "disability" is key to the ADA. Throughout the process on the ADA, we were often asked to substitute for this definition a list of selected disabilities that would be the only disabilities covered under the act. That approach was rejected by every committee. Instead, the act retains the flexibility definition that was first adopted in Section 504 of the Rehabilitation Act of 1973, that has been in effect for over 15 years, and that was recently explicated clearly by the Supreme Court in *School Board of Nassau County* v. *Arline,* 480 U.S. 273 (1987).

The first prong of the definition covers individuals who have a physical or mental impairment that substantially limits a major life activity. Physical impairments cover all forms of physiological disorders, cosmetic disfigurements, or anatomical losses affecting different body systems. Mental impairments include a similar, broad range of cognitive, emotional, and mental disabilities. Under this prong of the definition, these impairments must also substantially limit some major life activity, such as caring for one's self, breathing, seeing, or working. Examples of impairments that substantially limit major life activities are visual or hearing impairments, mobility impairments, cerebral palsy, epilepsy, HIV infection, mental retardation, chronic schizophrenia, or heart disease.

The second prong of the definition covers individuals who have a record of an impairment. This covers, for example, an individual who has recovered from an impairment—such as cancer—but is discriminated against on the basis of that past impairment that substantially limits one or more major life activities.

The third prong of the definition covers individuals who are regarded as having an impairment. This prong of the definition is critical in ensuring adequate protection for all individuals who face discrimination on the basis of actual or perceived physical or mental impairments. The scope of this prong was recently explicated by the Supreme Court in School Board of Nassau County versus Arline, where the Court noted that while a particular impairment might not diminish a person's physical or mental capabilities, it might nevertheless limit that person's ability to participate in the community as a result of the negative reactions of others to the impairment. *Arline,* 480 U.S. 273, 283 (1987). Thus, for example, if an employer perceived that an applicant had an impairment which precluded that applicant from working for the employer, and refused to hire—or fired—the person on that basis, or if the owner of a public accommodation perceived a patron as being unable to enjoy the goods or services being offered, and discriminated against the patron on that basis, those individuals would be covered under the third prong of the definition, whether or not the person had an impairment that actually limited participation.

TITLE I: EMPLOYMENT

Title I of the ADA deals with employment. The provisions of the original title I of H.R. 2273, which incorporated a range of concepts, have now been incorporated within each title.

The substantive employment protections of the ADA are primarily derived from protections that exist under section 504 of the Rehabilitation Act of 1973. Much of the procedural and enforcement framework has been derived from title VII of the Civil Rights Act of 1964.

Section 102(a) sets forth the general rule of this title: a covered entity may not discriminate against a qualified individual with a disability, because of the disability of such individual, with regard to job application procedures, the hiring, advancement or discharge of employees, employee compensation, job training and other terms, conditions, and privileges of employment. The Education and Labor Report and the Judiciary Committee report further discuss the range of employment decisions and practices covered by the statute.

Section 102(b) sets forth constructions of the general rule. These constructions describe various forms of discrimination that are among those included within the general prohibition. Most of these provisions derived from the section 504 regulations to give example of the types of actions that would be prohibited under section 102(a).

For example, section 102(b)(1) sets forth the simple, straightforward requirement that a covered entity may not limit, segregate, or classify an applicant or employee in a way that adversely affects the opportunities or status of such applicant or employee because of such an individual's disability.

Section 102(b)(2) provides that a covered entity may not enter into a contractual or other relationship that has the effect of subjecting the covered entity's applicants or employees to discrimination. These include relationships with referral agencies, labor unions, and entities providing fringe benefits or training programs. There was extensive discussion regarding this provision during consideration by the Education and Labor Committee and that Committee's report gives examples of how this important provision works.

Section 102(b)(3) provides that a covered entity may not use standards, criteria, or methods of administration that have the effect of discrimination or that perpetuate the discrimination of others who are subject to common administrative control. This provision is derived from the section 504 regulations.

Section 102(b)(4) provides that it is discrimination to exclude, or otherwise deny equal jobs or benefits, to a qualified individual with a disability because of the known disability of an individual with whom the qualified individual is know to have a relationship or association. This is an important provision which is designed to extend protection to those who experience discrimination because they live with, associate with, give care to, are married to, or have some other relationship with a person with a disability—and are discriminated against because of that association or relationship.

Section 102(b)(5) requires that reasonable accommodations be made to the known physical or mental limitations of an otherwise qualified individual with a disability. This is a central provision of the bill and various aspects of the provision were discussed at length during consideration of the bill.

First, as noted, an entity covered under the ADA may not discriminate against a "qualified individual with a disability." A qualified individ-

ual with a disability means a person who, with or without a reasonable accommodation, if necessary, can perform the essential functions of the job that the person holds or desires. The determination of whether a person is qualified must be made at the time of the employment action—for example, the point of hiring or promotion—and paternalistic concerns about what is best for the person with the disability cannot be used to foreclose employment opportunities.

There was extensive discussion regarding the concept of "essential functions" of a job. This is a key concept in ensuring non-discrimination protection for people with disabilities. At times, an employer may have a marginal, nonessential job function which a person with a disability cannot, in fact, do. The purpose of this provision is to establish that if a person with a disability can do the essential functions of a job, that person is considered a "qualified" individual for purposes of that job.

An amendment was added in the Judiciary Committee to clarify that consideration must be given to an employer's determination as to what job functions are essential. By contrast, an amendment that would have created a presumption in favor of the employer's determination of what was an essential function was rejected by that committee. An employer is the one that first designates the essential functions of the job. A person with a disability, who has been rejected because he or she cannot perform one of those functions because of his or her disability, can then challenge whether that function is, indeed, essential. At that point, a court should give consideration to the employer's judgment, as well as to the evidence submitted by the plaintiff, as to whether the function is, in fact, essential. Another amendment that has been added to the ADA provides that a court should consider as evidence of an essential function any written job description the employer may have. Of course, a job description which is not at all tailored to the actual functions of the job will, ultimately, have little weight. The fact that a task is written in a job description does not, by itself, mean that it is essential. A court, however, must consider the written job description as evidence, and then ultimately decide, based on the evidence submitted by both the person with a disability and the employer, what constitutes the essential functions of the job.

As noted, a person is considered qualified for a job position if, with reasonable accommodation, if necessary, the person can perform the essential functions of the job. The provision of reasonable accommodations to individuals with disabilities is a key requirement under section 504 and a key requirement under the ADA. While many people with disabilities may not require any reasonable accommodations at all to perform a job—they simply require an employer to shed his or her preconceived notions about the abilities of people with disabilities—the provision of a reasonable accommodation is critical for a number of people with disabilities.

Under the ADA, as under section 504, an accommodation need not be provided if it would impose an "undue hardship" on the employer. There is no hard and fast rule about what is or is not an "undue hardship." To the contrary, the strength of section 504, and the strength of the ADA, is that "undue hardship" is a flexible standard, which is designed to take into account a range of different factors. As the act provides, an accommodation is an undue hardship if it would require significant difficulty or expense on the part of the covered entity, when considered in light of the factors set forth in the act.

This consideration in light of the factors is an essential element in this area. In fact, a change was made in the bill to add explicitly to the standard the words: "when considered in light of the factors set forth in subparagraph (B) [of the statute]". Section 101(10). The importance of this flexible approach can be seen, for example), in a case such as *Nelson v. Thornburgh*, 567 F.Supp. 369 (E.D. Pa. 1983), as noted in the Judiciary Committee report. In that case, a group of state income maintenance workers who were blind requested several accommodations. In holding that section 504 required these accommodations to be provided, the court noted that while the costs of the accommodations were substantial, the additional dollar burden was only a small fraction of the agency's personnel budget. In light of those facts, the accommodations would not require a "significant expense" under the act and this would not be an undue hardship. Of course, the key point is that the same accommodation may well be an undue hardship for a small employer because it would require expending significant proportions of that employer's available resources.

This flexibility was, I believe, an important factor in the rejection by this House of an amendment that was offered which would have created a presumption that an accommodation that cost over 10 percent of an employee's annual salary constituted would be presumed to be an undue hardship and thus would not be required under the act. That provision was directly contrary to the flexible approach for determining undue hardship which is based on over a decade of experience under the Rehabilitation Act. As noted, the Rehabilitation Act approach focuses on the resources of the employer. A 10-percent cap provision would fail to protect adequately the rights of persons with disabilities to receive accommodations that would, in fact, not impose an undue hardship on an employer. For example, the provision failed to account for the fact that many accommodations, such as physical changes to facilities and the acquisition of equipment, last for many years and are used by employees other than the employee in question, and that businesses always amortize the cost of equipment over a period of years. Moreover, a 10-percent cap on accommodations based on an employee's salary would exclude the hiring or retaining of an employee who required an accommodation that exceeds that limit, but which would not truly impose an undue hardship on the employer.

In terms of the factors to be considered in determining whether a reasonable accommodation would constitute an undue hardship there was significant discussion—during both the Education and Labor and Judiciary Committee considerations of this bill—of the approach to take when one large company owns a number of small, local facilities. Concerns were raised that the parent company may choose to close down a local store operating at a margin rather than devote significant expenditures for reasonable accommodations. The added factors allow courts to consider such consequences to the local store. I believe the approach finally taken in the bill strikes the proper balance, by weighing the resources of both the large company and the local facility. By including the "site-specific" factors in the determination of undue hardship, it is assured that the situation at the local facility will be considered when determining what is an undue hardship to the covered entity.

Section 102(c) establishes a specific and important provision on medical examinations and inquiries. A basic principle underlying this title is that employment decisions must be made on the basis of merit, and not on the basis of stereotypes or preconceptions. This section, by prohibiting medical inquiries before an offer of employment is made, ensures that a procedure is established so that misconceptions do not bias the selection process. After an offer of employment is made, medical exams may be conducted under specific conditions. In addition, the section ensures that employees on the job are not unnecessarily identified as people with disabilities through a medical examination if there is no job-related reason to conduct such an examination. In order to respond to some questions raised by employers, however, the bill now expressly clarifies that voluntary medical examinations—for example, "wellness" programs often offered by corporations—are valid under this title.

Section 103 sets forth defenses available under the title. This section provides that a covered entity may defend the application of a qualification standard, test, or selection criteria that screens out or tends to screen out an individual with a disability by demonstrating that the standard, test, or criterion is job related and consistent with business necessity. The reports of both the Education and Labor Committee and Judiciary Committee describe this defense at greater length.

During consideration by the Judiciary Committee, section 103(b) was modified to state that the term "qualification standard" may include a requirement that an individual "not pose a direct threat to the health or safety of other individuals in the workplace." "Direct threat" is defined in section 101(8) to mean "a significant risk to the health or safety of others that cannot be eliminated by reasonable accommodation."

This provision and definition come from cases under section 504. Indeed, the definition of "direct threat" comes directly from the Supreme Court case of School Board of Nassau County versus Arline, which dealt with an individual who had turberculosis. The purpose of adding this provision was to allay any concerns on the part of those who unnecessarily feared that this title would require them to hire or retain employees who posed a significant risk to others. At the same time, the amendment was designed to set forth clearly in the title the specific standard that must be met before discriminating against an individual based on "fear of risk." Thus, this provision

protects individuals with disabilities from discrimination based on generalizations, fears, and "conventional widom" about risks they might pose. In order to apply the qualification standard, the covered entity must show that there is a significant risk posed by the individual that no reasonable accommodation could eliminate the risk, and that there is evidence supporting this determination is credible. For example, in the case of a person with a mental disability a court shall determine whether the evidence is sufficiently recent to be credible or for example, in the case of a person with a contagious disease a court shall determine that the assessment of risk is based on valid medical evidence.

Finally, section 104 of the title expressly excludes individuals who are current illegal users of drugs from the definition of a "qualified individual with a disability." The section continues coverage for individuals who are no longer illegally using drugs or are perceived as illegally using drugs, and expressly provides that testing applicants and employees for the illegal use of drugs is permitted. As both the Education and Labor Committee and Judiciary Committee reports explain, such drug testing may not be used to undermine the protection set forth in section 102(c) for individuals with disabilities who legally take drugs for their disabilities. Those reports also make clear that the current drug policies of the various sports leagues are valid under this title.

However, the language which appears in the Education and Labor report concerning this matter has certain typographical errors which I would like to correct. The current policies of the four professional sports leagues are completely consistent with the act and the ADA is not intended to disturb those policies. Furthermore, I intend to engage in a colloquy with the gentleman from Ohio [Mr. ECKART] which further discusses this matter. The language in the Education and Labor Report should have been as follows:

As noted, under section 104, employers may discipline or discharge employees who are current users of illegal drugs. The professional sports leagues have developed drug policies to deal with players who have current drug problems. The Committee has reviewed these policies because the leagues have raised questions as to whether such policies comply with the act.

The committee believes that the league's policies are in compliance with the requirements of this act. The National Football League permits its players who test positive on drug tests to enter a treatment program and not be disciplined on the first occasion. Players who test positive on a second occasion are permitted to receive treatment but are suspended for a minimum 30-day period or until later deemed fit to return. After a third positive drug test a player is banned from play and is ineligible for reinstatement for at least one year. This policy is consistent with the act.

The National Basketball Association permits players who voluntarily seek treatment for a current drug problem to obtain treatment without cost to the player on the first occasion without suffering any discipline. Players who are using drugs and do not seek treatment voluntarily and are subsequently detected are terminated for a minimum period of two years. Players who relapses and seek treatment on a second occasion are suspended but permitted to receive treatment and return when deemed fit. Players who relapse for a second time are dismissed and cannot seek reinstatement for at least 2 years. The decision to reinstate players in both the NBA and the NFL is based on an individualized determination that takes into consideration the player's satisfactory completion of a treatment program, conduct following the dismissal, including completion of any suspension period. This policy is consistent with the act.

Finally, Major League Baseball gives players who use drugs and those who test positive on a drug test an opportunity to obtain treatment before being disciplined. Players who relapse are disciplined but are permitted to obtain treatment on a second occasion. This policy is consistent with the Act.

As noted, these drug policies are entirely consistent with the nondiscrimination provisions of the Act. The Committee recognizes the right of these and other sports leagues to maintain the integrity of professional sports through the disciplinary procedures, including dismissal, and recognizes that these three leagues have established reasonable policies that provide a means for players to receive rehabilitation and for appropriate discipline including termination.

In addition, it is consistent with the act for leagues that wish to do so to dismiss players who illegally use drugs or who relapse again after an opportunity to obtain treatment while providing an opportunity to petition for discretionary reinstatement after a specified time period, upon a showing of rehabilitation, which includes abstinence from the use of illegal drugs to the satisfaction of the appropriate league authority, as one factor in the overall circumstances.

The National Hockey League has adopted a different policy that is also consistent with the Act. The National Hockey League suspends players who are involved with illegal drugs and provides an opportunity for reinstatement within a year based on a showing of positive rehabitative conduct.

The act is not intended to disturb the legitimate and reasonable disciplinary rules and procedures established and enforced by professional sport leagues; nor is it intended to disturb collectively bargained policies that have been entered into between league management and its players association that are not inconsistent with this Act.

Section 104(e) of the bill specifically addresses rail employees. This provision was added to ensure that drug testing that is being conducted by rail companies pursuant to rules and regulations other that the Department of Transportation regulations cited in section 104(c)(5) can be conducted, provided the testing program is otherwise lawful and the individual holds or seeks a job that the Department of Transportation has determined is safety-sensitive. In the view of the committee having railroad jurisdiction, the current Department of Transportation regulations do not encompass all truly safety-sensitive positions. In addition, testing conducted pursuant to this section must be accurate, as is required with the other testing permitted in this section, and adverse actions may be taken only against individuals who are currently engaging in the illegal use of drugs or are currently impaired on the job from alcohol use.

Section 107, the enforcement section of the title, cross-references the enforcement sections of title VII of the Civil Rights Act of 1964. The purpose of this cross-reference is to ensure that people with disabilities retain the same remedies and procedures that are available to women and minorities under the 1964 Civil Rights Act, i.e., injunctive relief, pay and benefits. As has been discussed at length during this process, there is currently a bill pending (H.R. 4000) that would expand the remedies and procedures available under title VIII. When that bill passes, the cross-reference to title VII in the ADA will assure that those remedies and procedures will be available to people with disabilities as well—as they well should be in a society based on parity and equality.

A clarifying amendment was added by the Judiciary Committee to this enforcement section, as well as to the enforcement sections in titles II and III. That clarifying amendment has been incorporated in the final bill. This amendment struck the words "shall be available" from section 107(a) and substituted the words "shall be the powers, remedies, and procedures this title provides." A concern had been expressed that the term "shall be available" could be misinterpreted to mean that a plaintiff under the ADA was not required to avail himself or herself of the same procedures—such as EEOC enforcement—that other minorities had to follow under title VII. Because, to the contrary, the central point of this provision was to establish parity with other minorities under title VII, this amendment was accepted as a clarifying amendment. While section 501(b) of the act ensures that other Federal laws—including the Rehabilitation Act of 1973—and State laws remain available for people with disabilities, the title VII remedies are the only remedies provided by title I of the ADA.

Because sections 501, 503 and 504 of the Rehabilitation Act remain in full force for entities covered under those provisions—see section 501(b) of the ADA—concerns were raised during the deliberation by the Education and Labor Committee that such entities might face duplicative administrative and judicial proceedings under the Rehabilitation Act and the ADA. In order to address that concern, a new provision was added to the enforcement section requiring that procedures be developed to avoid duplication of effort and imposition of inconsistent standards for the same requirements under this title and the Rehabilitation Act. That provision has been incorporated in the final bill.

TITLE II: PUBLIC SERVICES

Title II of the ADA covers public services. Essentially, it extends the requirement of section 504 of the Rehabilitation Act to all programs of State and local governments, regardless of the receipt of Federal financial assistance.

In order to accommodate the changes that were made in the Energy and Commerce Committee and the Public Works and Transportation Committee, title II of the bill has been somewhat restructured. Subtitle A now sets forth the general anti-discrimination provision and other relevant provisions for all public entities, which includes State and local governments, agencies and departments of a State, and Amtrak and commuter rail. Subtitle B deals specifically with certain transportation services provided by public entities.

SUBTITLE A

Section 202 of subtitle A, the general antidiscrimination provision, directly tracks the language of section 504 of the Rehabilitation Act. Instead of listing out all of the constructions of discrimination, however, as the other titles do, section 204 directs the Attorney General to issue regulations implementing this section that are consistent with this act and with regulations under section 504 of the Rehabilitation Act of 1973. Thus, to the extent that the constructions of discrimination in titles I or III have clarified what constitutes discrimination on the basis of disability, those constructions must be included, as long as they provide no less protection than the section 504 regulations. As a general matter, the regulations that have been issued under section 504 will govern this section and the same standards included in those regulations—and not anything lower—will apply to this section.

Title II covers the range of services, programs and benefits offered by State and local governments, without a requirement that such programs or activities received Federal financial assistance. Thus, title II extends to whatever spheres of authority a State or local government is involved in—including employment, health and service programs, the streets—which require curb-cuts—and the facilities owned or operated by such governments.

Section 504 has been critical in opening up public services and programs to people with disabilities and in ending segregation. Title II of this act is designed to continue breaking down barriers to the integrated participation of people with disabilities in all aspects of community life. While the integration of people with disabilities will sometimes involve substantial short-term burdens, the long-range effects of integration will benefit society as a whole.

Also, while it may sometimes appear more convenient to provide services to people with disabilities in a segregated manner, that does not constitute a valid justification for separate or different services under either section 504 or this title. While separate services which are designed to provide a benefit for people with disabilities—such as specialized recreation programs—are not prohibited by section 504 or by this title, the existence of such programs may not be used as a basis for excluding a person with a disability from a program that is offered to people without disabilities or for refusing to provide an accommodation in a regular setting.

As noted, title II covers the range of services, programs and benefits offered by State and local governments. It also includes providing training to public employees in order to ensure that discriminatory actions do not occur. For example, persons who have epilepsy are sometimes inappropriately arrested because police officers have not received proper training to recognize seizures and to respond to them. In my situations, appropriate training of officials will avert discriminatory actions.

Section 203 sets forth the enforcement provision for title II and incorporates the remedies, procedures and rights of section 505 of the Rehabilitation Act of 1973. As in title I, the Judiciary Committee adopted an amendment that deleted the term "shall be available," and substituted in its place "shall be the remedies, procedures, and rights this title provides." This change has been incorporated in the final bill. As in title I, the intent of the change is simply to clarify that the remedies provided by the Rehabilitation Act—as they currently stand or as they might be amended in the future—are the remedies that title II provides. The Rehabilitation Act provides a private right of action, with a full panoply of remedies. See, for example, *Miener* v. *State of Missouri,* 673 F.2d 969 (8th Cir. 1982); *Kling* v. *County of Los Angeles,* 769 F.2d 532 (9th Cir. 1985).

This enforcement provision, like the others in the ADA, must be read in conjunction with section 501(b), which provides that the ADA does not preempt other applicable laws that provide equal or greater protection. Thus, section 504 of the Rehabilitation Act is still available to be used, as are remedies available under 42 U.S.C. 1983 and State law claims.

SUBTITLE B

Subtitle B addresses specifically public bus and public rail transportation. Part I of the subtitle deals with all public transportation other than transportation by aircraft—which Congress has recently addressed in the Air Carrier Access Act—transportation by Amtrak and commuter rail. Part II deals with transportation by Amtrak and commuter rail.

PART I

Part I specifies, in further detail, the forms of discrimination that are prohibited by section 202 with respect to public buses, public light rail and rapid rail vehicles, and other public vehicles not covered under part II. As noted, section 202 applies to all public entities, as defined in the statute.

Part I lays out the basic, simple rule that every new bus, new rapid rail, new light rail, or other new vehicle used on designated transportation system must be accessible to individuals with disabilities, including individuals who use wheelchairs. This basic, simple rule will finally ensure that—at some point in the future—all of the mainline transportation systems will be fully accessible to individuals with disabilities. Of course, any accessibility equipment that will be bought for these vehicles must also be maintained in good operational order and must be operated when needed. Otherwise, the accessible mainline system will exist only in theory, and not in fact.

Even when the mainline system becomes fully accessible, there will be some individuals with disabilities who will not be able to use that system because of the severity or nature of their disability. In addition, until the mainline system becomes fully accessible, it will not be usable by many individuals with disabilities. To deal with those situations, the act requires that paratransit services be provided as well.

One of the changes that the Public Works and Transportation Committee made in the bill was to expand on and to clarify the paratransit requirement under the bill. Essentially, part I now sets forth an established minimum of paratransit services that must be provided under this act. This minimum requires that paratransit be provided to any individual with a disability who is unable, because of a physical impairment—including a vision impairment—or because of a mental impairment, to ride the mainline system without the assistance of another individual. It also requires paratransit service to be provided to an individual who has a specific impairment related condition that prevents that individual from traveling to or from the mainline system. Thus, for example, paratransit services would be provided to an individual who is blind who may lack the necessary mobility skills to safely traverse city streets. Such services would also be provided to an individual with a mental impairment who needs assistance in getting to a mainline stop, in counting change, and in getting off at the appropriate stop and to an individual who uses a wheelchair and a respiratory device who may need the assistance of another individual to help with the device.

To deal with the interim situation before the mainline system is fully accessible, the act also requires that paratransit services be available to a person who cannot use the system because there is no accessible vehicle available at the time, or within a reasonable period of such time, the person wishes to ride. The minimum also requires that paratransit service be made available to at least one other individual accompanying the person with the disability.

The act also requires the Secretary to establish certain minimum service criteria for the provision of these paratransit services. To guard against excessive costs, the act includes an "undue financial burden" limitation for public entities. Of course, it is expected that public entities will make every effort to ensure that their regular and their paratransit services are operated in a cost-efficient manner, so that more paratransit services can be provided prior to reaching the "undue financial burden" limitation.

While the changes made by the Public Works and Transportation Committee added clarity to the act, it was also important—in setting forth these clear guidelines—to note clearly that Congress intended that these guidelines be minimums. As long as a local entity meets the minimum, local entities are perfectly free to provide more service. For example, a local entity might choose to allow several individuals to accompany a person with a disability on a paratransit vehicle. Section 223(f) makes the point clearly that nothing in this section should be construed to cut back or to restrict the paratransit services currently being offered or that might be offered by local entities in the future.

I would also like to point out that the pattern of paratransit services currently varies widely from city to city. There are many different kinds of organizations which provide these services, which receive their funding from various sources. Those organizations which are private, and are not governmental transit entities operating fixed-route operations, are clearly not directly governed by this title.

Section 223(f) makes it clear, however, that the paratransit requirements of the ADA are not designed to reduce in any way the current level of services being offered by a variety of organizations. Entities that are currently providing paratransit services should be encouraged to continue to provide such services and, indeed, to provide such services beyond the minimum requirements set forth in this title.

The Public Works Committee also modified the alterations provision governing existing fa-

cilities. Under the modified provision, when a public entity undertakes an alteration that affects the usability of an area of a facility that contains a primary function, the entity must—to the maximum extent feasible—make the altered area accessible and, in addition, make the path of travel to the altered area and the bathrooms, telephones, and drinking fountains serving the altered area accessible as well. These latter alterations must be made if they are not disproportionate to the overall alterations in terms of cost and scope. A similar modification of an analogous provision was made in title III by the Education and Labor Committee and the Judiciary Committees and are discussed in the reports of those Committees accompanying the bill.

Part I also sets forth requirements for making existing key stations for rapid or light rail systems accessible over a period of time. The changes are supposed to be made as soon as practicable, but in any event, in no less than three years after enactment of the act. The act also allows an extension for extraordinarily expensive structural changes, for up to 30 years, upon application to the Secretary, with an additional requirement that at least two-thirds of the key stations must be accessible within 20 years. Thus, applications, submitted under this section will be granted only when, in fact, there are extraordinarily expensive structural changes that must be made. In addition, it is expected that among the two-thirds stations that must be made accessible within 20 years, priority will be given to those with high ridership, those that operate as feeder stations, and those that represent a geographic mix of stations.

The Public Works and Transportation Committee also added a provision regarding historic vehicles. The purpose of this provision is to establish that when historic vehicles are remanufactured, access features do not have to be included if the addition of such features would significantly alter the historic character of the vehicle. If there are some access features that can be included without significantly altering the historic character, those features must be included.

Part II of subtitle B deals with Amtrak and commuter rail. There was extensive discussion of this section with the Energy and Commerce Committee and I believe that the current provisions establish a strong, effective means of ensuring accessible transportation on Amtrak and commuter rail and recognizing the fiscal and operational realities of modern-day rail transportation.

As with part I, the general rule of non-discrimination set forth in section 202 applies to Amtrak and commuter rail, just as it applies to all other public entities. Part II, however, sets forth specific provisions with regard to accessibility of particular Amtrak and commuter rail cars and accessibility of stations. A detailed and specific plan for buying different types of Amtrak cars was worked out to ensure that individuals who use wheelchairs will have access to the same number of seats that would have been available had every new Amtrak coach car been built in a manner accessible to such individuals. In addition, there are time limits established for when these accessible Amtrak cars must be available. This approach ensures that, within a definite time period, access to Amtrak cars will be ensured for individuals who use wheelchairs. This approach also took into account, and met, the operational and financial concerns of Amtrak.

The report from the Energy and Commerce Committee clearly and carefully lays out the details of this plan and I will not repeat all of these details. I urge interested parties to read that report for useful guidance. I wish to note here only some specific points. The discussion of these points should not be construed as deemphasizing the importance of the other numerous points made in the Energy and Commerce report. Rather, this discussion exemplifies how the appropriate use of operational flexibility, rather than simply structural changes, can be used to provide access.

As the Energy and Commerce Committee report makes clear, the concepts of accessibility and usability entail more than simply accessibility to those who use wheelchairs. For example, new railroad cars might be required to include nonslip surfaces, contrast edges on steps, adequate illumination in boarding areas, tactile markings for identifying basic amenities, contrasting characters on signage, a public address system for audible announcements, and automatic door closing alarms to make the railroad cars accessible to and usable by individuals with all forms of disabilities.

I should note that there was extensive discussion regarding accessibility of dining cars. The bill provides that single-level dining cars do not have to be built in a manner that makes them accessible from the station platform, but also ensures that individuals who use wheelchairs will be able to enter the dining car by exiting from an accessible car and then reentering through the end door of the dining car. Although Amtrak officials are not required to move the train to allow this "exit and entry" of the individual who uses a wheelchair, personnel on the train should assist the individual who uses a wheelchair in those circumstances where the exit and entry can be done. In addition, the bill provides that "unless not practicable," Amtrak shall place an accessible car adjacent to the end of the dining car so that this "exit and entry" can work. The whole process of "exit and entry" depends on an accessible car being placed adjacent to the dining car and thus, unless not practicable, Amtrak should provide this accessible car adjacent to the dining car.

A similar effort is expected on the part of Amtrak with regard to bilevel dining cars and bilevel lounge cars. Under the bill, bilevel dining cars do not have to be built accessible to individuals who use wheelchairs, while bilevel lounge cars are required to be built accessible to such individuals. Amtrak officials indicated during discussions on this section that bilevel lounge cars were almost uniformly placed next to bilevel dining cars. It is expected that Amtrak will continue to buy these bilevel lounge cars and will continue to place them adjacent to the bilevel dining cars, unless not practicable, so as to ensure access by individuals who use wheelchairs to the same type of food service they could have received in the bilevel dining car. In addition, people with disabilities should not be treated as "different" and "special" in these lounge cars. During discussions on this section, Amtrak officials indicated they were thinking of expanding the bilevel lounge cars to include tables and food table service.

The commuter rail provisions of the bill were also clarified during the Energy and Commerce Committee deliberations. Under the bill, all new commuter rail cars must be built accessible to all individuals with disabilities, including individuals who use wheelchairs. The section now clarifies, in addition, that if there is no restroom provided to all other passengers on the car, an accessible restroom need not be included for individuals who use wheelchairs. In addition, because individuals who use wheelchairs do not transfer into a seat on a commuter car, there is no requirement that there be space to fold and store a wheelchair and no requirement that there be a seat to which the passenger can transfer.

The Energy and Commerce Committee adopted the same modification to the alterations provision that was adopted by the Education and Labor and Judiciary Committees. That provision is discussed in those reports and would apply here as well.

Interim accessibility requirements were adopted in subtitle B of title II and in title III as well. The purpose of these sections is to ensure predictability for architects and builders in the event that final regulations have not been issued under the act within the mandated time period. It is expected, however, that the regulations will be issued in a timely fashion so that this section will not need to be unduly used.

TITLE III

Title III bars discrimination, on the basis of disability, by any person who owns, leases, leases to, or operates a place of public accommodation. The purpose of this title is to finally open up all areas of American life to people with disabilities.

In order to set forth clearly the range of places covered under this title, the act lists 12 categories of places that are considered public accommodations under the law. While this list is exclusive, it is intended that the categories be interpreted broadly to include the range of places that would belong within the category. For example, category 5 is: "a bakery, grocery store, clothing store, hardware store, shopping center, or other sales or rental establishment." The intent is that any sales or rental establishment would be included within this section. Indeed, one of the clarifications made in the Judiciary Committee bill, and adopted in the final bill, was to delete the word "similar" that is, "or other similar sales or rental establishment" from the statute. The point is that a person alleging discrimination does not have to prove that a particular business is similar to one of the businesses listed for example, similar to a grocery store, but rather, that the business falls within the general category described.

Section 302(a) sets forth the general rule prohibiting discrimination under the title. The Judiciary Committee added a provision to this general rule that clarifies which entities are covered under the rule and this provision has been incorporated in the final bill. This addition clarifies that the requirements of the title apply to a person who owns, leases, leases to, or operates a public accommodation. Thus,

for example, the entities covered would be a company that owns a chain of restaurants, a company that leases a restaurant for an occasion, a company that owns a building and leases the building—or part of the building—to the restaurant, and a company that operates a restaurant.

Section 302(b)(1) sets forth the construction of the discrimination prohibited in a series of general prohibitions. As noted above, title I of the original H.R. 2273 has been deleted and its concepts incorporated within each title. These general prohibitions represent those of the original title I, and much of the discussion regarding the analogous provisions in the employment section apply here as well.

For example, there was significant discussion during consideration by the Education and Labor Committee regarding the contractual liability provisions of section 302(b), which are addressed in the report of that committee and in the report of the Judiciary Committee. The basic requirement is that an entity covered under title III may not use a contractual arrangement to subject its own customers and clients to discrimination.

The general prohibitions also provide protection for individuals and entities that have a relationship or an association with a person with a disability. Entities are included within this provision because, at times, businesses, service providers and organizations that provide services to or represent people with disabilities, such as people with HIV disease, are subject to discrimination as well.

Section 302(b)(2) sets forth specific prohibitions that fall within the construction or discrimination under this title. There should not be any conflict between these specific prohibitions and the general prohibitions, because this structure follows the structure adopted in the section 504 regulations issued in 1977. However, to the extent that there is any perceived conflict, the specific prohibitions govern.

The specific prohibitions provide that it is discriminatory to impose an eligibility criterion that screens out, or tends to screen out, a person with a disability. However, the covered entity can adopt such a criterion if it can demonstrate that the criterion is necessary for the provision of the goods or services being offered. (Section 302(b)(2)(A)(i))

This provision ensures important protection for people with disabilities, while still accommodating the truly legitimate needs of businesses. For example, entities covered under title III may not use a criterion for services that would deny services to a person with a disability, for example, no services to a person with cerebral palsy or that would screen out people with disabilities for example, requiring a driver's license for identification that screens out people with epilepsy when another equally valid form of identification would suffice. At the same time, however, covered entities may impose eligibility criteria that are necessary for the provision of services. For example, a height limitation for certain rides in an amusement park may screen out certain persons with disabilities of short stature, but will be a legitimate criterion because of safety concerns. The key requirement here is that the criterion must, in fact, be truly necessary for the provision of services. It is expected that courts will carefully scrutinize any assertion by an covered entity that a criterion which discriminates against people with disabilities is necessary. For example, in the safety context, criteria related to such concerns must be based on actual risks and evidence and not on speculation, stereotypes or generalizations about persons with disabilities.

A specific construction was added at the end of section 302 by the Judiciary Committee, section 302(b)(3), providing that nothing in the title shall require an entity to provide goods or services to an individual with a disability when such individual would pose a direct threat to the health or safety of others through the provision of such goods or services. The term "direct threat" is defined as "a significant risk to the health or safety of others that cannot be eliminated by a modification of policies, practices, or procedures, or by the provision of auxiliary aids or services."

This provision is analogous to one added in the employment title. Again, the purpose of the provision was simply to allay any unnecessary fears on the part of entities covered under this title and to set forth clearly the high standard that must be met before goods or services can be denied on the basis of "fear of risk." Thus, this specific construction basically explicates and describes a "necessary" eligibility criterion in the safety context.

The specific prohibitions also require that an entity covered under title III make reasonable modifications in policies or practices when such modifications are necessary to provide goods or services, unless the entity can demonstrate that making such modifications would fundamentally alter the nature of the goods or services being offered. Section 302(b)(2)(A)(ii). For example, it would be discriminatory for a restaurant to refuse to alter a "no pets" rule for a person who uses a guide or a service dog, because such an alteration would not fundamentally alter the nature of the goods being provided.

It is also discriminatory under this title not to provide auxiliary aids or services to a person with a disability, unless the entity demonstrates that the provision of such aids or services would fundamentally alter the goods or services being offered or would result in an undue burden. Section 302(b)(2)(A)(iii). The term "undue burden" is analogous to the term "undue hardship" in the employment context. Like "undue hardship," the determination as to whether provision of an auxiliary aid or service constitutes an "undue burden" must be made on a case-by-case basis, based on the standard and factors used for determining an undue hardship. A critical factor in this determination is what constitutes an effective auxiliary aid or service in the context of the services or goods being provided—or a reasonable accommodation, in the context of employment. For example, while it may not be necessary to provide braille price tags for shoppers who are visually impaired, it may be necessary to provide braille manuals in the employment context. For this reason, although the term "undue burden" in title III is analogous to the term "undue hardship" in title I, the obligations of a business will vary depending on the context involved.

Finally, the specific prohibitions require an entity covered under title III to remove architectural barriers, structural communication barriers, and transportation barriers in existing facilities and vehicles when such removal is "readily achievable." (Section 302(b)(2)(A)(iv).) The term "readily achievable" is new—it does not appear in Section 504 regulations—and is defined in the title to mean "easily accomplishable and able to be carried out without much difficulty or expense." The basic purpose of this provision is to ensure that those physical access changes that can be made in existing facilities and vehicles without much difficulty or expense should be made. A deliberate decision was made in the ADA not to require extensive and expensive retrofitting. At the same time, however, a decision was made to place some requirement on covered entities so that changes that could be made without much difficulty or expense would get done. If such physical access changes are not readily achievable, then the covered entity must provide the goods or services through some alternative method, if such methods are readily achievable. (Section 302(b)(2)(A)(v)).

The approach taken by the ADA is essentially to focus on the future. Thus, while only "readily achievable" changes are required for existing facilities, the ADA establishes high standards for any new construction or alterations undertaken by public accommodations or commercial facilities.

The term "commercial facilities" is defined in the ADA as any facility that is intended for nonresidential use and whose operations will affect commerce. During consideration by the Education and Labor Committee, concern was raised that the term "potential places of employment"—the term used originally in H.R. 2273 and in S. 933 as passed by the Senate—might be confusing by implying that title III also incorporated some employment requirements. Because that was never the intent of the act—employment requirements are intended to be covered only under title I—the term "commercial facilities" was substituted for the term "potential places of employment." The same definition, however, that appears in S. 933 was retained. Thus, the scope of the definition remains as broad—covering any facility intended for non-residential use, whose operations affect commerce. (This would include office buildings, factories, transportation terminals, et ceteria.)

Section 303 sets forth the requirements for alterations and new construction. A change was made in the alterations section to require that when alterations are made to an area of a facility containing a primary function, the covered entity must—to the maximum extent feasible—also make the path of travel to the altered area and the facilities serving such area accessible, if such alterations would not be disproportionate to the overall alterations in terms of scope and cost. The reports of both the Education and Labor Committee and the Judiciary Committee address this provision and the manner in which it is intended to operate. As these reports note, it would clearly be disproportionate to require a covered entity to double the cost of a planned alteration. It would be consistent with the ADA, however, for the regulations to establish a specific standard, for determining the disproportionality

of the accessible path of travel and alterations of facilities.

In both the area of alterations and new construction, facilities must be built so that they are "readily accessible to and usable by" individuals with disabilities, including individuals who use wheelchairs. This is a term of art which contemplates a high degree of convenient accessibility for patrons and employees. For example, a new building should be designed so that a potential patron can get to a store, get into the store, and get to the areas where the goods are being provided. Similarly, a new building should be designed so that a potential employee can get to the building, get into the building, and get to and around the employment area.

Accessibility in new construction is important for persons with many kinds of disabilities, not only those with mobility impairments. For example, there are architectural features which are necessary to make a new building accessible to people with all kinds of disabilities. Under section 504 of the ADA, it is expected that the Architectural Transportation and Barriers Compliance Board [ATBCB] will collect information, conduct research, and issue guidelines on making new construction accessible to and usable by individuals with all kinds of disabilities.

The ADA includes an "elevator" exception for both new construction and alterations. Under this exception, facilities that are less than 3 stories, or have less than 3,000 square feet per story, are not required to install an elevator. A shopping center, shopping mall, professional offices of a health care provider, and any other category of facilities designated by the Attorney General as requiring an elevator are not subject to this exemption.

The ADA's basic accessibility requirements may not be evaded by constructing facilities in such a way that no story constitutes a "ground floor;" rather, at least one accessible ground story must be provided in each building. In addition, where ground level entry is provided from more than one story of a facility, each such story must still be readily accessible to and usable by individuals with disabilities.

The requirements regarding alterations and new construction are key provisions of the ADA. These requirements will help ensure that the new America will, in fact, be accessible to all people with disabilities.

Title III also covers transportation provided by private entities. These entities are covered in two separate sections. The specific prohibitions, sections 302(b)(2)(B)-(C), cover entities that provide transportation services, but are not primarily in the business of offering such services. This would include, for example, a business that runs a shuttle service on the side for its customers or a hotel that runs a transportation service for its patrons. Any new large vehicle—a vehicle with a seating capacity of more than 16 passengers—that such entities buy for a fixed route system must be accessible to persons with disabilities. If the entity is buying smaller vehicles for such a system, it must ensure that its system, when viewed in its entirety, offers an equivalent level of service to people with disabilities. If such entities are operating "demand responsive" systems, they must ensure that their system, when viewed in its entirety, provides an equivalent level of services to people with disabilities.

Section 304 covers entities that are primarily engaged in the business of transporting people. These entities are under the same general non-discrimination prohibitions as other entities covered under title III. In addition, there are specific provisions regarding accessibility of vehicles. Such entities must ensure that all new vehicles—other than certain exempted vehicles—used in fixed route systems are accessible, and that demand-responsive systems operated by such entities provide an equivalent level of service to people with disabilities. Provisions regarding remanufacturing rail cars and historic rail cars were added by the Energy and Commerce Committee.

The Public Works and Transportation Commitee refined the requirements governing over-the-road buses operated by private entities in section 305. The Office of Technology Assessment [OTA] is mandated to study various factors, including the access needs of people with disabilities and the effectiveness of various methods of providing accessibility to such buses. The Secretary of Transportation is required to issue interim requirements, under section 306, one year after enactment of the act, for accessibility to such buses—but such regulations may not require structural changes in over-the-road buses to provide access to persons who use wheelchairs or require the purchase of boarding assistance devices to assist such individuals. The inclusion of interim requirements are not intended to adversely influence or detract from the objectivity of the OTA study. Of course, once title III becomes effective—after 18 months—while providers of over-the-road bus service do not have to make structural changes in their buses or provide boarding ramps, such providers must still make such buses accessible to individuals with disabilities, including individuals who use wheelchairs, and must provide such individuals with assistance in boarding the buses if such individuals desire such assistance.

The OTA study must be completed within 36 months after the date of enactment of this act. Not later than 1 year after submission of the study, the Secretary of Transportation must issue new regulations that will implement the requirements for accessibility to over-the-road buses for individuals with disabilities, taking into account the results of the study. With regards to the regulations, it should be noted that the general regulations issued by the Secretary of Transportation for all transit providers under section 306(a)(1) would apply to providers of over-the-road buses as well, except where the special rules for providing access to such buses apply.

I should also point out that a decision was made not to require that accessible restrooms be placed on over-the-road buses, if such restrooms would result in a loss of seating capacity. However, as noted above, title III does require a modification of policies and procedures to accommodate individuals with disabilities. Thus, if an individual with a disability who was on the bus needed an accessible restroom, under the "modification of policies" provision, the provider of an over-the-road bus that did not have an accessible restroom would be required to ensure that the bus stopped at a rest stop that did offer an accessible restroom and that sufficient time was extended to the person with a disability to use that restroom.

Section 308 sets forth the enforcement procedures available under this title. The remedies and procedures set forth in title II of the Civil Rights Act of 1964 are the remedies and procedures this title provides. Again, the same amendment adopted in the Judiciary Committee is incorporated in the final bill, clarifying that the remedies of title II of the 1964 act, as they existed may be amended in the future, are the remedies provided by title III of the ADA. As in the other titles, section 501(b) ensures that remedies available under other Federal or State laws also continue to be available.

The Judiciary Committee also adopted a further clarifying provision, which has been incorporated in the final bill. The Judiciary Committee spelled out the type of "anticipatory discrimination" that was included under this title. The section had included a provision stating that a person who had "reasonable grounds for believing he or she was about to be discriminated against" could bring suit under the title. Concerns were raised as to what the "about to be" provision encompassed. This amendment first clarified, therefore, that any person who had reasonable grounds for believing that such person is about to be subjected to discrimination in violation of section 303 could bring a suit. In other words, if a new construction or an alteration is being planned, and there are reasonable grounds for believing that such construction or alteration is being done without the accessibility features mandated by section 303, a suit may be brought. In addition, the amendment clarified that a person does not have to engage in a "futile gesture" if the person has notice that an entity covered under title III does not intend to comply with its provisions. For example, if a theatre has turned away six people with cerebral palsy and has indicated that it has a policy of turning away such individuals, a person with cerebral palsy can bring suit without first subjecting himself or herself to the humiliation of being turned away by the theatre. These elements of enforcement are those which exist under the other titles of the act—incorporated under the general phrase "alleging discrimination on the basis of disability"—but they have been explicated clearly in title III.

Damages are not available to private plaintiffs who bring suit for violations of title III. However, all forms of injunctive relief are available. Moreover, section 308(a)(2) explicitly mandates that injunctive relief must include orders to make facilities readily accessible to and usable by individuals with disabilities, to the extent provided by this title, and must include requiring the provision of an auxiliary aid or service, the modification of a policy or procedure, or the provision of goods or services through alternative methods, to the extent required by the title. This important relief that will be granted by the courts will be useful in ensuring prior compliance with the law.

Because private plaintiffs may not seek damages for violations of title III, however, the enforcement activity of the Attorney General under title III is particularly important. The Attorney General is charged with investigating alleged violations of the title and with undertaking periodic reviews of compliance of covered entities under the title. Under the ADA, the Attorney General may bring cases where there is a pattern or practice of discrimination by a covered entity, or where a single person or a group of persons has been discriminated against in violation of the title and such discrimination raises an issue of general public importance. It is expected that the Attorney General will take his or her responsibilities seriously under this act because many private plaintiffs will not find it feasible to bring suits for violations of this title because of the lack of availability of damages.

During consideration by the Education and Labor Committee, a provision was added allowing the Attorney General to certify that State or local laws meet or exceed the minimum standards for accessibility established by this title. This provision has been incorporated in the final bill. While such certification is designed to assist architects and builders in reducing the number of standards they must operate under, this provision may not be used as a means of reducing the protection available under this title. Thus, the Attorney General should carefully scrutinize any requests for certification and seriously consider any objections raised by individuals with disabilities to such certification, if such objections are made. The Education and Labor Committee report provides important guidance regarding this process.

TITLE IV

Title IV deals with the provision of telecommunication relay services. This requirement of the act will finally help end discrimination against deaf and hard of hearing individuals in our Nation's telecommunications network. By requiring nationwide relay services to be available for all local and long distance calls 24 hours a day, 7 days a week, this part of the bill will provide hearing impaired persons with the degree of independence necessary to benefit from other parts of the ADA. The relay services that are promised under title IV must offer telephone service that is functionally equivalent to telephone service enjoyed by hearing individuals. This means that relayed calls should not receive busy signals or delays that are any greater than those currently experienced by voice telephone users. It also means that operators handling relay calls must have the necessary typing, spelling, and grammatical skills to properly and efficiently relay calls. In addition, operators should be familiar with the cultural and linguistic differences of the deaf community, since it is this community that will be relying most on the relay services.

The Federal Communications Commission is charged with implementing and enforcing the telecommunication section of the ADA. In so doing, the FCC should make sure to receive input from those individuals who will be relying on the relay systems for everyday telephone service. The best way to do this will be for the Commission to form a Federal Advisory Committee that would assist the Commission in devising the requirements for relay systems and monitoring their operation and enforcement.

The Senate version of the ADA had contained a prohibition against the use of surcharges to fund interstate relay services. The House lifted this prohibition. The method of funding ultimately chosen for interstate services, however, should not be identified on telephone bills in a way that would suggest that relay services are only for deaf and hard-of-hearing individuals. There is no reason to single out and to stigmatize individuals with hearing impairments.

Relay services for everyone. They will serve to bridge the telecommunications gap that has existed for at least 55 years, when the Communications Act of 1934 was first passed. As such, information about relay services must be readily available to all individuals. The Commission should ensure that information about relay numbers in the various States is accessible to all TDD and voice telephone users through whatever means is necessary, including a central 800 number, directory assistance operator services, and telephone books.

Deaf and hard-of-hearing individuals have waited all too long to enjoy the basic telephone service that has come to be so fundamental to our lives. Title IV of this act will finally enable these individuals to enjoy equal access to this very essential part of American life.

TITLE V

Title V includes various miscellaneous provisions. Section 501(a) is a provision that governs the interpretation of the ADA. It provides that, except where otherwise provided in the ADA, this act should not be interpreted to apply a lesser standard than section 504 or than the regulations issued under section 504. Thus, for example, if section 504 regulations—or case law—has applied a particular standard, and the ADA has not explicitly adopted a different standard, then the section 504 standard—and not a lesser one—should apply. Of course, in situations where the ADA has adopted a different and lower standard than the section 504 regulations, then the ADA standard applies to the ADA.

Section 501(b) is an antipreemption provision that provides that the rights, remedies and procedures of any Federal law—including the Rehabilitation Act of 1973—and of any State law—including State common law—that provides protection for people with disabilities are not preempted. For example, the rights and remedies of section 504 of the Rehabilitation Act, of State laws prohibiting discrimination on the basis of disability, of 42 U.S.C. section 1983 and of State tort law remain available to people with disabilities. Of course, where section 504 has been explicitly modified by the ADA—such as in the section regarding Amtrak—section 504 as modified applies.

Section 501(c) provides that the ADA should not be construed to prohibit or restrict the underwriting or classification of risks in insurance plans. A specific balance was struck in this area, which ensures that insurance companies may continue to underwrite and classify risks based on sound actuarial principles, but that does not allow such underwriting to be used as subterfuge as a means to evade the purposes of title I and III of the act. The reports accompanying the Education and Labor Committee and Judiciary Committee bills describe this section and note the parameters of the requirements regarding insurance companies and employers.

Section 501(d) was added by the Judiciary Committee to address concerns raised by certain organizations representing individuals with visual impairments and it has been incorporated in the final bill. This provision ensures that nothing in the ADA shall be construed to require an individual with a disability to accept an accommodation or benefit which such individual chooses not to accept.

Section 504 requires the Architectural and Transportation Barriers Compliance Board [ATBCB] to issue minimum guidelines, to supplement the existing Minimum Guidelines and Requirements for Accessible Design [MGRAD], that will establish requirements to ensure that buildings, facilities, rail passenger cars, and other vehicles are accessible in terms of architecture and design, transportation and communication to individuals with all kinds of disabilities. This is an important job for the excellent staff at ATBCB. In the final bill, the time line for issuance of these supplemental guidelines was extended to 9 months, to give the ATBCB sufficient time to develop and issue the guidelines. As the Education and Labor Report noted, it is also expected that the board will consider whether other revisions or improvements of the existing MGRAD—including scoping provisions—are called for to achieve consistency with the intent and requirements of this Act. Such changes would then also be applied in the Uniform Federal Accessibility Standards [UFAS]. For example, under the current UFAS requirements, access in certain historic buildings is to be provided to all levels of a building or facility whenever practical. The final regulations in this area should clarify that such access to all levels is required unless doing so would threaten or destroy the historic integrity or would be structurally impracticable.

Requirements regarding historic properties were added by the Education and Labor Committee in section 504(c) and are incorporated in the final bill. While alterations that will truly threatens or destroy the historic significance of qualified historic buildings are accommodated through this provision, it is certainly expected that alterations and changes which do not threaten or destroy the historic significance of such buildings will be done.

Section 505 sets forth an attorney's fees provision. This provision is essentially complementary to those incorporated by reference in the other titles of the act, and is designed simply to set forth clearly the elements that were always considered to be included in those other provisions. Thus, attorney's fees may be awarded for all forms of judicial and administrative proceedings. In addition, litigation expenses are included within the rubric of attorney's fees. As such, those expenses are to be assessed against a plaintiff only under the narrow standard set forth in *Christianburg Garment.* Particularly because of the current unavailability of damages for private plaintiffs under the ADA, it is to be hoped that courts

will liberally apply the attorney's fee provision of the act.

Section 506 provides for an extensive technical assistance program. This program will be essential in ensuring knowledgeable and effective compliance with the act. It is expected that sufficient resources will be placed in this program in order that it may be truly effective.

The rest of the provisions of title V deal with congressional coverage, with further provisions regarding current illegal users of drugs—which are analogous to the provisions regarding such individuals in the employment context—and with various exclusions to the definition of disability that were adopted by the Senate and accepted in the House bill. One modification made in the last provision was to clarify that homosexuality and bisexuality were not considered—and indeed, were never considered—impairments under the act, and as such, are not covered disabilities under the act.

The Americans with Disabilities Act which comes before the House today represents a magnificent example of bipartisan deliberation. After 2 years of hearings, negotiations, and refinements, we have before us a bill that we can all be proud of. I urge my colleagues to pass the Americans with Disabilities Act.

AUTHORIZING THE CLERK TO MAKE CORRECTIONS IN ENGROSSMENT OF H.R. 2273, AMERICANS WITH DISABILITIES ACT OF 1990

Mr. HOYER. Mr. Speaker, I ask unanimous consent that, in the engrossment of the bill, H.R. 2273, the Clerk be authorized to correct section numbers, cross-references, punctuation, and indentation, and to make other technical and conforming changes necessary to reflect the actions of the House.

The SPEAKER pro tempore (Mr. TRAXLER). Is there objection to the request of the gentleman from Maryland?

There was no objection.

GENERAL LEAVE

Mr. HOYER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and to include extraneous material, and I ask unanimous consent that I be allowed to include material detailing the development of the ADA to appear in the RECORD at the close of debate on the amendments, on H.R. 2273, the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Maryland?

There was no objection.

Mr. HOYER. Mr. Speaker, pursuant to House Resolution 394, I call up from the Speaker's table the Senate bill (S. 933) to establish a clear and comprehensive prohibition of discrimination on the basis of disability, and ask for its immediate consideration in the House.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. HOYER

Mr. HOYER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. HOYER moves to strike all after the enacting clause of the Senate bill, S. 933, and to insert the provisions of the bill, H.R. 2273, as passed by the House, as follows:

*Resolved*, That the bill from the Senate (S. 933) entitled "An Act to establish a clear and comprehensive prohibition of discrimination on the basis of disability", do pass with the following amendment: Strike out all after the enacting clause and insert:

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Americans with Disabilities Act of 1990".

(b) TABLE OF CONTENTS.—The table of contents is as follows:

Sec. 1. Short title; table of contents.
Sec. 2. Findings and purposes.
Sec. 3. Definitions.

TITLE I—EMPLOYMENT

Sec. 101. Definitions.
Sec. 102. Discrimination.
Sec. 103. Defenses.
Sec. 104. Illegal use of drugs and alcohol.
Sec. 105. Posting notices.
Sec. 106. Regulations.
Sec. 107. Enforcement.
Sec. 108. Effective date.

TITLE II—PUBLIC SERVICES

SUBTITLE A—PROHIBITION AGAINST DISCRIMINATION AND OTHER GENERALLY APPLICABLE PROVISIONS

Sec. 201. Definition.
Sec. 202. Discrimination.
Sec. 203. Enforcement.
Sec. 204. Regulations.
Sec. 205. Effective date.

SUBTITLE B—ACTIONS APPLICABLE TO PUBLIC TRANSPORTATION PROVIDED BY PUBLIC ENTITIES CONSIDERED DISCRIMINATORY

PART I—PUBLIC TRANSPORTATION OTHER THAN BY AIRCRAFT OR CERTAIN RAIL OPERATIONS

Sec. 221. Definitions.
Sec. 222. Public entities operating fixed route systems.
Sec. 223. Paratransit as a complement to fixed route service.
Sec. 224. Public entity operating a demand responsive system.
Sec. 225. Temporary relief where lifts are unavailable.
Sec. 226. New facilities.
Sec. 227. Alterations of existing facilities.
Sec. 228. Public transportation programs and activities in existing facilities and one car per train rule.
Sec. 229. Regulations.
Sec. 230. Interim accessibility requirements.
Sec. 231. Effective date.

PART II—PUBLIC TRANSPORTATION BY INTERCITY AND COMMUTER RAIL

Sec. 241. Definitions.
Sec. 242. Intercity and commuter rail actions considered discriminatory.
Sec. 243. Conformance of accessibility standards.
Sec. 244. Regulations.
Sec. 245. Interim accessibility requirements.
Sec. 246. Effective date.

TITLE III—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

Sec. 301. Definitions.
Sec. 302. Prohibition of discrimination by public accommodations.
Sec. 303. New construction and alterations in public accommodations and commercial facilities.
Sec. 304. Prohibition of discrimination in public transportation services provided by private entities.
Sec. 305. Study.
Sec. 306. Regulations.
Sec. 307. Exemptions for private clubs and religious organizations.
Sec. 308. Enforcement.
Sec. 309. Examinations and courses.
Sec. 310. Effective date.

TITLE IV—TELECOMMUNICATIONS RELAY SERVICES

Sec. 401. Telecommunication services for hearing-impaired and speech-impaired individuals.
Sec. 402. Closed-captioning of public service announcements.

TITLE V—MISCELLANEOUS PROVISIONS

Sec. 501. Construction.
Sec. 502. State immunity.
Sec. 503. Prohibition against retaliation and coercion.
Sec. 504. Regulations by the Architectural and Transportation Barriers Compliance Board.
Sec. 505. Attorney's fees.
Sec. 506. Technical assistance.
Sec. 507. Federal wilderness areas.
Sec. 508. Transvestites.
Sec. 509. Congressional inclusion.
Sec. 510. Illegal use of drugs.
Sec. 511. Definitions.
Sec. 512. Amendments to the Rehabilitation Act.
Sec. 513. Alternative means of dispute resolution.
Sec. 514. Severability.

SEC. 2. FINDINGS AND PURPOSES.

(a) FINDINGS.—The Congress finds that—

(1) some 43,000,000 Americans have one or more physical or mental disabilities, and this number is increasing as the population as a whole is growing older;

(2) historically, society has tended to isolate and segregate individuals with disabilities, and, despite some improvements, such forms of discrimination against individuals with disabilities continue to be a serious and pervasive social problem;

(3) discrimination against individuals with disabilities persists in such critical areas as employment, housing, public accommodations, education, transportation, communication, recreation, institutionalization, health services, voting, and access to public services;

(4) unlike individuals who have experienced discrimination on the basis of race, color, sex, national origin, religion, or age, individuals who have experienced discrimination on the basis of disability have often had no legal recourse to redress such discrimination;

(5) individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion, the discriminatory effects of architectural, transportation, and communication barriers, overprotective rules and policies, failure to make modifications to existing facilities and practices, exclusionary qualification standards and criteria, segregation, and relegation to lesser services, programs, activities, benefits, jobs, or other opportunities;

(6) census data, national polls, and other studies have documented that people with disabilities, as a group, occupy an inferior status in our society, and are severely disad-

vantaged socially, vocationally, economically, and educationally;

(7) individuals with disabilities are a discrete and insular minority who have been faced with restrictions and limitations, subjected to a history of purposeful unequal treatment, and relegated to a position of political powerlessness in our society, based on characteristics that are beyond the control of such individuals and resulting from stereotypic assumptions not truly indicative of the individual ability of such individuals to participate in, and contribute to, society;

(8) the Nation's proper goals regarding individuals with disabilities are to assure equality of opportunity, full participation, independent living, and economic self-sufficiency for such individuals; and

(9) the continuing existence of unfair and unnecessary discrimination and prejudice denies people with disabilities the opportunity to compete on an equal basis and to pursue those opportunities for which our free society is justifiably famous, and costs the United States billions of dollars in unnecessary expenses resulting from dependency and nonproductivity.

(b) PURPOSE.—It is the purpose of this Act—

(1) to provide a clear and comprehensive national mandate for the elimination of discrimination against individuals with disabilities;

(2) to provide clear, strong, consistent, enforceable standards addressing discrimination against individuals with disabilities;

(3) to ensure that the Federal Government plays a central role in enforcing the standards established in this Act on behalf of individuals with disabilities; and

(4) to invoke the sweep of congressional authority, including the power to enforce the fourteenth amendment and to regulate commerce, in order to address the major areas of discrimination faced day-to-day by people with disabilities.

SEC. 3. DEFINITIONS.

As used in this Act:

(1) AUXILIARY AIDS AND SERVICES.—The term "auxiliary aids and services" includes—

(A) qualified interpreters or other effective methods of making aurally delivered materials available to individuals with hearing impairments;

(B) qualified readers, taped texts, or other effective methods of making visually delivered materials available to individuals with visual impairments;

(C) acquisition or modification of equipment or devices; and

(D) other similar services and actions.

(2) DISABILITY.—The term "disability" means, with respect to an individual—

(A) a physical or mental impairment that substantially limits one or more of the major life activities of such individual;

(B) a record of such an impairment; or

(C) being regarded as having such an impairment.

(3) STATE.—The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

## TITLE I—EMPLOYMENT

SEC. 101. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Equal Employment Opportunity Commission established by section 705 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-4).

(2) COVERED ENTITY.—The term "covered entity" means an employer, employment agency, labor organization, or joint labor-management committee.

(3) DIRECT THREAT.—The term "direct threat" means a significant risk to the health or safety of others that cannot be eliminated by reasonable accommodation.

(4) EMPLOYEE.—The term "employee" means an individual employed by an employer.

(5) EMPLOYER.—

(A) IN GENERAL.—The term "employer" means a person engaged in an industry affecting commerce who has 15 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding calendar year, and any agent of such person, except that, for two years following the effective date of this title, an employer means a person engaged in an industry affecting commerce who has 25 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding year, and any agent of such person.

(B) EXCEPTIONS.—The term "employer" does not include—

(i) the United States, a corporation wholly owned by the government of the United States, or an Indian tribe; or

(ii) a bona fide private membership club (other than a labor organization) that is exempt from taxation under section 501(c) of the Internal Revenue Code of 1986.

(6) Illegal use of drugs.—

(A) In general.—The term "illegal use of drugs" means the use of drugs, the possession or distribution of which is unlawful under the Controlled Substances Act (21 U.S.C. 812). Such term does not include the use of a drug taken under supervision by a licensed health care professional, or other uses authorized by the Controlled Substances Act or other provisions of Federal law.

(B) Drugs.—The term "drug" means a controlled substance, as defined in schedules I through V of section 202 of the Controlled Substances Act.

(7) PERSON, ETC.—The terms "person," "labor organization," "employment agency," "commerce," and "industry affecting commerce," shall have the same meaning given such terms in section 701 of the Civil Rights Act of 1964 (42 U.S.C. 2000e).

(8) QUALIFIED INDIVIDUAL WITH A DISABILITY.—The term "qualified individual with a disability" means an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the employment position that such individual holds or desires. For the purposes of this title, consideration shall be given to the employer's judgment as to what functions of a job are essential, and if an employer has prepared a written description before advertising or interviewing applicants for the job, this description shall be considered evidence of the essential functions of the job.

(9) REASONABLE ACCOMMODATION.—The term "reasonable accommodation" may include—

(A) making existing facilities used by employees readily accessible to and usable by individuals with disabilities; and

(B) job restructuring, part-time or modified work schedules, reassignment to a vacant position, acquisition or modification of equipment or devices, appropriate adjustment or modifications of examinations, training materials or policies, the provision of qualified readers or interpreters, and other similar accommodations for individuals with disabilities.

(10) UNDUE HARDSHIP.—

(A) In general.—The term "undue hardship" means an action requiring significant difficulty or expense, when considered in light of the factors set forth in subparagraph (B).

(B) FACTORS TO BE CONSIDERED.—In determining whether an accommodation would impose an undue hardship on a covered entity, factors to be considered include—

(i) the nature and cost of the accommodation needed under this Act;

(ii) the overall financial resources of the facility or facilities involved in the provision of the reasonable accommodation; the number of persons employed at such facility; the effect on expenses and resources, or the impact otherwise of such accommodation upon the operation of the facility;

(iii) the overall financial resources of the covered entity; the overall size of the business of a covered entity with respect to the number of its employees; the number, type, and location of its facilities; and

(iv) the type of operation or operations of the covered entity, including the composition, structure, and functions of the workforce of such entity; the geographic separateness, administrative, or fiscal relationship of the facility or facilities in question to the covered entity.

SEC. 102. DISCRIMINATION.

(a) GENERAL RULE.—No covered entity shall discriminate against a qualified individual with a disability because of the disability of such individual in regard to job application procedures, the hiring, advancement, or discharge of employees, employee compensation, job training, and other terms, conditions, and privileges of employment.

(b) CONSTRUCTION.—As used in subsection (a), the term "discriminate" includes—

(1) limiting, segregating, or classifying a job applicant or employee in a way that adversely affects the opportunities or status of such applicant or employee because of the disability of such applicant or employee;

(2) participating in a contractual or other arrangement or relationship that has the effect of subjecting a covered entity's qualified applicant or employee with a disability to the discrimination prohibited by this title (such relationship includes a relationship with an employment or referral agency, labor union, an organization providing fringe benefits to an employee of the covered entity, or an organization providing training and apprenticeship programs);

(3) utilizing standards, criteria, or methods of administration—

(A) that have the effect of discrimination on the basis of disability; or

(B) that perpetuate the discrimination of others who are subject to common administrative control;

(4) excluding or otherwise denying equal jobs or benefits to a qualified individual because of the known disability of an individual with whom the qualified individual is known to have a relationship or association;

(5)(A) not making reasonable accommodations to the known physical or mental limitations of an otherwise qualified individual with a disability who is an applicant or employee, unless such covered entity can demonstrate that the accommodation would impose an undue hardship on the operation of the business of such covered entity; or

(B) denying employment opportunities to a job applicant or employee who is an other-

wise qualified individual with a disability, if such denial is based on the need of such covered entity to make reasonable accommodation to the physical or mental impairments of the employee or applicant;

(6) using qualification standards, employment tests or other selection criteria that screen out or tend to screen out an individual with a disability or a class of individuals with disabilities unless the standard, test or other selection criteria, as used by the covered entity, is shown to be job-related for the position in question and is consistent with business necessity; and

(7) failing to select and administer tests concerning employment in the most effective manner to ensure that, when such test is administered to a job applicant or employee who has a disability that impairs sensory, manual, or speaking skills, such test results accurately reflect the skills, aptitude, or whatever other factor of such applicant or employee that such test purports to measure, rather than reflecting the impaired sensory, manual, or speaking skills of such employee or applicant (except where such skills are the factors that the test purports to measure).

(c) MEDICAL EXAMINATIONS AND INQUIRIES.—

(1) IN GENERAL.—The prohibition against discrimination as referred to in subsection (a) shall include medical examinations and inquiries.

(2) PREEMPLOYMENT.—

(A) PROHIBITED EXAMINATION OR INQUIRY.—Except as provided in paragraph (3), a covered entity shall not conduct a medical examination or make inquiries of a job applicant as to whether such applicant is an individual with a disability or as to the nature or severity of such disability.

(B) ACCEPTABLE INQUIRY.—A covered entity may make preemployment inquiries into the ability of an applicant to perform job-related functions.

(3) EMPLOYMENT ENTRANCE EXAMINATION.—A covered entity may require a medical examination after an offer of employment has been made to a job applicant and prior to the commencement of the employment duties of such applicant, and may condition an offer of employment on the results of such examination, if—

(A) all entering employees are subjected to such an examination regardless of disability;

(B) information obtained regarding the medical condition or history of the applicant is collected and maintained on separate forms and in separate medical files and is treated as a confidential medical record, except that—

(i) supervisors and managers may be informed regarding necessary restrictions on the work or duties of the employee and necessary accommodations;

(ii) first aid and safety personnel may be informed, when appropriate, if the disability might require emergency treatment; and

(iii) government officials investigating compliance with this Act shall be provided relevant information on request; and

(C) the results of such examination are used only in accordance with this title.

(4) EXAMINATION AND INQUIRY.—

(A) PROHIBITED EXAMINATIONS AND INQUIRIES.—A covered entity shall not require a medical examination and shall not make inquiries of an employee as to whether such employee is an individual with a disability or as to the nature or severity of the disability, unless such examination or inquiry is shown to be job-related and consistent with business necessity.

(B) ACCEPTABLE EXAMINATIONS AND INQUIRIES.—A covered entity may conduct voluntary medical examinations, including voluntary medical histories, which are part of an employee health program available to employees at that work site. A covered entity may make inquiries into the ability of an employee to perform job-related functions.

(C) REQUIREMENT.—Information obtained under subparagraph (B) regarding the medical condition or history of any employee are subject to the requirements of subparagraphs (B) and (C) of paragraph (3).

SEC. 103. DEFENSES.

(a) IN GENERAL.—It may be a defense to a charge of discrimination under this Act that an alleged application of qualification standards, tests, or selection criteria that screen out or tend to screen out or otherwise deny a job or benefit to an individual with a disability has been shown to be job-related and consistent with business necessity, and such performance cannot be accomplished by reasonable accommodation, as required under this title.

(b) QUALIFICATION STANDARDS.—The term "qualification standards" may include a requirement that an individual shall not pose a direct threat to the health or safety of other individuals in the workplace.

(c) RELIGIOUS ENTITIES.—

(1) IN GENERAL.—This title shall not prohibit a religious corporation, association, educational institution, or society from giving preference in employment to individuals of a particular religion to perform work connected with the carrying on by such corporation, association, educational institution, or society of its activities.

(2) RELIGIOUS TENETS REQUIREMENT.—Under this title, a religious organization may require that all applicants and employees conform to the religious tenets of such organization.

(d) FOOD HANDLING JOBS.—It shall not be a violation of this Act for an employer to refuse to assign or continue to assign any employee with an infectious or communicable disease of public health significance to a job involving food handling, provided that the employer shall make reasonable accommodation that would offer an alternative employment opportunity for which the employee is qualified and for which the employee would sustain no economic damage.

SEC. 104. ILLEGAL USE OF DRUGS AND ALCOHOL.

(a) QUALIFIED INDIVIDUAL WITH A DISABILITY.—For purposes of this title, the term "qualified individual with a disability" shall not include any employee or applicant who is currently engaging in the illegal use of drugs, when the covered entity acts on the basis of such use.

(b) RULES OF CONSTRUCTION.—Nothing in subsection (a) shall be construed to exclude as a qualified individual with a disability an individual who—

(1) has successfully completed a supervised drug rehabilitation program and is no longer engaging in the illegal use of drugs, or has otherwise been rehabilitated successfully and is no longer engaging in such use;

(2) is participating in a supervised rehabilitation program and is no longer engaging in such use; or

(3) is erroneously regarded as engaging in such use, but is not engaging in such use;

except that it shall not be a violation of this Act for a covered entity to adopt or administer reasonable policies or procedures, including but not limited to drug testing, designed to ensure that an individual described in paragraph (1) or (2) is no longer engaging in the illegal use of drugs.

(c) AUTHORITY OF COVERED ENTITY.—A covered entity—

(1) may prohibit the illegal use of drugs and the use of alcohol at the workplace by all employees;

(2) may require that employees shall not be under the influence of alcohol or be engaging in the illegal use of drugs at the workplace;

(3) may require that employees behave in conformance with the requirements established under the Drug-Free Workplace Act of 1988 (41 U.S.C. 701 et seq.);

(4) may hold an employee who engages in the illegal use of drugs or who is an alcoholic to the same qualification standards for employment or job performance and behavior that such entity holds other employees, even if any unsatisfactory performance or behavior is related to the drug use or alcoholism of such employee; and

(5) may, with respect to Federal regulations regarding alcohol and the illegal use of drugs, require that—

(A) employees comply with the standards established in such regulations of the Department of Defense, if the employees of the covered entity are employed in an industry subject to such regulations, including complying with regulations (if any) that apply to employment in sensitive positions in such an industry, in the case of employees of the covered entity who are employed in such positions (as defined in the regulations of the Department of Defense);

(B) employees comply with the standards established in such regulations of the Nuclear Regulatory Commission, if the employees of the covered entity are employed in an industry subject to such regulations, including complying with regulations (if any) that apply to employment in sensitive positions in such an industry, in the case of employees of the covered entity who are employed in such positions (as defined in the regulations of the Nuclear Regulatory Commission); and

(C) employees comply with the standards established in such regulations of the Department of Transportation, if the employees of the covered entity are employed in a transportation industry subject to such regulations, including complying with such regulations (if any) that apply to employment in sensitive positions in such an industry, in the case of employees of the covered entity who are employed in such positions (as defined in the regulations of the Department of Transportation).

(d) DRUG TESTING.—

(1) IN GENERAL.—For purposes of this title, a test to determine the illegal use of drugs shall not be considered a medical examination.

(2) CONSTRUCTION.—Nothing in this title shall be construed to encourage, prohibit, or authorize the conducting of drug testing for the illegal use of drugs by job applicants or employees or making employment decisions based on such test results.

(e) RAIL EMPLOYEES.—Nothing in this title shall be construed to encourage, prohibit, restrict, or authorize the otherwise lawful exercise by railroads of authority to—

(1) test railroad employees in, and applicants for, positions involving safety-sensitive duties, as determined by the Secretary of Transportation, for the illegal use of drugs and for on-duty impairment by alcohol; and

(2) remove such persons who test positive pursuant to paragraph (1) from safety-sensitive duties in implementing subsection (c).

SEC. 105. POSTING NOTICES.

Every employer, employment agency, labor organization, or joint labor-management committee covered under this title shall post notices in an accessible format to applicants, employees, and members describing the applicable provisions of this Act, in the manner prescribed by section 711 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-10).

SEC. 106. REGULATIONS.

Not later than 1 year after the date of enactment of this Act, the Commission shall issue regulations in an accessible format to carry out this title in accordance with subchapter II of chapter 5 of title 5, United States Code.

SEC. 107. ENFORCEMENT.

(a) Powers, Remedies, and Procedures.—The powers, remedies, and procedures set forth in sections 705, 706, 707, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-4, 2000e-5, 2000e-6, 2000e-8, and 2000e-9) shall be the powers, remedies, and procedures this title provides to the Commission, to the Attorney General, or to any person alleging discrimination on the basis of disability in violation of any provision of this Act, or regulations promulgated under section 106, concerning employment.

(b) COORDINATION.—The agencies with enforcement authority for actions which allege employment discrimination under this title and under the Rehabilitation Act of 1973 shall develop procedures to ensure that administrative complaints filed under this title and under the Rehabilitation Act of 1973 are dealt with in a manner that avoids duplication of effort and prevents imposition of inconsistent or conflicting standards for the same requirements under this title and the Rehabilitation Act of 1973. Such agencies shall establish such coordinating mechanisms in the regulations implementing this title and the Rehabilitation Act of 1973.

SEC. 108. EFFECTIVE DATE.

This title shall become effective 24 months after the date of enactment.

## TITLE II—PUBLIC SERVICES

### Subtitle A—Prohibition Against Discrimination and Other Generally Applicable Provisions

SEC. 201. DEFINITION.

As used in this title:

(1) PUBLIC ENTITY.—The term "public entity" means—

(A) any State or local government;

(B) any department, agency, special purpose district, or other instrumentality of a State or States or local government; and

(C) the National Railroad Passenger Corporation, and any commuter authority (as defined in section 103(8) of the Rail Passenger Service Act).

(2) QUALIFIED INDIVIDUAL WITH A DISABILITY.—The term "qualified individual with a disability" means an individual with a disability who, with or without reasonable modifications to rules, policies, or practices, the removal of architectural, communication, or transportation barriers, or the provision of auxiliary aids and services, meets the essential eligibility requirements for the receipt of services or the participation in programs or activities provided by a public entity.

SEC. 202. DISCRIMINATION.

Subject to the provisions of this title, no qualified individual with a disability shall, by reason of such disability, be excluded from participation in or be denied the benefits of the services, programs, or activities of a public entity, or be subjected to discrimination by any such entity.

SEC. 203. ENFORCEMENT.

The remedies, procedures, and rights set forth in section 505 of the Rehabilitation Act of 1973 (29 U.S.C. 794a) shall be the remedies, procedures and rights this title provides to any person alleging discrimination on the basis of disability in violation of section 202.

SEC. 204. REGULATIONS.

(a) IN GENERAL.—Not later than 1 year after the date of enactment of this Act, the Attorney General shall promulgate regulations in an accessible format that implement this subtitle. Such regulations shall not include any matter within the scope of the authority of the Secretary of Transportation under section 223, 229, or 244.

(b) RELATIONSHIP TO OTHER REGULATIONS.—Except for "program accessibility, existing facilities", and "communications", regulations under subsection (a) shall be consistent with this Act and with the coordination regulations under part 41 of title 28, Code of Federal Regulations (as promulgated by the Department of Health, Education, and Welfare on January 13, 1978), applicable to recipients of Federal financial assistance under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794). With respect to "program accessibility, existing facilities", and "communications", such regulations shall be consistent with regulations and analysis as in part 39 of title 28 of the Code of Federal Regulations, applicable to federally conducted activities under such section 504.

(c) STANDARDS.—Regulations under subsection (a) shall include standards applicable to facilities and vehicles covered by this subtitle, other than facilities, stations, rail passenger cars, and vehicles covered by subtitle B. Such standards shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 504(a) of this Act.

SEC. 205. EFFECTIVE DATE.

(a) GENERAL RULE.—Except as provided in subsection (b), this subtitle shall become effective 18 months after the date of enactment of this Act.

(b) EXCEPTION.—Section 204 shall become effective on the date of enactment of this Act.

### Subtitle B—Actions Applicable to Public Transportation Provided by Public Entities Considered Discriminatory

#### PART I—PUBLIC TRANSPORTATION OTHER THAN BY AIRCRAFT OR CERTAIN RAIL OPERATIONS

SEC. 221. DEFINITIONS.

As used in this part:

(1) DEMAND RESPONSIVE SYSTEM.—The term "demand responsive system" means any system of providing designated public transportation which is not a fixed route system.

(2) DESIGNATED PUBLIC TRANSPORTATION.—The term "designated public transportation" means transportation (other than public school transportation) by bus, rail, or any other conveyance (other than transportation by aircraft or intercity or commuter rail transportation (as defined in section 241)) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

(3) FIXED ROUTE SYSTEM.—The term "fixed route system" means a system of providing designated public transportation on which a vehicle is operated along a prescribed route according to a fixed schedule.

(4) OPERATES.—The term "operates", as used with respect to a fixed route system or demand responsive system, includes operation of such system by a person under a contractual or other arrangement or relationship with a public entity.

(5) PUBLIC SCHOOL TRANSPORTATION.—The term "public school transportation" means transportation by schoolbus vehicles of schoolchildren, personnel, and equipment to and from a public elementary or secondary school and school-related activities.

(6) SECRETARY.—The term "Secretary" means the Secretary of Transportation.

SEC. 222. PUBLIC ENTITIES OPERATING FIXED ROUTE SYSTEMS.

(a) PURCHASE AND LEASE OF NEW VEHICLES.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a public entity which operates a fixed route system to purchase or lease a new bus, a new rapid rail vehicle, a new light rail vehicle, or any other new vehicle to be used on such system, if the solicitation for such purchase or lease is made after the 30th day following the effective date of this subsection and if such bus, rail vehicle, or other vehicle is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(b) PURCHASE AND LEASE OF USED VEHICLES.—Subject to subsection (c)(1), it shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a public entity which operates a fixed route system to purchase or lease, after the 30th day following the effective date of this subsection, a used vehicle for use on such system unless such entity makes demonstrated good faith efforts to purchase or lease a used vehicle for use on such system that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(c) REMANUFACTURED VEHICLES.—

(1) GENERAL RULE.—Except as provided in paragraph (2), it shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a public entity which operates a fixed route system—

(A) to remanufacture a vehicle for use on such system so as to extend its usable life for 5 years or more, which remanufacture begins (or for which the solicitation is made) after the 30th day following the effective date of this subsection; or

(B) to purchase or lease for use on such system a remanufactured vehicle which has been remanufactured so as to extend its usable life for 5 years or more, which purchase or lease occurs after such 30th day and during the period in which the usable life is extended;

unless, after remanufacture, the vehicle is, to the maximum extent feasible, readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) EXCEPTION FOR HISTORIC VEHICLES.—

(A) GENERAL RULE.—If a public entity operates a fixed route system any segment of which is included on the National Register of Historic Places and if making a vehicle of historic character to be used solely on such segment readily accessible to and usable by individuals with disabilities would significantly alter the historic character of such vehicle, the public entity only has to make (or to purchase or lease a remanufactured

vehicle with) those modifications which are necessary to meet the requirements of paragraph (1) and which do not significantly alter the historic character of such vehicle.

(B) VEHICLES OF HISTORIC CHARACTER DEFINED BY REGULATIONS.—For purposes of this paragraph and section 228(b), a vehicle of historic character shall be defined by the regulations issued by the Secretary to carry out this subsection.

SEC. 223. PARATRANSIT AS A COMPLEMENT TO FIXED ROUTE SERVICE.

(a) GENERAL RULE.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a public entity which operates a fixed route system (other than a system which provides solely commuter bus service) to fail to provide with respect to the operations of its fixed route system, in accordance with this section, paratransit and other special transportation services to individuals with disabilities, including individuals who use wheelchairs, that are sufficient to provide to such individuals a level of service (1) which is comparable to the level of designated public transportation services provided to individuals without disabilities using such system; or (2) in the case of response time, which is comparable, to the extent practicable, to the level of designated public transportation services provided to individuals without disabilities using such system.

(b) ISSUANCE OF REGULATIONS.—Not later than 1 year after the effective date of this subsection, the Secretary shall issue final regulations to carry out this section.

(c) REQUIRED CONTENTS OF REGULATIONS.—

(1) ELIGIBLE RECIPIENTS OF SERVICE.—The regulations issued under this section shall require each public entity which operates a fixed route system to provide the paratransit and other special transportation services required under this section—

(A)(i) to any individual with a disability who is unable, as a result of a physical or mental impairment (including a vision impairment) and without the assistance of another individual (except an operator of a wheelchair lift or other boarding assistance device), to board, ride, or disembark from any vehicle on the system which is readily accessible to and usable by individuals with disabilities;

(ii) to any individual with a disability who needs the assistance of a wheelchair lift or other boarding assistance device (and is able with such assistance) to board, ride, and disembark from any vehicle which is readily accessible to and usable by individuals with disabilities if the individual wants to travel on a route on the system during the hours of operation of the system at a time (or within a reasonable period of such time) when such a vehicle is not being used to provide designated public transportation on the route; and

(iii) to any individual with a disability who has a specific impairment-related condition which prevents such individual from traveling to a boarding location or from a disembarking location on such system; and

(B) to 1 other individual accompanying the individual with the disability.

For purposes of clauses (i) and (ii) of subparagraph (A), boarding or disembarking from a vehicle does not include travel to the boarding location or from the disembarking location.

(2) SERVICE AREA.—The regulations issued under this section shall require the provision of paratransit and special transportation services required under this section in the service area of each public entity which operates a fixed route system, other than any portion of the service area in which the public entity solely provides commuter bus service.

(3) SERVICE CRITERIA.—Subject to paragraphs (1) and (2), the regulations issued under this section shall establish minimum service criteria for determining the level of services to be required under this section.

(4) UNDUE FINANCIAL BURDEN LIMITATION.—The regulations issued under this section shall provide that, if the public entity is able to demonstrate to the satisfaction of the Secretary that the provision of paratransit and other special transportation services otherwise required under this section would impose an undue financial burden on the public entity, the public entity, notwithstanding any other provision of this section (other than paragraph (5)), shall only be required to provide such services to the extent that providing such services would not impose such a burden.

(5) ADDITIONAL SERVICES.—The regulations issued under this section shall establish circumstances under which the Secretary may require a public entity to provide, notwithstanding paragraph (4), paratransit and other special transportation services under this section beyond the level of paratransit and other special transportation services which would otherwise be required under paragraph (4).

(6) PUBLIC PARTICIPATION.—The regulations issued under this section shall require that each public entity which operates a fixed route system hold a public hearing, provide an opportunity for public comment, and consult with individuals with disabilities in preparing its plan under paragraph (7).

(7) PLANS.—The regulations issued under this section shall require that each public entity which operates a fixed route system—

(A) within 18 months after the effective date of this subsection, submit to the Secretary, and commence implementation of, a plan for providing paratransit and other special transportation services which meets the requirements of this section; and

(B) on an annual basis thereafter, submit to the Secretary, and commence implementation of, a plan for providing such services.

(8) PROVISION OF SERVICES BY OTHERS.—The regulations issued under this section shall—

(A) require that a public entity submitting a plan to the Secretary under this section identify in the plan any person or other public entity which is providing a paratransit or other special transportation service for individuals with disabilities in the service area to which the plan applies; and

(B) provide that the public entity submitting the plan does not have to provide under the plan such service for individuals with disabilities.

(9) OTHER PROVISIONS.—The regulations issued under this section shall include such other provisions and requirements as the Secretary determines are necessary to carry out the objectives of this section.

(d) REVIEW OF PLAN.—

(1) GENERAL RULE.—The Secretary shall review a plan submitted under this section for the purpose of determining whether or not such plan meets the requirements of this section, including the regulations issued under this section.

(2) DISAPPROVAL.—If the Secretary determines that a plan reviewed under this subsection fails to meet the requirements of this section, the Secretary shall disapprove the plan and notify the public entity which submitted the plan of such disapproval and the reasons therefor.

(3) MODIFICATION OF DISAPPROVED PLAN.—Not later than 90 days after the date of disapproval of a plan under this subsection, the public entity which submitted the plan shall modify the plan to meet the requirements of this section and shall submit to the Secretary, and commence implementation of, such modified plan.

(e) DISCRIMINATION DEFINED.—As used in subsection (a), the term "discrimination" includes—

(1) a failure of a public entity to which the regulations issued under this section apply to submit, or commence implementation of, a plan in accordance with subsections (c)(6) and (c)(7);

(2) a failure of such entity to submit, or commence implementation of, a modified plan in accordance with subsection (d)(3);

(3) submission to the Secretary of a modified plan under subsection (d)(3) which does not meet the requirements of this section; or

(4) a failure of such entity to provide paratransit or other special transportation services in accordance with the plan or modified plan the public entity submitted to the Secretary under this section.

(f) STATUTORY CONSTRUCTION.—Nothing in this section shall be construed as preventing a public entity—

(1) from providing paratransit or other special transportation services at a level which is greater than the level of such services which are required by this section,

(2) from providing paratransit or other special transportation services in addition to those paratransit and special transportation services required by this section, or

(3) from providing such services to individuals in addition to those individuals to whom such services are required to be provided by this section.

SEC. 224. PUBLIC ENTITY OPERATING A DEMAND RESPONSIVE SYSTEM.

If a public entity operates a demand responsive system, it shall be considered discrimination, for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such entity to purchase or lease a new vehicle for use on such system, for which a solicitation is made after the 30th day following the effective date of this section, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, unless such system, when viewed in its entirety, provides a level of service to such individuals equivalent to the level of service such system provides to individuals without disabilities.

SEC. 225. TEMPORARY RELIEF WHERE LIFTS ARE UNAVAILABLE.

(a) GRANTING.—With respect to the purchase of new buses, a public entity may apply for, and the Secretary may temporarily relieve such public entity from the obligation under section 222(a) or 224 to purchase new buses that are readily accessible to and usable by individuals with disabilities if such public entity demonstrates to the satisfaction of the Secretary—

(1) that the initial solicitation for new buses made by the public entity specified that all new buses were to be lift-equipped and were to be otherwise accessible to and usable by individuals with disabilities;

(2) the unavailability from any qualified manufacturer of hydraulic, electromechanical, or other lifts for such new buses;

(3) that the public entity seeking temporary relief has made good faith efforts to locate a qualified manufacturer to supply the lifts to the manufacturer of such buses in sufficient time to comply with such solicitation; and

(4) that any further delay in purchasing new buses necessary to obtain such lifts would significantly impair transportation services in the community served by the public entity.

(b) DURATION AND NOTICE TO CONGRESS.—Any relief granted under subsection (a) shall be limited in duration by a specified date, and the appropriate committees of Congress shall be notified of any such relief granted.

(c) FRAUDULENT APPLICATION.—If, at any time, the Secretary has reasonable cause to believe that any relief granted under subsection (a) was fraudulently applied for, the Secretary shall—

(1) cancel such relief if such relief is still in effect; and

(2) take such other action as the Secretary considers appropriate.

SEC. 226. NEW FACILITIES.

For purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for a public entity to construct a new facility to be used in the provision of designated public transportation services unless such facility is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 227. ALTERATIONS OF EXISTING FACILITIES.

(a) GENERAL RULE.—With respect to alterations of an existing facility or part thereof used in the provision of designated public transportation services that affect or could affect the usability of the facility or part thereof, it shall be considered discrimination, for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for a public entity to fail to make such alterations (or to ensure that the alterations are made) in such a manner that, to the maximum extent feasible, the altered portions of the facility are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, upon the completion of such alterations. Where the public entity is undertaking an alteration that affects or could affect usability of or access to an area of the facility containing a primary function, the entity shall also make the alterations in such a manner that, to the maximum extent feasible, the path of travel to the altered area and the bathrooms, telephones, and drinking fountains serving the altered area, are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, upon completion of such alterations, where such alterations to the path of travel or the bathrooms, telephones, and drinking fountains serving the altered area are not disproportionate to the overall alterations in terms of cost and scope (as determined under criteria established by the Attorney General).

(b) SPECIAL RULE FOR STATIONS.—

(1) GENERAL RULE.—For purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for a public entity that provides designated public transportation to fail, in accordance with the provisions of this subsection, to make key stations (as determined under criteria established by the Secretary by regulation) in rapid rail and light rail systems readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) RAPID RAIL AND LIGHT RAIL KEY STATIONS.—

(A) ACCESSIBILITY.—Except as otherwise provided in this paragraph, all key stations (as determined under criteria established by the Secretary by regulation) in rapid rail and light rail systems shall be made readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in no event later than the last day of the 3-year period beginning on the effective date of this paragraph.

(B) EXTENSION FOR EXTRAORDINARILY EXPENSIVE STRUCTURAL CHANGES.—The Secretary may extend the 3-year period under subparagraph (A) up to a 30-year period for key stations in a rapid rail or light rail system which stations need extraordinarily expensive structural changes to, or replacement of, existing facilities; except that by the last day of the 20th year following the date of the enactment of this Act at least ⅔ of such key stations must be readily accessible to and usable by individuals with disabilities.

(3) PLANS AND MILESTONES.—The Secretary shall require the appropriate public entity to develop and submit to the Secretary a plan for compliance with this subsection—

(A) that reflects consultation with individuals with disabilities affected by such plan and the results of a public hearing and public comments on such plan, and

(B) that establishes milestones for achievement of the requirements of this subsection.

SEC. 228. PUBLIC TRANSPORTATION PROGRAMS AND ACTIVITIES IN EXISTING FACILITIES AND ONE CAR PER TRAIN RULE.

(a) PUBLIC TRANSPORTATION PROGRAMS AND ACTIVITIES IN EXISTING FACILITIES.—

(1) IN GENERAL.—With respect to existing facilities used in the provision of designated public transportation services, it shall be considered discrimination, for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for a public entity to fail to operate a designated public transportation program or activity conducted in such facilities so that, when viewed in the entirety, the program or activity is readily accessible to and usable by individuals with disabilities.

(2) KEY STATIONS.—Paragraph (1) shall not apply to a key station if the portion of such station providing access to the vehicle boarding or disembarking location has not been made readily accessible to and usable by individuals with disabilities who use wheelchairs at that station.

(b) ONE CAR PER TRAIN RULE.—

(1) GENERAL RULE.—Subject to paragraph (2), with respect to 2 or more vehicles operated as a train by a light or rapid rail system, for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for a public entity to fail to have at least 1 vehicle per train that is accessible to individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in no event later than the last day of the 5-year period beginning on the effective date of this section.

(2) HISTORIC TRAINS.—In order to comply with paragraph (1) with respect to the remanufacture of a vehicle of historic character which is to be used on a segment of a light or rapid rail system which is included on the National Register of Historic Places, if making such vehicle readily accessible to and usable by individuals with disabilities would significantly alter the historic character of such vehicle, the public entity which operates such system only has to make (or to purchase or lease a remanufactured vehicle with) those modifications which are necessary to meet the requirements of section 222(c)(1) and which do not significantly alter the historic character of such vehicle.

SEC. 229. REGULATIONS.

(a) IN GENERAL.—Not later than 1 year after the date of enactment of this Act, the Secretary of Transportation shall issue regulations, in an accessible format, necessary for carrying out this part (other than section 223).

(b) STANDARDS.—The regulations issued under this section and section 223 shall include standards applicable to facilities and vehicles covered by this subtitle. The standards shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 504 of this Act.

SEC. 230. INTERIM ACCESSIBILITY REQUIREMENTS.

If final regulations have not been issued pursuant to section 229, for new construction or alterations for which a valid and appropriate State or local building permit is obtained prior to the issuance of final regulations under such section, and for which the construction or alteration authorized by such permit begins within one year of the receipt of such permit and is completed under the terms of such permit, compliance with the Uniform Federal Accessibility Standards in effect at the time the building permit is issued shall suffice to satisfy the requirement that facilities be readily accessible to and usable by persons with disabilities as required under sections 226 and 227, except that, if such final regulations have not been issued one year after the Architectural and Transportation Barriers Compliance Board has issued the supplemental minimum guidelines required under section 504(a) of this Act, compliance with such supplemental minimum guidelines shall be necessary to satisfy the requirement that facilities be readily accessible to and usable by persons with disabilities prior to issuance of the final regulations.

SEC. 231. EFFECTIVE DATE.

(a) GENERAL RULE.—Except as provided in subsection (b), this part shall become effective 18 months after the date of enactment of this Act.

(b) EXCEPTION.—Sections 222, 223 (other than subsection (a)), 224, 225, 227(b), 228(b), and 229 shall become effective on the date of enactment of this Act.

## PART II—PUBLIC TRANSPORTATION BY INTERCITY AND COMMUTER RAIL

SEC. 241. DEFINITIONS.

As used in this part:

(1) COMMUTER AUTHORITY.—The term "commuter authority" has the meaning given such term in section 103(8) of the Rail Passenger Service Act (45 U.S.C 502(8));

(2) COMMUTER RAIL TRANSPORTATION.—The term "commuter rail transportation" has the meaning given the term "commuter service" in section 103(9) of the Rail Passenger Service Act (45 U.S.C 502(9));

(3) INTERCITY RAIL TRANSPORTATION.—The term "intercity rail transportation" means transportation provided by the National Railroad Passenger Corporation;

(4) RAIL PASSENGER CAR.—The term "rail passenger car" means, with respect to intercity rail transportation, single-level and bi-level coach cars, single-level and bi-level dining cars, single-level and bi-level sleeping cars, single-level and bi-level lounge cars, and food service cars;

(5) RESPONSIBLE PERSON.—The term "responsible person" means—

(A) in the case of a station more than 50 percent of which is owned by a public entity, such public entity;

(B) in the case of a station more than 50 percent of which is owned by a private party, the persons providing intercity or commuter rail transportation to such station, as allocated on an equitable basis by regulation by the Secretary of Transportation; and

(C) in a case where no party owns more than 50 percent of a station, the persons providing intercity or commuter rail transportation to such station and the owners of the station, other than private party owners, as allocated on an equitable basis by regulation by the Secretary of Transportation; and

(6) STATION.—The term "station" means the portion of a property located appurtenant to a right-of-way on which intercity or commuter rail transportation is operated, where such portion is used by the general public and is related to the provision of such transportation, including passenger platforms, designated waiting areas, ticketing areas, restrooms, and, where a public entity providing rail transportation owns the property, concession areas, to the extent that such public entity exercises control over the selection, design, construction, or alteration of the property, but such term does not include flag stops.

SEC. 242. INTERCITY AND COMMUTER RAIL ACTIONS CONSIDERED DISCRIMINATORY.

(a) INTERCITY RAIL TRANSPORTATION.—

(1) ONE CAR PER TRAIN RULE.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person who provides intercity rail transportation to fail to have at least one passenger car per train that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, in accordance with regulations issued under section 244, as soon as practicable, but in no event later than 5 years after the date of enactment of this Act.

(2) NEW INTERCITY CARS.—

(A) GENERAL RULE.—Except as otherwise provided in this subsection with respect to individuals who use wheelchairs, it shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person to purchase or lease any new rail passenger cars for use in intercity rail transportation, and for which a solicitation is made later than 30 days after the effective date of this section, unless all such rail cars are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as prescribed by the Secretary of Transportation in regulations issued under section 244.

(B) SPECIAL RULE FOR SINGLE-LEVEL PASSENGER COACHES FOR INDIVIDUALS WHO USE WHEELCHAIRS.—Single-level passenger coaches shall be required to—

(i) be able to be entered by an individual who uses a wheelchair;

(ii) have space to park and secure a wheelchair;

(iii) have a seat to which a passenger in a wheelchair can transfer, and a space to fold and store such passenger's wheelchair; and

(iv) have a restroom usable by an individual who uses a wheelchair,

only to the extent provided in paragraph (3).

(C) SPECIAL RULE FOR SINGLE-LEVEL DINING CARS FOR INDIVIDUALS WHO USE WHEELCHAIRS.—Single-level dining cars shall not be required to—

(i) be able to be entered from the station platform by an individual who uses a wheelchair; or

(ii) have a restroom usable by an individual who uses a wheelchair if no restroom is provided in such car for any passenger.

(D) SPECIAL RULE FOR BI-LEVEL DINING CARS FOR INDIVIDUALS WHO USE WHEELCHAIRS.—Bi-level dining cars shall not be required to—

(i) be able to be entered by an individual who uses a wheelchair;

(ii) have space to park and secure a wheelchair;

(iii) have a seat to which a passenger in a wheelchair can transfer, or a space to fold and store such passenger's wheelchair; or

(iv) have a restroom usable by an individual who uses a wheelchair.

(3) ACCESSIBILITY OF SINGLE-LEVEL COACHES.—

(A) GENERAL RULE.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person who provides intercity rail transportation to fail to have on each train which includes one or more single-level rail passenger coaches—

(i) a number of spaces—

(I) to park and secure wheelchairs (to accommodate individuals who wish to remain in their wheelchairs) equal to not less than one-half of the number of single-level rail passenger coaches in such train; and

(II) to fold and store wheelchairs (to accommodate individuals who wish to transfer to coach seats) equal to not less than one-half of the number of single-level rail passenger coaches in such train,

as soon as practicable, but in no event later than 5 years after the date of enactment of this Act; and

(ii) a number of spaces—

(I) to park and secure wheelchairs (to accommodate individuals who wish to remain in their wheelchairs) equal to not less than the total number of single-level rail passenger coaches in such train; and

(II) to fold and store wheelchairs (to accommodate individuals who wish to transfer to coach seats) equal to not less than the total number of single-level rail passenger coaches in such train,

as soon as practicable, but in no event later than 10 years after the date of enactment of this Act.

(B) LOCATION.—Spaces required by subparagraph (A) shall be located in single-level rail passenger coaches or food service cars.

(C) LIMITATION.—Of the number of spaces required on a train by subparagraph (A), not more than two spaces to park and secure wheelchairs nor more than two spaces to fold and store wheelchairs shall be located in any one coach or food service car.

(D) OTHER ACCESSIBILITY FEATURES.—Single-level rail passenger coaches and food service cars on which the spaces required by subparagraph (A) are located shall have a restroom usable by an individual who uses a wheelchair and shall be able to be entered from the station platform by an individual who uses a wheelchair.

(4) FOOD SERVICE.—

(A) SINGLE-LEVEL DINING CARS.—On any train in which a single-level dining car is used to provide food service—

(i) if such single-level dining car was purchased after the date of enactment of this Act, table service in such car shall be provided to a passenger who uses a wheelchair if—

(I) the car adjacent to the end of the dining car through which a wheelchair may enter is itself accessible to a wheelchair;

(II) such passenger can exit to the platform from the car such passenger occupies, move down the platform, and enter the adjacent accessible car described in subclause (I) without the necessity of the train being moved within the station; and

(III) space to park and secure a wheelchair is available in the dining car at the time such passenger wishes to eat (if such passenger wishes to remain in a wheelchair), or space to store and fold a wheelchair is available in the dining car at the time such passenger wishes to eat (if such passenger wishes to transfer to a dining car seat); and

(ii) appropriate auxiliary aids and services, including a hard surface on which to eat, shall be provided to ensure that other equivalent food service is available to individuals with disabilities, including individuals who use wheelchairs, and to passengers traveling with such individuals.

Unless not practicable, a person providing intercity rail transportation shall place an accessible car adjacent to the end of a dining car described in clause (i) through which an individual who uses a wheelchair may enter.

(B) BI-LEVEL DINING CARS.—On any train in which a bi-level dining car is used to provide food service—

(i) if such train includes a bi-level lounge car purchased after the date of enactment of this Act, table service in such lounge car shall be provided to individuals who use wheelchairs and to other passengers; and

(ii) appropriate auxiliary aids and services, including a hard surface on which to eat, shall be provided to ensure that other equivalent food service is available to individuals with disabilities, including individuals who use wheelchairs, and to passengers traveling with such individuals.

(b) COMMUTER RAIL TRANSPORTATION.—

(1) ONE CAR PER TRAIN RULE.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person who provides commuter rail transportation to fail to have at least one passenger car per train that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, in accordance with regulations issued under section 244, as soon as practicable, but in no event later than 5 years after the date of enactment of this Act.

(2) NEW COMMUTER RAIL CARS.—

(A) GENERAL RULE.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person to purchase or lease any new rail passenger cars for use in commuter rail transportation, and for which a solicitation is made later than 30 days after the effective date of this section, unless all such rail cars are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as prescribed by the

Secretary of Transportation in regulations issued under section 244.

(B) ACCESSIBILITY.—For purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), a requirement that a rail passenger car used in commuter rail transportation be accessible to or readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, shall not be construed to require—

(i) a restroom usable by an individual who uses a wheelchair if no restroom is provided in such car for any passenger;

(ii) space to fold and store a wheelchair; or

(iii) a seat to which a passenger who uses a wheelchair can transfer.

(c) USED RAIL CARS.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person to purchase or lease a used rail passenger car for use in intercity or commuter rail transportation, unless such person makes demonstrated good faith efforts to purchase or lease a used rail car that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as prescribed by the Secretary of Transportation in regulations issued under section 244.

(d) REMANUFACTURED RAIL CARS.—

(1) REMANUFACTURING.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person to remanufacture a rail passenger car for use in intercity or commuter rail transportation so as to extend its usable life for 10 years or more, unless the rail car, to the maximum extent feasible, is made readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as prescribed by the Secretary of Transportation in regulations issued under section 244.

(2) PURCHASE OR LEASE.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person to purchase or lease a remanufactured rail passenger car for use in intercity or commuter rail transportation unless such car was remanufactured in accordance with paragraph (1).

(e) STATIONS.—

(1) NEW STATIONS.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a person to build a new station for use in intercity or commuter rail transportation that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as prescribed by the Secretary of Transportation in regulations issued under section 244.

(2) EXISTING STATIONS.—

(A) FAILURE TO MAKE READILY ACCESSIBLE.—

(i) GENERAL RULE.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for a responsible person to fail to make existing stations in the intercity rail transportation system, and existing key stations in commuter rail transportation systems, readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as prescribed by the Secretary of Transportation in regulations issued under section 244.

(ii) PERIOD FOR COMPLIANCE.—

(I) INTERCITY RAIL.—All stations in the intercity rail transportation system shall be made readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable, but in no event later than 20 years after the date of enactment of this Act.

(II) COMMUTER RAIL.—Key stations in commuter rail transportation systems shall be made readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in no event later than 3 years after the date of enactment of this Act, except that the time limit may be extended by the Secretary of Transportation up to 20 years after the date of enactment of this Act in a case where the raising of the entire passenger platform is the only means available of attaining accessibility or where other extraordinarily expensive structural changes are necessary to attain accessibility.

(iii) DESIGNATION OF KEY STATIONS.—Each commuter authority shall designate the key stations in its commuter rail transportation system, in consultation with individuals with disabilities and organizations representing such individuals, taking into consideration such factors as high ridership and whether such station serves as a transfer or feeder station. Before the final designation of key stations under this clause, a commuter authority shall hold a public hearing.

(iv) PLANS AND MILESTONES.—The Secretary of Transportation shall require the appropriate person to develop a plan for carrying out this subparagraph that reflects consultation with individuals with disabilities affected by such plan and that establishes milestones for achievement of the requirements of this subparagraph.

(B) REQUIREMENT WHEN MAKING ALTERATIONS.—

(i) GENERAL RULE.—It shall be considered discrimination, for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), with respect to alterations of an existing station or part thereof in the intercity or commuter rail transportation systems that affect or could affect the usability of the station or part thereof, for the responsible person, owner, or person in control of the station to fail to make the alterations in such a manner that, to the maximum extent feasible, the altered portions of the station are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, upon completion of such alterations.

(ii) ALTERATIONS TO A PRIMARY FUNCTION AREA.—It shall be considered discrimination, for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), with respect to alterations that affect or could affect the usability of or access to an area of the station containing a primary function, for the responsible person, owner, or person in control of the station to fail to make the alterations in such a manner that, to the maximum extent feasible, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the altered area, are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, upon completion of such alterations, where such alterations to the path of travel or the bathrooms, telephones, and drinking fountains serving the altered area are not disproportionate to the overall alterations in terms of cost and scope (as determined under criteria established by the Attorney General).

(C) REQUIRED COOPERATION.—It shall be considered discrimination for purposes of section 202 of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for an owner, or person in control, of a station governed by subparagraph (A) or (B) to fail to provide reasonable cooperation to a responsible person with respect to such station in that responsible person's efforts to comply with such subparagraph. An owner, or person in control, of a station shall be liable to a responsible person for any failure to provide reasonable cooperation as required by this subparagraph. Failure to receive reasonable cooperation required by this subparagraph shall not be a defense to a claim of discrimination under this Act.

SEC. 243. CONFORMANCE OF ACCESSIBILITY STANDARDS.

Accessibility standards included in regulations issued under this part shall be consistent with the minimum guidelines issued by the Architectural and Transportation Barriers Compliance Board under section 504(a) of this Act.

SEC. 244. REGULATIONS.

Not later than 1 year after the date of enactment of this Act, the Secretary of Transportation shall issue regulations, in an accessible format, necessary for carrying out this part.

SEC. 245. INTERIM ACCESSIBILITY REQUIREMENTS.

(a) STATIONS.—If final regulations have not been issued pursuant to section 244, for new construction or alterations for which a valid and appropriate State or local building permit is obtained prior to the issuance of final regulations under such section, and for which the construction or alteration authorized by such permit begins within one year of the receipt of such permit and is completed under the terms of such permit, compliance with the Uniform Federal Accessibility Standards in effect at the time the building permit is issued shall suffice to satisfy the requirement that stations be readily accessible to and usable by persons with disabilities as required under section 242(e), except that, if such final regulations have not been issued one year after the Architectural and Transportation Barriers Compliance Board has issued the supplemental minimum guidelines required under section 504(a) of this Act, compliance with such supplemental minimum guidelines shall be necessary to satisfy the requirement that stations be readily accessible to and usable by persons with disabilities prior to issuance of the final regulations.

(b) RAIL PASSENGER CARS.—If final regulations have not been issued pursuant to section 244, a person shall be considered to have complied with the requirements of section 242(a) through (d) that a rail passenger car be readily accessible to and usable by individuals with disabilities, if the design for such car complies with the laws and regulations (including the Minimum Guidelines and Requirements for Accessible Design and such supplemental minimum guidelines as are issued under section 504(a) of this Act) governing accessibility of such cars, to the extent that such laws and regulations are not inconsistent with this part and are in effect at the time such design is substantially completed.

SEC. 246. EFFECTIVE DATE.

(a) GENERAL RULE.—Except as provided in subsection (b), this part shall become effective 18 months after the date of enactment of this Act.

(b) EXCEPTION.—Sections 242 and 244 shall become effective on the date of enactment of this Act.

## TITLE III—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

### SEC. 301. DEFINITIONS.

As used in this title:

(1) COMMERCE.—The term "commerce" means travel, trade, traffic, commerce, transportation, or communication—

(A) among the several States;

(B) between any foreign country or any territory or possession and any State; or

(C) between points in the same State but through another State or foreign country.

(2) COMMERCIAL FACILITIES.—The term "commercial facilities" means facilities—

(A) that are intended for nonresidential use; and

(B) whose operations will affect commerce.

Such term shall not include railroad locomotives, railroad freight cars, railroad cabooses, railroad cars described in section 242 or covered under this title, railroad rights-of-way, or facilities that are covered or expressly exempted from coverage under the Fair Housing Act of 1968 (42 U.S.C. 3601 et seq.).

(3) DEMAND RESPONSIVE SYSTEM.—The term "demand responsive system" means any system of providing transportation of individuals by a vehicle, other than a system which is a fixed route system.

(4) FIXED ROUTE SYSTEM.—The term "fixed route system" means a system of providing transportation of individuals (other than by aircraft) on which a vehicle is operated along a prescribed route according to a fixed schedule.

(5) OVER-THE-ROAD BUS.—The term "over-the-road bus" means a bus characterized by an elevated passenger deck located over a baggage compartment.

(6) PRIVATE ENTITY.—The term "private entity" means any entity other than a public entity (as defined in section 201(1)).

(7) PUBLIC ACCOMMODATION.—The following private entities are considered public accommodations for purposes of this title, if the operations of such entities affect commerce—

(A) an inn, hotel, motel, or other place of lodging, except for an establishment located within a building that contains not more than five rooms for rent or hire and that is actually occupied by the proprietor of such establishment as the residence of such proprietor;

(B) a restaurant, bar, or other establishment serving food or drink;

(C) a motion picture house, theater, concert hall, stadium, or other place of exhibition or entertainment;

(D) an auditorium, convention center, lecture hall, or other place of public gathering;

(E) a bakery, grocery store, clothing store, hardware store, shopping center, or other sales or rental establishment;

(F) a laundromat, dry-cleaner, bank, barber shop, beauty shop, travel service, shoe repair service, funeral parlor, gas station, office of an accountant or lawyer, pharmacy, insurance office, professional office of a health care provider, hospital, or other service establishment;

(G) a terminal, depot, or other station used for specified public transportation;

(H) a museum, library, gallery, or other place of public display or collection;

(I) a park, zoo, amusement park, or other place of recreation;

(J) a nursery, elementary, secondary, undergraduate, or postgraduate private school, or other place of education;

(K) a day care center, senior citizen center, homeless shelter, food bank, adoption agency, or other social service center establishment; and

(L) a gymnasium, health spa, bowling alley, golf course, or other place of exercise or recreation.

(8) RAIL AND RAILROAD.—The terms "rail" and "railroad" have the meaning given the term "railroad" in section 202(e) of the Federal Railroad Safety Act of 1970 (45 U.S.C. 431(e)).

(9) READILY ACHIEVABLE.—The term "readily achievable" means easily accomplishable and able to be carried out without much difficulty or expense. In determining whether an action is readily achievable, factors to be considered include—

(A) the nature and cost of the action needed under this Act;

(B) the overall financial resources of the facility or facilities involved in the action; the number of persons employed at such facility; the effect on expenses and resources, or the impact otherwise of such action upon the operation of the facility;

(C) the overall financial resources of the covered entity; the overall size of the business of a covered entity with respect to the number of its employees; the number, type, and location of its facilities; and

(D) the type of operation or operations of the covered entity, including the composition, structure, and functions of the workforce of such entity; the geographic separateness, administrative or fiscal relationship of the facility or facilities in question to the covered entity.

(10) SPECIFIED PUBLIC TRANSPORTATION.—The term "specified public transportation" means transportation by bus, rail, or any other conveyance (other than by aircraft) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

(11) VEHICLE.—The term "vehicle" does not include a rail passenger car, railroad locomotive, railroad freight car, railroad caboose, or a railroad car described in section 242 or covered under this title.

### SEC. 302. PROHIBITION OF DISCRIMINATION BY PUBLIC ACCOMMODATIONS.

(a) GENERAL RULE.—No individual shall be discriminated against on the basis of disability in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, or accommodations of any place of public accommodation by any person who owns, leases (or leases to), or operates a place of public accommodation.

(b) CONSTRUCTION.—

(1) GENERAL PROHIBITION.—

(A) ACTIVITIES.—

(i) DENIAL OF PARTICIPATION.—It shall be discriminatory to subject an individual or class of individuals on the basis of a disability or disabilities of such individual or class, directly, or through contractual, licensing, or other arrangements, to a denial of the opportunity of the individual or class to participate in or benefit from the goods, services, facilities, privileges, advantages, or accommodations of an entity.

(ii) PARTICIPATION IN UNEQUAL BENEFIT.—It shall be discriminatory to afford an individual or class of individuals, on the basis of a disability or disabilities of such individual or class, directly, or through contractual, licensing, or other arrangements with the opportunity to participate in or benefit from a good, service, facility, privilege, advantage, or accommodation that is not equal to that afforded to other individuals.

(iii) SEPARATE BENEFIT.—It shall be discriminatory to provide an individual or class of individuals, on the basis of a disability or disabilities of such individual or class, directly, or through contractual, licensing, or other arrangements with a good, service, facility, privilege, advantage, or accommodation that is different or separate from that provided to other individuals, unless such action is necessary to provide the individual or class of individuals with a good, service, facility, privilege, advantage, or accommodation, or other opportunity that is as effective as that provided to others.

(iv) INDIVIDUAL OR CLASS OF INDIVIDUALS.—For purposes of clauses (i) through (iii) of this subparagraph, the term "individual or class of individuals" refers to the clients or customers of the covered public accommodation that enters into the contractual, licensing or other arrangement.

(B) INTEGRATED SETTINGS.—Goods, services, facilities, privileges, advantages, and accommodations shall be afforded to an individual with a disability in the most integrated setting appropriate to the needs of the individual.

(C) OPPORTUNITY TO PARTICIPATE.—Notwithstanding the existence of separate or different programs or activities provided in accordance with this section, an individual with a disability shall not be denied the opportunity to participate in such programs or activities that are not separate or different.

(D) ADMINISTRATIVE METHODS.—An individual or entity shall not, directly or through contractual or other arrangements, utilize standards or criteria or methods of administration—

(i) that have the effect of discriminating on the basis of disability; or

(ii) that perpetuate the discrimination of others who are subject to common administrative control.

(E) ASSOCIATION.—It shall be discriminatory to exclude or otherwise deny equal goods, services, facilities, privileges, advantages, accommodations, or other opportunities to an individual or entity because of the known disability of an individual with whom the individual or entity is known to have a relationship or association.

(2) SPECIFIC PROHIBITIONS.—

(A) DISCRIMINATION.—For purposes of subsection (a), discrimination includes—

(i) the imposition or application of eligibility criteria that screen out or tend to screen out an individual with a disability or any class of individuals with disabilities from fully and equally enjoying any goods, services, facilities, privileges, advantages, or accommodations, unless such criteria can be shown to be necessary for the provision of the goods, services, facilities, privileges, advantages, or accommodations being offered;

(ii) a failure to make reasonable modifications in policies, practices, or procedures, when such modifications are necessary to afford such goods, services, facilities, privileges, advantages, or accommodations to individuals with disabilities, unless the entity can demonstrate that making such modifications would fundamentally alter the nature of such goods, services, facilities, privileges, advantages, or accommodations;

(iii) a failure to take such steps as may be necessary to ensure that no individual with a disability is excluded, denied services, segregated or otherwise treated differently than other individuals because of the absence of auxiliary aids and services, unless the entity can demonstrate that taking such steps would fundamentally alter the nature of the good, service, facility, privilege, ad-

vantage, or accommodation being offered or would result in an undue burden;

(iv) a failure to remove architectural barriers, and communication barriers that are structural in nature, in existing facilities, and transportation barriers in existing vehicles and rail passenger cars used by an establishment for transporting individuals (not including barriers that can only be removed through the retrofitting of vehicles or rail passenger cars by the installation of a hydraulic or other lift), where such removal is readily achievable; and

(v) where an entity can demonstrate that the removal of a barrier under clause (iv) is not readily achievable, a failure to make such goods, services, facilities, privileges, advantages, or accommodations available through alternative methods if such methods are readily achievable.

(B) FIXED ROUTE SYSTEM.—

(i) ACCESSIBILITY.—It shall be considered discrimination for a private entity which operates a fixed route system and which is not subject to section 304 to purchase or lease a vehicle with a seating capacity in excess of 16 passengers (including the driver) for use on such system, for which a solicitation is made after the 30th day following the effective date of this subparagraph, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(ii) EQUIVALENT SERVICE.—If a private entity which operates a fixed route system and which is not subject to section 304 purchases or leases a vehicle with a seating capacity of 16 passengers or less (including the driver) for use on such system after the effective date of this subparagraph that is not readily accessible to or usable by individuals with disabilities, it shall be considered discrimination for such entity to fail to operate such system so that, when viewed in its entirety, such system ensures a level of service to individuals with disabilities, including individuals who use wheelchairs, equivalent to the level of service provided to individuals without disabilities.

(C) DEMAND RESPONSIVE SYSTEM.—For purposes of subsection (a), discrimination includes—

(i) a failure of a private entity which operates a demand responsive system and which is not subject to section 304 to operate such system so that, when viewed in its entirety, such system ensures a level of service to individuals with disabilities, including individuals who use wheelchairs, equivalent to the level of service provided to individuals without disabilities; and

(ii) the purchase or lease by such entity for use on such system of a vehicle with a seating capacity in excess of 16 passengers (including the driver), for which solicitations are made after the 30th day following the effective date of this subparagraph, that is not readily accessible to and usable by individuals with disabilities (including individuals who use wheelchairs) unless such entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to that provided to individuals without disabilities.

(D) OVER-THE-ROAD BUSES.—

(i) LIMITATION ON APPLICABILITY.—Subparagraphs (B) and (C) do not apply to over-the-road buses.

(ii) ACCESSIBILITY REQUIREMENTS.—For purposes of subsection (a), discrimination includes (I) the purchase or lease of an over-the-road bus which does not comply with the regulations issued under section 306(a)(2) by a private entity which provides transportation of individuals and which is not primarily engaged in the business of transporting people, and (II) any other failure of such entity to comply with such regulations.

(3) SPECIFIC CONSTRUCTION.—Nothing in this title shall require an entity to permit an individual to participate in or benefit from the goods, services, facilities, privileges, advantages and accommodations of such entity where such individual poses a direct threat to the health or safety of others. The term "direct threat" means a significant risk to the health or safety of others that cannot be eliminated by a modification of policies, practices, or procedures or by the provision of auxiliary aids or services.

SEC. 303. NEW CONSTRUCTION AND ALTERATIONS IN PUBLIC ACCOMMODATIONS AND COMMERCIAL FACILITIES.

(a) APPLICATION OF TERM.—Except as provided in subsection (b), as applied to public accommodations and commercial facilities, discrimination for purposes of section 302(a) includes—

(1) a failure to design and construct facilities for first occupancy later than 30 months after the date of enactment of this Act that are readily accessible to and usable by individuals with disabilities, except where an entity can demonstrate that it is structurally impracticable to meet the requirements of such subsection in accordance with standards set forth or incorporated by reference in regulations issued under this title; and

(2) with respect to a facility or part thereof that is altered by, on behalf of, or for the use of an establishment in a manner that affects or could affect the usability of the facility or part thereof, a failure to make alterations in such a manner that, to the maximum extent feasible, the altered portions of the facility are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs. Where the entity is undertaking an alteration that affects or could affect usability of or access to an area of the facility containing a primary function, the entity shall also make the alterations in such a manner that, to the maximum extent feasible, the path of travel to the altered area and the bathrooms, telephones, and drinking fountains serving the altered area, are readily accessible to and usable by individuals with disabilities where such alterations to the path of travel or the bathrooms, telephones, and drinking fountains serving the altered area are not disproportionate to the overall alterations in terms of cost and scope (as determined under criteria established by the Attorney General).

(b) ELEVATOR.—Subsection (a) shall not be construed to require the installation of an elevator for facilities that are less than three stories or have less than 3,000 square feet per story unless the building is a shopping center, a shopping mall, or the professional office of a health care provider or unless the Attorney General determines that a particular category of such facilities requires the installation of elevators based on the usage of such facilities.

SEC. 304. PROHIBITION OF DISCRIMINATION IN SPECIFIED PUBLIC TRANSPORTATION SERVICES PROVIDED BY PRIVATE ENTITIES.

(a) GENERAL RULE.—No individual shall be discriminated against on the basis of disability in the full and equal enjoyment of specified public transportation services provided by a private entity that is primarily engaged in the business of transporting people and whose operations affect commerce.

(b) CONSTRUCTION.—For purposes of subsection (a), discrimination includes—

(1) the imposition or application by a entity described in subsection (a) of eligibility criteria that screen out or tend to screen out an individual with a disability or any class of individuals with disabilities from fully enjoying the specified public transportation services provided by the entity, unless such criteria can be shown to be necessary for the provision of the services being offered;

(2) the failure of such entity to—

(A) make reasonable modifications consistent with those required under section 302(b)(2)(A)(ii);

(B) provide auxiliary aids and services consistent with the requirements of section 302(b)(2)(A)(iii); and

(C) remove barriers consistent with the requirements of section 302(b)(2)(A) and with the requirements of section 303(a)(2);

(3) the purchase or lease by such entity of a new vehicle (other than an automobile, a van with a seating capacity of less than 8 passengers, including the driver, or an over-the-road bus) which is to be used to provide specified public transportation and for which a solicitation is made after the 30th day following the effective date of this section, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs; except that the new vehicle need not be readily accessible to and usable by such individuals if the new vehicle is to be used solely in a demand responsive system and if the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to such individuals equivalent to the level of service provided to the general public;

(4)(A) the purchase or lease by such entity of an over-the-road bus which does not comply with the regulations issued under section 306(a)(2); and

(B) any other failure of such entity to comply with such regulations; and

(5) the purchase or lease by such entity of a new van with a seating capacity of less than 8 passengers, including the driver, which is to be used to provide specified public transportation and for which a solicitation is made after the 30th day following the effective date of this section that is not readily accessible to or usable by individuals with disabilities, including individuals who use wheelchairs; except that the new van need not be readily accessible to and usable by such individuals if the entity can demonstrate that the system for which the van is being purchased or leased, when viewed in its entirety, provides a level of service to such individuals equivalent to the level of service provided to the general public;

(6) the purchase or lease by such entity of a new rail passenger car that is to be used to provide specified public transportation, and for which a solicitation is made later than 30 days after the effective date of this paragraph, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs; and

(7) the remanufacture by such entity of a rail passenger car that is to be used to provide specified public transportation so as to extend its usable life for 10 years or more, or the purchase or lease by such entity of such a rail car, unless the rail car, to the maximum extent feasible, is made readily accessible to and usable by individuals with

disabilities, including individuals who use wheelchairs.

(c) HISTORICAL OR ANTIQUATED CARS.—

(1) EXCEPTION.—To the extent that compliance with subsection (b)(2)(C) or (b)(7) would significantly alter the historic or antiquated character of a historical or antiquated rail passenger car, or a rail station served exclusively by such cars, or would result in violation of any rule, regulation, standard, or order issued by the Secretary of Transportation under the Federal Railroad Safety Act of 1970, such compliance shall not be required.

(2) DEFINITION.—As used in this subsection, the term "historical or antiquated rail passenger car" means a rail passenger car—

(A) which is not less than 30 years old at the time of its use for transporting individuals;

(B) the manufacturer of which is no longer in the business of manufacturing rail passenger cars; and

(C) which—

(i) has a consequential association with events or persons significant to the past; or

(ii) embodies, or is being restored to embody, the distinctive characteristics of a type of rail passenger car used in the past, or to represent a time period which has passed.

SEC. 305. STUDY.

(a) PURPOSES.—The Office of Technology Assessment shall undertake a study to determine—

(1) the access needs of individuals with disabilities to over-the-road buses and over-the-road bus service; and

(2) the most cost-effective methods for providing access to over-the-road buses and over-the-road bus service to individuals with disabilities, particularly individuals who use wheelchairs, through all forms of boarding options.

(b) CONTENTS.—The study shall include, at a minimum, an analysis of the following:

(1) The anticipated demand by individuals with disabilities for accessible over-the-road buses and over-the-road bus service.

(2) The degree to which such buses and service, including any service required under sections 304(b)(4) and 306(a)(2), are readily accessible to and usable by individuals with disabilities.

(3) The effectiveness of various methods of providing accessibility to such buses and service to individuals with disabilities.

(4) The cost of providing accessible over-the-road buses and bus service to individuals with disabilities, including consideration of recent technological and cost saving developments in equipment and devices.

(5) Possible design changes in over-the-road buses that could enhance accessibility, including the installation of accessible restrooms which do not result in a loss of seating capacity.

(6) The impact of accessibility requirements on the continuation of over-the-road bus service, with particular consideration of the impact of such requirements on such service to rural communities.

(c) ADVISORY COMMITTEE.—In conducting the study required by subsection (a), the Office of Technology Assessment shall establish an advisory committee, which shall consist of—

(1) members selected from among private operators and manufacturers of over-the-road buses;

(2) members selected from among individuals with disabilities, particularly individuals who use wheelchairs, who are potential riders of such buses; and

(3) members selected for their technical expertise on issues included in the study, including manufacturers of boarding assistance equipment and devices.

The number of members selected under each of paragraphs (1) and (2) shall be equal, and the total number of members selected under paragraphs (1) and (2) shall exceed the number of members selected under paragraph (3).

(d) DEADLINE.—The study required by subsection (a), along with recommendations by the Office of Technology Assessment, including any policy options for legislative action, shall be submitted to the President and Congress within 36 months after the date of the enactment of this Act. If the President determines that compliance with the regulations issued pursuant to section 306(a)(2)(B) on or before the applicable deadlines specified in section 306(a)(2)(B) will result in a significant reduction in intercity over-the-road bus service, the President shall extend each such deadline by 1 year.

(e) REVIEW.—In developing the study required by subsection (a), the Office of Technology Assessment shall provide a preliminary draft of such study to the Architectural and Transportation Barriers Compliance Board established under section 502 of the Rehabilitation Act of 1973 (29 U.S.C. 792). The Board shall have an opportunity to comment on such draft study, and any such comments by the Board made in writing within 120 days after the Board's receipt of the draft study shall be incorporated as part of the final study required to be submitted under subsection (d).

SEC. 306. REGULATIONS.

(a) TRANSPORTATION PROVISIONS.—

(1) GENERAL RULE.—Not later than 1 year after the date of the enactment of this Act, the Secretary of Transportation shall issue regulations in an accessible format to carry out sections 302(b)(2)(B) and (C) and to carry out section 304 (other than subsection (b)(4)).

(2) SPECIAL RULES FOR PROVIDING ACCESS TO OVER-THE-ROAD BUSES.—

(A) INTERIM REQUIREMENTS—

(i) ISSUANCE.—Not later than 1 year after the date of the enactment of this Act, the Secretary of Transportation shall issue regulations in an accessible format to carry out sections 304(b)(4) and 302(b)(2)(D)(ii) that require each private entity which uses an over-the-road bus to provide transportation of individuals to provide accessibility to such bus; except that such regulations shall not require any structural changes in over-the-road buses in order to provide access to individuals who use wheelchairs during the effective period of such regulations and shall not require the purchase of boarding assistance devices to provide access to such individuals.

(ii) EFFECTIVE PERIOD.—The regulations issued pursuant to this subparagraph shall be effective until the effective date of the regulations issued under subparagraph (B).

(B) FINAL REQUIREMENT.—

(i) REVIEW OF STUDY AND INTERIM REQUIREMENTS.—The Secretary shall review the study submitted under section 305 and the regulations issued pursuant to subparagraph (A).

(ii) ISSUANCE.—Not later than 1 year after the date of the submission of the study under section 305, the Secretary shall issue in an accessible format new regulations to carry out sections 304(b)(4) and 302(b)(2)(D)(ii) that require, taking into account the purposes of the study under section 305 and any recommendations resulting from such study, each private entity which uses an over-the-road bus to provide transportation to individuals to provide accessibility to such bus to individuals with disabilities, including individuals who use wheelchairs.

(iii) EFFECTIVE PERIOD.—Subject to section 305(d), the regulations issued pursuant to this subparagraph shall take effect—

(I) with respect to small providers of transportation (as defined by the Secretary), 7 years after the date of the enactment of this Act; and

(II) with respect to other providers of transportation, 6 years after such date of enactment.

(C) LIMITATION ON REQUIRING INSTALLATION OF ACCESSIBLE RESTROOMS.—The regulations issued pursuant to this paragraph shall not require the installation of accessible restrooms in over-the-road buses if such installation would result in a loss of seating capacity.

(3) STANDARDS.—The regulations issued pursuant to this subsection shall include standards applicable to facilities and vehicles covered by sections 302(b)(2) and 304.

(b) OTHER PROVISIONS.—Not later than 1 year after the date of the enactment of this Act, the Attorney General shall issue regulations in an accessible format to carry out the provisions of this title not referred to in subsection (a) that include standards applicable to facilities and vehicles covered under section 302.

(c) CONSISTENCY WITH ATBCB GUIDELINES.—Standards included in regulations issued under subsections (a) and (b) shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 504 of this Act.

(d) INTERIM ACCESSIBILITY STANDARDS.—

(1) FACILITIES.—If final regulations have not been issued pursuant to this section, for new construction or alterations for which a valid and appropriate State or local building permit is obtained prior to the issuance of final regulations under this section, and for which the construction or alteration authorized by such permit begins within one year of the receipt of such permit and is completed under the terms of such permit, compliance with the Uniform Federal Accessibility Standards in effect at the time the building permit is issued shall suffice to satisfy the requirement that facilities be readily accessible to and usable by persons with disabilities as required under section 303, except that, if such final regulations have not been issued one year after the Architectural and Transportation Barriers Compliance Board has issued the supplemental minimum guidelines required under section 504(a) of this Act, compliance with such supplemental minimum guidelines shall be necessary to satisfy the requirement that facilities be readily accessible to and usable by persons with disabilities prior to issuance of the final regulations.

(2) VEHICLES AND RAIL PASSENGER CARS.—If final regulations have not been issued pursuant to this section, a private entity shall be considered to have complied with the requirements of this title, if any, that a vehicle or rail passenger car be readily accessible to and usable by individuals with disabilities, if the design for such vehicle or car complies with the laws and regulations (including the Minimum Guidelines and Requirements for Accessible Design and such

supplemental minimum guidelines as are issued under section 504(a) of this Act) governing accessibility of such vehicles or cars, to the extent that such laws and regulations are not inconsistent with this title and are in effect at the time such design is substantially completed.

SEC. 307. EXEMPTIONS FOR PRIVATE CLUBS AND RELIGIOUS ORGANIZATIONS.

The provisions of this title shall not apply to private clubs or establishments exempted from coverage under title II of the Civil Rights Act of 1964 (42 U.S.C. 2000-a(e)) or to religious organizations or entities controlled by religious organizations, including places of worship.

SEC. 308. ENFORCEMENT.

(a) IN GENERAL.—

(1) AVAILABILITY OF REMEDIES AND PROCEDURES.—The remedies and procedures set forth in section 204(a) of the Civil Rights Act of 1964 (42 U.S.C. 2000a-3(a)) are the remedies and procedures this title provides to any person who is being subjected to discrimination on the basis of disability in violation of this title or who has reasonable grounds for believing that such person is about to be subjected to discrimination in violation of section 303. Nothing in this section shall require a person with a disability to engage in a futile gesture if such person has actual notice that a person or organization covered by this title does not intend to comply with its provisions.

(2) INJUNCTIVE RELIEF.—In the case of violations of sections 302(b)(2)(A)(iv) and section 303(a), injunctive relief shall include an order to alter facilities to make such facilities readily accessible to and usable by individuals with disabilities to the extent required by this title. Where appropriate, injunctive relief shall also include requiring the provision of an auxiliary aid or service, modification of a policy, or provision of alternative methods, to the extent required by this title.

(b) ENFORCEMENT BY THE ATTORNEY GENERAL.—

(1) DENIAL OF RIGHTS.—

(A) DUTY TO INVESTIGATE.—

(i) IN GENERAL.—The Attorney General shall investigate alleged violations of this title, and shall undertake periodic reviews of compliance of covered entities under this title.

(ii) ATTORNEY GENERAL CERTIFICATION.—On the application of a State or local government, the Attorney General may, in consultation with the Architectural and Transportation Barriers Compliance Board, and after prior notice and a public hearing at which persons, including individuals with disabilities, are provided an opportunity to testify against such certification, certify that a State law or local building code or similar ordinance that establishes accessibility requirements meets or exceeds the minimum requirements of this Act for the accessibility and usability of covered facilities under this title. At any enforcement proceeding under this section, such certification by the Attorney General shall be rebuttable evidence that such State law or local ordinance does meet or exceed the minimum requirements of this Act.

(B) POTENTIAL VIOLATION.—If the Attorney General has reasonable cause to believe that—

(i) any person or group of persons is engaged in a pattern or practice of discrimination under this title; or

(ii) any person or group of persons has been discriminated against under this title and such discrimination raises an issue of general public importance,

the Attorney General may commence a civil action in any appropriate United States district court.

(2) AUTHORITY OF COURT.—In a civil action under paragraph (1)(B), the court—

(A) may grant any equitable relief that such court considers to be appropriate, including, to the extent required by this title—

(i) granting temporary, preliminary, or permanent relief;

(ii) providing an auxiliary aid or service, modification of policy, practice, or procedure, or alternative method; and

(iii) making facilities readily accessible to and usable by individuals with disabilities;

(B) may award such other relief as the court considers to be appropriate, including monetary damages to persons aggrieved when requested by the Attorney General; and

(C) may, to vindicate the public interest, assess a civil penalty against the entity in an amount—

(i) not exceeding $50,000 for a first violation; and

(ii) not exceeding $100,000 for any subsequent violation.

(3) SINGLE VIOLATION.—For purposes of paragraph (2)(C), in determining whether a first or subsequent violation has occurred, a determination in a single action, by judgment or settlement, that the covered entity has engaged in more than one discriminatory act shall be counted as a single violation.

(4) PUNITIVE DAMAGES.—For purposes of subsection (b)(2)(B), the term "monetary damages" and "such other relief" does not include punitive damages.

(5) JUDICIAL CONSIDERATION.—In a civil action under paragraph (1)(B), the court, when considering what amount of civil penalty, if any, is appropriate, shall give consideration to any good faith effort or attempt to comply with this Act by the entity. In evaluating good faith, the court shall consider, among other factors it deems relevant, whether the entity could have reasonably anticipated the need for an appropriate type of auxiliary aid needed to accommodate the unique needs of a particular individual with a disability.

SEC. 309. EXAMINATIONS AND COURSES.

Any person that offers examinations or courses related to applications, licensing, certification, or credentialing for secondary or postsecondary education, professional, or trade purposes shall offer such examinations or courses in a place and manner accessible to persons with disabilities or offer alternative accessible arrangements for such individuals.

SEC. 310. EFFECTIVE DATE.

(a) GENERAL RULE.—Except as provided in subsection (b), and (c), this title shall become effective 18 months after the date of the enactment of this Act.

(b) CIVIL ACTION.—Except for any civil action brought for a violation of section 303, no civil action shall be brought—

(1) during the first 6 months after the effective date, against businesses that employ 25 or fewer employees and have gross receipts of $1,000,000 or less; and

(2) during the first year after the effective date, against businesses that employ 10 or fewer employees and have gross receipts of $500,000 or less.

(c) EXCEPTION.—Sections 302(a) for purposes of section 302(b)(2) (B) and (C) only, 304(a) for purposes of section 304(b)(3) only, 304(b)(3), 305, and 306 shall take effect on the date of the enactment of this Act.

## TITLE IV—TELECOMMUNICATIONS

SEC. 401. TELECOMMUNICATIONS RELAY SERVICES FOR HEARING-IMPAIRED AND SPEECH-IMPAIRED INDIVIDUALS.

(a) TELECOMMUNICATIONS.—Title II of the Communications Act of 1934 (47 U.S.C. 201 et seq.) is amended by adding at the end thereof the following new section:

"SEC. 225. TELECOMMUNICATIONS SERVICES FOR HEARING-IMPAIRED AND SPEECH-IMPAIRED INDIVIDUALS.

"(a) DEFINITIONS.—As used in this section—

"(1) COMMON CARRIER OR CARRIER.—The term 'common carrier' or 'carrier' includes any common carrier engaged in interstate communication by wire or radio as defined in section 3(h) and any common carrier engaged in intrastate communication by wire or radio, notwithstanding sections 2(b) and 221(b).

"(2) TDD.—The term 'TDD' means a Telecommunications Device for the Deaf, which is a machine that employs graphic communication in the transmission of coded signals through a wire or radio communication system.

"(3) TELECOMMUNICATIONS RELAY SERVICES.—The term 'telecommunications relay services' means telephone transmission services that provide the ability for an individual who has a hearing impairment or speech impairment to engage in communication by wire or radio with a hearing individual in a manner that is functionally equivalent to the ability of an individual who does not have a hearing impairment or speech impairment to communicate using voice communication services by wire or radio. Such term includes services that enable two-way communication between an individual who uses a TDD or other nonvoice terminal device and an individual who does not use such a device.

"(b) AVAILABILITY OF TELECOMMUNICATIONS RELAY SERVICES.—

"(1) IN GENERAL.—In order to carry out the purposes established under section 1, to make available to all individuals in the United States a rapid, efficient nationwide communication service, and to increase the utility of the telephone system of the Nation, the Commission shall ensure that interstate and intrastate telecommunications relay services are available, to the extent possible and in the most efficient manner, to hearing-impaired and speech-impaired individuals in the United States.

"(2) USE OF GENERAL AUTHORITY AND REMEDIES.—For the purposes of administering and enforcing the provisions of this section and the regulations prescribed thereunder, the Commission shall have the same authority, power, and functions with respect to common carriers engaged in intrastate communication as the Commission has in administering and enforcing the provisions of this title with respect to any common carrier engaged in interstate communication. Any violation of this section by any common carrier engaged in intrastate communication shall be subject to the same remedies, penalties, and procedures as are applicable to a violation of this Act by a common carrier engaged in interstate communication.

"(c) PROVISION OF SERVICES.—Each common carrier providing telephone voice transmission services shall, not later than 3 years after the date of enactment of this section, provide in compliance with the reg-

ulations prescribed under this section, within the area in which it offers service, telecommunications relay services, individually, through designees, through a competitively selected vendor, or in concert with other carriers. A common carrier shall be considered to be in compliance with such regulations—

"(1) with respect to intrastate telecommunications relay services in any State that does not have a certified program under subsection (f) and with respect to interstate telecommunications relay services, if such common carrier (or other entity through which the carrier is providing such relay services) is in compliance with the Commission's regulations under subsection (d); or

"(2) with respect to intrastate telecommunications relay services in any State that has a certified program under subsection (f) for such State, if such common carrier (or other entity through which the carrier is providing such relay services) is in compliance with the program certified under subsection (f) for such State.

"(d) REGULATIONS.—

"(1) IN GENERAL.—The Commission shall, not later than 1 year after the date of enactment of this section, prescribe regulations to implement this section, including regulations that—

"(A) establish functional requirements, guidelines, and operations procedures for telecommunications relay services;

"(B) establish minimum standards that shall be met in carrying out subsection (c);

"(C) require that telecommunications relay services operate every day for 24 hours per day;

"(D) require that users of telecommunications relay services pay rates no greater than the rates paid for functionally equivalent voice communication services with respect to such factors as the duration of the call, the time of day, and the distance from point of origination to point of termination;

"(E) prohibit relay operators from failing to fulfill the obligations of common carriers by refusing calls or limiting the length of calls that use telecommunications relay services;

"(F) prohibit relay operators from disclosing the content of any relayed conversation and from keeping records of the content of any such conversation beyond the duration of the call; and

"(G) prohibit relay operators from intentionally altering a relayed conversation.

"(2) TECHNOLOGY.—The Commission shall ensure that regulations prescribed to implement this section encourage, consistent with section 7(a) of this Act, the use of existing technology and do not discourage or impair the development of improved technology.

"(3) JURISDICTIONAL SEPARATION OF COSTS.—

"(A) IN GENERAL.—Consistent with the provisions of section 410 of this Act, the Commission shall prescribe regulations governing the jurisdictional separation of costs for the services provided pursuant to this section.

"(B) RECOVERING COSTS.—Such regulations shall generally provide that costs caused by interstate telecommunications relay services shall be recovered from all subscribers for every interstate service and costs caused by intrastate telecommunications relay services shall be recovered from the intrastate jurisdiction. In a State that has a certified program under subsection (f), a State commission shall permit a common carrier to recover the costs incurred in providing intrastate telecommunications relay services by a method consistent with the requirements of this section.

"(e) ENFORCEMENT.—

"(1) IN GENERAL.—Subject to subsections (f) and (g), the Commission shall enforce this section.

"(2) COMPLAINT.—The Commission shall resolve, by final order, a complaint alleging a violation of this section within 180 days after the date such complaint is filed.

"(f) CERTIFICATION.—

"(1) STATE DOCUMENTATION.—Any State desiring to establish a State program under this section shall submit documentation to the Commission that describes the program of such State for implementing intrastate telecommunications relay services and the procedures and remedies available for enforcing any requirements imposed by the State program.

"(2) REQUIREMENTS FOR CERTIFICATION.—After review of such documentation, the Commission shall certify the State program if the Commission determines that—

"(A) the program makes available to hearing-impaired and speech-impaired individuals, either directly, through designees, through a competitively selected vendor, or through regulation of intrastate common carriers, intrastate telecommunications relay services in such State in a manner that meets or exceeds the requirements of regulations prescribed by the Commission under subsection (d); and

"(B) the program makes available adequate procedures and remedies for enforcing the requirements of the State program.

"(3) METHOD OF FUNDING.—Except as provided in subsection (d), the Commission shall not refuse to certify a State program based solely on the method such State will implement for funding intrastate telecommunication relay services.

"(4) SUSPENSION OR REVOCATION OF CERTIFICATION.—The Commission may suspend or revoke such certification if, after notice and opportunity for hearing, the Commission determines that such certification is no longer warranted. In a State whose program has been suspended or revoked, the Commission shall take such steps as may be necessary, consistent with this section, to ensure continuity of telecommunications relay services.

"(g) COMPLAINT.—

"(1) REFERRAL OF COMPLAINT.—If a complaint to the Commission alleges a violation of this section with respect to intrastate telecommunications relay services within a State and certification of the program of such State under subsection (f) is in effect, the Commission shall refer such complaint to such State.

"(2) JURISDICTION OF COMMISSION.—After referring a complaint to a State under paragraph (1), the Commission shall exercise jurisdiction over such complaint only if—

"(A) final action under such State program has not been taken on such complaint by such State—

"(i) within 180 days after the complaint is filed with such State; or

"(ii) within a shorter period as prescribed by the regulations of such State; or

"(B) the Commission determines that such State program is no longer qualified for certification under subsection (f).".

(b) CONFORMING AMENDMENTS.—The Communications Act of 1934 (47 U.S.C. 151 et seq.) is amended—

(1) in section 2(b) (47 U.S.C. 152(b)), by striking "section 224" and inserting "sections 224 and 225"; and

(2) in section 221(b) (47 U.S.C. 221(b)), by striking "section 301" and inserting "sections 225 and 301".

SEC. 402. CLOSED-CAPTIONING OF PUBLIC SERVICE ANNOUNCEMENTS.

Section 711 of the Communications Act of 1934 is amended to read as follows:

"SEC. 711. CLOSED-CAPTIONING OF PUBLIC SERVICE ANNOUNCEMENTS.

"Any television public service announcement that is produced or funded in whole or in part by any agency or instrumentality of Federal government shall include closed captioning of the verbal content of such announcement. A television broadcast station licensee—

"(1) shall not be required to supply closed captioning for any such announcement that fails to include it; and

"(2) shall not be liable for broadcasting any such announcement without transmitting a closed caption unless the licensee intentionally fails to transmit the closed caption that was included with the announcement.".

## TITLE V—MISCELLANEOUS PROVISIONS

SEC. 501. CONSTRUCTION.

(a) IN GENERAL.—Except as otherwise provided in this Act, nothing in this Act shall be construed to apply a lesser standard than the standards applied under title V of the Rehabilitation Act of 1973 (29 U.S.C. 790 et seq.) or the regulations issued by Federal agencies pursuant to such title.

(b) RELATIONSHIP TO OTHER LAWS.—Nothing in this Act shall be construed to invalidate or limit the remedies, rights, and procedures of any Federal law or law of any State or political subdivision of any State or jurisdiction that provides greater or equal protection for the rights of individuals with disabilities than are afforded by this Act. Nothing in this Act shall be construed to preclude the prohibition of, or the imposition of restrictions on, smoking in places of employment covered by title I, in transportation covered by title II or III, or in places of public accommodation covered by title III.

(c) INSURANCE.—Titles I through IV of this Act shall not be construed to prohibit or restrict—

(1) an insurer, hospital or medical service company, health maintenance organization, or any agent, or entity that administers benefit plans, or similar organizations from underwriting risks, classifying risks, or administering such risks that are based on or not inconsistent with State law; or

(2) a person or organization covered by this Act from establishing, sponsoring, observing or administering the terms of a bona fide benefit plan that are based on underwriting risks, classifying risks, or administering such risks that are based on or not inconsistent with State law; or

(3) a person or organization covered by this Act from establishing, sponsoring, observing or administering the terms of a bona fide benefit plan that is not subject to State laws that regulate insurance.

Paragraphs (1), (2), and (3) shall not be used as a subterfuge to evade the purposes of title I and III.

(d) ACCOMMODATIONS AND SERVICES.—Nothing in this Act shall be construed to require an individual with a disability to accept an accommodation, aid, service, opportunity, or benefit which such individual chooses not to accept.

SEC. 502. STATE IMMUNITY.

A State shall not be immune under the eleventh amendment to the Constitution of the United States from an action in Federal or State court of competent jurisdiction for a violation of this Act. In any action against a State for a violation of the requirements of this Act, remedies (including remedies both at law and in equity) are available for such a violation to the same extent as such remedies are available for such a violation in an action against any public or private entity other than a State.

SEC. 503. PROHIBITION AGAINST RETALIATION AND COERCION.

(a) RETALIATION.—No person shall discriminate against any individual because such individual has opposed any act or practice made unlawful by this Act or because such individual made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this Act.

(b) INTERFERENCE, COERCION, OR INTIMIDATION.—It shall be unlawful to coerce, intimidate, threaten, or interfere with any individual in the exercise or enjoyment of, or on account of his or her having exercised or enjoyed, or on account of his or her having aided or encouraged any other individual in the exercise or enjoyment of, any right granted or protected by this Act.

(c) REMEDIES AND PROCEDURES.—The remedies and procedures available under sections 107, 203, and 308 of this Act shall be available to aggrieved persons for violations of subsections (a) and (b), with respect to title I, title II and title III, respectively.

SEC. 504. REGULATIONS BY THE ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD.

(a) ISSUANCE OF GUIDELINES.—Not later than 9 months after the date of enactment of this Act, the Architectural and Transportation Barriers Compliance Board shall issue minimum guidelines that shall supplement the existing Minimum Guidelines and Requirements for Accessible Design for purposes of titles II and III of this Act.

(b) CONTENTS OF GUIDELINES.—The supplemental guidelines issued under subsection (a) shall establish additional requirements, consistent with this Act, to ensure that buildings, facilities, rail passenger cars, and vehicles are accessible, in terms of architecture and design, transportation, and communication, to individuals with disabilities.

(c) QUALIFIED HISTORIC PROPERTIES.—

(1) IN GENERAL.—The supplemental guidelines issued under subsection (a) shall include procedures and requirements for alterations that will threaten or destroy the historic significance of qualified historic buildings and facilities as defined in 4.1.7(1)(a) of the Uniform Federal Accessibility Standards.

(2) SITES ELIGIBLE FOR LISTING IN NATIONAL REGISTER.—With respect to alterations of buildings or facilities that are eligible for listing in the National Register of Historic Places under the National Historic Preservation Act (16 U.S.C. 470 et seq.), the guidelines described in paragraph (1) shall, at a minimum, maintain the procedures and requirements established in 4.1.7(1) and (2) of the Uniform Federal Accessibility Standards.

(3) OTHER SITES.—With respect to alterations of buildings or facilities designated as historic under State or local law, the guidelines described in paragraph (1) shall establish procedures equivalent to those established by 4.1.7(1)(b) and (c) of the Uniform Federal Accessibility Standards, and shall require, at a minimum, compliance with the requirements established in 4.1.7(2) of such standards.

SEC. 505. ATTORNEY'S FEES.

In any action or administrative proceeding commenced pursuant to this Act, the court or agency, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorney's fee, including litigation expenses, and costs, and the United States shall be liable for the foregoing the same as a private individual.

SEC. 506. TECHNICAL ASSISTANCE.

(a) PLAN FOR ASSISTANCE.—

(1) IN GENERAL.—Not later than 180 days after the date of enactment of this Act, the Attorney General, in consultation with the Chair of the Equal Employment Opportunity Commission, the Secretary of Transportation, the Chair of the Architectural and Transportation Barriers Compliance Board, and the Chairman of the Federal Communications Commission, shall develop a plan to assist entities covered under this Act, and other Federal agencies, in understanding the responsibility of such entities and agencies under this Act.

(2) PUBLICATION OF PLAN.—The Attorney General shall publish the plan referred to in paragraph (1) for public comment in accordance with subchapter II of chapter 5 of title 5, United States Code (commonly known as the Administrative Procedure Act).

(b) AGENCY AND PUBLIC ASSISTANCE.—The Attorney General may obtain the assistance of other Federal agencies in carrying out subsection (a), including the National Council on Disability, the President's Committee on Employment of People with Disabilities, the Small Business Administration, and the Department of Commerce.

(c) IMPLEMENTATION.—

(1) RENDERING ASSISTANCE.—Each Federal agency that has responsibility under paragraph (2) for implementing this Act may render technical assistance to individuals and institutions that have rights or duties under the respective title or titles for which such agency has responsibility.

(2) IMPLEMENTATION OF TITLES.—

(A) TITLE I.—The Equal Employment Opportunity Commission and the Attorney General shall implement the plan for assistance developed under subsection (a), for title I.

(B) TITLE II.—

(i) SUBTITLE A.—The Attorney General shall implement such plan for assistance for subtitle A of title II.

(ii) SUBTITLE B.—The Secretary of Transportation shall implement such plan for assistance for subtitle B of title II.

(C) TITLE III.—The Attorney General, in coordination with the Secretary of Transportation and the Chair of the Architectural Transportation Barriers Compliance Board, shall implement such plan for assistance for title III, except for section 304, the plan for assistance for which shall be implemented by the Secretary of Transportation.

(D) TITLE IV.—The Chairman of the Federal Communications Commission, in coordination with the Attorney General, shall implement such plan for assistance for title IV.

(3) TECHNICAL ASSISTANCE MANUALS.—Each Federal agency that has responsibility under paragraph (2) for implementing this Act shall, as part of its implementation responsibilities, ensure the availability and provision of appropriate technical assistance manuals to individuals or entities with rights or duties under this Act no later than six months after applicable final regulations are published under titles I, II, III, and IV.

(d) GRANTS AND CONTRACTS.—

(1) IN GENERAL.—Each Federal agency that has responsibility under subsection (c)(2) for implementing this Act may make grants or award contracts to effectuate the purposes of this section. Such grants and contracts may be awarded to individuals, institutions not organized for profit and no part of the net earnings of which inures to the benefit of any private shareholder or individual (including educational institutions), and associations representing individuals who have rights or duties under this Act. Contracts may be awarded to entities organized for profit, but such entities may not be the recipients of grants described in this paragraph.

(2) DISSEMINATION OF INFORMATION.—Such grants and contracts, among other uses, may be designed to ensure wide dissemination of information about the rights and duties established by this Act and to provide information and technical assistance about techniques for effective compliance with this Act.

(e) FAILURE TO RECEIVE ASSISTANCE.—An employer, public accommodation, or other entity covered under this Act shall not be excused from compliance with the requirements of this Act because of any failure to receive technical assistance under this section, including any failure in the development or dissemination of any technical assistance manual authorized by this section.

SEC. 507. FEDERAL WILDERNESS AREAS.

(a) STUDY.—The National Council on Disability shall conduct a study and report on the effect that wilderness designations and wilderness land management practices have on the ability of individuals with disabilities to use and enjoy the National Wilderness Preservation System as established under the Wilderness Act (16 U.S.C. 1131 et seq.).

(b) SUBMISSION OF REPORT.—Not later than 1 year after the enactment of this Act, the National Council on Disability shall submit the report required under subsection (a) to Congress.

(c) SPECIFIC WILDERNESS ACCESS.—Congress reaffirms that nothing in the Wilderness Act is to be construed as prohibiting use of a wheelchair in a wilderness area by an individual whose disability requires use of a wheelchair, but no agency is required to provide any form of special treatment or accommodation, or to construct any facilities or modify any conditions of lands within a wilderness area in order to facilitate such use.

SEC. 508. TRANSVESTITES.

For the purposes of this Act, the term "disabled" or "disability" shall not apply to an individual solely because that individual is a transvestite.

SEC. 509. CONGRESSIONAL INCLUSION.

(a) IN GENERAL.—Notwithstanding any other provision of this Act or of law, the purposes of this Act shall, subject to subsections (b) through (d), apply in their entirety to the Senate, the House of Representatives, and all the instrumentalities of the Congress, or either House thereof.

(b) EMPLOYMENT IN THE HOUSE OF REPRESENTATIVES.—

(1) IN GENERAL.—The rights and protections under this Act shall, subject to paragraph (2), apply with respect to any employee in an employment position in the House of Representatives and any employing authority of the House of Representatives.

(2) ADMINISTRATION.—

(A) In the administration of this subsection, the remedies and procedures made applicable pursuant to the resolution described in subparagraph (B) shall apply exclusively.

(B) The resolution referred to in subparagraph (A) is House Resolution 15 of the One Hundred First Congress, as agreed to January 3, 1989, or any other provision that continues in effect the provisions of, or is a successor to, the Fair Employment Practices Resolution (House Resolution 558 of the One Hundredth Congress, as agreed to October 4, 1988).

(3) EXERCISE OF RULEMAKING POWER.—The provisions of paragraph (2) of this subsection are enacted by the Congress as an exercise of the rulemaking power of the House of Representatives, with full recognition of the right of the House to change its rules, in the same manner, and to the same extent as in the case of any other rule of the House.

(c) CONGRESSIONAL MATTERS OTHER THAN EMPLOYMENT.—

(1) IN GENERAL.—The rights and protections under this Act shall, subject to paragraph (2), apply with respect to the conduct of the Congress regarding matters other than employment.

(2) ESTABLISHMENT OF REMEDIES AND PROCEDURES BY ARCHITECT OF THE CAPITOL.—The Architect of the Capitol shall establish remedies and procedures to be utilized with respect to the rights and protections provided pursuant to paragraph (1). Such remedies and procedures shall apply exclusively, after approval in accordance with paragraph (3).

(3) APPROVAL BY CONGRESSIONAL LEADERSHIP.—For purposes of paragraph (2), the Architect of the Capitol shall submit proposed remedies and procedures to the Speaker of the House of Representatives and to an appropriate officer of the Senate, as designated by the Senate. The remedies and procedures shall be effective upon the approval of the Speaker, after consultation with the House Office Building Commission, and the approval of the appropriate officer of the Senate.

(d) INSTRUMENTALITIES OF CONGRESS.—

(1) IN GENERAL.—The rights and protections under this Act shall, subject to paragraph (2), apply with respect to the conduct of each instrumentality of the Congress.

(2) ESTABLISHMENT OF REMEDIES AND PROCEDURES BY INSTRUMENTALITIES.—The chief official of each instrumentality of the Congress shall establish remedies and procedures to be utilized with respect to the rights and protections provided pursuant to paragraph (1). Such remedies and procedures shall apply exclusively.

(3) REPORT TO CONGRESS.—The chief official of each instrumentality of the Congress shall, after establishing remedies and procedures for purposes of paragraph (2), submit to the Congress a report describing the remedies and procedures.

SEC. 510. ILLEGAL USE OF DRUGS.

(a) IN GENERAL.—For purposes of this Act, the term "individual with a disability" does not include an individual who is currently engaging in the illegal use of drugs, when the covered entity acts on the basis of such use.

(b) RULES OF CONSTRUCTION.—Nothing in subsection (a) shall be construed to exclude as an individual with a disability an individual who—

(1) has successfully completed a supervised drug rehabilitation program and is no longer engaging in the illegal use of drugs, or has otherwise been rehabilitated successfully and is no longer engaging in such use;

(2) is participating in a supervised rehabilitation program and is no longer engaging in such use; or

(3) is erroneously regarded as engaging in such use, but is not engaging in such use;

except that it shall not be a violation of this Act for a covered entity to adopt or administer reasonable policies or procedures, including but not limited to drug testing, designed to ensure that an individual described in paragraph (1) or (2) is no longer engaging in the illegal use of drugs; however, nothing in this section shall be construed to encourage, prohibit, restrict, or authorize the conducting of testing for the illegal use of drugs.

(c) HEALTH AND OTHER SERVICES.—Notwithstanding subsection (a) and section 511(b)(3), an individual shall not be denied health services, or services provided in connection with drug rehabilitation, on the basis of the current illegal use of drugs if the individual is otherwise entitled to such services.

(d) DEFINITION OF ILLEGAL USE OF DRUGS.—

(1) IN GENERAL.—The term "illegal use of drugs" means the use of drugs, the possession or distribution of which is unlawful under the Controlled Substances Act (21 U.S.C. 812). Such term does not include the use of a drug taken under supervision by a licensed health care professional, or other uses authorized by the Controlled Substances Act or other provisions of Federal law.

(2) DRUGS.—The term "drug" means a controlled substance, as defined in schedules I through V of section 202 of the Controlled Substances Act.

SEC. 511. DEFINITIONS.

(a) HOMOSEXUALITY AND BISEXUALITY.—For purposes of the definition of "disability" in section 3(2), homosexuality and bisexuality are not impairments and as such are not disabilities under this Act.

(b) CERTAIN CONDITIONS.—Under this Act, the term "disability" shall not include—

(1) transvestism, transsexualism, pedophilia, exhibitionism, voyeurism, gender identity disorders not resulting from physical impairments, or other sexual behavior disorders;

(2) compulsive gambling, kleptomania, or pyromania; or

(3) psychoactive substance use disorders resulting from current illegal use of drugs.

SEC. 512. AMENDMENTS TO THE REHABILITATION ACT.

(a) DEFINITION OF HANDICAPPED INDIVIDUAL.—Section 7(8) of the Rehabilitation Act of 1973 (29 U.S.C. 706(8)) is amended by redesignating subparagraph (C) as subparagraph (D), and by inserting after subparagraph (B) the following subparagraph:

"(C)(i) For purposes of title V, the term 'individual with handicaps' does not include an individual who is currently engaging in the illegal use of drugs, when a covered entity acts on the basis of such use.

"(ii) Nothing in clause (i) shall be construed to exclude as an individual with handicaps an individual who—

"(I) has successfully completed a supervised drug rehabilitation program and is no longer engaging in the illegal use of drugs, or has otherwise been rehabilitated successfully and is no longer engaging in such use;

"(II) is participating in a supervised rehabilitation program and is no longer engaging in such use; or

"(III) is erroneously regarded as engaging in such use, but is not engaging in such use, except that it shall not be a violation of this Act for a ccvered entity to adopt or administer reasonable policies or procedures, including but not limited to drug testing, designed to ensure that an individual described in subclause (I) or (II) is no longer engaging in the illegal use of drugs.

"(iii) Notwithstanding clause (i), for purposes of programs and activities providing health services and services provided under title I, II and III, an individual shall not be excluded from the benefits of such programs or activities on the basis of his or her current illegal use of drugs if he or she is otherwise entitled to such services.

"(iv) For purposes of programs and activities providing educational services, local educational agencies may take disciplinary action pertaining to the use or possession of illegal drugs or alcohol against any handicapped student who currently is engaging in the illegal use of drugs or in the use of alcohol to the same extent that such disciplinary action is taken against nonhandicapped students. Furthermore, the due process procedures at 34 CFR 104.36 shall not apply to such disciplinary actions.

"(v) For purposes of sections 503 and 504 as such sections relate to employment, the term 'individual with handicaps' does not include any individual who is an alcoholic whose current use of alcohol prevents such individual from performing the duties of the job in question or whose employment, by reason of such current alcohol abuse, would constitute a direct threat to property or the safety of others.".

(b) DEFINITION OF ILLEGAL DRUGS.—Section 7 of the Rehabilitation Act of 1973 (29 U.S.C. 706) is amended by adding at the end the following new paragraph:

"(22)(A) The term 'drug' means a controlled substance, as defined in schedules I through V of section 202 of the Controlled Substances Act (21 U.S.C. 812).

"(B) The term 'illegal use of drugs' means the use of drugs, the possession or distribution of which is unlawful under the Controlled Substances Act. Such term does not include the use of a drug taken under supervision by a licensed health care professional, or other uses authorized by the Controlled Substances Act or other provisions of Federal law.".

(c) CONFORMING AMENDMENTS.—Section 7(8)(B) of the Rehabilitation Act of 1973 (29 U.S.C. 706(8)(B)) is amended—

(1) in the first sentence, by striking "Subject to the second sentence of this subparagraph," and inserting "Subject to subparagraphs (C) and (D),"; and

(2) by striking the second sentence.

SEC. 513. ALTERNATIVE MEANS OF DISPUTE RESOLUTION.

Where appropriate and to the extent authorized by law, the use of alternative means of dispute resolution, including settlement negotiations, conciliation, facilitation, mediation, factfinding, minitrials, and arbitration, is encouraged to resolve disputes arising under this Act.

SEC. 514. SEVERABILITY.

Should any provision in this Act be found to be unconstitutional by a court of law, such provision shall be severed from the remainder of the Act, and such action shall not affect the enforceability of the remaining provisions of the Act.

The SPEAKER pro tempore. Without objection, the motion is agreed to.

Mr. WALKER. Mr. Speaker, reserving the right to object, I just want to know what it is we have been doing. It has been impossible to hear in the House.

Mr. HOYER. Mr. Speaker, will the gentleman yield?

Mr. WALKER. Further reserving the right to object, I am happy to yield to the gentleman from Maryland.

Mr. HOYER. Mr. Speaker, in response to the gentleman's question, what the motion does is it substitutes the House-passed language, the Coelho bill that we have just adopted, into the Senate bill as the text of the Senate bill. That is all it does.

Mr. WALKER. Mr. Speaker, further reserving the right to object, is that for the purpose of sending it back to the Senate? Is that correct?

Mr. HOYER. The gentleman is correct.

Mr. WALKER. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Maryland [Mr. HOYER].

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill, H.R. 2273, was laid on the table.

## PERSONAL EXPLANATION

Mr. HUTTO. Mr. Speaker, I was in my district this morning conducting official business. Therefore, I was unable to vote on two of the amendments to H.R. 2273.

Had I been present I would have voted "aye" on the amendment offered by Mr. LIPINSKI and "aye" on the amendment offered by Mr. SHUSTER.

## PERSONAL EXPLANATION

Mr. OBERSTAR. Mr. Speaker, last month, when the House of Representatives considered the bill H.R. 2273, the Americans with Disabilities Act, my vote was not recorded on several amendments.

During the consideration of this historic legislation, I was in Indiana to attend the graduation ceremonies for my son, Ted, at Notre Dame University.

Had I been present, I would have voted "nay" on the Olin amendment, rollcall vote 117. I would have voted "nay" on the Chapman amendment, rollcall vote 118. I would have voted "nay" on the Lipinski amendment, rollcall vote 119. I would have voted "nay" on the Shuster amendment, rollcall vote 120. I would have voted "nay" on the Sensenbrenner amendment, rollcall vote 121.

## PETROGLYPH NATIONAL MONUMENT ESTABLISHMENT ACT OF 1990

The SPEAKER pro tempore. The unfinished business is the question de novo of suspending the rules and passing the Senate bill, S. 286, as amended.

The Clerk read the title of the Senate bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Minnesota [Mr. VENTO] that the House suspend the rules and pass the Senate bill, S. 286, as amended.

The question was taken.

Mr. VENTO. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 415, nays 0, not voting 17, as follows:

[Roll No. 124]

□ 1525

So (two-thirds having voted in favor thereof) the rules were suspended and the Senate bill, as amended, was passed.

The result of the vote was announced as above recorded.

The title of the Senate bill was amended so as to read:

A bill to establish Petroglyph National Monument and Pecos National Historical Park in the State of New Mexico, and for other purposes.

A motion to reconsider was laid on the table.

## REPRESENTATIVE SCHEUER SUPPORTS BATES-BOEHLERT-WAXMAN AMENDMENT TO CLEAN AIR BILL

(Mr. SCHEUER asked and was given permission to address the House for 1 minute.)

Mr. SCHEUER. Mr. Speaker, for some reason that I do not understand I am listed in a letter that is being circulated in the last couple of days as a supporter of the Bruce-Oxley amendment to the Clean Air Act. This is by accident, inadvertence, and mistake.

In fact, I am a supporter of the Bates-Boehlert-Waxman amendment to the Clean Air Act.

## PERMISSION FOR COMMITTEE ON RULES TO FILE PRIVILEGED REPORT PROVIDING FOR CONSIDERATION OF H.R. 3030, CLEAN AIR ACT AMENDMENTS OF 1990

Mr. BONIOR. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight, May 22, 1990, to file a privileged report providing for consideration of H.R. 3030, the Clean Air Act Amendments of 1990.

The SPEAKER pro tempore (Mr. TRAXLER). Is there objection to the request of the gentleman from Michigan?

There was no objection.

## PROVIDING FOR CONSIDERATION OF H.R. 4636, SUPPLEMENTAL ASSISTANCE FOR EMERGING DEMOCRACIES ACT OF 1990

Mr. MOAKLEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 395 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 395

Providing for the consideration of the bill (H.R. 4636) to authorize supplemental economic assistance for fiscal year 1990 to support democracy in Panama and Nicaragua, and for other purposes.

*Resolved*, That at any time after the adoption of this resolution the Speaker may, pursuant to clause 1(b) of rule XXIII, declare the House resolved into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4636) to authorize supplemental economic assistance for fiscal year 1990 to support democracy in Panama and Nicaragua, and for other purposes, and the first reading of the bill shall be dispensed with. All points of order against consideration of the bill are hereby waived. After general debate, which shall be confined to the bill and which shall not exceed one and one-half hours, with one hour to be equally divided and controlled by the chairman and ranking minority member of the Committee on Foreign Affairs, and with thirty minutes to be equally divided and controlled by the chairman and ranking minority member of the Committee on Rules, the bill shall be considered as having been read for amendment under the five-minute rule and all points of order against the bill are hereby waived. No amendment to the bill shall be in order except the amendments printed in the report of the Committee on Rules accompanying this resolution. Said amendments shall be considered in the order and manner specified in the report, may only be offered by the Member specified or his designee, shall be considered as having been read and shall be debatable for the time specified in the report, equally divided and controlled by the proponent and a Member opposed thereto. All points of order against the amendments printed in the report are hereby waived. Said amendments shall not be subject to amendment except as specified in the report. The amendments numbered one shall be considered en bloc and shall not be subject to a demand for a division of the question in the House or in the Committee of the Whole. If both amendments numbered four and five are adopted, only the latter amendment which is adopted shall be considered as having been finally adopted and reported back to the House. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions. After passage of H.R. 4636, it shall be in order to take S. 2364 from the Speaker's table and to consider said bill in the House. It shall then be in order to move to strike out all after the enacting clause of S. 2364 and insert in lieu thereof the provisions contained in H.R. 4636 as passed by the House, and all points of order against said motion are hereby waived.

□ 1530

The SPEAKER pro tempore (Mr. TRAXLER). The gentleman from Massachusetts [Mr. MOAKLEY] is recognized for 1 hour.

Mr. MOAKLEY. Mr. Speaker, I yield the customary 30 minutes to the gentleman from New York [Mr. SOLOMON] for the purpose of debate only, pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 395 is a modified open rule providing one and one half hour of general debate. One hour is to be equally divided and controlled by the Chairman and ranking minority member of the Committee on Foreign Affairs, and one-half hour is to be equally divided and controlled by the chairman and ranking minority member of the Committee on Rules.

All points of order against the bill and against its consideration are waived. The rule makes in order only the amendments printed in the report accompanying the resolution and waives all points of order against those amendments. The amendments are to be considered only in the order and manner specified in the report. They are debatable for the time designated, to be equally divided between the proponent of the amendment and a member opposed thereto. The amendments are not subject to amendment.

Mr. Speaker, House Resolution 395 specifically makes in order the following amendments: First, the amendments en bloc by Representative FASCELL of Florida, debatable for 10 minutes; second, the amendment by Representative KOSTMAYER of Pennsylvania, debatable for 20 minutes; third, the amendment by Representative DREIER of California, debatable for 20 minutes; fourth, the amendment by Representative BROOMFIELD of Michigan, debatable for 1 hour; and fifth, the amendment by Representative MOAKLEY of Massachusetts or Representative MURTHA of Pennsylvania, debatable for 1 hour.

The rule states that the amendments numbered 1 in the report are to be considered en bloc and are not subject to a demand for a division of the question in the House or in the Committee of the Whole.

The rule further states that if both the Broomfield amendment and the Moakley amendment are adopted, only the last amendment adopted shall be considered as having been adopted and reported back to the House.

Mr. Speaker, the rule provides one motion to recommit, with or without instructions. After passage of H.R. 4636, the rule makes it in order to take the bill S. 2364 from the Speaker's table and to consider the bill in the House. A motion to strike all after the enacting clause of S. 2364 and insert in lieu thereof the text of H.R. 4636, as passed the House, is in order. The rule waives all points of order against the motion.

Mr. Speaker, H.R. 4636 authorizes supplemental foreign aid appropriations for Nicaragua, Panama and other countries. In addition, the bill authorizes and places conditions on military assistance to El Salvador in fiscal year 1990 and fiscal year 1991.

H.R. 4636 authorizes many of the foreign operations components of H.R. 4404, the supplemental appropriation bill. In addition, the legislation authorizes assistance for sub-Saharan Africa. The bill establishes a new development fund for Africa and provides for Caribbean regional development.

Title V of the bill withholds 50 percent of the money authorized for military assistance to El Salvador for the remainder of fiscal year 1990 and in fiscal year 1991. The rule provides for ample time to debate El Salvador and makes in order two amendments to the title.

Mr. Speaker, the Rules Committee requested that amendments be submitted to us several days before we granted this rule. We made in order every

Republican Amendment submitted. In addition, on the issue of El Salvador the rule makes in order the Broomfield substitute, and even allows instructions on the motion to recommit. In my opinion, this is eminently fair treatment of the minority.

Mr. Speaker, we have endeavored to work with the minority and the administration on the issue of El Salvador. It was only when we reluctantly concluded that the current round of talks were not going to produce an agreement that we decided to proceed with this bill on the floor. I fully anticipate and hope that we will continue to seek a bipartisan compromise on the issue of El Salvador and I look forward to working with the minority and the administration to accomplish this.

Mr. Speaker, this is a good rule that provides for the expeditious consideration of H.R. 4636, and I urge its adoption.

Mr. SOLOMON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I thank my friend, the gentleman from Massachusetts, chairman of the Committee on Rules, for yielding me half the time; nothing unfair about that.

Mr. Speaker, I rise with certain misgivings about H.R. 4636, as well as the rule that provides for its consideration. But I believe that the bill should be debated and I will not ask for a "no" vote, however modified the rule may be.

I will have more to say about H.R. 4636 during the general debate, but for now I will make just a few comments about the rule, House Resolution 395.

As the good chairman indicated, this is a modified closed rule that makes in order consideration of five amendments. One of these five amendments will be an en bloc package of amendments, which are largely technical in nature. All told, Mr. Speaker, there were only three amendments filed with the Committee on Rules that are not made in order under this rule. As the chairman has said, I would note that every amendment filed by Republican Members is being accommodated under this rule, and we thank the gentleman for that.

There were three amendments that were not allowed: The Traficant amendment, the Atkins amendment and, I believe, one of the Kostmayer amendments.

It is my practice, Mr. Speaker, not to support a less than fully open rule unless such a rule has been worked out in advance by the bipartisan leadership. That was not the case with this rule. There is one other serious problem, but this is with the bill itself: Namely, the inclusion of an El Salvador provision, against the wishes of the administration.

Mr. Speaker and my colleagues, H.R. 4636 started out as a simple request from the administration to provide assistance to the new democratic governments, I say new democratic governments of Nicaragua and Panama. But the bill has ballooned into an omnibus foreign aid package and the El Salvador language is a particularly regrettable provision.

So we have before us a flawed bill, but the process must go forward, and I will not oppose the rule.

Mr. Speaker, I reserve the balance of my time.

Mr. MOAKLEY. Mr. Speaker, I yield 4 minutes to the very eloquent gentleman from Ohio [Mr. TRAFICANT].

Mr. TRAFICANT. Mr. Speaker, I do not often come up on a rule and vote against it. I do not think there is a chairman of the House that has been more fair to everybody than the gentleman from Massachusetts [Mr. MOAKLEY].

Mr. Speaker, I am going to vote "no" on the rule and vote "no" on the bill. I just want to say a few things briefly.

I am trying to figure out, after almost 6 years, how our Government works. What really confuses me is we have been borrowing $200 billion a year because we spend $200 billion a year more than we take in. Now, that is really a tragedy because we are running an insolvent government that, in my opinion, is fiscally on automatic pilot about to go belly up.

With that $200 billion, listen to what we do: About $150 billion, we go ahead and we borrow that money from the real rich countries and we turn around and take the $150 billion to provide defense and protection for those same rich countries who have lent us the borrowed money.

Some people would say that is important for national security to have this NATO Alliance.

□ 1540

They give Members all this malarkey every year. I listen to their debates. Then we come to foreign aid and we borrow $20 billion from rich countries, and take this borrowed money, and then we give it in the form of foreign aid to those so-called poor countries. Many of those so-called poor countries say "Yankee, go home."

Now, I am trying to figure this all out. We borrow money so that we can give it away. But let me tell Members what really bothers me. I would like someone to tell me if there is any country around the world that takes our foreign aid money and then buys our T-bills with it? And then we pay interest on the debt to countries buying our T-bills, with foreign aid money, that we borrowed from rich countries.

Now this, Members, is Congress.

My people, no jobs. "Well, TRAFICANT, supply side." No housing. "Well TRAFICANT, no parochialism." No highways. "Now, look, TRAFICANT, no demonstration money." No revenue sharing. "Look, TRAFICANT, we got a deficit." Urban development action grants. "What are you trying to do, TRAFICANT, break the bank?"

Let me tell Members what. This is a taxpayer's screw bill here today, and I love this, I really do. Members can call me all the names they want, but I offered an amendment, and I normally have my amendments approved, but my amendment would have called for a vote and it would have been defeated, but here's what it said. My amendment would have said, "Look, it is bad enough we are borrowing this money and then we are going to give it to someone else, and they are not even American." My amendment would have said that when they go ahead and use this $20 billion, they would buy American goods with it. Now, my amendment was not allowed, and my amendment was not allowed because people do not want recorded votes on the Traficant amendment to cut foreign aid or to challenge foreign aid.

Let me say there have been some elections in the past where a pay raise became an issue. I will say this on the floor. I may not be here, I will probably be defeated before this is all over, but there will come a day when your voting record on foreign aid is going to be the one that grabs Members right by the keister, and that is what I want. I want the litmus test to be this type of vote.

That is why I feel bad having to vote against any of the gentleman from Massachusetts, Mr. MOAKLEY's issues that he brings to the floor. I mean that. I appreciate the gentleman giving me the time.

Mr. SOLOMON. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan [Mr. BROOMFIELD], the ranking Republican on the Committee on Foreign Affairs.

Mr. BROOMFIELD. Mr. Speaker, despite being titled a "modified open rule," this rule is in fact a closed rule. It permits only a small number of specified amendments for limited debate.

The proponents of this rule say that it is justified by the emergency nature of the bill, which is primarily intended to provide assistance for Nicaragua and Panama. But, in fact, this bill has languished in the House of Representatives since January, when the President first urgently requested this assistance. If the House had acted more expeditiously, there could have been a richer debate on this bill.

Mr. Speaker, I am appreciative to the Rules Committee and its distinguished chairman, Mr. MOAKLEY, for the opportunity to offer a substitute amendment on El Salvador. I believe that the vote on the Broomfield-Byron amendment will reveal that the majority of the Members of this House do

not support hastily withdrawing military assistance from El Salvador, despite the concerns we all share about human rights abuses attributable to the Salvadoran military.

The Studds provision, contained in the bill, would remove United States support for the Government of El Salvador just as the process of serious negotiations with the FMLN guerrillas is resuming. It would allow the FMLN terrorist to win in the Halls of Congress what they have so far failed to achieve either at the ballot box or even on the battlefield. The Studds provision would reward the FMLN for its provocations and make United States assistance to El Salvador hostage to the actions of the insurgents.

Not only are the provisions of the bill on this subject misguided, the Moakley proposal is little better. Like Studds, the Moakley amendment would in all likelihood also lead to an immediate cutoff of half of currently authorized military assistance. It would also make this assistance and future assistance depend largely on the actions of the FMLN guerrillas.

The rule unfairly stacks the debate on El Salvador. If the Broomfield substitute is adopted over the Studds language in the bill, then Chairman MOAKLEY could offer an amendment which is virtually identical to the Studds provision. Let's be absolutely clear: The Moakley amendment is not a moderate alternative to Studds. It is another attempt to cut off assistance and force the President to veto this bill.

Let there be no doubt. The President will veto this bill if it contains either the Studds or Moakley provisions. On the other hand, the administration has unequivocally indicated that it supports the Broomfield-Byron substitute.

The administration, through Secretary of State Baker, has offered to negotiate seriously and in good faith on legislative conditions on further assistance to El Salvador. This bill, which is required to meet emergency needs in Nicaragua and Panama, is really not the place for resolution of this issue. Nevertheless, the administration supports the Broomfield-Byron provision at this time.

Mr. Speaker, for a truly effective policy in El Salvador, the leaders of this body must reach a meeting of minds with the administration and should not play a game of legislative chicken with much needed assistance for Nicaragua and Panama.

In conclusion, I hope that once we get into this debate, the Broomfield-Byron amendment will be adopted by the House so that United States assistance to El Salvador does not become hostage to the FMLN terrorists.

Mr. MOAKLEY. Mr. Speaker, I yield 4 minutes to the gentleman from Massachusetts [Mr. MARKLEY].

Mr. MARKEY. Mr. Speaker, I rise in support of the Moakley amendment.

Mr. Speaker, 10 years ago, shortly before his brutal assassination, Archbishop Romero pleaded with us to stop sending military assistance to El Salvador. We did not listen to his plea. Over the ensuing 10 years we continued to send military aid. Since that time the situation has not improved and there has been no resolution of the conflict.

Last fall, six Jesuits, their housekeeper, and her young daughter were brutally killed by elements of the Salvadoran military. The Jesuits appealed to Salvadorans to reject the calls to violence from the right and left and heed their call to conscience.

Now it is time to heed their message and to cut military aid to El Salvador.

In Nicaragua, we pursued a military option before realizing that the best way to achieve democracy and peace was through negotiations, not through war.

In El Salvador, we have given $4 billion to the military over the last 10 years and what have we achieved? A Central American killing field which has left 70,000 dead.

Salvadoran democracy is being held hostage by the enemies of civilizing intelligence. Everyone knows the FMLN cannot force their way into power.

After 10 years the effort to defeat them has failed, and U.S. policy is bankrupt.

All that can be achieved through a military option is continued violence, misery, and death in El Salvador.

Mr. Speaker, El Salvador is not so much a country with a corrupt military, as a corrupt military with a country.

Fourteen out of the top 15 Salvadoran military commanders have risen to their positions despite having had documented abuses of human rights carried out by troops under their command. The judicial inquiry into the Jesuit murders is stalled, key witnesses sent out of the country, and crucial evidence has disappeared.

Enough is enough. There is no accountability in El Salvador for these abuses—the question now is whether there will be some accountability tied to United States military aid. It is time to place conditions on our assistance; intelligent conditions which will result in responses carefully calibrated to be elicited from this Government.

I urge my colleagues to support the Moakley substitute. It is a rational, common sense, balanced response to irrational conduct in that region of the world.

Mr. SOLOMON. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. MOAKLEY. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore (Mr. Bosco). The question is on the resolution.

The question was taken; the Speaker pro tempore announced that the ayes appeared to have it.

Mr. BROOMFIELD. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 305, nays 108, not voting 19, as follows:

□ 1610

Mr. CLINGER changed his vote from "yea" to "nay."

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## PERSONAL EXPLANATION

Mr. NELSON of Florida. Mr. Speaker, had I been present, I would have voted "aye" on rollcall No. 124 and No. 125.

## PERMISSION FOR COMMITTEE ON MERCHANT MARINE AND FISHERIES TO SIT ON WEDNESDAY, MAY 23, 1990, DURING THE 5-MINUTE RULE

Mr. JONES of North Carolina. Mr. Speaker, I ask unanimous consent that the Committee on Merchant Marine and Fisheries may be permitted to sit on Wednesday, May 23, 1990, while the House is reading for amendment under the 5-minute rule.

The purpose is for a full committee markup.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

## SUPPLEMENTAL ASSISTANCE FOR EMERGING DEMOCRACIES ACT OF 1990

The SPEAKER pro tempore. Pursuant to House Resolution 395 and rule XXIII, the Chair declares the House in the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 4636.

□ 1512

IN THE COMMITTEE OF THE WHOLE

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4636) to authorize supplemental economic assistance for fiscal year 1990 to support democracy in Panama and Nicaragua, and for other purposes with Mr. AUCOIN in the Chair.

The Clerk read the title of the bill.

The CHAIRMAN. Pursuant to the rule, the bill is considered as having been read the first time.

Under the rule, the gentleman from Florida [Mr. FASCELL] will be recognized for 30 minutes; the gentleman from Michigan [Mr. BROOMFIELD] will be recognized for 30 munutes; the gentleman from Massachusetts [Mr. MOAKLEY] will be recognized for 15 minutes; and the gentleman from New York [Mr. SOLOMON] will be recognized for 15 minutes.

The Chair recognizes the gentleman from Florida [Mr. FASCELL].

Mr. FASCELL. Mr. Chairman, I yield myself not to exceed 4 minutes.

Mr. Chairman, I rise in strong support of H.R. 4636, which provides authorization for assistance for fiscal year 1990 for emerging democracies in the Western Hemisphere.

In brief, this bill: Gives the President the authority to provide supplemental assistance he requested for Panama, Nicaragua, and refugees; gives the President the authority to provide supplemental assistance for Haiti and for the Caribbean; creates a housing guaranty program for new immigrants in Israel; authorizes the repayment to the African-aid account the $30 million which was borrowed from existing appropriations earlier this year for emergency assistance for Panama, establishes specific policy guidelines for United States assistance for Africa and the Caribbean; and conditions United States military assistance to El Salvador on the behavior of the Government of El Salvador and on the FMLN guerrillas.

Mr. Chairman, the committee moved expeditiously on the principal purpose of this bill with good bipartisan cooperation. However, we were not able to work out a compromise agreement with the administration on the terms and conditions of our military assistance program to El Salvador. This delayed final action both in committee and with respect to the rule on consideration of this legislation.

I would like to thank the leadership and all interested Members for their efforts on behalf of this bill and hope that, having finally taken this bill up in the House, we can now let the legislative process work. Following passage of this bill today, we are prepared to go to conference immediately with the Senate. We will make every effort to complete that conference before both bodies take up the related supplemental appropriations conference report later this week.

While the money requested by the President is contained in the urgent supplemental which is ready to come back from conference, let me briefly sum up what we would lose by failing to enact this legislation: Incentives to abolish money-laundering in Panama; policy guidance for the use of funds in Panama, Nicaragua, and Haiti, authorities for a development fund for Africa and the Caribbean; and momentum toward establishing an effective, bipartisan congressional/executive branch agreement on our policy toward El Salvador.

Mr. Chairman, I urge my colleagues to support final passage of this bill and to insist on regular order in the legislative process.

Mr. BROOMFIELD. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, on January 25, 1990, the President first requested legislation to provide $500 million in assistance for the newly elected Government of Panama.

On March 5, the President requested an additional $300 million in assistance for the newly elected democratic government of Nicaragua.

Four months have passed since the President made his initial request, yet we are still debating this package. What's more, it has become loaded down with unrelated provisions that will do nothing but provoke a Presidential veto.

For years, Members of this body have argued that we should give peace a chance in Central America. Over and over, I've heard it said that U.S. aid should support peaceful democratic

change, not continued warfare. Where are the voices for peaceful change now that we need them?

I recall some of the early criticisms of the President. He was called timid and cautious. Yet, it was he who acted right away on this important issue—and that was 4 months ago. I recall criticism of the President's aid requests for Panama and Nicaragua. The requests were called excessive. Yet, the bill before us exceeds his request by almost $180 million.

Not only has this bill been held up too long—not only does it authorize too much money—but the bill also contains a seriously flawed provision restricting aid to El Salvador.

The Studds language incorporated in title V places onerous conditions on military aid and gives the terrorist FMLN veto power over our assistance.

Peace negotiations have begun under U.N. auspices. Yet, the committee bill ignores the peace process.

The Secretary of State has tried to fashion a bipartisan approach to El Salvador. This committee bill is a partisan measure which rewards the FMLN for walking out of the peace talks last fall and launching a murderous offensive that claimed the lives of hundreds of innocent civilians.

The White House has indicated to me that the President will almost certainly veto the bill if this provision is not fixed.

The Studds amendment is pure veto bait. It has been drawn up for no other reason than to create a confrontation with the administration.

Everyone in this House knows that the real aid bill—the supplemental appropriations bill—comes up tomorrow. This is just an exhibition game. It's a way of playing to the galleries.

What's been lost in this exhibition of showmanship is the well-being of democracy in Nicaragua and Panama. While the elected leaders of those two countries are fighting for the survival of democracy, we are playing inside baseball—a game for the press galleries.

Mr. Chairman, Congresswoman BYRON and I will be offering an amendment to improve the El Salvador language, and I urge all Members to support this approach. By agreeing to our amendment we can assure passage of the bill, avoid a veto by the President, and finally get aid to the needy people of Panama and Nicaragua.

At this point I insert into the RECORD the statement of administration policy on H.R. 4636.

STATEMENT OF ADMINISTRATION POLICY

H.R. 4636—SUPPLEMENTAL ASSISTANCE FOR EMERGING DEMOCRACIES ACT OF 1990

The Administration supports enactment of legislation to promote democracy in Nicaragua and Panama. Although H.R. 4636 authorizes programs and activities requested by the Administration, it also includes objectionable provisions that raise serious policy concerns and impinge significantly on the ability of the President to conduct foreign policy.

Without modifications to take into account the Administration's concerns regarding the bill's restrictions on military aid to El Salvador, the President's senior advisers would recommend that H.R. 4636 be vetoed. The Moakley amendment is very similar to the restrictions on El Salvador currently in H.R. 4636, and would also cause the President's senior advisers to recommend veto. Such restrictions would greatly hinder the Administration's ability to work towards peace in El Salvador. The Administration supports, as a substitute, the Broomfield-Byron amendment, which provides sufficient flexibility for providing assistance to El Salvador. Under the Broomfield-Byron amendment, the President shall withhold a portion of military assistance funds for El Salvador if he determines that the Government has not made demonstrated progress in the area of human rights, Jesuit murder investigation, administration of justice, and civilian control over the police.

H.R. 4636 also contains provisions that limit the President's flexibility to respond to changing conditions and to provide for an effective foreign assistance program. Accordingly, the Administration will seek to delete or modify those provisions that:

Impose numerous conditions, restrictions, and earmarks on regional assistance programs—i.e., particularly the separate policy and program requirements for the Caribbean. These requirements would limit the flexibility needed by the Administration to implement development assistance programs, and are contrary to the recommendations in the House Foreign Affairs Committee Task Force Report on Foreign Assistance.

Require the President to negotiate certain agreements with the government of Panama or otherwise prescribe the conduct of foreign negotiations.

Require prior notification or certification to Congress before certain foreign assistance funds could be obligated or expended for specified purposes.

Earmark funds for the establishment of an Agency for International Development (AID) mission in Namibia, thereby encroaching on the President's authority to conduct diplomatic relations with foreign governments.

Earmark the Emergency Refugee and Migration Assistance Fund, especially the earmarks for domestic refugee/migrant assistance, thereby precluding the flexibility required to administer such emergency assistance effectively.

□ 1620

Mr. FASCELL. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Massachusetts [Mr. STUDDS].

Mr. STUDDS. Mr. Chairman, I rise in support of the committee bill and the Moakley-Murtha substitute to improve it.

Our proposal would, for the first time, provide a strong incentive for both sides in the Salvadoran civil war to negotiate seriously for peace.

It would, for the first time, make the level of U.S. military aid conditional not only on the behavior of the government, but of the FMLN, as well.

Under our proposal, if U.S. aid is cut off, the armed forces will have only themselves to blame; and if paid is fully restored, the FMLN will be to blame. That's putting the responsibility exactly where it belongs.

Some say the substitute offered by the minority is preferable. But it is a substitute without substance. It accepts the premises of our bill; that negotiations are necessary; that the military must be reformed; that the FMLN must accept democracy; but it provides neither side with a real incentive to change. It requires nothing that the President could not have done on his first day in office. It changes nothing and waits 5 months to do it.

Today's excuse for inaction is that negotiations have just begun. It is a delicate time, we are told. But it is the ideal time. There could be no better time to approve a bill that would empower those who seek peace in El Salvador, while disarming, on both sides, the apostles of continued war.

Some say we shouldn't be dealing with El Salvador in this bill. But the promotion of peace and democracy in Central America is the heart and soul of this legislation. And what could be more urgent than stopping a brutal, bloody, senseless, stupid conflict that has killed 70,000 people, undermined civilian rule, throttled democracy and created refugees from Honduras to Dupont Circle? El Salvador belongs in this bill.

Some say this proposal would hurt President Cristiani by cutting military aid. But under our proposal, military aid will be reduced, if the government behaves, only if the FMLN stops attacking civilian targets; stops launching offensives; and stops acquiring arms. It must, in short, stop being the FMLN. Nothing we could do would be more helpful to President Cristiani, or more certain to promote peace.

As for the armed forces, I must tell you that—in my judgment—they do not deserve another nickel of our aid. They have grown so used to U.S. dollars; so immune to lectures on human rights; so arrogant in their use of power; so confident in their lies; so secure in their belief that we will never act on our ideals that they will never change unless we shock them into doing so—not with more empty rhetoric, but with a law that will finally hold them accountable for what they do.

Last November 16, one of the best-trained, most-experienced units in the Salvadoran military surrounded the sleeping quarters of six courageous and compassionate men; the soldiers forced those men to lie face down on the ground; and shot them in the back of the head. The soldiers came across a woman who cooked for those six Jesuit priests, and her 15-year-old daughter. They shot them both more than a dozen times. They did not want any witnesses.

But we are witnesses. Evidence in the Jesuits' case has disappeared. The investigation is at a standstill. Justice—again—may be denied. Of this, too, we are witnesses. But that is not all we have seen.

Over the past decade, we have seen thousands of campesinos, students, labor leaders, educators, priests, nuns—abducted, tortured, often mutilated—their bodies left in streets or tossed down wells or thrown in rivers. And we have heard their murderers lie repeatedly about those crimes, while thanking us—in the very next breath—for U.S. military aid.

We have also seen—if we have chosen to see—teenagers with their legs blown off by FMLN mines; mayors assassinated for doing their jobs; civilians caught in the crossfire of a guerrilla offensive launched in the name of the people, but not supported by the people.

Today, we must see—if we see anything at all—that the deaths on one side do not excuse the other. For there is no difference of politics or ideology that justifies the theft of human dignity; no provocation excuses murder or kidnapping or torture.

Today, we must see—unless we are blind—that every day we wait means more injustice, more suffering, more dead. El Salvador's future depends on peace.

I plead with you; do not turn away from what we have seen with our own eyes; from what we have seen in the eyes of the victims on all sides in El Salvador. Do not listen to those who tell you—yes, I agree with all that, but this is not the right time.

Vote your conscience. Not tomorrow; today. Not for a phony substitute; but for the Moakley-Murtha bill. Vote for the real thing; for the right thing; at the right time. Vote today for peace.

Mr. SOLOMON. Mr. Chairman, I yield 1 minute of the time of the Committee on Rules to the gentleman from Indiana [Mr. BURTON].

Mr. BURTON of Indiana. Mr. Chairman, what the gentleman from Massachusetts failed to discuss was that this is a democratically elected government in El Salvador and that this democratically elected government in El Salvador is threatened by the Communist FMLN.

He talked about the atrocities perpetrated upon the people down there by the Government troops, but what he did not tell us was about the atrocities that are taking place on a daily basis by the Communist FMLN who cannot win at the ballot box so they try to get power through the barrel of a gun or through mines planted in areas so they can blow children's feet off. Here is a gentleman who was gunned down in the street indiscriminately by the FMLN; here is a little boy whose father was just killed, gunned down by the FMLN; here is a little girl who both of her legs were blown off by the FMLN. He did not talk about that. He did not talk about these two little children killed in an indiscriminate bombing in a shopping area in El Salvador by the FMLN.

There are the things my colleagues on the other side never tell you about.

Mr. BROOMFIELD. Mr. Chairman, I yield 4 minutes to the distinguished gentleman from Oklahoma [Mr. EDWARDS].

Mr. EDWARDS of Oklahoma. Mr. Chairman, the original intent of this legislation was to authorize assistance for Panama and Nicaragua. I strongly support that assistance. It is a tragedy that the people of Nicaragua and Panama, who suffered for so long under dictatorial rule and how now have finally gotten the opportunity to experience democracy, have received more excuses than aid from the United States Government.

It is wrong for the Congress to play partisan politics while the future of democracy hangs in the balance in Panama and Nicaragua. For those who do not think this aid is critical, consider the following:

First, the Sandinistas' plundering of the Nicaraguan economy has left the Chamorro government with only about $3 million in hard currency;

Second, the spring planting season has already begun in Nicaragua, but farmers don't yet have the necessary seed, fertilizer or machinery to plant their crops. A good harvest is essential if Mrs. Chamorro's economic reforms are to succeed; and

Third, this legislation contains urgently needed money to help demobilize the Contras, who by OAS estimates have current food stocks of less than 2 weeks. If the Contras are not quickly reintegrated into Nicaraguan life, it could place severe strains on the relationship between Chamorro and the Nicaraguan army.

The situation is no better in Panama:

One in four Panamanians is now unemployed, GDP continues to fall, and private investment is dropping.

In light of the facts we know about the dire economic situations facing both Nicaragua and Panama, I am sorry that the majority insists on tying our economic aid to these emerging democracies to conditions on our aid to El Salvador. These issues are enormously different and Members should be ashamed that this urgently needed aid for Panama and Nicaragua is being held hostage to partisan politics.

I do not oppose conditionality on U.S. foreign assistance. I have always believed that it is the proper role of the Congress to determine under what terms our foreign aid will be provided. In the case of El Salvador, I agree that conditions may be in order, but the conditionality provisions in this legislation are very poorly-timed and are too restrictive.

As we debate cutting off aid to Salvador, the Cristiani government and the FMLN are sitting down to try to negotiate an end to their war. Just the fact that we are discussing this on the floor today gives the FMLN a huge boost in its negotiating position and places the Christiani government on the defensive. It will be tragic if the Congress, by having this debate today, tips the scale in favor of the FMLN.

Cutting off half of the remaining 1990 military aid to El Salvador and half the military aid next year will only weaken civilian control over the military and allow the FMLN to win in Washington what they could not in El Salvador.

For that reason, I urge Members to support the Broomfield-Byron amendment. If it does not pass, Mr. Chairman, I cannot vote for this bill and I will urge Members to oppose the bill.

□ 1630

Mr. FASCELL. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from New York [Mr. WEISS].

Mr. WEISS. Mr. Chairman, let me start by saying that the proponents of the Broomfield amendment for some reason think that the basis for the Committee on Foreign Affairs' action was to draw some kind of needless or unnecessary confrontation with the administration or with the President over El Salvador. Nothing could be further from the truth. The fact is that the Central American policy of the Bush administration and the Reagan administration have been disastrous. We now have the opportunity to adopt a piece of legislation which will have impact which will provide an incentive to both sides in El Salvador to negotiate an end to the civil war.

Mr. Chairman, 10 years ago, Archbishop Oscar Romero was brutally murdered while saying Mass in San Salvador. In the decade since his assassination, over 70,000 other Salvadorans have been killed in a savage and relentless civil war—a civil war funded largely by the United States.

During these last 10 years, many here in Congress have repeatedly argued that United States military aid somehow inhibits El Salvador's brutal military from violating human rights. These supporters of aid claim that providing guns and ammunition somehow entices the military to stop murdering its own people.

How many years must the killing continue before our Government recognizes the absurdity of this approach? The arguments did not make sense in 1980, and after 10 years of savagery, they seem almost grotesque today. Archbishop Romero, the murdered American churchwomen, and the Jesuits, were all killed by individuals associated with the Salvadoran military. Yet we in the United States continue to debate the wisdom of sending more aid to that murderous army.

The only real solution to this tragic dilemma would be a complete cutoff of United States financial support for the Salvadoran military. The 10-year-old policy now in place has demonstrably and completely failed to bring peace and justice in El Salvador.

Today we have the first real opportunity in many years to make a significant change in United States policy toward El Salvador—a change in the right direction. The Foreign Affairs Committee included language in this supplemental authorization bill which would immediately suspend 50 percent of United States military assistance to El Salvador. Subsequent military aid would be strictly tied to demonstrable steps on the part of the Salvadoran Government and the FMLN to negotiate in good faith toward a solution to the conflict.

Since the committee's action, several improvements have been suggested by our colleagues Representative MOAKLEY and Representative MURTHA, and these refinements are included in the amendment now before the House.

Mr. Chairman, the adoption of this proposal will not offer a miracle cure to the civil war in El Salvador. Nor will it absolve the United States of continued responsibility for the abuse of the Salvadoran military—after all, 50 percent of the United States military aid will continue flow.

Yet the Foreign Affairs Committee approach—as refined by the Moakley-Murtha amendment—does move our policy in the right direction and provides real incentives for both sides to negotiate for a peaceful and just resolution of the conflict. I urge my colleagues to support the Moakley-Murtha amendment and to oppose any efforts to weaken this language.

Mr. Chairman, let me spend the remaining minute and one-half I have to discussing the underlying legislation, the aid and assistance to Panama and Nicaragua.

Those who were cheering mightily the American invasion of Panama and the capture of Gen. Manuel Noriega a few brief months ago as a justification for the slaughter of at least 300 Panamanian civilians, the death of 23 American military personnel, the devastation of the homes and countryside of Panama, can only read today's headlines to see what we achieved after all of that cost and devastation. General Noriega has just been granted by the U.S. Government the right to have his legal fees paid for by the taxpayers of the United States. The estimates are that that will cost about $3 million.

What is the reason that is being done? Because the Government of the United States does not want to reveal the fact that some $11 million were paid to Noriega while he was a CIA agent of the United States.

All of these problems result from our illegal and immoral invasion of Panama—which violated the United States Constitution, the United Nations Charter and the Charter of the OAS.

And the fact that we are authorizing funds to repair the damage does not excuse the fact that we violated our own laws and highest principles in the process.

In regard to Nicaragua, its people also were subjected to the most outrageous kind of behavior by the Reagan administration.

Much of the damage we are now trying to repair in Nicaragua is a result of the unrelenting war the United States waged against that small and impoverished nation.

Our support of the Contras—and their attempt to overthrow the Nicaraguan Government—are directly responsible for many of the problems now being experienced in Nicaragua.

And now the Contras have announced that they may not honor their agreement to lay down their arms.

Stories in today's newspapers suggest that the Contras have now said they will not live up to the agreement that they made to demobilize and lay down their arms. So much for the honor of the Contras.

This legislation authorizes funds for the repatriation and demobilization of the Contras. But these funds are contingent on the Contras willingness to disarm. If this legislation were in force today, given the Contras recent statements, these funds could not be delivered. The Contras must disarm and disband immediately, otherwise the $340 million authorized by this bill will simply be squandered.

Mr. BROOMFIELD. Mr. Chairman, I yield 4 minutes to the gentleman from Florida [Mr. MCCOLLUM].

Mr. MCCOLLUM. Mr. Chairman, I strongly rise to support today the efforts that we are making in this legislation to give assistance to Nicaragua and to Panama. I think over the last few years the rise of democracy in Latin America has been one of the great things that has happened in the events of the world.

We have now seen democracies flourishing in El Salvador, Nicaragua, and Panama, and we have a national security interest as well as a moral interest in seeing that those democracies survive and flourish and become good trading partners of ours in the future.

What disturbs me about this legislation are the provisions of restricting the aid to El Salvador that are in this bill. I think this is detrimental to the cause of peace in the negotiations with the FMLN, who are still the communist guerrillas operating in that country where we have a duly elected democratic president in President Cristiani, and I think that the concerns of those that want to place these restrictions are unfounded.

I happened to have been a member of the Moakley task force that went to El Salvador to investigate the deaths of the Jesuit priests. It is because of those brutal murders that none of us condone that these restrictions are now in this bill today.

Yet I think when you look back at the perspective of history, they are not justified. Death squads do not abound in El Salvador any more. We have a democratically elected government. The military basically has come under the control of the Cristiani government.

When you look at what has happened in this case itself, the interpretations that we are beginning to hear on the floor of the House with regard to the Jesuit deaths are all wrong. It seems to me we need to look at what really is happening.

We have had a thorough investigation. The task force itself says, and I quote, "* * * believes that Salvadorean President Cristiani has made a sincere effort to encourage professional investigation into the murders."

We have a bunch of officers who have been held and charged with these murders. We have a very high officer, Colonel Benavides, who is charged right now with the murders.

In the Salvadorean system of justice, a civilian judge has the investigation at the present time and he is taking that investigation forward as he is supposed to.

The investigation that this judge is doing, Judge Zamoro, is a very drawn out process under the nature of the laws of those governments in Latin America, all of them having a little different justice system from ours. But is seems to be operating.

I know I went out with the task force to interview the judge. I found him to be a remarkably frank individual who thought the case was very strong against these folks for the Jesuit deaths. He described the process which they were going to go through, a followup investigation, sort of a preliminary inquiry, followed by a deciding point on law, which would then take the case to a jury against these officers.

In the next week he has under consideration the Vice Minister of Defense, Sepeda, who will be interviewed by him, Chief of Staff Ponce, who is the highest ranking officer above Sepeda, has given two sworn statements already to Judge Zamoro, Minister of Defense Larios and Vice President of Defense-Republic Security Montano have stated that they are going to be testifying within the next week. All kinds of folks who are the key officers that we are talking about, worrying about, are all giving their statements to the investigating officer, Judge Zamoro.

I do not see where the problem is, and I think we ought to give the benefit of the doubt in this case to the newly elected, freely elected government of President Cristiani, that we all know has done an excellent job up

to this point in investigating the murders of these Jesuits, and giving the power to be able to deal with these Communist guerrillas, the FMLN, in a way that will finally bring peace. Let us not tie his hands. Let us not tie the hands of aid to the Salvadorean military and their government, right now at the critical juncture.

Let us let the Broomfield amendment carry the day. Let us let our President make those decisions, if indeed the investigation goes awry in the future, which it has not right now, and not put the shoe on the other foot and take away the aid and have it only trigger back if the FMLN do something disastrous out there.

We need to give this support to Cristiani now. I think we have that chance later in this vote on the floor when the Broomfield amendment comes up. I urge its adoption.

Mr. FASCELL. Mr. Chairman, I yield 4 minutes to the gentlewoman from California [Mrs. BOXER].

Mrs. BOXER. Mr. Chairman, the outrageous murders of the Jesuits in El Salvador were just a ripple in the blood bath that has washed over that country for the past 10 years while the United States has pursued a policy that has American taxpayers financing death squads and torturers.

For 10 years, our tax dollars have gone to a military that views as enemies those who join unions, work with the poor, and criticize human rights abuses. The list of victims gets longer and longer. Since 1980, 70,000 people have been killed. The majority have been civilians killed by the military or death squads.

Let me tell you about some of those who have been killed. I have photographs here from the Nongovernmental Human Rights Commission of El Salvador. A group of church people in my district, church people, the Marin Interfaith Task Force on Central America, managed to get these photographs out of El Savador so that we could all see exactly what is going on there.

The face of war is not easy to look at, but I have an obligation to my constituents who risked their lives to share these photos with the American people. Therefore, I have decided to show just four of the hundreds of photographs I have access to show them as examples of the real brutality. I apologize if anyone finds it necessary to look away from these photographs.

□ 1640

The first one is a man and a woman. They were taken from their houses in April 1988, during the night by men dressed in olive drab and armed with M-16's. They were shot in the head. The woman had been raped. She was 77 years old.

The next one, three young men were found mutilated and dead in February 1988 in what is known in Salvador as a body dump. This one, a ravine between two cliffs, is called the devil's door. Their families said they had been taken away by men dressed in military uniforms. One of the victims was only 16.

Next, we have all heard of Herbert Anaya. He was president of the Independent Human Rights Commission when he was gunned down by two assailants in October 1987. He was preparing to take his children to school. This House memorialized his slaying.

As Members know, there is also violence from the FMLN. They too have committed grievous human rights abuses. This last photo is of government troops killed by the FMLN. Yes, the FMLN violates human rights, but we have not given the FMLN $4 billion since 1980 as we have given the Government of El Salvador. That is the difference. Blood is being shed with our tax dollars.

Mr. Chairman, President Cristiani has been in the newspapers talking about the progress his government is making in El Salvador. In the meantime, these abuses continue, despite the enormous rage unleased around the world by the murders of the Jesuits.

The Washington Post reported last week the disappearance of 30 more people in the first 3 months of this year. More than half disappeared after being detained by the military.

Mr. Chairman, I am one of those who has always supported strong strings on all aid to El Salvador. But I am supporting H.R. 4636 because it is a first step.

I would like to close by quoting the Moakley Commission. "During its visit to El Salvador, task force members heard the murders of the Jesuits described by high military officials as 'stupid,' 'self-defeating,' and 'dumb.' But no senior military official with whom we talked said it was wrong."

My colleagues, let us say these brutal murders were wrong. Support H.R. 4636.

Mr. SOLOMON. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Louisiana [Mr. LIVINGSTON].

ANNOUNCEMENT BY THE CHAIRMAN

The CHAIRMAN. The Chair would like to advise the people in the gallery that they are here as guests of the House and outbursts and displays are not permitted under the rules of the House.

Mr. BURTON of Indiana. Mr. Chairman, will the gentleman yield?

Mr. LIVINGSTON. I yield to the gentleman from Indiana.

Mr. BURTON of Indiana. Mr. Chairman, I want to take 30 seconds to try to set the record straight.

The gentlewoman from California showed pictures with Mr. Anaya, who was killed by the Communist FMLN guerrillas, and she is attributing his death to the government, which is totally incorrect.

Mrs. BOXER. Mr. Chairman, will the gentleman yield?

Mr. BURTON of Indiana. I do not have the time for yield.

Mrs. BOXER. The gentleman is incorrect.

Mr. BURTON of Indiana. I am not incorrect.

Mr. SOLOMON. Regular order.

The CHAIRMAN. The regular order is the gentleman from Louisiana [Mr. LIVINGSTON] controls the time.

Mr. BURTON of Indiana. Mr. Chairman, my second point I would like to make very briefly is that this is a duly elected government and the FMLN Communists down there have been threatening mayors and other elected officials and telling them they have 24 hours to get out of town, and if they do not then they kill them and their families. The gentlewoman does not mention that either.

Mr. LIVINGSTON. Mr. Speaker, how soon we forget. How many of us remember back to 1987, and the state visit of El Salvador's President, Jose Napoleon Duarte?

ANNOUNCEMENT BY THE CHAIRMAN

The CHAIRMAN. The gentleman from Louisiana will suspend for one moment.

The Chair would also like to remind Members that the proper order is to address their remarks not to each other on the floor but to the Chair, and given the sensitive and controversial nature of the material the Committee is debating it would be wise for all Members to observe that practice.

The Chair now recognizes the gentleman from Louisiana [Mr. LIVINGSTON].

Mr. LIVINGSTON. Mr. Chairman, how soon we forget. How many of us remember back to 1987, and the state visit of El Salvador's President, Jose Napoleon Duarte, to the United States? That heroic individual, a former political prisoner who withstood repeated torture and a death sentence, stood on the south lawn of the White House and publicly thanked the President of the United States and the American people and the Congress, yes, the Congress for our support of freedom in El Salvador.

And then he stepped off the platform, walked over to the Marine Honor Guard, and in front of an international audience he kissed the American flag.

Mr. Chairman, President Duarte is no longer with us. But the same 5 million Salvadoran people who elected him have elected another leader to carry on that country's fledgling democracy. That democracy has succeeded over the last 10 years despite threats, bombs, riots, revolution or attempted revolution, assassination,

murder, mayhem, and so forth at the hands of the Cuban and Sandinista financed and controlled FMLN.

That is the real issue, Mr. Chairman, not negotiations, not good faith efforts. This debate is about democracy, the fundamental right to choose your own leaders and not have them chosen for you by force.

El Salvador's rebels, the FMLN, like every repressive movement on this Earth, do not want democracy. They do not want negotiations and they do not want freedom. They want power. They want control, and they want it not through elections, they want it by force of arms, because they know they cannot win a free, and fair and open election.

It is time we stopped skirting the true issue. Anything that undercuts the Government of El Salvador also undercuts the will of the Salvadoran people who have voiced their feelings time and time again in free, and fair and open elections, at the polls, and have rejected what the FMLN have to offer.

So Mr. Chairman, let us stop torpedoing this democratic ally of ours in El Salvador and let us support full funding for the people of El Salvador and support the Broomfield amendment.

Mr. MOODY. Mr. Chairman, will the gentleman yield?

Mr. LIVINGSTON. I am happy to yield to the gentleman from Wisconsin.

Mr. MOODY. Mr. Chairman, it takes a lot more than elections to make a democracy. We have had a lot of autocratic governments and elections. It takes a free press. There is none in El Salvador. It takes an independent judiciary, and there is none in El Salvador. There is not a democracy.

Mr. LIVINSTON. The gentleman from Wisconsin was not there at those elections or the polls where the people voted for this government and 95 percent of those people turned out at the polls.

Mr. FASCELL. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Wisconsin [Mr. MOODY].

Mr. MOODY. Mr. Chairman, I rise in strong support of the Murtha-Moakley amendment to cut military aid to El Salvador by 50 percent for the current year, 1990, and next year.

The key to this bill is that, for the first time, it provides a real incentive for each side to negotiate successfully an end to the killing. I do not think I need to remind my colleagues in this Chamber that there are people on both sides of the El Salvador conflict who do not want successful negotiations. It would allow the President to restore the aid if the FMLN backed off the peace process, and it would give him authority to cut the military aid further if the El Salvador Government failed to negotiate seriously.

During this debate, some have said that it is playing politics to put an El Salvador amendment on this bill for Nicaragua and Panama, but the Broomfield amendment itself recognizes this bill is an appropriate vehicle for El Salvador policy because that is where it is being offered.

Some here say that we should not "tie the hands of the civilian Cristiani government" with this amendment. The fact is that there is over a year's worth of military aid already in the pipeline, some of it still left over from 1989. The Murtha-Moakley amendment would have no significant military effect in the field. But it would send a very important signal to both sides that the United States is serious about negotiation, and we want them to be also.

Finally, some here say that this is "not the right time" to bring this matter up. When is it the right time, if not now?

In November as we were last considering El Salvador aid, we were told we should not bring up any limiting or conditioning amendment because we did not know who committed those heinous murders of the Jesuit priests. In fact the gentleman from Michigan [Mr. BROOMFIELD] and others said that it probably it was the FMLN guerrillas that did it, and it would be too hasty for us to cut aid at that time. But 6 months have passed, and we now know that it was not the FMLN guerrillas but the military itself that committed these murders.

That is why we cannot call this government in El Salvador democratic. This is a country where the official military has been responsible for more torture and murder of unarmed civilians, often executed at point blank range, than the FMLN. There are heinous acts committed by both sides, but in financing the El Salvador military we are financing a military that murders its own civilians, executes its own priests, rapes its own nuns, bombs its own villagers. How can we stand up for democratic and American values if we keep financing that system without attaching any conditions? If this is not the right time to stand for our values, when would be?

The Murtha-Moakley amendment is serious, it is not playing politics. It would not tie the hands of the civilian government. This is the right time to stand up for basic American values.

We have spent 7 years and $4 plus billion in El Salvador without any serious conditons on the aid. We have not seen peace. We have not seen serious negotiations. We have not seen an end to human rights atrocities by the army. If we are not willing to put conditions on now, after what we have seen what moral commitment can our Nation claim?

It is time to put serious limits on this aid that will lead to an end of the killing.

Please support the Murtha-Moakley amendment.

□ 1650

Mr. BROOMFIELD. Mr. Chairman, I yield 3 minutes to the gentleman from Pennsylvania [Mr. SHUSTER].

Mr. SHUSTER. Mr. Chairman, I had the privilege of being the senior Republican in our delegation that went to El Salvador to investigate the murder of the Jesuits. I am absolutely astonished at some of the things I am hearing said on this floor today. I am astonished to have heard the allegation that Herbert Anaya was killed by soldiers. Herbert Anaya was killed by the FMLN Communist terrorist guerrillas.

He was captured, he confessed and only when his family was threatened with death did he attempt to recant.

Ladies and gentlemen, we see here today an attempt to create what might be called moral symmetry between a duly elected, democratically elected Government of El Salvador and FMLN Communist terrorist guerrillas. It is wrong, it is dead wrong.

We are not dealing here with Sunday school teachers on the one hand, these FMLN Communist guerrillas; we are dealing with brutal terrorists.

Mr. Chairman, I brought back with me from El Salvador an AK-47 which was captured, taken from an FMLN Communist terrorist name Gallardo.

While it is not proper to bring that AK-47 here on the floor today, I have brought the silencer that was taken from that Communist terrorist guerrilla that was on that AK-47. And when Gallardo was interrogated and asked, "What do you use that AK-47 for? and most particularly, "Why do you have a silencer on it?". His answer was, "We in the FMLN use it to extract what might be called revolutionary justice."

Now, we all know revolutionary justice means assassination, assassination not of one or two or three or four but assassination of duly elected mayors, assassination of people who have the courage to stand up and speak in support of a democratically elected government.

Ladies and gentlemen, there is no moral symmetry here. We are talking about vicious Communist terrorists on the one hand and a duly elected government that is trying to bring about a better standard of life and bring about peace in El Salvador.

Now, it is true that historically there were death squads and the death squads and the military brutally murdered hundreds of innocent civilians. It was certainly true in the early 1980's.

But thank goodness we saw Napoleon Duarte bring an improvement to that situation; thank goodness we saw President Cristiani bring a further improvement to that situation. And today, while there are some excesses and nobody condones the murder of the Jesuits, the jury is still out on that and we should not destroy the Government of El Salvador. We should support the Broomfield amendment when the opportunity comes.

Mr. FASCELL. Mr. Chairman, I yield such time as he may consume to the gentleman from Minnesota [Mr. VENTO].

Mr. VENTO. Mr. Chairman, I rise in support of the bill and specifically the provisions which reduce and condition military aid to El Salvador.

Mr. Chairman, this bill provides the authorization for the foreign aid funds for Panama and Nicaragua which passed the House last month. I support providing aid to Panama to help it rebuild and promote the establishment of the fractured democratic institutions. The $470 million authorized by this bill will provide loans, credit and contributions to an international account enabling Panama to pay its debts to the International Monetary Fund. In addition, the bill authorizes $340 million in economic support funds for Nicaragua, as well as smaller amounts for Haiti, the Caribbean, and Africa.

For the first time, the House is considering legislation to withhold a large portion of the military assistance we provide to El Salvador. I believe such an action is needed to create strong incentives for both sides to negotiate for peace in El Salvador. Today we can send a message to the FMLN and the Government of El Salvador that this bloody struggle must end. Rather than prolonging the conflict, our Nation and American taxpayers can be an instrument of peace for this war-torn country.

Over the past 10 sad years, more than 70,000 Salvadorans have died and thousands more have been injured or made homeless by the civil war. The victims of this war have ranged from Archbishop Oscar Romero and other priests and nuns to labor activists, from Salvadoran Army leaders to peasant women and children. Most casualties have been innocent civilians—bystanders in a war between the Armed Forces, death squads and the guerrilla forces.

Since the election of President Cristiani last year, the level of violence and human rights abuses has regretably increased sharply. The decline of the centrist Christian Democratic government and the rise of the ARENA Party has clearly polarized the nation and led to greater extremism on both the right and left. The circumstance has gone from bad to worse. There has been a resurgence of murders by rightwing death squads as well as increased attacks by the FMLN forces.

Americans were particularly outraged by the last year's murder of six Jesuit priests and their housekeeper and her daughter. The priests were thoughtful proponents of peace who had been working for a negotiated settlement for many years. Their brutal murder allegedly by members of the Armed Forces was the worst example to date of the military ignoring civilian authority and taking the law into their own hands.

The investigation into the Jesuit murders has shown the inadequacy of the Salvadoran justice system. The Speaker's Special Task Force on El Salvador found a number of problems with the Government's investigation. These include the failure to investigate senior military officers other than Colonel Benavides and the lack of progress on gathering evidence against those already arrested. The task force also pointed out a lack of outrage or moral condemnation among senior military officials about the crime. Furthermore, the slipshod investigation is an the Salvadoran justice system at its best—a clear indication of the bankruptcy of El Salvador's criminal justice system. Thousands of other crimes have yet to even be investigated, much less brought to conclusion.

Several recent developments are cause for deep concern. Four soldiers who might have testified about the killings have been sent abroad. The colonel's diary and the log of the military school have incredibly disappeared. A number of other leads have been ignored. As of mid April, the investigation appeared to be at a standstill.

The bill addresses the inadequacy of the investigation by threatening a full cutoff of military aid if the Government fails to conduct a thorough and professional investigation into and prosecution of those responsible for the murder. A full cutoff would also be triggered if the Government declines to engage in good faith negotiations toward a cease-fire. The bill would restore all military aid if the FMLN fails to negotiate or if they receive significant military assistance from outside the country or if Cristiani's government is threatened by an FMLN offensive. I am hopeful that these carefully considered and well-balanced provisions will lead both sides to the negotiating table.

The United States has a special responsibility to assure that the Government of El Salvador is respecting human rights and vigorously pursuing a political settlement. Over the past 10 years, we have supplied over $4.5 billion in military and economic assistance to El Salvador and continue to provide over $1 million per day. While I understand the right of the government of El Salvador to restore and maintain order, the recipients of our aid should meet basic standards in the area of human rights and in efforts to reach a political settlement.

Despite the bleak outlook in El Salvador, there are reasons for hope that the decade long civil war will end. The people of El Salvador are tired of the prolonged conflict and want peace. The recent peace initiative of the U.N. Secretary General has yielded a commitment from both sides to negotiate. The end of hostilities in neighboring Nicaragua has contributed to a general lessening of tension in the Central America region.

I urge my colleagues to join me in supporting the Moakley-Murtha language on El Salvador to help the fragile peace process in El Salvador along.

Mr. SOLOMON. Mr. Chairman, I yield myself 6 minutes.

Mr. Chairman, during the debate on the rule, I mentioned briefly the misgivings I have concerning this bill. Generally, I am concerned that a simple request by the administration to provide $720 million in emergency assistance to the struggling new democracies in Nicaragua and Panama has ballooned into an omnibus foreign aid package, replete with the language of micromanagement. More specifically, I am concerned about title V—the provision concerning aid to El Salvador. It is this provision that is largely responsible for the delay in bringing this bill to the floor. And it is this provision that makes such a mockery of the bill's announced purpose: to aid emerging democracies.

At the very least, Mr. Chairman, title V represents a kidney punch at the administration. President Bush and Secretary of State Baker have bent over backward to come to terms with Congress on Central American issues. The very fact that we can today call Nicaragua an emerging democracy is testimony to the success of that kind of an approach. And then along comes title V.

Only last week, Secretary Baker reiterated his assurances that the administration is willing and prepared to reach a bipartisan accord with Congress concerning El Salvador. But here Congress sits, months after President Bush requested aid for Nicaragua and Panama, holding those two countries hostage for the sake of doing some posturing on El Salvador. Let's look at the substance of title V; 50 percent of our military aid for El Salvador would be withheld right up front. And the FMLN Communist guerrillas would be given a de facto veto over that 50 percent, so long as their political representatives sit at a conference table and present a good appearance.

As a matter of fact, the only way El Salvador could receive the full amount, or close to the full amount, of aid requested by the administration, would be if the President certifies that the guerrillas are conducting, quote "substantial and sustained military operations that are jeopardizing the survival of the constitutional government of El Salvador." In other words, my colleagues, El Salvador gets the aid just as soon as the guerrillas are on the brink of victory. What kind of nonsense is that. Once again, Congress is a day late and a dollar short.

Mr. Chairman, title V is based on the premise that the Government of El Salvador, which has conducted six internationally observed elections, is morally equivalent to the guerrillas, which have never participated in any electoral process.

There is not a single word in title V about human rights abuses by the guerrillas. Not a single word is said, for example, about 3,000 innocent people killed by the guerrilla terrorist offensive in the cities of El Salvador last fall. Not a single word is said about

the guerrillas walking away from the peace table time and again, or about the guerrillas using innocent civilians as shields to wage war behind.

In short, Mr. Chairman, I would cite the Washington Post editorial of May 15—1 week ago today. The editorial presented a strong case for why military aid to El Salvador must continue. And in summary, it said, quote, "A vote for an aid cut is, perversely, a vote to fuel the war and burden negotiations," and kill more people.

Before concluding, Mr. Chairman, I would like to comment on the congressional procedures that are included in title V, the reason why this bill was subject to a sequential referral to the Rules Committee.

These procedures are advertised as being a so-called expedited process for Congress to provide aid to El Salvador after we receive the necessary certifications from the President. But, in fact, these procedures are so convoluted and fraught with ambiguities, as to defy description.

I will insert two analyses prepared by the Republican staff of the Subcommittee on the Legislative Process. One is an itemized list of problems and inconsistencies found in these procedures. The other is the minority views signed by every Republican member of the Rules Committee.

Suffice it to say right now, that the procedures whereby withheld funds could be made available to El Salvador are anything but expedited. Reading from the minority views in the committee report:

While it may not have been the intention of the drafters of this section to permit an "expedited" process to drag on for 7 months, there is no question that that is exactly what could happen under the bill as presently drafted.

The minority views then go on to detail all of the procedural gimmicks that would be available to opponents of aid to El Salvador.

And I would add that the Moakley-Murtha amendment does not make a bad provision better. As much as I like my good friends JOE MOAKLEY and JACK MURTHA, I have to say that their amendment offers only a marginal improvement compared with the bill's present conditions on leveraging the military aid. And the Moakley-Murtha amendment retains, word for word, the same convoluted procedures for expediting aid that I referred to a moment ago. All the same gimmicks would be available.

Mr. Chairman, title V is as ill-conceived as it is ill-timed. At a time when U.S. policy in Central America is bearing fruit, title V represents a regression, a return to partisan kidney punching at its worst. Title V should be changed via the Broomfield amendment. Failing that, it should be stricken from this bill altogether.

Mr. Chairman, earlier I made reference to the convoluted and ambiguous procedures that would govern the congressional response to a certification by the President that conditions in El Salvador warrant the delivery of military aid to that embattled country.

As you know, title V of H.R. 4636 withholds the bulk of United States military aid to El Salvador for fiscal year 1991, pending Presidential certification to Congress that conditions warrant the delivery in full of such promised aid.

The procedures which would govern the congressional response to such a certification have been advertised as being an expedited process for releasing the aid that had been withheld. A closer examination, however, reveals that these procedures are fraught with ambiguities and inconsistencies.

The Republican staff of the Subcommittee on the Legislative Process, Committee on Rules, has prepared a detailed analysis of the problems posed by these procedures.

For the benefit of my colleagues, I would like to insert in the RECORD an itemized list of the specific anomalies and ambiguities in these procedures, as well as the minority views of H.R. 4636 that were signed by the four Republican members of the Committee on Rules.

SUMMARY OF PROCEDURAL PROBLEMS WITH EL SALVADOR AID PROVISIONS OF H.R. 4636, SUPPLEMENTAL FOREIGN ASSISTANCE AUTHORIZATION

Title V of H.R. 4636 places various limits and conditions on U.S. military assistance to El Salvador. In fiscal 1991, the bill authorizes $85 million in such assistance, but withholds half unless the President makes certain determinations regarding the FMLN (rebels). Moreover, of the half that is not withheld, only half of that (i.e., one-fourth of the total) may be made available prior to March 1, 1991, at which time the President must report to Congress on the actions of the government and the FMLN towards achieving a negotiated peace.

The remaining unwithheld funds shall be made available at that time but may not be expended until the expiration of a 30-day congressional review period of the President's report. Any joint resolution reported from the House Foreign Affairs or Senate Foreign Relations Committees during the 30-day review period which places conditions or limits on fiscal 1991 military aid for El Salvador shall be privileged for consideration on the third day after it is reported or at any time thereafter.

Sec. 501(h) of H.R. 4636 establishes the expedited procedures for such joint resolutions. These procedures pose the following problems:

Any joint resolution reported prior to March 31, 1991, would remain privileged through Sept. 30, 1991; it need not be considered during the 30-day review period.

The prohibition on the inclusion in a joint resolution of provisions which are not "germane" to the limits and conditions of the joint resolution is not an appropriate parliamentary term since germaneness is used only with respect to amendments (provisions of a measure cannot be nongermane to that measure).

The four hours of general debate time is divided between a Member favoring and a Member opposing as opposed to the customary division of general debate time between the chairman and ranking minority member of the reporting committee; the bill permits amendments in the House, when it should be the Committee of the Whole, and limits debate time on them to such time as ordered by the House, when it should be under the five-minute rule. (Absent a rule, or a unanimous consent request or motion on each amendment, the House is not in a position to order time limits on amendments).

The bill provides that the final passage vote in the House would occur on the joint resolution and those amendments adopted in the Committee of the Whole. Any amendment adopted in the Committee of the Whole must first be readopted by the House.

MINORITY VIEWS ON H.R. 4636

The Rules Committee received a joint referral of H.R. 4636 because section 501(h) establishes procedures for the consideration by Congress of joint resolutions placing conditions or limitations on fiscal 1991 U.S. military assistance to El Salvador.

Section 501(h) is misleadingly headed, "Expedited Congressional Review Procedures." While the bill ostensibly creates a 30-day congressional review period for a presidential report, it actually authorizes up to seven months during which a privileged joint resolution could be considered by Congress.

Section 501(b)(2)(c) makes the balance of unwithheld funds available on March 1, 1991, when the President is required to issue a report to Congress on the progress of peace negotiations in El Salvador; but it bars the expenditure of those funds for 30-days "in order to provide time for congressional review of the report."

Section 501(h) defines "privileged joint resolution" as any joint resolution containing a limit or condition on military aid to El Salvador for fiscal year 1991 which "is reported" by the House Foreign Affairs or Senate Foreign Relations Committees "during the 30-day period beginning on March 1, 1991." The bill does not, however, require that the resolution be considered by Congress during that same 30-day review period. It only prohibits its privileged consideration prior to the third day after it is reported. There is no limit as to how long after it is reported it would remain privileged for consideration.

Since the joint resolution can only deal with fiscal 1991 funds, it would only be applicable for the balance of that fiscal year, that is, through September 30, 1991. At that point, any military aid still in the pipeline must be converted to humanitarian assistance under the terms of the bill.

While it may not have been the intention of the drafters of this section to permit an "expedited" process to drag on for seven months, there is no question that is exactly that could happen under the bill as presently drafted, so long as the resolution is reported prior to March 31, 1991.

This opens the way for all kinds of mischief. It could happen that such a joint resolution (or several) could be reported within the 30-day time frame without any plans for immediate floor consideration. And yet, several months later, should a hitch occur in negotiations, it might be called up in the House without any review of or hearings on the actual circumstances, simply to embarrass the Administration.

We are especially surprised that the Rules Committee majority even tepidly embraces such an open ended "expedited" process that both circumvents the Rules Commit-

tee's involvement and takes away the leadership's scheduling prerogatives. As the majority report notes:

Generally, the Committee takes a dim view of including expedited procedures in legislation and has worked with committees to minimize the practice.

We are even more astounded, though, as to the reason given for the committee's support of these particular expedited procedures:

However, the Committee notes that the procedures used in this bill are structured to allow a certain degree of flexibility in the consideration of a joint resolution.

Referring to seven months of "expedited congressional review procedures" as a "certain degree of flexibility" has to take the prize as the parliamentary understatement of the 101st Congress. If the joint resolutions were given any more flexibility they would be double-jointed.

We have no objection to expedited procedures in certain situations in which prompt congressional review and action is necessary to accommodate the implementation of executive actions. The committee and conference process is not designed to respond as quickly as might be necessary in such cases. This is the first time, however, that we can recall seeing an expedited review period that could stretch for up to seven months. Ordinarily the periods run 30-, 60-, or 90-days at the most.

There are other procedural problems with subsection (h): it prohibits nongermane provisions in joint resolutions yet bars points of order from being raised; it divides general debate time between a Member favoring and a Member opposing instead of the customary division of time between the reporting committee's chairman and ranking minority member; it provides for debate on amendments "in the House of Representatives to the extent ordered by the House," while at the same time implying that consideration is on the Committee of the Whole under the five-minute rule; and it prohibits separate votes in the House on amendments adopted in the Committee of the Whole.

In summary, subsection (h) is a procedural abomination. We strongly urge support instead for the minority substitute which remedies these procedural failings as well as making substantive improvements in the policy aspects of Title V.

□ 1700

Mr. BROOMFIELD. Mr. Chairman, I yield 2 minutes to the gentleman from Florida [Mr. Goss], a distinguished member of the Committee on Foreign Affairs.

Mr. GOSS. Mr. Chairman, I think my colleagues have covered most of the salient points with regard to what is going on with the FMLN, the brutality, identifying them for what they are—Communists bent on terrorism.

What I want to talk about is how well the Government of El Salvador is doing right now in terms of its approval ratings in its own country. I quote here from a recent public opinion survey conducted by CID of Costa Rica. Members will recall that that was the firm used by former President Arias of Costa Rica, and frankly the only firm to accurately predict the Chamorro victory in Nicaragua. That firm poll indicates that President Cristiani presently holds a 72-percent favorable rating. The same survey also indicates a 72-percent popular support for the Salvadoran military, and an 80-percent favorable rating of the United States. Salvadorans are largely blaming the FMLN, Cuba, and Nicaragua for the civil war.

Mr. Chairman, I would also like to point out that earlier this year when I was in El Salvador speaking with President Cristiani, I asked specifically the question, what will happen if we send a signal from the U.S. Congress that we are cutting aid to the military in El Salvador? The President looked me in the eye and he said, "That will be a signal for the FMLN to go out and create a wave of terrorism." Well, Mr. Chairman, as a matter of record, just a few days after the Committee on Foreign Affairs did, in fact, vote in an amendment to cut aid, that a wave of terrorism, orchestrated by the FMLN, did take place, nationwide, in El Salvador. People were killed, women, children, innocent victims, as well as combatants. That is unacceptable.

I urge my colleagues to face the real facts in El Savador, what is really going on down there, support the Broomfield amendment. It is the right way. It is the right balance of carrots and sticks, and I think that the other proposals although well-intentioned, miss the mark.

Mr. FASCELL. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Pennsylvania [Mr. MURPHY].

Mr. MURPHY. Mr. Chairman, I thank the chairman of the full committee who has done as good a job as he could do in attempting to draft a first supplemental foreign aid package, but all of the debate we have heard this afternoon seems to be whether or not we are going to provide military aid for one side or the other in El Salvador, who are killing each other.

They are talking about the President wanting a mere $700 million besides the supplemental foreign aid. Supplemental foreign aid means over and above the already some $20 billion we have spent in foreign aid in this fiscal year.

I am here to talk about what is here for the United States of America. We are talking about who is killing who in El Salvador, and we cannot determine, if the U.S. Congress can be evenly divided, we cannot decide who is killing who. Yet we are talking about spending not $700 million but almost $1 billion in foreign aid in the supplemental aid package. We are providing money for housing, we are providing money for small business, we are providing money for the military on this side and the military on that side.

There are communities in need all over this country. I receive calls from small business people who are on the rocks, who need the help of their government. They cannot get it. I receive calls from people in this country who need housing, senior citizens. So much is needed in this country, and yet we stand here and debate hour after hour of spending another mere billion dollars, sending it around the world, and we do not even know who is killing who.

Mr. BROOMFIELD. Mr. Chairman, I yield 1 minute to the gentleman from New York [Mr. HOUGHTON], a member of the Committee on Foreign Affairs.

Mr. HOUGHTON. Mr. Chairman, I would like to just take a little different track here. I support the Broomfield substitute amendment really because it de-emotionalizes the issue, and is the practical way of getting at what the real bill is all about, which is help to Nicaragua and to Panama.

There are really two issues here. There is the El Salvador issue which has its own tragedies. But really, when we take a look at the need here, it is for the need to prevent the financial collapse of two critical countries. One is Panama, the other is Nicaragua, which we were part of the process of provoking.

They would not be considered in the package if they were not in the same part of the world. I submit that there is no tie-in. I submit the El Salvador issue is not germane. I submit furthermore, that I feel so strongly about this that I would even vote for the Studds amendment if it were separated from this bill, which goes to the part of the need of two great nations.

The CHAIRMAN. The gentleman from New York [Mr. SOLOMON] has 5 minutes remaining, the gentleman from Michigan [Mr. BROOMFIELD] has 13 minutes remaining, the gentleman from Florida [Mr. FASCELL] has 9 minutes remaining, and the gentleman from Massachusetts [Mr. MOAKLEY] has 15 minutes remaining.

Mr. MOAKLEY. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, later during consideration of this bill, my colleague from Pennsylvania [MR. MURTHA], will join me in offering an amendment to address the current realities in El Salvador, and I will ask for the support of my colleagues on this measure.

Yesterday both the FMLN and the Salvadoran Government signed a statement after 5 long days of negotiations indicating that "a cease-fire could occur before mid-September." Before that happens, however, both sides will engage in a series of talks on delicate issues such as reform of the

armed forces, human rights, electoral and constitutional reform, and the economic and social situations.

Mr. Chairman, today the United States Congress has the opportunity to help make that cease-fire—and an eventual negotiated end to the war in El Salvador—a reality.

This is not the first time the FMLN and the Salvadoran Government have talked, and this is not the first time we have heard lofty statements emanating from both sides. But if this is the first time that they are serious about peace, then let this Congress show it is equally serious.

The provisions in the Moakley-Murtha substitute make it more likely that both sides will keep their word.

Quite frankly, I do not have a whole lot of trust in either the FMLN, or the Salvadoran Armed Forces. They both lie and they both play politics with other peoples' lives.

Let us provide the necessary pressures to make a continuation of the current war policy less likely.

Mr. Chairman, over 70,000 Salvadorans have been killed in a conflict that has raged over a decade. And there are elements in both the right and left who are interested not in peace—but in a continuation of the war in order to sustain and expand their own power base.

I hope this Congress has had enough. I know the people of El Salvador, who have suffered enormously, want an end to the war and all of its horrible consequences.

Let us finally stand up for the majority of Salvadorans, who have said over and over again that they want peace now. Support the Moakley-Murtha substitute and support the peace process.

And I also urge my colleagues to vote "yes" on final passage of H.R. 4636—the fiscal year 1990 Supplemental Authorization for Emerging Democracies.

The CHAIRMAN. The time of the gentleman from California [Mr. DORNAN] has expired.

The Chair recognizes the gentleman from Massachusetts [Mr. MOAKLEY].

Mr. MOAKLEY. Mr. Chairman, I yield myself 3 minutes.

Mr. Chairman, I think the gentleman who just spoke is absolutely entitled to his opinion. He was down there, and he can make his own judgment. I have no quarrel with that. But he showed a lot of arms that were coming in, and under the Moakley-Murtha amendment, once the aid is cut and these things happen, of course, the military aid goes up to 100 percent, so the Government or the military of El Salvador does not loose anything.

At this time I would like to read a statement from Dr. Fidel Chavez Mena, Secretary General of the Christian Democratic Party of El Salvador, and former Minister of Foreign Relations and Economic Planning in the Duarte government, who expressed the belief of his party——

Mr. BURTON of Indiana. Mr. Chairman, will the gentleman yield just for a second?

Mr. MOAKLEY. I yield very briefly.

Mr. BURTON of Indiana. I have one real quick question.

Mr. Chairman, for years we have been alleging that weapons have been smuggled into El Salvador, and Members on the gentleman's side of the aisle have been denying they have been smuggled in. If this amendment passes, how are we going to know if the FMLN continues to have weapons smuggled in? We know that they just came in earlier this year.

Mr. MOAKLEY. Mr. Chairman, under the Moakley-Murtha amendment, if the President is convinced that a significant number of arms is coming into the FMLN, then he raises the money back up to 100 percent where it was before.

Mr. BURTON of Indiana. What does "significant" mean? The use of the word "significant," clearly means that some unidentified lesser level of weapons is acceptable.

Mr. MOAKLEY. "Significant" will be determined by the President, who will make the judgment.

Mr. BURTON of Indiana. But the gentleman himself does not have any definition of what "significant" means?

Mr. MOAKLEY. I cannot tell the gentleman what "significant" is. It means more than a lesser amount.

Mr. BURTON of Indiana. But the gentleman is the author of the amendment.

Mr. MOAKLEY. That is right, but "significant" will be determined by reasonable people under reasonable circumstances.

Mr. FASCELL. Mr. Chairman, will the gentleman yield?

Mr. MOAKLEY. I yield to the chairman of the committee.

Mr. FASCELL. Mr. Chairman, I thank the gentleman for yielding.

Of course we knew that arms were being smuggled to the FMLN, and we had an investigation of it. We found out how it was done and how much of it was done. So it can be determined.

Under the legislation we are talking about here, the President would make that decision. I cannot imagine that the gentleman would find something with that. I thought I understood him correctly. Or did I misunderstand him?

Mr. BURTON of Indiana. Mr. Chairman, will the gentleman yield?

Mr. MOAKLEY. I yield to the gentleman from Indiana.

Mr. BURTON of Indiana. Mr. Chairman, I just think when we are getting into this area, which is a very gray area as far as I am concerned, relative to the security and safety of El Salvador, if we are going to pass legislation dealing with the security of this nation and whether or not weapons are coming in or out, we ought to be more definitive than we are with this particular language. Just saying "significant" is not enough for me.

The CHAIRMAN. The time of the gentleman from Massachusetts [Mr. MOAKLEY] has expired.

Mr. MOAKLEY. Mr. Chairman, I yield myself 3 additional minutes.

Mr. Chairman, I will tell the Members what the word "significant" does not mean. The word "significant" does not mean one member of the FMLN walking down the street with a rifle over his shoulder. "Significant" is a term that will be determined by the President and his military advisers. I do not think there is any big question there.

Mr. BURTON of Indiana. Would the gentleman let me ask one more question? Would the gentleman yield?

Mr. MOAKLEY. Go ahead.

Mr. BURTON of Indiana. Mr. Chairman, let me quote this:

> The Esquipulas II (Arias) peace plan calls for the cessation of overt and covert military aid to insurgent forces "as an essential requirement for achieving a stable and lasting peace in the region."

Why would the gentleman want to go against the Arias agreement? This is a complete cessation, and the gentleman is saying, "significant." We are talking about all of it.

Mr. MOAKLEY. Mr. Chairman, we are talking about the carrot-and-stick, determining future aid to El Salvador, and that is why the word "significant," is used.

Mr. BURTON of Indiana. The gentleman did support the Arias peace plan, did he not?

Mr. MOAKLEY. Absolutely.

The CHAIRMAN. The gentleman will suspend.

The Chair will state that if the gentleman from Indiana or any other Member wishes a Member to yield, he should put the question to the Member who has the time.

Mr. BURTON of Indiana. Mr. Chairman, I did ask the gentleman to yield.

The CHAIRMAN. The Chairman recognizes the gentleman from Massachusetts [Mr. MOAKLEY], and if he wishes to yield, he may do so. The Chair recognizes him further at this time.

□ 1720

Mr. MOAKLEY. Mr. Chairman, as I said, in a recent statement by Dr. Fidel Chavez Mena, Secretary General of the Christian Democratic Party of El Salvador, and former Minister of Foreign Relations and Economic Planning in the Duarte government, he expressed the belief of his party that, "if El Salvador is truly moving toward peace, we will need military aid less and less."

His statement goes on to say that:

Freezing half the military aid, as proposed by Congress, makes exactly this point. If negotiations between the government and the FMLN advance toward concrete agreements, and if the FMLN abides by them, the frozen fifty percent will not be necessary and will not be delivered. We suggest that these funds be converted into direct economic and humanitarian assistance to further the investment in democracy and peace, which El Salvador wants and the United States has supported.

In sum, we believe, as did our late President Jose Napoleon Duarte, the founder of our Christian Democratic Party, that a combination of international pressure and support is beneficial to the negotiating process.

Mr. Chairman, that is a statement by Dr. Fidel Chavez Mena, Secretary General of the Christian Democratic Party of El Salvador.

Mr. BROOMFIELD. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from California [Mr. DREIER].

Mr. DREIER of California. Mr. Chairman, I thank the gentleman from Michigan [Mr. BROOMFIELD], the distinguished ranking member of the full Committee on Foreign Affairs, for yielding, and I would like to, of course, express my appreciation to the gentleman from Massachusetts [Mr. MOAKLEY], the distinguished chairman of the Committee on Rules.

Mr. Chairman, I had the privilege of going to El Salvador, as some said earlier, to participate in that very important, but tragic, task force that went to investigate the murder of Father Ellacuria and the other Jesuits. It seems to me, Mr. Chairman, that we have a real tragedy here, and I think that the President of the United States has said it several times very emotionally.

If we had thought 1 year ago today that we would see Manuel Noriega out of office, out of control of Panama, and Daniel Ortega out of control of Nicaragua, most everyone in this House would be absolutely stunned. At that time, if we had in a bipartisan way talked about putting together some kind of aid package which would assist these people, who have been living under the repression of Noriega in Panama and Ortega in Nicaragua, I believe that we would have had complete bipartisan support for that package.

Mr. Chairman, that is exactly what the President of the United States is calling for here. He wants us to help these people who have, as has been said many times, these fledgling democracies which are attempting to reach out of this deep pit of totalitarianism to some kind of democratic form of government.

Mr. Chairman, they have taken that first and very bold step by having free and fair elections. We saw Guillermo Endara win by an overwhelming margin over a year ago, and we, of course, saw earlier this year, on February 5, Violeta Chamorro win.

Now that we have done everything we can to encourage that process, let us provide these people with the assistance needed.

So, Mr. Chairman, what do we do from this Congress? We decide, following the President's request, to hold hostage that very important package for the people of Panama and the people of Nicaragua.

Mr. Chairman, this is reprehensible, that we would consider in any way preventing the people of Nicaragua and Panama from getting this support without cutting off aid to the duly elected Government of El Salvador.

Mr. Chairman, we have seen for the first time in the history of El Salvador the transition from one democratically elected government to another in the history of that country, and, yes, last November 16 saw a real tragedy, the horrible massacre of those Jesuits. However, Mr. Chairman, it would not have taken place had the FMLN not on November 9 launched the largest urban assault ever in El Salvador, and we have got to recognize that our assistance to the Cristiani government is important.

As one of our Democratic colleagues on that important mission led by the gentleman from Massachusetts [Mr. MOAKLEY] said, "President Cristiani offers the best hope for the future of El Salvador."

Mr. Chairman, we know that he is working diligently on behalf of this package, and we need to ensure that the aid to El Salvador is consistent and strong.

The FMLN cannot get their support from the Soviets, the Government of Nicaragua, or Cuba. They are getting it from the U.S. Congress.

Mr. SMITH of Florida. Mr. Chairman, I yield 2 minutes to the gentleman from New Mexico [Mr. RICHARDSON].

Mr. RICHARDSON. Mr. Chairman, this legislation represents the first time in 10 years that the Congress will tell the Salvadoran Armed Forces that they do not have a blank check.

Ten years of giving the administration virtually a free hand and all the military aid they have requested, has resulted in a Salvadoran military which is impervious to civilian control and blindly permissive of human rights abuses.

The case of the six murdered Jesuits and their housekeepers, far from being an isolated case of human rights abuse, is a telling example of the Salvadoran military's contempt for justice. Key witnesses have been sent overseas, evidence in military custody has disappeared, and the judicial system has been intimidated to the point of paralysis. Clearly, the Congress must send a strong signal—and must send it now.

The committee's language on El Salvador deserves the support of the entire House. Passage of this provision would send a serious and unequivocal message to all segments of Salvadoran Society—particularly the combatants on both sides—that the United States is determined to support the negotiating process and the regional movement towards demilitarization and to see that justice is done in the case of the murdered Jesuit priests.

The provisions regarding military aid are clearly aimed at the military sectors of El Salvador, both Government and rebel. Furthermore, the provisions strengthen President Cristiani's ability to respond to El Salvador's needs. Economic and development assistance are not affected and should the 50-percent cut remain unaltered, these funds are converted to development assistance—which would help the neediest Salvadorans.

NOW IS THE TIME TO ACT

Last June, the administration argued that it was not the time to condition U.S. aid because it might signal a lack of support for President Cristiani. The Salvadoran military interpreted the lack of conditioning as a signal that their acts of harassment and abuse were acceptable.

Last September, the administration told the Senate that it was not the time to condition United States military aid because it might undermine talks between the Salvadoran Government and guerrillas. Lack of United State action led the Salvadoran military to again move forward with a campaign to harass, abuse, and attack any segment of the Salvadoran population which was opposed to their actions.

Last November, the administration again argued that it was not the time to suspend part of U.S. military assistance in response to the brutal murders of six Jesuits—that Congress should focus not on the crime but on the investigation of that crime. Lack of congressional action led the Salvadoran military to bring the investigation to a grinding halt.

Now, the administration again argues that a cut in aid would send the wrong signal at a point when negotiations are set to begin. Mr. Chairman, we have been sending the wrong signal all along. It is time to speak unequivocally to both sides and state that the United States is in support of peace and a negotiated settlement to the Salvadoran crisis.

REGARDING PANAMA AND NICARAGUA

The $720 million for Panama and Nicaragua will provide desperately needed assistance for the new and popularly elected governments in those two nations.

The Governments of Nicaragua and Panama are struggling to show their people that democracy can and does

work, that freely elected governments can face down the tremendous economic and social crises which have taken hold of the Central American region.

It is critical that we move quickly on this aid package. To delay would do further damage to our Nation's credibility in the region. We have promised that democracy does work, we have promised aid, and congratulated these new democracies. The time has come to meet our obligations and help these fledgling democracies fulfill their promise.

FREE TRADE WITH PANAMA

In addition to this aid package, I believe it is important to consider ways of increasing trade with these two nations. Privately, the Panamanian Government has expressed an interest in discussing the possibility of a free trade agreement with United States officials.

A free trade agreement would directly benefit the Panamanian private sector, the sector most damaged by United States sanctions, the United States invasion and subsequent looting.

While the $470 million package will be invaluable to the Endara government, it will not automatically spur activity in the private sector. To assure quick private sector growth, and the employment and economic growth that comes with it, Panama must again become an attractive trade and investment center. A free trade agreement with the United States would create such growth.

It is my hope that the State Department and other appropriate agencies will seize the initiative and begin to study the many benefits of a free trade agreement with the nation of Panama.

FORT WORTH, TX,
*May 14, 1990.*

Hon. BILL RICHARDSON,
*House of Representatives,*
*Washington, DC.*

DEAR BILL: When I retired from Congress last year, I vowed I would never lobby or harass my old colleagues about anything. Please indulge me one exception. It involves an area in which I've had a consuming interest—Latin America.

In my considered view, it is extremely important for Congress to move just as swiftly as possible to approve President Bush's emergency request for $720,000,000 in desperately needed economic aid to Panama and Nicaragua.

New popularly elected heads of state in both countries are striving mightily to demonstrate that democracy does work, and that freely chosen governments can come to grips with the staggering economic and social problems that beset the region.

The need is immediate, even desperate. Years of war and mismanagement have crippled the economies of the two countries. The aid proposed by President Bush, modest by our own standards, can make a major difference. It can give those impoverished economies a new lease on life.

It is important to our country's credibility in all of Latin America that we make good on our President's commitment in these particular instances. The delays of our legislative process are difficult at best for many to understand. If our country should renege on a pledge so publicly made, it would give rise to pervasive cynicism as to our motives and reliability.

Moreover, simple justice demands that we help to repair the widespread damage to public infrastructure and the private economy inflicted by U.S. arms and economic embargoes. Democracy can thrive in Latin America only when we show that it promotes economic justice.

Thanks for your consideration. I earnestly believe our early affirmative action is very important in a part of the world that is very important to us. Very best personal regards.

Sincerely,

JIM WRIGHT.

---

SIDE-BY-SIDE COMPARISON OF THE EL SALVADOR LEGISLATION

| | House Foreign Affairs Committee H.R. 4636, Title V | Broomfield substitute |
|---|---|---|
| Effect on fiscal year 1990 military aid. | 50 percent withholding..... | None. |
| Reprogramming of withheld aid. | rechanneled into humanitarian aid. | None. |
| FMLN: Incentive to meet conditions of language. | 50 percent military aid withholding maintained. | No incentive. |
| FMLN: Punishment if conditions are not met. | Reinstatement of 100 percent of military aid to Armed Forces. | 0 to 100 percent reinstatement of military aid—but only if the aid has already been withheld. |
| Military: Incentive to meet conditions of language. | Maintenance of 50 percent of military aid. | 100 percent maintenance of military aid. |
| Military: Punishment if conditions are not met. | 50 percent of remaining aid would be withheld. | 0 to 100 percent of aid withheld depending on which of eight conditions are not met. |
| Resolution of Jesuit case. | 100 percent military aid withheld if not resolved. | 0 to 25 percent cut in military aid if not resolved. |
| Time frame for resolution of Jesuit case. | Action would be taken 6 months after murders. | Action would not be taken for at least a year after the murders. |
| in case of military coup. | 100 percent withholding..... | 100 percent withholding. |
| Judicial reform ..... | Promotes negotiations and allows the GOES and FMLN to resolve the reform question through the negotiations process. | Preempts the negotiations process by removing reform from the list of issues to be dealt with in negotiations. |
| Separation of police from military. | Leaves this issue in the hands of the negotiations process. | Offers $2 million in police aid even if the police are not separated from the military. |

CRITIQUE OF THE BROOMFIELD SUBSTITUTE AMENDMENT ON EL SALVADOR

CONCLUSION

The greatest weakness of the Broomfield amendment is its failure to signal strongly enough Congress' concern about the need for further reform of the Salvadoran military.

BACKGROUND

The Salvadoran military for many years has operated as a power unto itself, above the law and beyond the control of civilian authorities. This has proven to be as true during the tenure of President Alfredo Cristiani as it was under his predecessor, Jose Napoleon Duarte, notwithstanding the best efforts of each. Human rights abuses and massive corruption have been carried out with impunity.

The likely involvement of high level military officials in the November, 1989 murders of the Jesuit priests and their two associates has focused attention on the role of the military in Salvadoran society. The success of the current negotiations, of judicial reform, of efforts to improve human rights practices and establish a pluralistic democracy depend heavily on the extent to which the military can be made accountable to civilian authorities.

TALKING POINTS

1. The provisions related to the investigation and prosecution of November, 1989 murders of the Jesuits and their associates does not reflect the commitment made by the House last November with regard to this case.

The House, by a 409-3 vote last November 20, approved a resolution that "states unequivocally that a satisfactory resolution of this case is a pivotal test of El Salvador's democratic and judicial institutions and will be instrumental in determining continued U.S. support for the Government of El Salvador."

The Speaker's Special Task Force on El Salvador recently concluded that "the investigation and preparations for prosecuting the case have come to a virtual standstill. This is true both with respect to any investigation of possible senior officer involvement in the crimes, and to the gathering of further evidence against those already arrested. This lack of Salvadoran law, make it less and less likely that full justice will be done."

Under the Broomfield amendment U.S. policy toward El Salvador remains unchanged for another six months. With respect to the Jesuit case, no action would be taken before November, 1990—a full year after the murders. At that time, if the President determines that the government "is failing to conduct a thorough and professional investigation into, and prosecution of those responsible" for the murders, he must withhold up to 25 percent of the FY 91 military aid.

The November House resolution, together with Foreign Affairs Committee approval of a 50 percent "up front" withholding have created expectations both in the U.S. and in El Salvador. Approval of the Broomfield amendment, despite the conclusions of the Speaker's Special Task Force and recent additional information concerning problems in the case, would signal a failure of will on the part of the House. Such action is likely to undermine those in El Salvador—both within and outside the military—who are seeking to make the military accountable to the civilian authorities.

2. The current situation in El Salvador calls for clear, unequivocal action. The Broomfield amendment relies heavily on a process of conditioning aid that has been tried and proven largely ineffective.

The Broomfield amendment proposes to authorize expenditure of the full amount of military aid, and later review the performance of the government on specific criteria before determining whether to suspend a portion of the assistance.

This approach has been used in the past and has proven ineffective for two reasons:

First, the previous U.S. Administration demonstrated a willingness to certify progress on conditions where little or none existed; and

Second, the language of the conditions often reflected the ambivalence of Members of Congress who wanted to see improvements within El Salvador but were not willing to support a suspension of aid.

The current situation in El Salvador calls for clear, unequivocal action on the part of the U.S., such as that reflected in the House

Foreign Affairs Committee recommendations. Archbishop Roger Mahony made this point on behalf of the United States Catholic Conference: "By initially withholding a substantial portion of the military aid as yet unexpended in the current year and of that already authorized for next year, demonstrates that failure to respect human rights will have real consequences. It also demonstrates our active and strong commitment to the peace process . . . the enormity of the murders of the six Jesuit priests and the two women at the UCA, and of so many other unpunished crimes, calls for new approaches that clearly signal an end to business as usual."

The approach embodied in Title V of H.R. 4636—the immediate withholding of a substantial portion of aid—has been used on one other occasion. In FY 84, 30 percent of military aid was withheld until a verdict was rendered in the case of the murdered American church women. In the absence of strong action by Congress the case had languished in the Salvadoran judicial system for three years. Once aid was withheld, a verdict (albeit one that did not investigate or prosecute higher level military officers) was rendered within months.

3. The Broomfield amendment provisions concerning administration of justice programs and democratic initiatives cannot succeed until the Salvadoran military demonstrates a greater willingness to submit itself to civilian authority.

The amendment fails to acknowledge the role the Salvadoran military has played in obstructing the administration of justice and democratic initiatives in El Salvador, as well as the obstacles presented by the war itself.

The amendment would, for example, provide funds "to enhance the organizational and leadership skills of the members of such organizations [professional, civic, trade union, business, community, etc.] in order to increase citizen participation in democratic process."

An example reported in the press this week about the disappearance last December of the leaders of an agrarian reform cooperative in San Cayetano, (Department of Ahuachapan) illustrates the problem with the proposals in the Broomfield amendment for judicial reform and democratic initiatives. In addition to these recent disappearances, countless other civic, labor, church, agricultural, and peasant leaders have been murdered, arrested, tortured, disappeared or forced into exile as a result of their civic involvement.

The need to create a climate that allows broad participation in all aspects of civil society, including partisan politics, depends in the first instance on the restraint of the Salvadoran military and only secondarily on technical assistance and leadership training.

4. The amendment fails to take strong action to encourage the current negotiations process. Strong action at this time may enhance the possibility of early agreements that would improve the climate for national elections in March 1991.

Many in El Salvador, from across the political spectrum, are looking to the Assembly and municipal elections in March, 1991, as an important component of an overall resolution of the conflict. A number of reforms are needed, however, if the elections are to be conducted in a way that truly will contribute to peace. This is an area that is likely to be under consideration in the negotiations. With campaign season getting underway by September, 1990, these agreements will have to be reached at an early stage if they are to achieve the desired outcome. The U.S. must signal its seriousness of purpose earlier rather than later if it hopes to encourage successful negotiations on this issue.

THE BROOMFIELD AMENDMENT ON THE SALVADORAN MILITARY

The amendment seeks to address the problem of the Salvadoran military in the following ways:

Requires bi-annual reports from the President including an assessment of government policies with regard to "an end to the involvement in or support for acts of unlawful violence, secret detentions, abduction, torture, and murder by members of military, security, or police forces;"

Provides for the withholding of up to 25 percent of military aid if the President determines and reports to Congress not later than November 1, 1989 or May 1, 1990, that the government: is failing to conduct a thorough and professional investigation into the November, 1989 murders at the University of Central America; is failing to separate the police force from the Armed Forces and establishing a police force under civilian authority; and is failing to reorganize the structure and reduce the size of the Armed Forces following the successful completion of a negotiated settlement with the FMLN.

Requires approval by the Salvadoran president of the obligation or expenditure by the Armed Forces of all U.S. military aid.

The amendment also provides $10 million in ESF for Administration of Justice programs and activities and for a "Support for Democracy Program."

MAY 15, 1990.

Mr. BROOMFIELD. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Ohio [Mr. MCEWEN].

Mr. MCEWEN. Mr. Chairman, I rise to emphasize how important it is that the amendment of the gentleman from Michigan [Mr. BROOMFIELD] pass. Let me tell my colleagues where the battle is.

My colleagues have seen what went on in Ceausescu's government in Romania. They saw what happened in Nicaragua. They now see where the focus of attention is.

I recently met some months ago with the Human Rights Commission in Managua. They told about how that all of the support for the international support had been cut off from the Human Rights Commission inside Managua once the Communists took control there. They went back to some of their old suppliers. They went to the World Council of Churches and the other funding sources. They said why is it they are cutting off aid to us, who are human rights people, and they said, my colleagues; get this: Geneva said to Managua, they said, "We are no longer concerned about human rights abuses in Nicaragua. Our next target, our next goal, is El Salvador."

So, Mr. Chairman, I say to my colleagues, "You can just watch the coalition building. Now that they have lost Eastern Europe, now that they are losing Nicaragua, the next goal is El Salvador."

So, we have an amendment that says this. The amendment says that, even if they make progress on human rights, even if they have a serious investigation in the Jesuit case, even if they reform the military and the judicial system, even if they do all of those things, the aid is still cut off. If the Communist guerrilla front organization, the FMLN, refuses to launch an offensive, then the aid from America will still be held in abeyance.

Now, get that, get that, that, as long as the Communists do not launch an offensive, then the aid is withdrawn.

Now, talk about convoluted, backward thinking. I do not have any idea how in the world we can come up with the idea that we give veto power to the Marxist guerrillas that have spent the last 6½ weeks moving all of their caches of supplies from Nicaragua into El Salvador. Now that they are ready to try to undermine the democratically elected government, we are about to pass an amendment in this Congress that says that those people are given veto power over aid to an ally that has a democratically elected government.

□ 1730

Mr. MOAKLEY. Mr. Chairman, for purposes of debate only, I yield 4 minutes to the gentleman from Kansas [Mr. SLATTERY].

Mr. SLATTERY. Mr. Chairman, I want to use my time this evening to rise in support of the Moakley-Murtha amendment. This is a balanced amendment which will strengthen this bill and require both the government of El Salvador and the FMLN rebels to meet important conditions. It provides incentives for both sides to remain at the bargaining table.

Most importantly, this amendment contains positive incentives for peace.

The Moakley-Murtha substitute withholds 50 percent of Salvadoran military aid in the fiscal years 1990 and 1991, and links the restoration or elimination of this aid to specific conditions by the FMLN and the Salvadoran military, just as in the bill.

The substitute goes even further than the bill by adding a provision to trigger a cutoff or resumption of all military aid if either side is engaging in violent attacks on civilians.

It further strengthens this bill by requiring that all military aid be approved by President Cristiani, strengthening his hand in dealing with the military.

It authorizes election monitoring funds for the purpose of promoting democracy and monitoring the municipal and parliamentary elections in El Salvador in March 1991.

We need to act now to encourage current negotiations for a cease-fire and lay the foundation for democratic and judicial reforms that will bring all

Salvadorans into the political process by the March 1991 elections.

The United States must demonstrate that we will back up our concern for the murder of the six Jesuit priests, their housekeeper and her daughter, and other equally reprehensible crimes with a real change in policy.

Showing our full support for the Salvadoran government through unconditional aid has not proven successful. It has only helped institutionalize an independently wealthy segment of the military that assumes the United States will continue to fund the war no matter what.

Mr. Chairman, that false sense of security must be removed.

Let there be no mistake about it, the FMLN has also engaged in its share of human rights crimes. The point is that neither side is blameless. The bottom line is that it is time for a change. Justice dictates it and the war-weary Salvadoran people desperately yearn for it.

The United States must put its money where its mouth is. If we abhor human rights violations by both sides, we must support the Moakley-Murtha amendment and institute a positive change for peace today.

This amendment offers a real opportunity to forge a bipartisan policy toward El Salvador. This amendment allows us to constructively demonstrate our frustration over events in El Salvador, while at the same time encouraging both sides to negotiate in good faith.

The substitute would complement, not undermine, the peace negotiations which have recently begun between the Salvadoran government and the FMLN. It provides real carrots and sticks to help prod the negotiations forward.

If either side fails to negotiate in good faith during the peace talks, U.S. military aid will be eliminated or restored, depending on the conduct of the parties.

With this substitute, extremists in both the FMLN and the Salvadoran military will feel the consequences of obstructing negotiations. This substitute is not about punishing the Salvadoran military. It is about supporting those moderates in El Salvador who are seeking to negotiate and end to that terrible war.

I want to support those moderates, and a U.S. policy that will help to end this bloody civil war. I urge my colleagues to support the Moakley-Murtha substitute and final passage of this bill.

Mr. COLEMAN of Texas. Mr. Chairman, will the gentleman yield?

Mr. SLATTERY. I yield to the gentleman from Texas.

Mr. COLEMAN OF TEXAS. Mr. Chairman, if I could just for a moment refer to the previous speaker in the well who referred to convoluted thinking. It seems appropriate to me that finally the United States says to everybody else,"We will give you the money after you show us results in terms of your judicial system and bringing those people to justice."

Mr. Chairman, I thank the gentleman for yielding to me.

Mr. SOLOMON. Mr. Chairman, I yield 4 minutes to the gentleman from California [Mr. DORNAN].

Mr. BROOMFIELD. Mr. Chairman, I reserve the balance of my time.

Mr. FASCELL. Mr. Chairman, I had one speaker. We are trying to get him here right now, so I will have to reserve the balance of my time for the moment.

Mr. MOAKLEY. Mr. Chairman, I also reserve the balance of my time.

□ 1740

Mr. BROOMFIELD. Mr. Chairman, I yield such time as he may consume to the gentleman from California [Mr. LEWIS].

Mr. LEWIS of California. Mr. Chairman, I thank my colleague, the gentleman from Michigan, for this generosity.

I must say that from our perspective on this side of the aisle it might be helpful to close our portion of the debate by suggesting that the House just might benefit by focusing on the reality that we come to the floor to discuss this very important issue in our own hemisphere at the very moment when the world is exploding, literally exploding, with hope. Democracy is ablossom around the world, and even in El Salvador, democracy is blossoming.

But, as I understand it, we began this process relative to this bill because we wanted to give some asssitance that was desperately needed to a couple of countries in Central America other than El Salvador, to Panama and to Nicaragua, and now because a few seem to want to link problems that we see in the past in El Salvador to this aid to these other democracies who so desperately need our help, that we are holding up the flow of that aid by the form that this bill is coming to us.

Let me suggest that President Cristiani, the new President elected by the people of El Salvador, is attempting to make real progress in his country. Let me also suggest that President Bush, the President of the United States, has had a fantastic impact in terms of the world's view of our own attitudes about that growth and strength and hope for democracy.

To suggest that we should use this time to return to that recent pattern of the Congress to want to have all us be Secretaries of State would be a very, very big mistake. I have great respect for the chairman of the Committee on Rules, and I understand his concern. I also have great respect for my leader, the ranking member on our policy committee.

The amendment he has crafted is a very, very professional piece of work. It recognizes that the Congress may want to have a careful means of taking a look at what goes on in El Salvador, but suggests that the President of the United States should be given that flexibility rather than our returning to the position of suggesting that we are the Secretary of State or we will serve as the President in this case.

In these closing moments of this debate, I would hope that we would focus upon that most important role of the Congress, that is, to give support to a strong and flexible foreign policy led by a President, I think, who has demonstrated very, very well that he has a pretty good idea as to how we can best help not only countries in Eastern Europe but very important growing democracies throughout our hemisphere as well, particularly El Salvador, Nicaragua, and Panama.

I urge the House to move very carefully here. I would urge the Members to support the Broomfield amendment when we go into that portion of our debate.

But at this point, I think we have discussed the pure partisan rhetoric enough, and it is time for us to focus one more time on what we were trying to do in the first place, and that is to quickly help the countries of Nicaragua and Panama.

Mr. FASCELL. Mr. Chairman, I yield the balance of my time to the gentleman from Florida [Mr. SMITH].

The CHAIRMAN. The gentleman from Florida [Mr. SMITH] is recognized for 7 minutes.

Mr. SMITH of Florida. Mr. Chairman, I thank the gentleman for yielding me this time.

Mr. Chairman, I want to commend the chairman of the Committee on Foreign Affairs for having brought this vehicle to the floor and for having provided leadership consistently along the lines that the President has been asking for.

The previous speaker, the gentleman from California [Mr. LEWIS], was correct; I mean, the initial aspect of this bill was, and still is, with reference to Panama and Nicaragua, but it pains me that for some reason we seem to begin each and every debate not ab initio, not from the beginning and the roots of the problems, but somewhat instanter, from the instant we get in the well; it is as if that new set of circumstances just erupted, that there has been no history, no past.

What is wrong with us? Why do we forget the history of these regions when we discuss foreign aid? Why do we forget what we did yesterday, last year, 10 years ago? Why do we forget what the history of these countries was, the history of the recipient coun-

tries for which our money is intended to provide significant help? It will not, you know, unless we do, in fact, remember the history.

Panama and Nicaragua have had significant and violent histories. We need to remember that they are in a position now with transition to democratically elect governments.

It will not be easy for them to provide all of the aspirations, the kinds of services and the kinds of allocation of goods, of education, of commercial enterprise, of freedom in every aspect all at once.

The basic premise of this bill is that we are going to take from what the President wants to do from the Defense Department money to provide these countries with the hope of being able to increase their democratic strengths, to strengthen democratic institutions and to give them ultimately the beginnings, the framework, the underpinnings of a free society, and we are doing that.

I do not think anybody here really debates that. Yes, there is an amendment about how much we should be involved in trying to make sure that the Panamanians are involved with us in coming to agreements on money laundering. Part of that is already in the bill, and there are some situations regarding Nicaragua and the use of the money, but for the most part we all agree.

But then we get to El Salvador, and again, for some reason, in El Salvador we seem to want to forget history.

The debate over the difference between the Moakley-Murtha amendment, and I commend the gentleman from Massachusetts, the chairman of the Committee on Rules, for his foresight and vision and his commitment to finding the truth in El Salvador; the differences are exacerbated so greatly here.

Mr. Chairman, we have had over 100 years of military rule in El Salvador. Then came Jose Duarte, supported on both sides of the aisle. Some on the Republican side were suspicious at first because he was really not a right-winger, much more of a leftist to moderate, but after time, people began to realize he was really committed to trying to do something to bring his country into the democratic column and to give them some hope in the latter part of the 20th century that they would not be stuck in the 19th century forever.

But he had problems. He had the death squads operating, then, after he was democratically elected just as they had operated previously, and he could not make peace with the FMLN, although people thought he was the best hope.

They kidnaped his daughter and held her hostage. And so we were disappointed, not surprised, but disappointed.

Mr. Duarte now is gone, died, after trying very hard to bring his country into the 20th century, and now we have another duly elected government, Mr. Cristiani from the right, but the death squads are still operating. The Republicans as well as the Democrats will all agree on that.

One of the speakers in the well on this side talked about the fact that the Jesuit priests were killed by the army, but, he said, but we still have to give the army the money they are entitled to.

Why must we forget history? When we have given money unfettered, it has not worked. It did not even work in Nicaragua.

□ 1750

The time that there began to be light at the end of the tunnel was the time we all got together on this floor and put some conditionality on the money and got the rest of the people in the region involved in the process. That is what we are trying to do here again.

The difference between the Moakley-Murtha amendment and the Broomfield amendment is somewhat akin to the Churchill story. We know what they are, we are just haggling over the penalty. I come down and I hope most Members will come down on the side of the Moakley amendment, mainly because it contains one provision that more than any other will be important for the future, for the future of El Salvador, and that is it gives the president of El Salvador more control over the military, which again we should not forget has run rampant in that country time after time through administration of left-leaning presidents and right-leaning presidents. We cannot forget the history of these countries. It is important.

I would urge you to support the Moakley-Murtha amendment and support this bill. This aid must flow. We must be able to establish democracy in the region.

The CHAIRMAN. The Chair would note that the gentleman from Michigan [Mr. BROOMFIELD] has one-half minute remaining and the gentleman from Massachusetts [Mr. MOAKLEY] has 3 minutes remaining.

Mr. BROOMFIELD. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

Mr. MOAKLEY. Mr. Chairman, I yield 3 minutes to the gentlewoman from California [Ms. PELOSI].

Ms. PELOSI. Mr. Chairman, I rise today in support of the Moakley-Murtha amendment to the El Salvador provisions contained in H.R. 4636, the supplemental authorization bill for aid to Panama and Nicaragua.

The committee provisions before us today would provide for an immediate 50 percent cut in military aid to El Salvador, contingent on specific good-faith actions in peace negotiations by both the Salvadoran Government and the FMLN. The committee provisions were carefully crafted to encourage both parties—the Salvadoran Government and the FMLN—to participate in serious negotiations.

Mr. Chairman, H.R. 4636, the supplemental authorization bill for Panama and Nicaragua before us today contains an authorization for $30 million for Contra demobilization. The demobilization funds are to be channelled through the UN/OAS's International Support and Verification Commission—known as CIAV—and they are to be available only provided that the Contras abide by their agreement to disarm.

I rise today to bring to my colleagues' attention my concern about the recent action by the Contras, announced last Friday, to suspend indefinitely their agreement to disarm. To date, only approximately 1,000 of the estimated 16,0000 Contras have turned in their weapons to the U.N. forces. The elite Contra forces are being maintained in reserve. Reports on May 21, in fact, indicated that 1,500 Contras had returned to the Honduran side of the border where they had maintained their base camps. Through their actions, the Contras are now presenting a challenge to the authority of the Chamorro Government.

Many individuals here in Congress were able to support this demobilization aid to the Contras based on the fact that it would be solely for Contra demobilization, repatriation and resettlement. We must emphasize now that that is indeed the purpose of these funds. Any aid for Contra demobilization must go solely for Contra demobilization. This aid is not to maintain a standing army.

I am very concerned, Mr. Chairman, that the Contras have backed out of their agreement to demobilize. No funds should be released to the Contras if they are not fulfilling the conditions stipulated by Congress.

I wish to return to the Moakley-Murtha amendment which further strengthens the incentives and disincentives for participation in the peace process in El Salvador. If the FMLN causes the negotiations to collapse, launches another offensive, continues to receive substantial shipments of outside arms, assassinates or abducts civilian noncombatants or engages in acts of violence directed at civilian targets, President Bush could reinstate the military aid.

If the Salvadoran Government causes the negotiations to collapse, if there is less than a full investigation and prosecution of the individuals responsible for the assassinations of the six Jesuit priests, if the Salvadoran

military stages a coup, or if the Salvadoran military is assassinating or abducting civilian noncombatants or engaging in acts of violence directed at civilian targets, then the military assistance could be cut off entirely.

These are sensible conditions designed to keep both the government and the rebels at the negotiating table. The cut in aid is designed to send a serious message to those in El Salvador who choose guns over talks, both military and rebel.

The Salvadoran military is balking at participating in the negotiations between the FMLN and the Cristiani government. Without their participation, any real change will be difficult. Cutting military aid by 50 percent sends a signal that the United States will no longer condone their brutal actions. As long as the military continues to get full U.S. funding, there is no incentive for the military to pursue peace.

The tragedy of El Salvador gets worse. Last November, as I watched the reports of the escalation of the war in this tiny country, I saw many pictures of small children wounded as they were caught in the crossfire of an ideological battle which they are too young to understand.

There cannot and will not be a military victory in the Salvadoran war, by either side. Even American military advisers have acknowledged that a military victory is impossible. Without the possibility of a military victory, there is only one way to stop the war—negotiations. Today, we have an opportunity to promote the negotiations and at the same time, support the work of the Central American Presidents in their efforts to promote regional peace.

Over the course of the past 10 years, the United States has spent $4 billion in El Salvador and the situation there has progressively worsened. Human rights violations are tragically increasing and no one has yet to be successfully convicted for human rights abuses.

The murder of the six Jesuit priests galvanized the people of the United States. The assassination of the Jesuits has highlighted the serious problems with the Salvadoran justice system. The purported investigation and prosecution of those responsible for these heinous crimes has become a farce, with essential witnesses transferred out of the country on study programs, critical evidence such as journals, diaries and logs disappearing and the corrupt Salvadoran military structure pulling out all the stops to protect its own. President Cristiani has indicated that Colonel. Benavides may simply walk away from the murders.

A number of my colleagues who had prevously supported military assistance to El Salvador have now indicated their reluctance to support further aid. They, too, are frustrated with the lack of progress in resolving the crisis in El Salvador. The growing discontent in the United States Congress about the status quo in El Salvador is helping to increase the pressure for a negotiated political settlement to the war in Salvador. Today provides us with an opportunity to act positively to change United States policy toward El Salvador.

The escalation in the civil war in El Salvador, the tragic increase in death and destruction there, the serious rise in death squad activity and the recent assassinations of six Jesuit priests, the backbone of El Salvador's intellectual community, all cry out for action by the United States to change our policy.

While I support the committee provisions and the Moakley-Murtha amendment, I am disappointed that we are not voting today for a total cutoff of military aid to El Salvador. The sheer fact of the matter about the situation in El Salvador is that it is American taxpayers' dollars which are paying for the war there. We send $1.5 million a day, not a week, not a month, but $1.5 million a day to support the regime in El Salvador. Without our tremendous amount of foreign aid to this tiny country, the war could not go on.

Military assistance will only prolong the suffering. Negotiations are the only way to stop it. For the sake of the children of this war-torn country, we must renew our efforts to promote a negotiated political settlement to the Salvadoran civil war.

If we do not act to stop the war, if we do not act to send a message to El Salvador that we will not support repression there, we will be responsible for the deaths of many people whose sole goal in life has been to improve life for all Salvadorans. As we work to promote democracy in Central America, we should make sure that El Salvador is not left out of our efforts.

Mr. Chairman, a number of people in the San Francisco Bay area are actively involved in promoting peace in El Salvador. They support sister cities programs and visit Salvador on pastoral, humanitarian and religious delegations. Uniformly, they return from this tiny, war-torn country with one message, a message they hear repeatedly from their Salvadoran hosts, please cut the aid. Today, let us heed those voices and add ours to the groundswell for peace.

I urge my colleagues to support the Moakley-Murtha amendment, which strengthens the committee provisions on El Salvador.

Mr. BROWN of California. Mr. Chairman, I rise today in strong support of the Moakley-Murtha amendment to H.R. 4636. I want to address my comments to my colleagues who have not yet decided how to vote on the El Salvador aid restructuring proposals.

Some of my colleagues may be under the impression that the Moakley-Murtha amendment cuts military aid to only the Salvadoran Government and puts no pressure on the FMLN rebels.

In fact, Mr. Chairman, the beauty of this legislation is that even though the United States can only directly control the military aid that is given to the Salvadoran Government, Moakley-Murtha puts conditions on the behavior of the FMLN which, in effect, also cut its military aid. If the President of the United States certifies that the FMLN is continuing to receive significant shipments of outside military equipment, the Moakley-Murtha amendment calls for the resumption of full military aid to the Salvadoran Government. In addition, if the President certifies that the FMLN is undertaking offensive operations that threaten the survival of the Salvadoran Government, then full military aid to the Government resumes. Through this legislation, both sides are put in a straitjacket in terms of military aid to help ensure that both camps back away from a military solution to the conflict and negotiate in good faith for a diplomatic solution.

Since negotiations are just beginning again in El Salvador, some of my colleagues might be wondering whether this is the right time to be conditioning aid in a way that some have interpreted as weakening the position of the Salvadoran Government?

In fact, Mr. Chairman, the timing is perfect for this legislation because it will weaken the hands of those who are unwilling to seriously negotiate and respect human rights, while it strengthens the hands of those on both sides who want successful negotiations. With this legislation, Salvadoran President Cristiani can now turn to the extremists in the military and the far right-wing and warn them of the consequences of obstructing negotiating in terms they can appreciate. President Cristiani may have to publicly say that he opposes this legislation, but logically, if he is sincere about wanting peace and sincere about his willingness to make reasonable compromises, this legislation gives him the leverage he needs against the extremists in his party and the Salvadoran military. Likewise, on the FMLN side, this legislation increases the power of those who want to make compromises for peace, while it weakens the influence of those who want to pursue a military solution to the civil war.

Mr. Chairman, it is finally time for the Congress to answer the question: Are we going to start promoting peace and negotiations in El Salvador, as the Moakley-Murtha provisions will have us do, or are we going to continue helping El Salvador's extremists pursue a bloody, military approach to the civil conflict in that country? I urge my colleagues to support the Moakley-Murtha amendment.

Mr. FEIGHAN. Mr. Chairman, when we look book back at the situation in El Salvador, we look at a decade that was ushered in with the murder of four American churchwomen—two of them from my home State of Ohio. It is a decade of war that ended with the brutal killing of six Jesuit priests, their cook, and her daughter. In both cases, the Salvadoran mili-

tary, financed and trained with U.S. tax dollars, were implicated. Those events are bloody bookends to a decade in which 70,000 Salvadorans have been killed.

Today, we have the opportunity to change course. The Moakley-Murtha amendment gives us an opportunity to peg our policy directly to the process of peace negotiations. We have the opportunity to end the carte blanche approach to military aid to El Salvador and replace it with a policy that puts the United States foursquare behind the pursuit of a negotiated settlement to the war.

The Moakley-Murtha amendment sends a message to the FMLN that they will now be held accountable for their actions—for attacks against civilians, for car bombings, and political assassinations. At the same time, it sends a message to the Salvadoran high command that they must do what they have never done before. They must police their own ranks for those members who kill priests, bomb civilian targets, or threaten to topple the elected government. The Jesuits case is a litmus test of their willingness to take on this commitment.

Let's look at the Jesuits' case. According to the Moakley task force's interim report, the case is at a virtual standstill. Questions aimed at tracing the crime back to its intellectual authors are, according to the report unanswered and apparently, unasked. But beyond these observations, the task force interim report describes a policy failure in El Salvador. Our prolonged effort to establish respect for human rights has not worked. In the words of the Moakley report, "The Salvadoran justice system remains essentially an oxymoron—neither systematic, nor just."

Perhaps the most disturbing fact revealed in the Moakley report is that just 2 days before the crime, nearly all those now under arrest for the murder of the Jesuits, sat in a U.S.-taught training course on infantry patrol techniques and weapons training.

The Moakley task force reported to this House that its members were "* * * convinced that the military's contribution to the problems of human rights and a paralyzed judicial system are not caused by a few renegade officers; they reside at the heart of the armed forces as an institution."

We must acknowledge that this same military institution has been armed, financed and trained with U.S. tax dollars. The Jesuits' case cries out for a change in our policy. The Moakley-Murtha amendment puts that policy in place. I urge my colleagues to support it.

Mr. RAHALL. Mr. Chairman, I rise in strong opposition to H.R. 4636, a bill to authorize yet another billion dollars to foreign countries.

Mr. Chairman, I do not question the fact that there are many nations around the world which require economic development assistance. Clearly this is true. However, I do question if we have the resources to provide such assistance when there is such need in our own country.

Our deficit stands at $152.1 billion, our gross Federal debt at $2.8 trillion. Real earnings between 1973 and 1986 have declined 17 percent. Our merchandise trade deficit has risen from $19.3 billion to $118.5 billion since 1980.

Our method of addressing our serious budget problems has been tragically ironic. While we have freely provided economic development assistance to foreign countries, we have simultaneously cut every small program that could provide needed economic development assistance for our own people. EDA, ARC, UDAG, CDBG, and the EPA construction grants program for water and sewers are just a few of the domestic economic development programs which have fallen victim to this budget cutting. What is worse is that this method has been predictably ineffective.

Even more ironic is that while we are poised to pass a bill authorizing yet another billion dollars for foreign countries, we are struggling in a budget summit to make $60 billion worth of cuts, and find a way to exclude another $60 billion, used to bailout mismanaged savings and loans, from our deficit calculation. We must do so, and will probably have to change our deficit reduction laws to allow for more debt than previously anticipated, because we do not have the funds to pay off this massive debt and because our economy cannot absorb more that $60 billion worth of cuts.

The answer is not more taxes. The answer is reorder our spending priorities. Our first step should be for us to realize that we must address our problems at home before we can again assist other nations. The answer is to defeat this bill and use the billion dollars it authorizes to solve our problems.

Mr. GEPHARDT. Mr. Chairman, over the past year, in region after region throughout the world, the forces of democracy, moderation and reason are taking over. From Eastern Europe to southern Africa, from Nicaragua to Mongolia, people are coming together to solve problems that were thought intractable just a short time ago.

Today, we have an historic opportunity to help this movement toward global reconciliation spread to a nation on our own continent that has known no peace for more than a decade, El Salvador.

In the past few months, I have had the honor to meet with a number of religious leaders from El Salvador, including those who have been targets of persecution, death threats, and assassination attempts.

These courageous men and women have documented the continuing violence and repression in El Salvador against labor leaders, religious figure, human rights advocates, and ordinary citizens. To a person, they say that United States military aid to El Salvador is only serving to increase the violence there by encouraging the Government to resist a negotiated settlement.

They frequently raise the fundamental, unanswerable question: What have we gained as the result of the $4 billion of aid we have provided to El Salvador over the past decade?

More and more Americans are asking themselves the same question. They now accept that our policy toward El Salvador over the past decade has failed—failed to bring about fundamental reform of the military and judiciary, failed to rein in the death squads, and failed to bring peace to a war now entering its third decade.

A bipartisan consensus now calls for our Government to change its course.

The committee bill, enhanced by the Moakley-Murtha substitute, sends the clear message that a military solution to the problems of El Salvador is not possible, that it is time to bury the hatred along with the dead, and that a negotiated settlement based on fundamental reform and human rights is the only guarantor of lasting peace in this afflicted country.

The bill immediately transfers half our military aid to attack the real enemies in El Salvador, namely, illiteracy, malnutrition, and disease. It provides incentives for the Government and the opposition to negotiate under U.N. auspices. And it enhances the role of civilian authorities vis-a-vis a runaway military command.

Nothing less than this will suffice.

Mr. Broomfield's substitute is well-intentioned, but it does not go nearly far enough. It delays action for 5 months; it requires minimal conditions for a full restoration of military aid; it provides no incentives to the opposition FMLN to participate in negotiations. As such, the Broomfield substitute is a prescription for a status quo that none of us should accept.

Last session, when we voted to cut off aid to the Contras, we were warned by the last administration that this result would condemn Nicaragua to an eternity of totalitarian rule. History, and the election of Violeta Chamorro, proved those critics wrong then. I believe the opponents of the Moakley-Murtha amendment will be proved just as wrong.

I urge my colleagues to defeat the Broomfield substitute and support the committee bill enhanced by the Moakley-Murtha substitute.

Mr. DORGAN of North Dakota. Mr. Chairman, there is no question that there is an urgent need to get assistance to the new democracies of Panama and Nicaragua and to the provisional Government in Haiti which is trying to guide that country through democratic elections.

There is no question that the United States, which has long supported the Government and military in El Salvador, has an obligation to assist in the search for a negotiated settlement of the civil war which is widely acknowledged to be unwinnable.

The issue is what kinds of aid should we provide and under what conditions.

When the Bush administration sent us its proposals for fiscal year 1990 supplemental aid to Panama and Nicaragua, I made it clear as Chairman of the International Task Force on Hunger, that the Panama proposals in particular, constituted trickle down aid plan. We would have been handing over a blank check to the Panamanian Government, and providing nothing to meet the critical nutritional and health needs of children; nothing to rebuild Panama's primary health care system despite their serious deterioration caused by Noriega's misrule and United States sanctions.

The administration's proposals, if enacted, would have sent the new democratic Government of Panama a message of indifference to basic human needs. A Third World democracy which believes that restoring the health of the banking industry is action sufficient to address the nutritional needs of its desperately poor will not long survive as a democracy. That is why I voted against the supplemental appropriations bill, H.R. 4404.

The measure before us today is an improvement. I commend the Foreign Affairs Committee for its authorization of $50 million of the

Panama aid to meet the priority needs of its poorest people. I share the committee's concern about the deterioration of primary health care services in both Nicaragua and Panama—a decline which has been realistically documented by the Pan American Health Organization [PAHO]. To cite one distressing disease statistic compiled by PAHO, because of the suspension of mosquito control activities during the Nicaraguan war, malaria increased 100 percent from 1985 to 1988.

In the political disorder of the past several years, children have borne a disproportionate share of the burden—child malnutrition has worsened. I expect that the administration will faithfully follow the committee's injunction to channel increased levels of development assistance to child survival and health care programs to address the critical health care needs of children in both countries.

I want to raise a question about changes to the current Central American Survival Assistance Act, Public Law 101-215, which I authored last year. That law ensured that emergency medical aid to the civilian victims of Nicaragua's civil war would continue. The change in section 102(g) removes the word "noncombatant" thus making assistance available to any victim of the strife. This would be consistent with the reconciliation process being promoted by the democratically elected Chomorro government, assuming that the Contras will be demobilized. Only then, when they are former combatants, should they be considered for this aid, for only then could its use advance the humanitarian goals of Public Law 101-215. Is this interpretation of the intent of this change correct?

Both the Committee on Appropriation's Foreign Operations Subcommittee and the Foreign Affairs Committee are to be commended for correcting the failure of the Bush administration to request added funds for overseas refugees. In my role on the Hunger Committee, I heard testimony earlier this year that the State Department's refugee assistance budget on a per capita basis, had declined from $20 per refugee in 1985 to about $12 per refugee in 1989. We were told that up to 225,000 children, ages 1 to 5, who are in United Nations High Commissioner for Refugees care are suffering acute malnutrition. I support the increase in the Emergency Migration and Refugee Fund on the understanding that overseas refugees, who are from the world's poorest countries and who have a thin margin for survival, will be prime beneficiaries of increased spending from this fund.

The restoration of $30 million in aid to southern Africa to compensate for funds previously taken from Africa accounts is warranted. It is satisfying to see these funds being used to aid democratic development in that region. It seems to me that too often Americans have concentrated their enthusiasm for the surge of democracy on countries which previously had endured Communist rule. There also has been a condescending, albeit unspoken, view that some regions, including Africa, were different and not ready for multiparty democracy. Under this rationale we looked the other way while one party dictatorships abused human rights and wasted or stole our assistance dollars. This must stop. Our concern for human rights and democracy must be universal.

I also strongly support the authorization for up to $20 million in assistance to Haiti to help its provisional government steer the country through free and fair elections into democracy. Once Haiti has a government worthy of its people, one which is really striving to alleviate the grinding poverty of that land, I hope this body will remember its generosity toward Panama and Nicaragua, and provide adequate aid to our hemisphere's poorest country.

Aid to El Salvador was not addressed in the appropriations bill. The authorization measure, both as reported by the Committee on Foreign Affairs and in the Moakley-Murtha substitute, have my support.

Human rights abuses have been committed both by the Salvadoran military and by the rebel FMLN. All such violations of human rights are reprehensible. But our military aid to the Government imposes on us a particular moral obligation to ensure that its abuses stop. How can we continue to fully fund the Salvadoran military after its soldiers murder six Jesuit priests? How can we continue to provide money after we are told by Salvadoran authorities that key evidence against the highest ranking officer arrested for involvement in the atrocity has been lost?

Too often our administration, some of us in Congress, and foreign governments, act as if our assistance were an entitlement which should continue regardless of their behavior and changes in the international political environment.

That is the case with El Salvador.

The dramatic improvement of United States-Soviet relations and the onset of democracy in Panama and Nicaragua should reduce concerns in this country that a red tide is going to roll over Central America. This has been the justification for sending over $4 billion of our taxpayers money to the Salvadoran Government and military over the past 10 years.

Authorizing aid to the Salvadoran military under the title "Assistance to Emerging Democracies" is a perversion of the meaning of those words. I recognize, however, that the intent of the legislation as reported by the Foreign Affairs Committee, is not to provide additional aid, but to set tougher aid conditions. Frankly, I am skeptical of the efficacy of withholding only 50 percent of our military aid to encourage successful prosecution of those responsible for murdering the priests and encouraging negotiations to end the war. But I will support these provisions because they improve our current policy.

I would have preferred withholding 100 percent of our aid to the Salvadoran military. But, peace negotiations now are underway, in part because the FMLN recognizes that the changes in the international political situation make pursuit of its military option much less attractive. A total U.S. military aid cutoff at this delicate juncture some argue, could give the FMLN renewed confidence that it could gain a military victory and thus torpedo peace hopes.

I am voting against the Broomfield amendment, because although it appears to place conditions on U.S. military aid, these conditions would be more apparent than real. No money would be withheld now: Thus no clear human rights or peace message would be sent to the Salvadoran Government and military. Further, in the future, President Bush alone would decide whether any funds would be withheld if, for example, the Salvadoran investigation into the murders of the priests continued to be a farce.

Finally, I note the bill's provision which authorizes the President to transfer any unused military aid, of both fiscal year 1990 and fiscal year 1991, to development aid to serve the basic needs of the Salvadoran population. I cannot predict whether this laudable provision will in fact be used. But it sets the direction in which we should be heading. If this provision is used, I recommend that expenditures comport with the standards in the Central American Survival Assistance Act. Aid for basic human needs, "si"; aid to the military, "no."

In conclusion, I support the improvements in this bill to the previously passed supplemental.

Mr. JONES of North Carolina. Mr. Chairman, I want to thank Chairman FASCELL for inserting into the committee report on H.R. 4636 our concerns for training more Panamanian nationals at the U.S. Merchant Marine Academy and the U.S. Coast Guard Academy.

With the Government of Panama taking over complete control of the Panama Canal in the year 2000, it is in the interest of both the United States and Panama to train more Panamanians to develop the technical and managerial skills needed to operate the Panama Canal. An education at Kings Point or the Coast Guard Academy would well serve this purpose.

The Committee on Merchant Marine and Fisheries is amending the appropriate laws to permit more Panamanians into these two academies. By allowing the Government of Panama to use foreign aid funds for this purpose, we help both countries, as well as the individuals who receive the training.

I want to thank Chairman FASCELL again for making clear that it is a permissible and desirable use of funds in this aid package to cover the costs of Panamanian students at the Merchant Marine Academy and the Coast Guard Academy. I encourage our Government and the Republic of Panama to make immediate and aggressive use of this authority.

Mr. HALL of Ohio. I rise in strong support of H.R. 4636. I would like to commend the chairman of the Committee on Foreign Affairs, Mr. FASCELL, for his excellent work, and in particular for his work for poor people in Panama and Nicaragua and refugees overseas.

I am aware of the immediate needs of tens of thousands of children in Panama and Nicaragua, and am pleased that this bill earmarks money to meet priority needs of the poorest people of Panama. In addition, the committee report states the committee's support for increased levels of development assistance through the child survival and health program to address the critical health care needs of children in both countries. I am confident that the Bush administration will not neglect the children of these countries as we work to help build strong, equitable, democratic societies in these two countries.

I salute the committee for its efforts to help us meet the crisis in funding for refugees overseas. The Select Committee on Hunger had held a hearing on this issue, and I strongly endorse the committee's report language

which describes the critical budget shortfalls faced by the United Nations High Commissioner for Refugees and the International Committee of the Red Cross. By increasing the authorized ceiling of the Emergency Refugee and Migration Assistance Fund, the committee has demonstrated its concern for the more than 15 million refugees around the world, many of whom flee their homes only to face continued hardships in refugee camps.

Mr. Chairman, I believe the situation of these refugees and displaced people is intolerable. In addition to the positive measures contained in H.R. 4636, it is clear that the Congress and the administration must continue to devote greater resources to assist refugees overseas.

I urge all Members to support this legislation.

Mr. WOLPE, Mr. Chairman, I rise in support of the legislation and want to commend my friend and chairman, Mr. FASCELL, for his diligence in crafting this bill.

Mr. Chairman, there is one part of this legislation which bears special mention and that is the language limiting military assistance to El Salvador. For the first time in a decade we have a unique opportunity to help advance the cause of peace in a country which has been torn by a bloody civil war. The graphic horrors of this war have been most notably symbolized by the brutal slaying of six Jesuit priests last November. At that time, last winter, Congress missed an opportunity to curtail a portion of the military aid to El Salvador when an amendment to the foreign aid bill was narrowly rejected by the House. Today, we must not make a similar mistake.

Frankly, I wish that this bill more closely followed the initiative proposed by my friend, Mr. DELLUMS, which would have terminated all aid to the Salvadoran Government, pending the resolution of the case of the six murdered Jesuits. In my view it is terribly wrong that American tax dollars are continuing to fund a government which is:

Incapable of controlling its own military;

Incapable of controlling the right-wing death squads that inflict terror on the Salvadoran people; and

Whose judicial system is so corrupt that it has yet to hold accountable a single military officer for crimes committed against innocent civilians.

Our support for the Salvadoran Government this past decade has not brought about the changes for which we had all hoped. We have not advanced our country's national interests or improved the lives of a majority of the Salvadoran people. Instead we have helped to perpetuate the strife and poverty which plagues this country.

Nonetheless, I recognize that significant steps have been taken within the past 2 months under the auspices of the United Nations to negotiate a settlement between the FMLN and the Salvadoran Government. We must all be encouraged by these talks. And that is why the language we have in this bill is an important first step.

The House bill and the Murtha-Moakley substitute, provide both the FMLN and the Salvadoran Government with incentives to remain at the bargaining table—which is exactly where they belong. The bill immediately withholds 50 percent of the military aid to El Salvador for fiscal year 1990. If the Salvadoran Government has not conducted a thorough investigation into the murders of the Jesuit priests or if it does not participate in good faith negotiations in the peace talks, all military aid would be terminated.

Similarly, if the FMLN continues to acquire significant amounts of arms from abroad or if it does not negotiate in good faith, then aid to the Salvadoran military can be restored.

I happen to be particularly supportive of the amendments which my colleagues, Mr. MURTHA and Mr. MOAKLEY, are offering that would add attacks on civilians by the FMLN or the Salvadoran armed forces as an additional condition for restoring or terminating military assistance. Also, the amendment requiring the Salvadoran president to approve of any military assistance will help strengthen civilian control of the armed forces. These amendments are sensible and will help improve the package we have before us today.

Finally, Mr. Chairman, I want to point out that I am painfully aware that there has been tremendous insensitivity to human suffering by both sides. Like the Salvadoran Army, the FMLN has displayed a callousness which has contributed to the enormous misery of the Salvadoran people. But the Salvadoran army is still armed and trained by our taxpayer dollars and as long as the Salvadoran Government is complicit in the terrorizing of civilians, we cannot reward that government with unconditional aid. We have the opportunity to send the strongest signal yet to the Government of El Salvador and the rebels that the U.S. Government wants to end the decade of bloodshed and terror in this Central American nation. I urge my colleagues' support for this bill, and the Moakley-Murtha substitute.

Ms. SCHNEIDER. Mr. Chairman, I urge my colleagues to support the Foreign Affairs Committee and vote for a real reduction in United States aid to El Salvador. Meaningful action to end the bloodshed in that country is long overdue.

Ten years ago, shortly before his assassination, Archbishop Romero urged the United States to cut off our military assistance. We did not follow his advice and for a decade, the United States has undertaken support of various Salvadoran governments in an attempt to quell the FMLN rebels. A decade of fighting and $4 billion in aid to the government and military forces, however, has brought neither peace nor prosperity to the people of El Salvador. Rather, it has contributed to warfare that has yielded 70,000 deaths and widespread suffering and pain.

I have been a long-time opponent of military support and have in the past supported restrictions on our aid. Today, we have a real opportunity. The Moakley-Murtha substitute not only restricts 50 percent of military aid, but also gives President Bush the authority to cut off or restore aid if either the Salvadoran Government or the FMLN do not negotiate in good faith. Both sides are guilty of human rights violations, both sides have promoted war and this legislation puts both sides on notice. Furthermore, the Moakley-Murtha substitute will actually strengthen the hand of President Cristiani in enhancing civilian control over the Salvadoran military by requiring that he approve the disbursement of all military aid.

The Moakley-Murtha substitute also puts action behind our condemnation of the killing of six Jesuit priests and the numerous other crimes of the preceding decade. Our previous attempts to leverage human rights concessions have clearly failed: not one Salvadoran military officer has been convicted of a human rights crime.

I also urge my colleagues not to be confused by arguments that the timing of our action is bad. On the contrary, our timing could not be better to empower those who seek peace and reconciliation in El Salvador. The Moakley-Murtha substitute will contribute to the peace process by giving both the FMLN and the Salvadoran Government a direct incentive to continue the initiative in Caracas, Venezuela.

We have seen the result of a bipartisan effort to end the Contra War in Nicaragua. Let us now vote to help those who have been hurt most by the bloodshed of the past decade and will benefit most from national reconciliation: the people of war-torn El Salvador.

I urge my colleagues to support the Moakley-Murtha substitute and oppose any amendments to weaken the committee language.

Mr. PEASE. Mr. Chairman, I rise reluctantly in opposition to passage of H.R. 4636, supplemental assistance for emerging democracies. I do so because this bill, like the corresponding supplemental appropriations bill, H.R. 4404, that we passed a few weeks ago reflects ad hoc decisionmaking in U.S. foreign assistance programs.

Last week, the Washington Post carried a three front-page articles about divergent philosophies within the Congress and the Bush administration regarding how to overhaul and update U.S. foreign aid laws and priorities. But one point of consensus emerged loud and clear—it is time to update a foreign aid program that is still administered under a law enacted in 1961 and largely unchanged since the mid 1970's.

President Bush has chastised the Congress for failing to provide him with more flexibility in the foreign aid program through which he can more effectively respond to dramatic geopolitical changes such as we have recently seen in Eastern Europe, the Soviet Union, and Latin America. I hope the Congress will take up his challenge and engage him in a thoughtful and comprehensive rewriting of U.S. foreign aid.

Until such a review is completed and the White House is willing to actively support legislation that fundamentally redirects U.S. foreign aid programs, I will continue to oppose the foreign aid requests President Bush sends to the Congress along with measures like this bill which perpetuate a very confused foreign assistance priorities. Specifically, this bill does little to speak to the following adverse trends in foreign aid: First, the concentrated maldistribution of aid to just five countries; second, the imbalance of spending priorities whereby too much emphasis is placed upon military aid and economic support funds, while far too little aid is devoted to humanitarian and development assistance; and third, increased spending without re-examining whether better

targeting of current levels of foreign aid spending might yield better results relative to more clearly defined, obtainable foreign aid purposes.

The CHAIRMAN. Pursuant to the rule, the bill is considered as having been read for amendment under the 5-minute rule.

The text of H.R. 4636 is as follows:

H.R. 4636

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SECTION 1. SHORT TITLE AND TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the "Supplemental Assistance for Emerging Democracies Act of 1990".

(b) TABLE OF CONTENTS.—The table of contents for this Act is as follows:

Section 1. Short title and table of contents.
TITLE I—SUPPLEMENTAL ASSISTANCE FOR FISCAL YEAR 1990
Sec. 101. Assistance for Panama.
Sec. 102. Assistance for Nicaragua.
Sec. 103. Administrative uses of funds for Panama and Nicaragua.
Sec. 104. Assistance for Haiti.
Sec. 105. Assistance for the Caribbean.
Sec. 106. Migration and refugee assistance.
Sec. 107. Assistance for sub-Saharan Africa.
Sec. 108. Assistance to encourage negotiations leading to a peaceful transition to democracy in South Africa.
Sec. 109. Housing investment guarantee program for new immigrants to Israel.
TITLE II—OTHER AUTHORIZATIONS
Sec. 201. Claude and Mildred Pepper Scholarship Program.
Sec. 202. Certain international affairs activities.
Sec. 203. Gorgas Memorial Institute.
Sec. 204. Extension of au pair programs.
Sec. 205. Technical and conforming amendments to the Department of State Appropriations Act, 1990, and the Foreign Relations Authorization Act, Fiscal Years 1990 and 1991.
TITLE III—DEVELOPMENT FUND FOR AFRICA
Sec. 301. Short title.
Sec. 302. Development Fund for Africa.
TITLE IV—CARIBBEAN REGIONAL DEVELOPMENT
Sec. 401. United States policies.
Sec. 402. Priority areas for assistance.
Sec. 403. Protection of worker rights.
Sec. 404. Protection of public health.
Sec. 405. Support for women's role in development.
Sec. 406. Consultation, monitoring, evaluation, and reporting.
Sec. 407. Definition of Caribbean.
TITLE V—EL SALVADOR
Sec. 501. Assistance for El Salvador.

TITLE I—SUPPLEMENTAL ASSISTANCE FOR FISCAL YEAR 1990

SEC. 101. ASSISTANCE FOR PANAMA.

(a) ECONOMIC ASSISTANCE.—In order to support the efforts of Panama to restructure and restore its economy, restore relations with international financial institutions, address specific development problems, and strengthen democratic institutions, there are authorized to be appropriated $470,000,000 as supplemental appropriations for fiscal year 1990 for assistance in accordance with this section under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund).

(b) OBJECTIVES OF ASSISTANCE.—The assistance authorized by this section shall be used to encourage and assist the Government of Panama in taking the necessary steps to restructure government policy and administration in order to allow the proper functioning of a market economy and political democracy. Among these steps should be the formulation and execution of sound economic policies and improved public sector management, with special attention to such areas as fiscal policy, the financial sector, budget planning and implementation, privatization of public enterprise, trade policy, and regulatory policy.

(c) ALLOCATIONS OF ASSISTANCE.—Except as provided in subsection (e), the funds authorized to be appropriated by subsection (a) shall be allocated and used as follows:

(1) DEVELOPMENT ASSISTANCE.—$50,000,000 shall be for assistance, consistent with the authorities and policies of chapter 1 of part I of the Foreign Assistance Act of 1961 (22 U.S.C. 2151 and following; relating to development assistance)—

(A) to meet priority needs of the poorest people of Panama, including assistance for rural development, health, family planning, and education; and

(B) to address immediate environmental needs and other environmental problems, including through means such as debt-for-nature swaps.

Assistance under this paragraph may be provided directly or through regional or international institutions.

(2) PRIVATE SECTOR REVITALIZATION.—

(A) IN GENERAL.—$150,000,000 shall be for assistance to revitalize the private sector in Panama. Such assistance shall include the following:

(i) BUSINESS INVESTMENT AND INVENTORY.—Assistance to help business finance a resumption of investment expenditures and restock inventories. Priority should be given to those businesses that suffered from looting in late December 1989 and for which a rapid resumption of economic activity would generate substantial employment.

(ii) EXPORT PROMOTION.—Assistance for export promotion activities.

(B) TRADE AND DEVELOPMENT PROGRAM.—Of the funds allocated to carry out this paragraph, $3,000,000 shall be transferred to the Trade and Development Program for use under section 661 of the Foreign Assistance Act of 1961 (22 U.S.C. 2421), except that this subparagraph applies only to such extent as is provided in advance in an appropriations Act.

(C) CREDIT ASSISTANCE.—Except for the assistance described in subparagraphs (A)(ii) and (B), assistance under this paragraph shall be provided through the commercial banking system and other financial intermediaries.

(3) PUBLIC INVESTMENT PROGRAM.—$110,000,000 shall be for assistance to revitalize public investment in Panama. Such assistance shall be provided as budget support to the Government of Panama to finance construction and other activities in such sectors as transportation, education, agricultural, and health. This assistance shall be administered by the Government of Panama and by nongovernmental organizations, with implementation to be carried out for the most part by private contractors.

(4) PAYMENT OF ARREARAGES TO INTERNATIONAL FINANCIAL INSTITUTIONS.—$130,000,000 shall be for assistance to assist Panama in paying its arrearages to international financial institutions. Such assistance shall be provided as part of a package of assistance for such purpose that includes the participation of the Government of Panama and other donor nations and multilateral institutions. This effort should be accompanied by a rescheduling of official bilateral and commercial debt.

(5) STRENGTHENING PUBLIC ADMINISTRATION.—Except as provided in subsection (d)(4), $30,000,000 shall be for—

(A) assistance to strengthen the administrative and management capabilities of the Government of Panama, including the National Banking Commission;

(B) assistance under section 534 of the Foreign Assistance Act of 1961 (22 U.S.C. 2346c) to strengthen the administration of justice in Panama, including the Office of the Attorney General; and

(C) notwithstanding section 660 of that Act (22 U.S.C. 2420; relating to the prohibition on assistance for law enforcement forces)—

(i) training for the Public Forces and other civilian law enforcement forces of Panama in human rights, civil law, and investigative and civilian law enforcement techniques,

(ii) assistance in developing a civilian police training academy in Panama, and

(iii) assistance to finance the procurement for civilian law enforcement forces in Panama of equipment that are appropriate for standard civilian law enforcement requirements.

(d) LAW ENFORCEMENT ASSISTANCE.—

(1) PROHIBITION ON LETHAL EQUIPMENT.—Only equipment that is nonlethal may be provided under subsection (c)(5).

(2) LIMITATION ON EQUIPMENT.—Not more than $5,000,000 of the funds used under subsection (c)(5) may be used for the procurement of equipment for law enforcement forces of Panama.

(3) DEFINITION OF EQUIPMENT.—For purposes of this subsection and subsection (c)(5), the term "equipment" has the same meaning as is given the term "commodities" by section 644(c) of the Foreign Assistance Act of 1961 (22 U.S.C. 2403(c)).

(4) ASSISTANCE FOR OTHER COUNTRIES.—Up to $1,200,000 of the amount allocated pursuant to subsection (c)(5) may be used under section 534(b)(3) of the Foreign Assistance Act of 1961 (22 U.S.C. 2346(b)(3)) for countries in Latin America and the Caribbean other than Panama.

(5) LIMITATIONS NOT APPLICABLE.—The second sentence of section 534(e) of the Foreign Assistance Act of 1961 (22 U.S.C. 2346c(e)) and the second sentence of section 599G(c) of the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1990 (Public Law 101-167), shall not apply with respect to assistance provided under subsection (c)(5), including assistance under paragraph (4) of this subsection.

(e) CHANGES IN ALLOCATIONS.—

(1) REDUCTION OF ALLOCATIONS IF APPROPRIATIONS ARE LESS THAN SUM OF SPECIFIED ALLOCATION AMOUNTS.—If the aggregate amount appropriated pursuant to the authorization of appropriations provided by this section is less than the amount authorized, then the amount allocated pursuant to each paragraph of subsection (c) shall be the amount which bears the same ratio to the amount specified in that paragraph as

the amount appropriated bears to the amount authorized.

(2) REALLOCATIONS.—Funds allocated pursuant to any paragraph of subsection (c) may be reallocated for use under any other such paragraph if, at least 15 days before such reallocation, the President notifies the congressional committees specified in section 634A of the Foreign Assistance Act of 1961 (22 U.S.C. 2394-1; relating to reprogramming procedures) in accordance with the procedures applicable under that section.

(f) MONEY LAUNDERING.—

(1) CURRENT COOPERATION BY ENDARA GOVERNMENT.—The Congress—

(A) again commends the Endara government for its cooperation and assistance in freezing Panamanian bank accounts believed to be implicated in narcotics-related and other illegal financial transactions; and

(B) notes the willingness of the Endara government to enter into negotiations with the United States on information sharing regarding narcotics-related financial transactions.

(2) APPLICABILITY OF KERRY AMENDMENT TO PANAMA.—Panama shall be considered to be a country described in the second sentence of section 4702(c)(1) of the International Narcotics Control Act of 1988 (31 U.S.C. 5311 note; relating to "highest priority" countries for purposes of negotiations concerning laundering of United States currency).

(3) BANK RECORD SHARING AGREEMENT.—Not more than half of the funds appropriated pursuant to the authorization of appropriations provided in this section may be expended until—

(A) the Secretary of the Treasury reports to the Congress that the Government of the United States and the Government of Panama have reached an agreement for exchanging adequate records (as defined in section 4702(f)(2) of the International Narcotics Control Act of 1988) on international currency transactions in connection with narcotics investigations and proceedings; or

(B) if a report has not been submitted under subparagraph (A) as of the time the Secretary of the Treasury submits the final report required by section 4702(d) of that Act, the Secretary reports to the Congress that Panama is negotiating in good faith to reach such an agreement.

(4) 1991 NARCOTICS CERTIFICATION.—

(A) SEPARATE CERTIFICATIONS FOR BILATERAL AND MULTILATERAL ASSISTANCE.—In the case of the certification requirements of section 481(h) of the Foreign Assistance Act of 1961 (22 U.S.C. 2291(h)), the President shall submit separate certifications with respect to Panama for fiscal year 1991 for purposes of paragraphs (1)(A) and (1)(B) of that section.

(B) REQUIREMENT FOR BILATERAL ASSISTANCE CERTIFICATION.—The President may make a certification with respect to Panama for fiscal year 1991 for purposes of paragraph (1)(A) of that section under paragraph (2)(A)(i) of that section (relating to countries which are fully cooperating with respect to illicit drug production, trafficking, and money laundering) only if an agreement has been signed by the Government of the United States and the Government of Panama that provides for—

(i) mutual access to records of financial transactions for purposes of drug-related law enforcement investigations, and

(ii) efficient mechanisms for each government to obtain from the other country, in judicially admissible form, bank records for use in drug-related proceedings.

(5) EXPLANATORY NOTE REGARDING STATUTORY REFERENCE.—The International Narcotics Control Act of 1988 is title IV of the Anti-Drug Abuse Act of 1988.

(g) CONGRESSIONAL NOTIFICATIONS.—At least 15 days before each obligation of funds for assistance under this section (including assistance authorized by subsection (j)), the President shall notify the congressional committees specified in section 634A of the Foreign Assistance Act of 1961 (22 U.S.C. 2394-1; relating to reprogramming procedures) in accordance with the procedures applicable under that section.

(h) AUTHORIZATION OF EXTENDED PERIOD OF AVAILABILITY FOR OBLIGATION.—Funds appropriated pursuant to the authorization of appropriations contained in this section may be made available for obligation until expended.

(i) WAIVER OF BROOKE-ALEXANDER AMENDMENT.—The assistance authorized for Panama by this section may be provided notwithstanding section 518 of the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1990 (Public Law 101-167), section 620(q) of the Foreign Assistance Act of 1961 (22 U.S.C. 2370(q)), and any similar provision of law relating to foreign assistance repayments.

(j) OTHER ASSISTANCE.—In addition to the funds authorized to be appropriated by this section for assistance for Panama, funds available for fiscal year 1990 under other provisions of law may be used to provide the economic assistance for Panama authorized by this section notwithstanding the provisions of law cited in subsection (i).

SEC. 102. ASSISTANCE FOR NICARAGUA.

(a) AUTHORIZATION OF APPROPRIATIONS.—In order to help restore the productive capacity of the Nicaraguan economy, restore Nicaragua's relations with international financial institutions, provide support for long-term economic growth and development in Nicaragua, strengthen democratic institutions in Nicaragua, and provide assistance for the repatriation and reconciliation process in Nicaragua, there are authorized to be appropriated $340,000,000 as supplemental appropriations for fiscal year 1990 for assistance in accordance with this section under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund).

(b) ALLOCATIONS OF ASSISTANCE.—Except as provided in subsection (c), the funds authorized to be appropriated by subsection (a) shall be allocated and used as follows:

(1) RESTORING THE PRODUCTIVE CAPACITY OF THE NICARAGUAN ECONOMY.—$128,000,000 shall be for assistance to support the efforts of the Government of Nicaragua and the private sector in Nicaragua to restore the productive capacity of the Nicaraguan economy. Such assistance may include support for public and private sector imports of—

(A) agricultural equipment, spare parts, fertilizer, and other inputs needed to restore the agriculture sector;

(B) petroleum and oil products; and

(C) raw materials, equipment, intermediate goods, and spare parts to rehabilitate existing facilities and stimulate new productive enterprise in the industrial and agricultural sectors.

(2) PAYMENT OF ARREARAGES TO INTERNATIONAL FINANCIAL INSTITUTIONS.—$50,000,000 shall be for assistance to assist Nicaragua in paying its arrearages to international financial institutions. Such assistance shall be provided as part of a package of assistance for such purpose that includes the participation of the Government of Nicaragua and other donor nations and multilateral institutions. This effort should be accompanied by a rescheduling of official bilateral and commercial debt.

(3) ECONOMIC GROWTH AND DEVELOPMENT.—$75,000,000 shall be for assistance to assist Nicaragua to meet its longer-term economic growth and development needs, directly or through regional and other international institutions. Such assistance may include support for such activities as—

(A) programs to repair, improve, and maintain existing public infrastructure such as schools, health clinics, roads, and community facilities;

(B) provision of medical equipment, commodities, training, and other support for the health and family planning sectors;

(C) provision of assistance and training to improve government administration and strengthen democratic institutions;

(D) provision of technical assistance and training to the private sector to permit the rehabilitation and modernization of private enterprise in Nicaragua;

(E) support for primary school education and university level scholarships and training; and

(F) support for the agricultural sector through small farmer credit activities and improvement of input supply and production marketing systems.

(4) DEMOBILIZATION AND REPATRIATION; ASSISTANCE FOR REFUGEES AND DISPLACED PERSONS.—$87,000,000 shall be for assistance to support the demobilization and demilitarization process and to reintegrate former combatants (including members of the Nicaraguan Resistance), as well as Nicaraguan refugees and other Nicaraguans who have been displaced by the conflict, into the social, economic, and political life of Nicaragua, as follows:

(A) DEMOBILIZATION, REPATRIATION, AND RESETTLEMENT OF MEMBERS OF THE NICARAGUAN RESISTANCE.—(i) $30,000,000 shall be used to support the voluntary demobilization, repatriation, and resettlement of members of the Nicaraguan Resistance and their families.

(ii) Such assistance shall be provided—

(I) through the International Commission of Support and Verification (CIAV) established by the Secretary General of the United Nations and the Secretary General of the Organization of American States pursuant to the agreement of the Central American Presidents at Tela, Honduras, on August 7, 1989, and

(II) in coordination with the Government of Nicaragua,

unless the President notifies the congressional committees specified in section 634A of the Foreign Assistance Act of 1961 (22 U.S.C. 2394-1; relating to reprogramming procedures) in accordance with the procedures applicable under that section.

(iii) Assistance may be provided under this subparagraph for members of the Nicaraguan Resistance only if there is agreement that such members will give up their weapons as part of the demobilization process.

(B) ONUCA.—$2,000,000 shall be used to support the Observer Group for Central America (ONUCA) if, with the consent of the United Nations Security Council, it plays a role in supporting the voluntary demobilization of former combatants and supporting safe conditions in Nicaragua in accord with the Central American peace process.

(C) REPATRIATION AND RESETTLEMENT OF REFUGEES AND DISPLACED PERSONS.—

$55,000,000 shall be used for the repatriation and resettlement in Nicaragua of Nicaraguan refugees and other Nicaraguans who have been displaced by the conflict in Nicaragua (without regard to whether they are within or outside Nicaragua). Such repatriation and resettlement shall be carried out under international auspices, including through the United Nations High Commissioner for Refugees (UNHCR) and the International Conference of Central American Refugees (CIREFCA), in coordination with the Government of Nicaragua. Assistance under this subparagraph may be provided under the authorities of the Migration and Refugee Assistance Act of 1962 (22 U.S.C. 2601 and following).

(c) CHANGES IN ALLOCATIONS.—

(1) REDUCTION OF ALLOCATIONS IF APPROPRIATIONS ARE LESS THAN SUM OF SPECIFIED ALLOCATION AMOUNTS.—If the aggregate amount appropriated pursuant to the authorization of appropriations provided by subsection (a) is less than the amount authorized, then the amount allocated pursuant to each paragraph of subsection (b) and each subparagraph of paragraph (4) of that subsection shall be the amount which bears the same ratio to the amount specified in that paragraph or subparagraph (as the case may be) as the amount appropriated bears to the amount authorized.

(2) REALLOCATIONS.—Funds allocated pursuant to any paragraph of subsection (b), or any subparagraph of paragraph (4) of that subsection, may be reallocated for use under any other such paragraph or subparagraph (as the case may be) if, at least 15 days before such reallocation, the President notifies the congressional committees specified in section 634A of the Foreign Assistance Act of 1961 (22 U.S.C. 2394-1; relating to reprogramming procedures) in accordance with the procedures applicable under that section.

(d) CONGRESSIONAL NOTIFICATIONS.—At least 15 days before each obligation of funds for assistance under this section (including assistance pursuant to subsections (g) and (h)), the President shall notify the congressional committees specified in section 634A of the Foreign Assistance Act of 1961 (22 U.S.C. 2394-1; relating to reprogramming procedures) in accordance with the procedures applicable under that section.

(e) AUTHORIZATION OF EXTENDED PERIOD OF AVAILABILITY FOR OBLIGATION.—Funds appropriated pursuant to the authorization of appropriations contained in this section may be made available for obligation until expended.

(f) WAIVER OF BROOKE-ALEXANDER AMENDMENT.—The assistance authorized for Nicaragua by this section may be provided notwithstanding section 518 of the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1990 (Public Law 101-167), section 620(q) of the Foreign Assistance Act of 1961 (22 U.S.C. 2370(q)), and any similar provision of law relating to foreign assistance repayments.

(g) EXPANDING USES OF SURVIVAL ASSISTANCE FOR VICTIMS OF CIVIL STRIFE IN CENTRAL AMERICA.—Section 1 of the Act entitled "An Act to provide survival assistance to victims of civil strife in Central America", approved December 11, 1989 (Public Law 101-215), is amended—

(1) in the first sentence of subsection (a), by striking out "noncombatant";

(2) in the second sentence of subsection (a), by striking out "noncombatants" and inserting in lieu thereof "those"; and

(3) by repealing subsection (c).

(h) OTHER ASSISTANCE.—In addition to the funds made available by this section for assistance for Nicaragua, funds available for fiscal year 1990 under other provisions of law may be used to provide the economic assistance for Nicaragua authorized by this section, and to provide otherwise authorized training and services provided by the Office of Security of the Department of State for law enforcement personnel of Nicaragua for VIP protection and the physical protection of internationally protected persons and related facilities, notwithstanding the provisions of law cited in subsection (f).

(i) TRANSITION TO DEMOCRATIC GOVERNMENT.—

(1) SUSPENSION OF ASSISTANCE.—The President may suspend the provision of any assistance pursuant to this section if he determines that—

(A) there is not an orderly, peaceful, and complete transition from the existing Sandinista government to the duly elected democratic government in Nicaragua; or

(B) it is in the interest of the United States to suspend such assistance.

(2) SENSE OF CONGRESS.—It is the sense of Congress that the President should work toward an orderly, peaceful, and complete transfer of power to the duly elected democratic government in Nicaragua.

SEC. 103. ADMINISTRATIVE USES OF FUNDS FOR PANAMA AND NICARAGUA.

Up to $10,000,000 of the funds authorized to be appropriated by sections 101 and 102 may be used for the purpose of paying administrative expenses incurred by the Agency for International Development in connection with carrying out its functions under those sections or under the Act entitled "An Act to implement the Bipartisan Accord on Central America of March 24, 1989", approved April 18, 1989 (Public Law 101-14).

SEC. 104. ASSISTANCE FOR HAITI.

(a) ASSISTANCE FOR FISCAL YEAR 1990.—

(1) ASSISTANCE FOR ELECTIONS AND CRITICAL IMPORTS.—There are authorized to be appropriated $20,000,000 as supplemental appropriations for fiscal year 1990 for assistance for Haiti under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund), of which—

(A) up to $5,000,000 may be used for election assistance; and

(B) the remainder shall be used to finance critical imports.

Funds appropriated pursuant to the authorization of appropriations contained in this paragraph may be made available for obligation until expended.

(2) ANTI-TERRORISM ASSISTANCE.—Assistance may be provided for Haiti for fiscal year 1990 under chapter 8 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2349aa and following).

(b) CONDITIONS ON ASSISTANCE.—The assistance authorized by subsection (a) shall be subject to the requirements of section 560(a) of the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1990 (Public Law 101-167), except that paragraph (1) of that section does not apply with respect to such assistance.

(c) CONGRESSIONAL NOTIFICATIONS.—Section 634A of the Foreign Assistance Act of 1961 (22 U.S.C. 2394-1; relating to reprogramming procedures) applies to the assistance authorized by subsection (a).

SEC. 105. ASSISTANCE FOR THE CARIBBEAN.

(a) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated $20,000,000 as supplemental appropriations for fiscal year 1990 for assistance for the Caribbean under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund). Of that amount, $5,000,000 is authorized to be appropriated only for assistance for the Eastern Caribbean.

(b) AUTHORIZATION OF EXTENDED PERIOD OF AVAILABILITY FOR OBLIGATION.—Funds appropriated pursuant to the authorization of appropriations contained in this section may be made available for obligation until expended.

SEC. 106. MIGRATION AND REFUGEE ASSISTANCE.

(a) FISCAL YEAR 1990 SUPPLEMENTAL AUTHORIZATION.—Section 104(a)(1) of the Foreign Relations Authorization Act, Fiscal Years 1990 and 1991 (Public Law 101-246), is amended by striking out "$415,000,000" and inserting in lieu thereof "$458,409,000".

(b) EMERGENCY REFUGEE AND MIGRATION ASSISTANCE FUND.—

(1) INCREASED AUTHORIZATION.—Section 2(c)(2) of the Migration and Refugee Assistance Act of 1962 (22 U.S.C. 2601(c)(2)) is amended by striking out "$50,000,000" and inserting in lieu thereof "$125,000,000".

(2) MIGRANT IMPACT ASSISTANCE.—If at any time during fiscal year 1990 the unobligated amount available to carry out section 2(c) of that Act exceeds $50,000,000 pursuant to the amendment made by paragraph (1), not less than one-third of the amount in excess of $50,000,000 shall be transferred under section 4(b) of that Act (22 U.S.C. 2603(b)) to appropriate Government agencies for use in providing migrant impact assistance to State and local governments to reimburse them for expenses they are legally required to incur with respect to migrants.

(3) AFRICAN AMERICAN HEBREW COMMUNITY IN ISRAEL.—Subject to paragraph (2), if at any time during fiscal year 1990 the unobligated amount available to carry out section 2(c) of that Act exceeds $50,000,000 pursuant to the amendment made by paragraph (1), up to $5,000,000 of that amount is authorized to be made available (without regard to paragraph (1) of that section) for assistance to address the needs of the African-American Hebrew community in Israel in accordance with an agreement among representatives of that community, the Government of Israel, and the Government of the United States.

(4) UNITED NATIONS RELIEF AND WORKS AGENCY.—Subject to paragraph (2), if at any time during fiscal year 1990 the unobligated amount available to carry out section 2(c) of that Act exceeds $50,000,000 pursuant to the amendment made by paragraph (1), up to $10,000,000 of that amount is authorized to be made available for a United States contribution to the United Nations Relief and Works Agency for Palestinian Refugees in the Near East.

SEC. 107. ASSISTANCE FOR SUB-SAHARAN AFRICA.

(a) ASSISTANCE FOR NAMIBIA.—

(1) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated $10,000,000 as supplemental appropriations for fiscal year 1990 for assistance under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund), which shall be for assistance for Namibia following its transition to an independent democratic country.

(2) USES OF ASSISTANCE.—Except as provided in paragraph (3), funds appropriated under this subsection shall be provided to the Government of Namibia for budgetary support and to nongovernmental organiza-

tions to finance development activities in the priority sectors of agriculture, health, education, and housing.

(3) AID MISSION.—Up to $1,000,000 of the funds appropriated under this subsection shall be used for the expenses of establishing and maintaining an Agency for International Development mission in Namibia.

(b) DEVELOPMENT ASSISTANCE.—There are authorized to be appropriated $5,000,000 as supplemental appropriations for fiscal year 1990 for the "SUB-SAHARAN AFRICA, DEVELOPMENT ASSISTANCE" account under chapter 1 of part I of the Foreign Assistance Act of 1961 (22 U.S.C. 2151 and following; relating to development assistance), which shall be for additional assistance for countries for which assistance under that account is allocated for fiscal year 1990 in the report submitted to the Congress pursuant to section 653 of the Act (22 U.S.C. 2413).

(c) ECONOMIC SUPPORT FUND ASSISTANCE.—There are authorized to be appropriated $5,000,000 as supplemental appropriations for fiscal year 1990 under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 22346 and following; relating to the economic support), which shall be for assistance for countries for which assistance is allocated under the "SUB-SAHARAN AFRICA, DEVELOPMENT ASSISTANCE" account for fiscal year 1990 in the report submitted to the Congress pursuant to section 653 of the Act (22 U.S.C. 2413).

(d) AUTHORIZATION OF EXTENDED PERIOD OF AVAILABILITY FOR OBLIGATION.—Funds appropriated pursuant to the authorizations of appropriations contained in this section may be made available for obligation until expended.

(e) NAMIBIA AND THE COMPREHENSIVE ANTI-APARTHEID ACT.—It is the sense of the Congress that as of March 21, 1990, when Namibia became self-governing, the definition of South Africa in the Comprehensive Anti-Apartheid Act of 1986 ceased to apply to Namibia.

SEC. 108. ASSISTANCE TO ENCOURAGE NEGOTIATIONS LEADING TO A PEACEFUL TRANSITION TO DEMOCRACY IN SOUTH AFRICA.

(a) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated $10,000,000 as supplemental appropriations for fiscal year 1990 under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund), which shall be used to provide assistance, through the National Endowment for Democracy and other groups, to support programs and activities of organizations to encourage negotiations leading to a peaceful transition to a genuine democracy based on universal suffrage within a united South Africa.

(b) SUSPENSION OF VIOLENCE.—An organization which has engaged in armed struggle or other acts of violence shall be eligible for assistance under this section only if that organization is committed to a suspension of violence in the context of negotiations to establish a democratic system of government in South Africa.

(c) PROHIBITION ON USING FUNDS TO SUPPORT VIOLENCE.—In order to receive assistance under this section, an organization must agree that it will not use any of the funds made available to it under this section for the purpose of supporting physical violence by any individual, group, or government.

(d) AUTHORIZATION OF EXTENDED PERIOD OF AVAILABILITY FOR OBLIGATION.—Funds appropriated pursuant to the authorization of appropriations contained in this section may be made available for obligation until expended.

SEC. 109. HOUSING INVESTMENT GUARANTEE PROGRAM FOR NEW IMMIGRANTS TO ISRAEL.

(a) ESTABLISHMENT OF PROGRAM.—Title III of chapter 2 of part I of the Foreign Assistance Act of 1961 is amended by inserting after section 222A (22 U.S.C. 2182a) the following new section:

"SEC. 222B. GUARANTY PROGRAM FOR HOUSING FOR NEW IMMIGRANTS TO ISRAEL.

"(a) AUTHORITY.—The President is authorized to issued guaranties to eligible investors (as defined in section 238(c)) assuring against losses incurred in connection with loans made for housing projects in Israel for newly arrived immigrants in that country.

"(b) LIMITATION.—The total principal amount of guaranties issued under this section that are outstanding at any one time may not exceed $400,000,000. The limitation established by the second sentence of section 222(a) does not apply with respect to guaranties issued under this section.

"(c) TERMS AND CONDITIONS.—The President may issue regulations from time to time with regard to the terms and conditions upon which such guaranties shall be issued and the eligibility of lenders.

"(d) FEES.—For each loan guaranteed under this section, the fee charged pursuant to section 223(a) shall be an initial fee of one quarter of 1 percent of the principal amount of such loan and an annual fee of one half of 1 percent of the outstanding principal balance of such loan, except that the total of all annual fees charged under this subsection each year shall not exceed $150,000.

"(e) APPROPRIATIONS ACTION REQUIRED.—The authority of this section may be exercised only to such extent or in such amount as may be provided in advance in appropriations Acts.".

(b) CONFORMING AMENDMENTS.—Section 223 of that Act (22 U.S.C. 2183) is amended—

(1) in subsection (a), by striking out "or 222A" and inserting ", 222A, or 222B";

(2) in subsection (b)—

(A) by inserting "or 222B" after "222" the first and third places it appears, and

(B) by inserting "and 222B" after "222" the second place it appears;

(3) in subsection (c), by inserting "or 222B" after "222";

(4) in subsection (d), by striking out "or 222A" and inserting ", 222A, or 222B";

(5) in subsection (f), by inserting "or 222B" after "222"; and

(6) in subsection (j)—

(A) in the second sentence, by striking out "this title" and inserting in lieu thereof "section 222", and

(B) in the third sentence, by inserting "under section 222" after "issued" both places it appears.

## TITLE II—OTHER AUTHORIZATIONS

SEC. 201. CLAUDE AND MILDRED PEPPER SCHOLARSHIP PROGRAM.

(a) FINDINGS AND PURPOSE.—The Congress finds that freedom and movement towards democratic government reform are increasing worldwide and that thousands of high school and college students from foreign countries visit the United States each year to live and study. It is the purpose of this section to provide Federal financial assistance to facilitate a program to enable such students to spend from one to two weeks in Washington, District of Columbia, observing and studying the workings and operations of the democratic form of government of the United States.

(b) GRANTS.—The Director of the United States Information Agency is authorized to make grants to the Claude and Mildred Pepper Scholarship Program of the Washington Workshops Foundation to carry out the purpose specified in subsection (a).

(c) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated $200,000 for the fiscal year 1990 to carry out this section.

SEC. 202. CERTAIN INTERNATIONAL AFFAIRS ACTIVITIES.

(a) CANADA.—Section 2 of Public Law 86-42 is amended—

(1) by striking out "$50,000" and inserting in lieu thereof "$100,000"; and

(2) by striking out "$25,000" both places it appears and inserting in lieu thereof "$50,000".

(b) MEXICO.—Section 2 of Public Law 86-420 is amended—

(1) by striking out "$50,000" and inserting in lieu thereof "$100,000"; and

(2) by striking out "$25,000" both places it appears and inserting in lieu thereof "$50,000".

(c) TRANSITION RULE.—Funds appropriated by section 303 of the Department of State Appropriations Act, 1988, shall be available for use pursuant to the amendments made by subsections (a) and (b) only to the extent that that section is amended in order to appropriate additional funds pursuant to those amendments.

SEC. 203. GORGAS MEMORIAL INSTITUTE.

(a) FINDINGS.—The Congress finds that the purposes and activities of the Gorgas Memorial Institute of Tropical and Preventive Medicine, Incorporated (hereafter in this section referred to as the "Institute") can be most effectively achieved through incorporation of the Institute with the Pan American Health Organization.

(b) NEGOTIATIONS.—The Secretary of State is urged to enter into negotiations with the Republic of Panama and the Pan American Health Organization to assure a transition of control of the Institute and its laboratories to the Pan American Health Organization that is satisfactory to the interested parties.

(c) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated $3,500,000 for each of the fiscal years 1991, 1992, and 1993 for payment of a voluntary contribution by the United States to the Pan American Health Organization to provide continued support for the Institute.

SEC. 204. EXTENSION OF AU PAIR PROGRAMS.

The au pair programs which are designated, as of the date of enactment of this Act, by the Director of the United States Information Agency may be continued in effect until such time as another agency of the United States is authorized to implement such programs.

SEC. 205. TECHNICAL AND CONFORMING AMENDMENTS TO THE DEPARTMENT OF STATE APPROPRIATIONS ACT, 1990, AND THE FOREIGN RELATIONS AUTHORIZATION ACT, FISCAL YEARS 1990 AND 1991.

The following provisions of law are repealed:

(1) Section 614 of the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1990 (Public Law 101-162).

(2) Section 302 of the Foreign Relations Authorization Act, Fiscal Years 1990 and 1991 (Public Law 101-246).

## TITLE III—DEVELOPMENT FUND FOR AFRICA

SEC. 301. SHORT TITLE.

This title may be cited as the "Development Fund for Africa Act".

SEC. 302. DEVELOPMENT FUND FOR AFRICA.

(a) ENACTMENT OF AUTHORIZATION FOR DEVELOPMENT FUND.—Part I of the Foreign Assistance Act of 1961 is amended by adding after chapter 9 the following new chapter:

### "CHAPTER 10—DEVELOPMENT FUND FOR AFRICA

"SEC. 496. LONG-TERM DEVELOPMENT ASSISTANCE FOR SUB-SAHARAN AFRICA.

"(a) FINDINGS.—The Congress finds that—

"(1) drought and famine have caused countless deaths and untold suffering among the people of sub-Saharan Africa;

"(2) drought and famine in combination with other factors such as desertification, government neglect of the agricultural sector, and inappropriate economic policies have severely affected long-term development in sub-Saharan Africa; and

"(3) the most cost-effective and efficient way of overcoming Africa's vulnerability to drought and famine is to address Africa's long-term development needs through a process that builds upon the needs and capabilities of the African people, promotes sustained and equitable economic growth, preserves the environment, and protects the rights of the individual.

"(b) AUTHORITY TO FURNISH ASSISTANCE.—The President is authorized to furnish project and program assistance, on such terms and conditions as he may determine in accordance with the policies contained in this section, for long-term development in sub-Saharan Africa.

"(c) PURPOSE OF ASSISTANCE.—The purpose of assistance under this section is to help the poor majority of men and women in sub-Saharan Africa to participate in a process of long-term development through economic growth that is—

"(1) equitable, in that it enables the poor to increase their incomes and their access to productive resources and services so that they can satisfy their basic needs and lead lives of decency, dignity, and hope;

"(2) participatory, in that it enables the poor to contribute knowledge and other resources and to make and influence decisions that affect their lives;

"(3) environmentally sustainable, in that it maintains and restores the renewable natural resource base of the economy and wisely uses nonrenewable resources; and

"(4) self-reliant, in that it is based on indigenous institutions, private and public, local and national, that have the capacity (including the human resources and finances) to carry out development policies.

Assistance provided under this section should also, in a manner consistent with the preceding provisions of this subsection, encourage private sector development, promote individual initiatives, and help to reduce the role of central governments in areas more appropriate for the private sector.

"(d) APPLICATION OF DEVELOPMENT ASSISTANCE GENERAL AUTHORITIES AND POLICIES.—Except to the extent inconsistent with this section—

"(1) any reference in any law to chapter 1 of this part (including references to sections 103 through 106) shall be deemed to include a reference to this section; and

"(2) assistance under this section shall be provided consistent with the policies contained in section 102.

"(e) PRIVATE AND VOLUNTARY ORGANIZATIONS.—

"(1) CONSULTATION TO ENSURE LOCAL PERSPECTIVES.—The Agency for International Development shall take into account the local-level perspectives of the rural and urban poor in sub-Saharan Africa, including women, during the planning process for project and program assistance under this section. In order to gain that perspective the Agency for International Development should consult closely with African, United States, and other private and voluntary organizations that have demonstrated effectiveness in or commitment to the promotion of local, grassroots activities on behalf of long-term development in sub- Saharan Africa as described in subsection (c).

"(2) FUNDING FOR STRENGTHENING OF DEVELOPMENT EFFORTS.—In carrying out this section, the Agency for International Development should make available funds for the strengthening of development efforts by African, United States, and other private and voluntary organizations which have demonstrated effectiveness in or a commitment to the promotion of local grassroots activities on behalf of long-term development in sub-Saharan Africa as described in subsection (c).

"(3) DEFINITION OF PRIVATE AND VOLUNTARY ORGANIZATION.—For purposes of this section, the term 'private and voluntary organization' includes (in addition to entities traditionally considered to be private and voluntary organizations) cooperatives, credit unions, trade unions, women's groups, higher education institutions, nonprofit development research institutions, other intermediaries, and indigenous local organizations, which are private and nonprofit.

"(f) LOCAL INVOLVEMENT IN PROJECT IMPLEMENTATION.—Local people, including women, shall be closely consulted and involved in the implementation of every project under this section which has a local focus.

"(g) PARTICIPATION OF AFRICAN WOMEN.—The administering agency shall ensure that development activities assisted under this section incorporate a significant expansion of the participation (including decision-making) and integration of African women in each of the critical sectors described in subsection (i).

"(h) TYPES OF ASSISTANCE.—

"(1) PROJECTS AND PROGRAMS TO ADDRESS CRITICAL SECTORAL PRIORITIES.—Assistance under this section shall emphasize primarily projects and programs to address critical sectoral priorities for long-term development described in subsection (i).

"(2) REFORM OF NATIONAL ECONOMIC POLICIES.—

"(A) USE OF PROGRAM ASSISTANCE.—Assistance under this section may also include program assistance to promote reform of national economic policies affecting long-term development in sub-Saharan Africa as described in subsection (c), with primary emphasis on reform of national economic policies to support the critical sectoral priorities described in subsection (i).

"(B) PROTECTION OF VULNERABLE GROUPS.—Assisted policy reforms shall also include provisions to protect vulnerable groups (especially poor, isolated, and female farmers and the urban poor) and long-term environmental interests from possible negative consequences of the reforms.

"(3) OTHER ASSISTANCE.—Funds made available to carry out this section shall be used almost exclusively for assistance in accordance with paragraphs (1) and (2). Limited amounts of assistance, however, may be furnished under this section to address other priorities for long-term development in sub-Saharan Africa as described in subsection (c).

"(i) CRITICAL SECTORAL PRIORITIES.—The critical sectoral priorities for long-term development, as described in subsection (c), are the following:

"(1) AGRICULTURAL PRODUCTION AND NATURAL RESOURCES.—

"(A) AGRICULTURAL PRODUCTION.—Increasing agricultural production in ways which protect and restore the natural resource base, especially food production, through agricultural policy changes at the macroeconomic and sector levels, agricultural research (including participatory research directly involving small farmers) and extension, development and promotion of agriculture marketing activities, credit facilities, and appropriate production packages, and the construction and improvement of needed production-related infrastructure such as farm-to-market roads, small-scale irrigation, and rural electrification. Within this process, emphasis shall be given to promoting increased equity in rural income distribution, recognizing the role of small farmers.

"(B) NATURAL RESOURCE BASE.—Maintaining and restoring the renewable natural resource base in ways which increase agricultural production, through the following:

"(i) Small-scale, affordable, resource-conserving, low-risk local projects, using appropriate technologies (including traditional agricultural methods) suited to local environmental, resource, and climatic conditions, and featuring close consultation with and involvement of local people at all stages of project design and implementation. Emphasis shall be given to grants for African local government organizations, international or African nongovernmental organizations, and United States private and voluntary organizations.

"(ii) Support for efforts at national and regional levels to provide technical and other support for projects of the kinds described in clause (i) and to strengthen the capacities of African countries to provide effective extension and other services in support of environmentally sustainable increases in food production.

"(iii) Support for special training and education efforts to improve the capacity of countries in sub-Saharan Africa to manage their own environments and natural resources.

"(iv) Support for low-cost desalination activities in order to increase the availability of fresh water sources in sub-Saharan Africa.

"(2) HEALTH.—Improving health conditions, with special emphasis on meeting the health needs of mothers and children through the establishment of self-sustaining primary health care systems that give priority to preventive health.

"(3) VOLUNTARY FAMILY PLANNING SERVICES.—Providing increased access to voluntary family planning services, including encouragement of private, community, and local government initiatives.

"(4) EDUCATION.—Improving the relevance, equity, and efficiency of education, with special emphasis on improving primary education.

"(5) INCOME-GENERATING OPPORTUNITIES.—Developing income-generating opportunities for the unemployed and underemployed in urban and rural areas through, among other things, support for off-farm employment

opportunities in micro- and small scale labor-intensive enterprises.

"(j) MINIMUM LEVELS OF ASSISTANCE FOR CERTAIN CRITICAL SECTORS.—The Agency for International Development shall target the equivalent of not less than 10 percent of the amount authorized to be appropriated for each fiscal year to carry out this chapter for each of the following:

"(1) The activities described in subsection (i)(1)(B), including identifiable components of agricultural production projects.

"(2) The activities described in subsection (i)(2).

"(3) The activities described in subsection (i)(3).

"(k) EFFECTIVE USE OF ASSISTANCE.—Assistance provided under this section shall be concentrated in countries which will make the most effective use of such assistance in order to fulfill the purpose specified in subsection (c), especially those countries (including those of the Sahel region) having the greatest need for outside assistance.

"(l) PROMOTION OF REGIONAL INTEGRATION.—Assistance under this section shall, to the extent consistent with this section, include assistance to promote the regional and subregional integration of African production structures, markets, and infrastructure.

"(m) GENERATED LOCAL CURRENCIES.—

"(1) GENERATED UNDER THIS SECTION.—Local currencies generated under this section by the sale of imports or foreign exchange by the government of a country in sub-Saharan Africa shall be deposited in a special account established by that government. These local currencies shall be available only for use, in accordance with an agreement with the United States, for development activities which would be eligible for assistance under this section, except that the agreement shall require that the government of the country make available to the United States Government such portion of the amount deposited in the special account as may be determined by the President to be necessary for requirements of the United States Government. The Agency for International Development shall carefully monitor the deposit of local currencies and the use of such local currencies or their equivalent for specific developmental activities in accordance with this paragraph.

"(2) GENERATED UNDER OTHER AUTHORITIES.—Local currencies generated in sub-Saharan Africa under chapter 4 of part II of this Act or under section 106(b)(2), section 206, or title III of the Agricultural Trade Development and Assistance Act of 1954 that are to be used for development activities shall be used only for activities which would be eligible for assistance under this section.

"(n) DONOR COORDINATION MECHANISM.—Funds made available to carry out this section may be used to assist the governments of countries in sub-Saharan Africa to increase their capacity to participate effectively in donor coordination mechanisms at the country, regional, and sector levels.

"(o) POLICY ON USE OF FUNDS FOR PAYMENT OF OFFICIAL DEBT.—It shall be the policy of the United States that funds made available to carry out this section not be used to make payments with respect to any official debt owed to the United States Government, any foreign government, or any multilateral lending institution. Exceptions to this policy may be made—

"(1) only in certain instances where the recipient country's debt service is a significant barrier to development and where such payments would have a significant effect in leveraging additional flows of development finance; and

"(2) only after consultation with the Committee on Foreign Affairs of the House of Representatives and the Committee on Foreign Relations of the Senate.

"(p) RELATION TO OTHER AUTHORITIES.—

"(1) ASSISTANCE UNDER OTHER AUTHORITIES.—The authority granted by this section to provide assistance for long-term development in sub-Saharan Africa is not intended to preclude the use of other authorities for that purpose. Centrally-funded programs which benefit sub-Saharan Africa shall continue to be funded under chapter 1 of part I of this Act.

"(2) TRANSFER AUTHORITIES.—(A) The transfer authority contained in section 109 of this Act shall not apply with respect to this section.

"(B) The transfer authority contained in section 610(a) of this Act may not be used to transfer funds made available to carry out this section in order to allow them to be used in carrying out any other provision of this Act.

"(3) REPROGRAMMING NOTIFICATIONS.—Section 634A of this Act does not apply with respect to funds made available to carry out this section.

"(4) PROCUREMENT OF GOODS AND SERVICES.—In order to allow the assistance authorized by this section to be furnished as effectively and expeditiously as possible, section 604(a) of this Act, and similar provisions relating to the procurement of goods and services, shall not apply with respect to goods and services procured for use in carrying out this section. The exemption provided by this paragraph shall not be construed to apply to the Comprehensive Anti-Apartheid Act of 1986.

"(q) SUPPORT FOR SADCC PROJECTS.—

"(1) AUTHORITY TO PROVIDE ASSISTANCE.—To the extent funds are provided for such purpose in the annual Foreign Operations, Export Financing, and Related Programs Appropriations Act, funds made available to carry out this chapter may be used to assist sector projects, in the sectors specified in paragraph (2), that are supported by the Southern Africa Development Coordination Conference (SADCC) to enhance the economic development of the 9 member states forming that regional institution.

"(2) SECTORS.—The sectors with respect to which assistance may be provided under this subsection are the following: transportation; manpower development; agriculture and natural resources; energy (including the improved utilization of electrical power sources which already exist in the member states and offer the potential to swiftly reduce the dependence of those states on South Africa for electricity); and industrial development and trade (including private sector initiatives).

"(3) RELATION TO DFA POLICIES AND AUTHORITIES.—To the maximum extent feasible, the assistance authorized by this subsection shall be provided consistent with the policies and authorities contained in the preceding subsections of this section.

"SEC. 497. AUTHORIZATIONS OF APPROPRIATIONS FOR THE DEVELOPMENT FUND FOR AFRICA.

"(a) AUTHORIZATIONS.—The Congress will authorize appropriations to carry out this chapter.

"(b) EXTENDED AVAILABILITY OF FUNDS.—Funds appropriated to carry out this chapter are authorized to be made available until expended. It is the sense of the Congress that the authority of this subsection should be used to extend the period of availability of those funds whenever appropriate to improve the quality of assistance provided under section 496.

"SEC. 498. FUNDING FOR INCREASED AID ORGANIZATIONAL RESOURCES FOR SUB-SAHARAN AFRICA.

"The Administrator of the Agency for International Development may transfer up to 5 percent of the funds made available each fiscal year to carry out this chapter to the appropriations account for the operating expenses of the Agency for International Development for use in increasing (above the level of resources available for fiscal year 1989) the organizational resources which the agency has available for development assistance activities for sub-Saharan Africa. These funds shall be in addition to amounts otherwise allocated to the agency's Bureau for Africa.".

(b) EVALUATIONS.—The Administrator of the Agency for International Development shall periodically evaluate the progress of the agency in achieving the purpose specified in section 496(c) of the Foreign Assistance Act of 1961, as enacted by this section. The Administrator shall submit to the Committee on Foreign Affairs and the Committee on Appropriations of the House of Representatives and the Committee on Foreign Relations and the Committee on Appropriations of the Senate—

(1) an interim evaluation by October 1, 1992; and

(2) a summary evaluation by February 1, 1997.

(c) REPORTS TO CONGRESS.—As part of the annual Congressional presentation materials for economic assistance, the Administrator of the Agency for International Development shall include a description of the progress made during the previous fiscal year in carrying out chapter 10 of part I of the Foreign Assistance Act of 1961, including for each sub-Saharan African country a brief description of—

(1) the nature and extent of consultation to ensure local perspectives, as described in subsection (e)(1) and (f) of section 496;

(2) the degree of involvement of local people in the implementation of projects having a local focus;

(3) the assistance provided to private and voluntary organizations pursuant to section 496(e)(2), specifying the amounts obligated for such assistance and comparing these amounts with those provided for the previous fiscal year;

(4) the extent to which there has been expansion of the participation and integration of African women in each of the critical sectors specified in section 496(i);

(5) program assistance provided to promote national economic policy reforms, including the amounts obligated, the criteria used for assisting national reforms, and the provisions made pursuant to section 496(h)(2)(B) to protect vulnerable groups from possible negative consequences of the reforms; and

(6) assistance for the critical sector priorities specified in section 496(i), by sector, including the amounts obligated.

Each report shall also describe organizational changes undertaken pursuant to section 498 and the amounts obligated and the amounts expended for these changes.

(d) CONFORMING AMENDMENTS.—

(1) FOREIGN ASSISTANCE ACT.—The Foreign Assistance Act of 1961 is amended—

(A) in section 105(b)—

(i) by striking out "(b)(1)" and inserting in lieu thereof "(b)"; and

(ii) by striking out paragraph (2);

(B) in section 116(e)(1), by adding at the end thereof "Funds made available to carry out section 496 of this Act may only be used under this subsection with respect to countries in Sub-Saharan Africa.";

(C) by repealing section 121; and

(D) in subsections (f) and (g) of section 123, by striking out "121, and 491" in each subsection and inserting in lieu thereof "491, and 496".

(2) PUBLIC LAW 480.—The Agricultural Trade Development and Assistance Act of 1954 is amended—

(A) in section 106(b)(2), by inserting "(or, in the case of sub-Saharan Africa, programs directed at comparable objectives contained in section 496" after "Foreign Assistance Act of 1961";

(B) in clause (3)(A) of section 206(a), by inserting "(or, in the case of sub-Saharan Africa, comparable objectives contained in section 496 of that Act)" after "section 103 of the Foreign Assistance Act of 1961";

(C) in section 301(b), by inserting "(or, in the case of sub-Saharan Africa, programs directed at comparable objectives contained in section 496)" after "Foreign Assistance Act of 1961"; and

(D) in section 303(b), by inserting "(or, in the case of sub-Saharan Africa, under section 496)" after "section 103 of the Foreign Assistance Act of 1961".

## TITLE IV—CARIBBEAN REGIONAL DEVELOPMENT

SEC. 401. UNITED STATES POLICIES.

(a) IN GENERAL.—It shall be the policy of the United States in providing development and other economic assistance to the Caribbean—

(1) to help the poor (including women, the landless, subsistence food producers, urban workers, the unemployed, and indigenous populations) to participate in the development of their societies through a process of equitable economic growth that enables them to increase their incomes and their access to productive resources and services, to protect and advance their rights, and to influence decisions that affect their lives;

(2) to support development that is environmentally sustainable;

(3) to promote Caribbean self-reliance by providing assistance to indigenous national and regional governmental and nongovernmental institutions that have the capacity or potential to carry out development programs effectively;

(4) to support food production for national and regional consumption;

(5) to promote the diversification of industrial and agricultural production, the development of new products, and the integration of agricultural production with the development of industry and tourism;

(6) to help advance the process of regional economic integration by channeling assistance through regional organizations to the maximum extent possible;

(7) to support those national programs of economic adjustment that promote the policies enumerated in this section in order to help ensure that the burdens created by adjustment are not borne by the poor;

(8) to support employment generation while avoiding the displacement of traditional lines of small-scale production; and

(9) to preserve and reinforce traditional Caribbean culture and social values.

(b) DEVELOPMENT ASSISTANCE.—

(1) SUPPORTING INDIGENOUS DEMOCRATIC INSTITUTIONS.—Priority in providing assistance to the Caribbean under chapter 1 of part I of the Foreign Assistance Act of 1961 (relating to development assistance) shall be given to supporting indigenous democratic Caribbean institutions (including farmers' unions, cooperatives, trade unions and other labor organizations, women's groups, and community organizations) that represent, work with, and benefit the poor, and through which the poor participate in making the decisions that affect their lives and their development. Such assistance shall be channeled to the maximum extent possible through United States institutions and Caribbean regional and national institutions that directly fund such democratic Caribbean institutions.

(2) PER CAPITA INCOME ELIGIBILITY CRITERIA.—In determining the eligibility of any country in the Caribbean for development assistance, the per capita income of that country shall be deemed to be no greater than the per capita income for the Caribbean as a whole.

(c) ECONOMIC SUPPORT FUND.—To the extent that assistance made available for the Caribbean under chapter 4 of part II of the Foreign Assistance Act of 1961 (relating to the economic support fund) is used to promote national economic policy reforms, such reforms shall be consistent with the policies enumerated in sections 402 through 405 of this Act.

SEC. 402. PRIORITY AREAS FOR ASSISTANCE.

To implement the policies set forth in section 401, priority in the allocation of funds for assistance for the Caribbean under chapter 1 of part I and chapter 4 of part II of the Foreign Assistance Act of 1961 (relating to development assistance and the economic support fund, respectively), and in the allocation of the local currencies accruing as a result of the use of those funds, shall be given to the following:

(1) FOOD SELF-SUFFICIENCY.—Support to national ministries of agriculture, the appropriate specialized agencies of the Caribbean Community (CARICOM) and the Organization of Eastern Caribbean States, the Caribbean Development Bank, and indigenous nongovernmental organizations for efforts to achieve greater food self-sufficiency through increased staple food production for domestic consumption, including support for—

(A) the gathering of agricultural data;

(B) the coordination of agricultural research;

(C) the improvement of marketing, storage, and transportation systems;

(D) the provision of credit to agricultural producers; and

(E) improved coordination of regional planning for food self-sufficiency.

(2) RURAL DEVELOPMENT.—Support, principally through regional institutions, for rural development efforts designed to increase rural employment opportunities, enhance the quality of rural life, and retard rural-to-urban migration, including programs that provide access to land and necessary assistance to small producers and cooperatives.

(3) COMMUNITY-BASED AGRO-INDUSTRIES.—Support for locally owned cooperative and other small- and medium-scale industries engaged in the processing of indigenous resources, including support for the establishment of a marketing network to facilitate intraregional trade in food through programs that incorporate or serve small producers.

(4) FINANCIAL RESOURCES FOR SMALL- AND MEDIUM-SIZED FARM AND MANUFACTURING ENTERPRISES.—Provision of financial resources to small- and medium-sized farm and manufacturing enterprises through—

(A) the creation and capitalization of appropriate financial mechanisms; and

(B) measures to encourage Caribbean commercial banks and credit unions to provide risk capital to such enterprises.

(5) EXPANSION OF TOURISM.—Support for the expansion of tourism in the Caribbean through its fuller integration into the local economy, by providing assistance—

(A) to appropriate governmental and nongovernmental regional organizations for the design and coordination of programs for—

(i) the expansion of the use of local goods and services;

(ii) the development and implementation of a marketing strategy for tourism in the Caribbean; and

(iii) the promotion of investments in tourism integrated with the local economy; and

(B) for training and utilizing local expertise in hotel and restaurant management and other necessary skills.

(6) REGIONAL INTEGRATION.—Support for regional integration and institutions, including seeking the cooperation of other donor countries in promoting regional development in the Caribbean and including support for—

(A) efforts to regionalize and coordinate activities and prevent the proliferation and duplication of regional bureaucracies;

(B) the efforts of governmental and nongovernmental regional institutions to strengthen the infrastructure necessary to promote regional commercial activity and economic and social development;

(C) regional research institutes; and

(D) inter-island transportation and communication links, roads, and port facilities.

(7) UPGRADING TECHNICAL AND MANAGERIAL SKILLS.—Support for efforts of the countries of the Caribbean to upgrade the technical and managerial skills of their people, through—

(A) the increased utilization of local personnel, knowledge, technologies, and expertise in all development-related activities;

(B) support, including scholarships, for training in appropriate technical fields, including administration, finance, marketing, science, technology, environmental protection, and tourism; and

(C) support for increasing the capacity of Caribbean institutions to provide training in such fields.

(8) NATURAL RESOURCE BASE.—Promoting those small-scale, affordable, agricultural and industrial methods suited to local environmental, resource, and climatic conditions, and supporting such actions as the establishment of protected areas, the development of environmental curricula, and programs of public education and dialogue designed to sustain and enhance the renewable natural resource base of the Caribbean.

(9) PRIVATE SECTOR DEVELOPMENT.—Support for the diversification and promotion of Caribbean exports, for investments in the Caribbean that are appropriate to the needs of the region, and for the strengthening of private sector institutions, that would further the policy set forth in section 401(a)(5), and particularly that would strengthen the sector referred to in paragraph (3) of this section.

(10) DEMOCRATIC DEVELOPMENT AND THE ADMINISTRATION OF JUSTICE.—Support to broaden and deepen democratic institutions and values in the Caribbean and to assist countries in areas such as the administration of justice where requested by the recipient governments.

(11) ACCESS TO HUMAN SERVICES AND ASSISTANCE FOR HUMAN RESOURCES DEVELOPMENT.—Support for the provision of basic services to the citizens of the Caribbean using, as appropriate, governmental and non-governmental entities, with emphasis on sustainability of service delivery in areas such as basic education, primary health care, child survival, family planning, and prevention and control of acquired immune deficiency syndrome (AIDS).

SEC. 403. PROTECTION OF WORKER RIGHTS.

(a) DENIAL OF ASSISTANCE.—

(1) IN GENERAL.—Assistance under the Foreign Assistance Act of 1961 and the Arms Export Control Act—

(A) may not be provided to the government of any country in the Caribbean if that government does not extend, protect, and enforce internationally recognized worker rights for workers in that country (including workers within any designated zone); and

(B) may not otherwise be provided for a country in the Caribbean if the provision of that assistance would be inconsistent with promoting respect for internationally recognized worker rights.

(2) ASSISTANCE IF CERTAIN STEPS TAKEN.—Assistance may be provided to a government notwithstanding paragraph (1)(A) if that government is taking steps to adopt and implement laws that demonstrate significant, tangible, and measurable overall advancement in providing internationally recognized worker rights throughout the country (including in any designated zone).

(3) EXEMPTIONS.—Paragraph (1) does not apply with respect to development assistance or narcotics control assistance provided under this Act.

(b) ANNUAL REPORTS.—Each human rights report required by sections 116(d) and 502B(b) of the Foreign Assistance Act of 1961 shall address how the provisions of this section were implemented during the preceding fiscal year.

(c) DEFINITIONS.—As used in this section—

(1) the term "designated zone" has the same meaning it has for purposes of the Trade Act of 1974; and

(2) the term "internationally recognized worker rights" has the same meaning as is given that term by section 502(a)(4) of the Trade Act of 1974.

SEC. 404. PROTECTION OF PUBLIC HEALTH.

The Agency for International Development shall not provide any assistance, directly or indirectly, for the use of any chemical or other substance in a country in the Caribbean if—

(1) that use is not permitted under laws of that country relating to protection of public health, or

(2) that use would not be permitted in the United States under laws of the United States relating to protection of public health.

SEC. 405. SUPPORT FOR WOMEN'S ROLE IN DEVELOPMENT.

In providing assistance to the Caribbean, the Agency for International Development shall place emphasis on ensuring the active participation of Caribbean women in the development process, particularly through—

(1) the promotion of greater access by women to productive resources and services, such as land, credit, and markets, thereby increasing the economic security of women and their dependents;

(2) programs that respond to and support women's domestic needs and activities, including the strengthening of community-based education, health, and childcare programs and other critical social services identified by poor women; and

(3) the involvement of Caribbean women in research on the factors that contribute to their economically vulnerable situation, in programs that address these factors, and in the design and implementation of development projects.

SEC. 406. CONSULTATION, MONITORING, EVALUATION, AND REPORTING.

(a) CONSULTATION.—In all stages of the design and implementation of assistance policies, programs, and projects in the Caribbean, the Agency for International Development shall take into account the perspectives of the rural and urban poor through close and regular consultation with Caribbean organizations that work with the poor and that have demonstrated effectiveness in or commitment to the promotion of local, grassroots activities on behalf of long-term development in the Caribbean, as described in section 401(a). The Agency for International Development shall reflect the results of such consultations in its annual planning documents.

(b) MONITORING.—The Agency for International Development shall monitor socioeconomic conditions in the Caribbean and the effect of United States economic assistance programs and policies on those conditions. The Agency for International Development shall involve Caribbean governments, and Caribbean nongovernmental organizations that work at the grassroots level, in such monitoring.

(c) EVALUATION.—Not later than 3 years after the date of enactment of this Act, the Office of Technology Assessment—

(1) shall conduct an evaluation of the performance of the Agency for International Development in carrying out this title; and

(2) shall report the result of that evaluation to the Congress.

(d) ANNUAL REPORTS TO CONGRESS.—The Administrator of the Agency for International Development shall submit to the Congress, at the same time as the annual congressional presentation materials for economic assistance are submitted, an analysis of—

(1) the effectiveness of the programs conducted under this title in furthering the polices set forth in section 401 and in carrying out each of the priorities of section 402, including the amounts expended on each such program;

(2) the nature and results of consultations under subsection (a), and the impact of such consultations on the programs undertaken to carry out this title; and

(3) the results of the monitoring under subsection (b).

SEC. 407. DEFINITION OF CARIBBEAN.

As used in this title, the term "Caribbean" includes Anguilla, Antigua and Barbuda, Aruba, the Bahamas, Barbados, Belize, Dominica, Dominican Republic, Grenada, Guyana, Haiti, Jamaica, Saint Lucia, Saint Vincent and the Grenadines, Suriname, Trinidad and Tobago, Cayman Islands, Montserrat, Netherlands Antilles, Saint Christopher-Nevis, Turks and Caicos Islands, and the British Virgin Islands.

## TITLE V—EL SALVADOR

SEC. 501. ASSISTANCE FOR EL SALVADOR.

(a) STATEMENT OF POLICY.—It shall be the policy of the United States—

(1) to support the Central American Presidents' Agreement of December 12, 1989, calling upon the Farabundo Marti National Liberation Front (hereafter in this section referred to as the "FMLN") to cease its hostilities and renounce all types of violent actions that may directly or indirectly affect the civilian population of El Salvador;

(2) to support an active role for the Secretary General of the United Nations and the Secretary General of the Organization of American States in negotiations between the Government of El Salvador and the FMLN for the purpose of achieving a ceasefire and a permanent settlement to the conflict in El Salvador; and

(3) to review the level of military assistance for El Salvador on a periodic basis, taking into account both—

(A) the demonstrated willingness of the Government of El Salvador and the FMLN to negotiate seriously and in good faith for the purpose of achieving a ceasefire and a permanent settlement to the conflict in El Salvador; and

(B) the actions of each side that affect the basic human rights of the Salvadoran people.

(b) INCENTIVES FOR PEACE: AMOUNTS OF MILITARY ASSISTANCE AVAILABLE FOR EL SALVADOR.—

(1) FISCAL YEAR 1990: CONDITIONAL WITHHOLDING OF HALF OF REMAINING MILITARY ASSISTANCE.—Half of the funds allocated for military assistance for El Salvador for fiscal year 1990 that are unexpended on the date of enactment of this Act shall be withheld from expenditure for military assistance unless and until the President submits to the Congress a report containing the determination regarding the FMLN described in subsection (c).

(2) FISCAL YEAR 1991.—

(A) MAXIMUM LEVEL OF MILITARY ASSISTANCE.—The amount allocated for military assistance for El Salvador for fiscal year 1991 may not exceed $85,000,000.

(B) CONDITIONAL WITHHOLDING OF HALF OF MILITARY ASSISTANCE.—Half of the funds allocated for military assistance for El Salvador for fiscal year 1991 shall be withheld from obligation for military assistance unless and until the President submits to the Congress a report containing the determination regarding the FMLN described in subsection (c).

(C) TRANCHING OF ASSISTANCE.—Not more than half of the amount allocated for military assistance for El Salvador for fiscal year 1991 that is not being withheld from obligation pursuant to subparagraph (B) may be obligated before March 1, 1991. In order to provide time for congressional review of the report required to be submitted on that date by subsection (f), funds that become available for obligation under this subparagraph as of that date may not be expended during the 30-day period beginning on that date.

(3) USE OF FUNDS IF DETERMINATION REGARDING FMLN NOT MADE.—

(A) DEVELOPMENT ASSISTANCE.—At the end of fiscal year 1990 and at the end of fiscal year 1991, the President shall transfer any military assistance funds then being withheld pursuant to paragraph (1) or paragraph (2)(B) to appropriations accounts for development assistance under chapter 1 of part I of the Foreign Assistance Act of 1961 (22 U.S.C. 2151 and following) for use in providing assistance for child nutrition, health, housing, education, or other programs serving the basic human needs of the people of El Salvador. Funds so transferred shall remain available until expended notwithstanding any other provision of law. Section 634A of the Foreign Assistance Act of 1961 (22 U.S.C. 2394-1; relating to reprogramming procedures) applies with respect

to the obligation of any funds so transferred.

(B) EXCEPTION.—Notwithstanding subparagraph (A) and paragraph (1), fiscal year 1990 funds withheld from expenditure pursuant to paragraph (1) may be used for cancellation expenses for military assistance programs for El Salvador, so long as such use does not result in the delivery of any military assistance to El Salvador.

(4) TERMINATION OF MILITARY ASSISTANCE.—If the President submits to the Congress a report containing the determination regarding the Government of El Salvador described in subsection (d), all military assistance for El Salvador for fiscal year 1990 and fiscal year 1991 shall be terminated, including deliveries of previously obligated military assistance. All military assistance shall be terminated pursuant to this paragraph without regard to whether a report is submitted containing the determination regarding the FMLN described in subsection (c).

(5) RESUMPTION OF MILITARY ASSISTANCE.—If, after submitting to the Congress a report containing the determination regarding the Government of El Salvador described in subsection (d), the President finds that the facts giving rise to that determination no longer prevail, the President may submit to the Congress a report describing the reasons for such finding. If the President submits such a report under this paragraph, military assistance for El Salvador may be resumed, subject to the requirements of this section.

(c) CONDUCT OF THE FMLN RESULTING IN A RELEASE OF WITHHELD ASSISTANCE.—The determination described in this subsection is a determination by the President that—

(1) the representatives of the FMLN—

(A) are declining to participate in good faith in negotiations for a ceasefire and a permanent settlement to the armed conflict in El Salvador, or

(B) are rejecting or otherwise failing to support an active role for the Secretary General of the United Nations in those negotiations;

(2) the United States Government has proof that the FMLN is continuing to acquire or receive significant shipments of lethal military equipment from outside El Salvador, and this proof has been shared with the Congress; or

(3) the survival of the constitutional Government of El Salvador is being jeopardized by substantial and sustained offensive military actions or operations by the FMLN.

(d) CONDUCT OF THE GOVERNMENT OF EL SALVADOR RESULTING IN A TERMINATION OF ASSISTANCE.—The determination described in this subsection is a determination by the President that—

(1) the duly-elected Head of Government of El Salvador has been deposed by military coup or decree;

(2) the Government of El Salvador is declining to participate in good faith in negotiations for a ceasefire and a permanent settlement to the armed conflict, or is rejecting or otherwise failing to support an active role for the Secretary General of the United Nations in those negotiations; or

(3) the Government of El Salvador is failing to conduct a thorough and professional investigation into, and prosecution of those responsible for, the 8 murders at the University of Central America on November 16, 1989.

(e) SUBMISSION OF REPORTS CONTAINING DETERMINATIONS.—The President may submit to the Congress at any time a report containing the determination regarding the FMLN described in subsection (c) or containing the determination regarding the Government of El Salvador described in subsection (d). If the President determines that any of the conditions described in subsection (c) or subsection (d) exist, the President shall immediately report that determination to the Congress.

(f) REPORTS ON SITUATION IN EL SALVADOR.—Thirty days after the date of enactment of this Act and on March 1, 1991, the President shall submit to the Congress a report describing—

(1) the willingness or unwillingness of the Government of El Salvador and the FMLN to negotiate seriously and in good faith for the purpose of achieving a ceasefire and a permanent settlement to the conflict in El Salvador;

(2) the status of the negotiations;

(3) the criteria that the President will use in deciding whether to make the determinations described in subsections (c) and (d) with respect to negotiations and other issues; and

(4) any actions of the Government of El Salvador (including the armed forces) and the FMLN that are having an adverse impact on the basic human rights of the Salvadoran people.

(g) SUPPORT FOR DEMOCRACY PROGRAM.—

(1) ESTABLISHMENT OF PROGRAM.—The Secretary of State, through agreement with the National Endowment for Democracy or other qualified organizations, shall establish and carry out a program of education, training, and dialogue for the purpose of strengthening democratic political and legal institutions in El Salvador. The program shall be designed to—

(A) assist and involve all prodemocratic sectors in El Salvador in efforts to strengthen civilian control over the armed forces;

(B) establish an effective judicial system;

(C) facilitate the free and open exchange of political views;

(D) provide for monitoring and other activities in support of free and fair elections; and

(E) increase respect for basic civil and human rights.

(2) AUTHORIZATION OF APPROPRIATIONS.—To carry out this subsection, there are authorized to be appropriated $10,000,000 for fiscal year 1991 under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund).

(h) EXPEDITED CONGRESSIONAL REVIEW PROCEDURES.—

(1) DEFINITION OF PRIVILEGED JOINT RESOLUTION.—For purposes of this subsection, the term "privileged joint resolution" means a joint resolution—

(A) which—

(i) in the case of the House of Representatives, is reported by the Committee on Foreign Affairs, and

(ii) in the case of the Senate, is reported by the Committee on Foreign Relations,

during the 30-day period beginning on March 1, 1991;

(B) which would place conditions or limitations, or both, on expenditures of military assistance funds for El Salvador for fiscal year 1991;

(C) which does not contain any provision which is not germane to the conditions and limitations provided for in the joint resolution; and

(D) the title of which is as follows: "Joint resolution relating to military assistance for El Salvador for fiscal year 1991.".

(2) MOTION FOR FLOOR CONSIDERATION.—On or after the third calendar day (excluding Saturdays, Sundays, and legal holidays) after the day on which a privileged joint resolution is reported by the Committee on Foreign Affairs or the Committee on Foreign Relations (as the case may be), it shall be in order (even though a previous motion to the same effect has been disagreed to) for the chairman of that committee (or his designee) to move to proceed to the consideration of that joint resolution. In the House of Representatives the motion shall be that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution. The motion may be made in the Senate notwithstanding any rule or precedent of the Senate, including Rule 22. All points of order against the joint resolution (and against consideration of the joint resolution) are waived. The motion to proceed to the consideration of the joint resolution is highly privileged in the House of Representatives and is privileged in the Senate and is not debatable. The motion is not subject to amendment, to a motion to postpone, or to a motion to proceed to the consideration of other business. A motion to reconsider the vote by which the motion is agreed to or disagreed to shall not be in order. If a motion to proceed to the consideration of the joint resolution is agreed to by a House of Congress, that House shall immediately proceed to the consideration of the joint resolution without intervening motion, order, or other business, and that joint resolution shall remain the unfinished business of the respective House until disposed of.

(3) DEBATE TIME.—Debate on a privileged joint resolution, and on all debatable motions and appeals in connection therewith (other than amendments made in order in the House of Representatives under paragraph (4) and a motion to recommit in the House under paragraph (7)), shall be limited to not more than 4 hours, which shall be divided equally between a Member favoring and a Member opposing the joint resolution. A motion further to limit debate is in order and not debatable.

(4) AMENDMENTS IN THE HOUSE OF REPRESENTATIVES.—Amendments to a privileged joint resolution shall be in order, and shall be debatable, in the House of Representatives to the extent ordered by the House.

(5) AMENDMENTS IN THE SENATE.—Amendments to a privileged joint resolution are not in order in the Senate.

(6) CERTAIN MOTIONS NOT IN ORDER.—A motion to postpone or to proceed to the consideration of other business is not in order. A motion to reconsider the vote by which a privileged joint resolution is agreed to or disagreed to is not in order.

(7) FINAL PASSAGE IN THE HOUSE OF REPRESENTATIVES.—In the House of Representatives, at the conclusion of debate on a privileged joint resolution and consideration of any amendments made in order to the joint resolution, the Committee of the Whole shall rise and report the resolution back to the House, and the previous question shall be considered as ordered on the joint resolution, with any amendments adopted in the Committee of the Whole, to final passage without intervening motion except one motion to recommit.

(8) FINAL PASSAGE IN THE SENATE.—In the Senate, immediately following the conclusion of the debate on a privileged joint resolution, and a single quorum call at the conclusion of the debate if requested in accordance with the rules of the Senate, the vote

on final passage of the joint resolution shall occur.

(9) APPEALS FROM DECISION OF THE CHAIR NOT DEBATABLE IN THE SENATE.—Appeals in the Senate from the decisions of the Chair relating to the application of the rules of the Senate to the procedure relating to a privileged joint resolution shall be decided without debate.

(10) CONGRESSIONAL RULEMAKING POWERS.—This subsection is enacted by the Congress—

(A) as an exercise of the rulemaking power of the Senate and House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of a privileged joint resolution, and it supersedes other rules only to the extent that it is inconsistent with such rules; and

(B) with full recognition of the constitutional right of either House to change its rules at any time, in the same manner, and to the same extent as in the case of any other rule of that House.

(i) DEFINITION OF MILITARY ASSISTANCE.—For purposes of this section, the term "military assistance" means assistance under section 23 of the Arms Export Control Act (22 U.S.C. 2763; relating to the foreign military financing program) or under chapter 2 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2311 and following; relating to the grant military assistance program).

The CHAIRMAN. No amendments to the bill shall be in order except those amendments printed in House Report 101-489. Said amendments shall be considered in the order and manner specified in said report, shall be considered as having been read, and shall not be subject to amendment. Debate time specified for each amendment shall be equally divided and controlled by the proponent of the amendment and a member opposed thereto.

The amendments numbered 1 shall be considered en bloc and shall not be subject to a demand for a division of the question.

If amendments numbered 4 and 5 are adopted, only the latter amendment adopted shall be considered as finally adopted and reported back to the House.

It is now in order to considered amendment No. 1 printed in House Report 101-489.

AMENDMENTS EN BLOC OFFERED BY MR. FASCELL

Mr. FASCELL. Mr. Chairman, pursuant to the rule, I offer five amendments en bloc.

The CHAIRMAN. The Clerk will designate the amendments en bloc.

Amendments en bloc offered by Mr. FASCELL: Page 31, after line 6, insert the following new section:

SEC. 110. AUTHORITY TO TRANSFER FY 1990 MILITARY ASSISTANCE FUNDS TO ECONOMIC ASSISTANCE ACCOUNTS.

For purposes of section 610(a) of the Foreign Assistance Act of 1961, funds made available for fiscal year 1990 to carry out section 23 of the Arms Export Control Act shall be deemed to be funds made available to carry out chapter 2 of part II of the Foreign Assistance Act of 1961.

Page 31, after line 6, insert the following:

SEC. 110. REQUIREMENT THAT CERTAIN AIRCRAFT BE LEASED RATHER THAN SOLD.

(a) AVAILABILITY OF CERTAIN FUNDS TO SATISFY REQUIREMENT.—For purposes of satisfying the requirement of section 484 of the Foreign Assistance Act of 1961, funds appropriated for counter-narcotics programs by section 602 of the Foreign Operations, Export Financing, and Related Programs Appropriations Act, 1990 (Public Law 101-167) that are allocated for assistance for Bolivia and Peru may be used to finance the leasing to those countries, under chapter 6 of the Arms Export Control Act, of up to 11 UH-1H helicopters.

(b) COST OF LEASES.—Section 61(a)(3) of the Arms Export Control Act shall not apply with respect to leases so financed; rather the entire cost of any such lease (including any renewals) shall be an initial, one time payment of the amount which would be the sales price for the helicopters if they were sold under section 21(a)(1)(B) or section 22 of that Act (as appropriate).

(c) REIMBURSEMENT OF SDAF.—To the extent that helicopters so leased were acquired under chapter 5 of the Arms Export Control Act, funds used pursuant to this section to finance such leases shall be credited to the Special Defense Acquisition Fund under chapter 5 of that Act (excluding the amount of funds that reflects the charges described in section 21(e)(1) of that Act). The funds described in the parenthetical clause of the preceding sentence shall be available for payments consistent with sections 37(a) and 43(b) of that Act.

(d) CERTAIN REPORTING REQUIREMENTS.—Leases financed under this section may be entered into without regard to the requirement of section 62 of the Arms Export Control Act for advance certification to the Congress; that section applies, however, to any renewal of any such lease.

Page 34, strike out lines 1 through 12.

Page 34, after line 12, insert the following:

SEC. 206. FUNDING FOR CERTAIN INTERNATIONAL EXPOSITIONS.

Section 201(b) of the Foreign Relations Authorizations Act, Fiscal Years 1990 and 1991, is amended—

(1) by striking out "SEVILLE WORLD'S FAIR" and inserting in lieu thereof "INTERNATIONAL EXPOSITIONS"; and

(2) by striking out "for fiscal year 1990, $7,30,000 for United States participation in the World's Fair in Seville, Spain" and inserting in lieu thereof $7,300,000 for United States participation in the International Expositions in Seville, Spain and Genoa, Italy".

Page 34, after line 12, insert the following:

SEC. 206. CENTER FOR CULTURAL AND TECHNICAL INTERCHANGE BETWEEN NORTH AND SOUTH.

(a) SHORT TITLE.—This section may be cited as the "Center for Cultural and Technical Interchange between North and South Act of 1990".

(b) PURPOSE.—The purpose of this section is to promote better relations between the United States and the nations of Latin America, and the Caribbean and Canada through cooperative study, training, and research, by supporting in Florida a Center for Cultural and Technical Interchange Between North and South where scholars and students in various fields from the nations of the Hemisphere may study, give and receive training, exchange ideas and views, and conduct other activities primarily in support of the objectives of the United States Information and Educational Exchange Act of 1948 and other Acts promoting international, educational, cultural, scientific, and related activities of the United States.

NORTH-SOUTH CENTER.—In order to carry out the purpose of this section, the Director of the United States Information Agency shall provide for the operation in Florida of an educational institution to be known as the North-South Center, through arrangements with public, educational, or other nonprofit institutions.

(d) AUTHORITIES.—The Director of the United States Information Agency, in carrying out this section, may utlize the authorities of the United States Information and Educational Exchange Act of 1948. Section 704(b) of Mutual Security Act of 1960 (22 U.S.C. 2056(b)) shall apply in the administration of this section.

(e) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropiated $10,000,000 for fiscal year 1991 to carry out this section. Amounts appropriated under this section are authorized to be made available until expended.

The CHAIRMAN. The gentleman from Florida [Mr. FASCELL] will be recognized for 5 minutes, and a Member opposed will be recognized for 5 minutes.

The Chair now recognizes the gentleman from Florida [Mr. FASCELL].

Mr. FASCELL. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, pursuant to the rule, I now bring up five amendments en bloc. These amendments represent needs expressed by the administration with respect to our international narcotics control program in the Andean countries, authority for the United States to participate in the World's Fair International Exposition in Seville, Spain and Genoa, Italy in 1992, and authority to establish a Center for Cultural and Technical Interchange between North America and the other nations of the Western Hemisphere. Finally, the bloc includes a procedural amendment relating to the Commerce, Justice, State Appropriations Act of 1990.

These amendments are noncontroversial in nature and have been worked out in consultation with the ranking minority member of the committee, Mr. BROOMFIELD of Michigan, and other interested members on both sides of the aisle.

I urge the adoption of the en bloc amendments.

Mr. BROOMFIELD. Mr. Chairman, I rise to indicate my support for these en bloc amendments as proposed by the chairman of the committee, the gentleman from Florida [Mr. FASCELL].

Mr. Chairman, as the distinguished chairman of the House Foreign Affairs Committee has indicated, this en bloc amendment contains five provisions.

The first amendment enables the Department of Defense to forward helicopters to Peru and Bolivia to enhance antinarcotics efforts of those countries. The title to the helicopters would, however, remain in the United

States to ensure that their use is consistent with U.S. policy in the region.

The second amendment allows the transfer of funds from military assistance to economic assistance. This provision provides the President with the flexibility to respond to the rapidly changing needs of the Andean nations in their fight against drugs.

The third amendment strikes a portion of the bill which would release State Department funds at fiscal year 1990 levels. It is my understanding that this provision is a part of the supplemental appropriations conference report we are to consider tomorrow.

The fourth amendment authorizes $7.3 million to fund United States exhibits at the Seville World's Fair in Spain and at the Genoa, Italy Celebration to commemorate Columbus' discovery of America. While this money was previously authorized, it has not been appropriated.

The fifth amendment authorizes $10 million in 1991 for the establishment of a north-south center. This is an effort to build better relations between the nations of the Northern and Southern Hemispheres through the promotion of cultural and educational exchange and is, of course, subject to appropriation.

I have no objection to the en bloc amendments and I urge its adoption.

Mr. GOSS. Mr. Chairman, the Fascell en bloc amendment which we are debating today contains an amendment on the titling of aircraft that I would like to address in more detail. Although this is a technical amendment, the issue at stake is the President's Andean initiative and the precedent set for military assistance in general.

Section 484 of the Foreign Assistance Act of 1961, enacted in 1986, says that any aircraft provided under the INM program, or primarily for narcotics-related purposes under any other provision of law, may only be provided on a lease or loan basis. It is clear that the Congress intended to be able to reclaim aircraft promptly from countries in situations where the equipment was not being used for counternarcotics purposes.

The International Narcotics Control Act, which was passed in November 1989, authorized military equipment and assistance for the President's International Cocaine Control Program. Equipment is to be provided under the Arms Export Control Act which requires sales, meaning a transfer of title. As a consequence of this legislative conflict, helicopters intended for Bolivia and Peru in 1989 still have not been provided for fighting the drug war.

Congress and the administration have been attempting to resolve this issue over the period of the last 2 months. Mr. SMITH of Florida has offered a fix to the title issue while the administration has offered, as part of their 1991 legislative package, something entirely different. I think that it is only fair to give my colleagues the administration's solution to the conflict as well.

The administration amendment would grant authority to the President to waive section 484 and, in appropriate cases, transfer title to aircraft. Some of our narcotics-fighting allies may not accept aircraft unless title is transfered.

The Smith amendment on leasing or loaning aircraft would permit leases or loans under the Arms Export Control Act; this change has the potential to affect worldwide military assistance programs. While an immediate fix is needed in order to fully commence the centerpiece of the President's international program, Mr. Smith's amendment does not adequately respond to the problem.

Not only does mandatory leasing and loaning restrict the President's flexibility, it sends a signal to our counternarcotics allies that we distrust them. Even more important, such a requirement would thrust us into a more central role, when we want to keep the principal responsibility for the source country war on drugs with the Andean nations themselves. This very issue has been of increasing debate by my colleagues on the Foreign Affairs Committee in particular regard to U.S. military assistance to Peru.

While I agree on the intent of the legislation—that is, accountability on the part of foreign governments to use equipment for the purposes it was provided for—the ultimate authority over the use of any equipment is future year authorizations and appropriations. The multiyear Andean initiative explicitly states that if countries do not perform in narcotics control this year, they jeopardize their receipt of next year's counternarcotics and economic assistance.

The CHAIRMAN. The question is on the amendments en bloc offered by the gentleman from Florida [Mr. FASCELL].

The amendments en bloc were agreed to.

AMENDMENT OFFERED BY MR. KOSTMAYER

Mr. KOSTMAYER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. KOSTMAYER: Page 10, strike out line 10 and all that follows through line 2 on page 11 and insert in lieu thereof the following:

(3) AGREEMENT TO SHARE INFORMATION RELATING TO MONEY LAUNDERING.—Not more than half of the funds appropriated pursuant to the authorization of appropriations provided in this section may be expended until the Secretary of State, after consultation with the Secretary of the Treasury, certifies to the chairman of the Committee on Foreign Affairs of the House of Representatives and the chairman of the Committee on Foreign Relations of the Senate that the Government of the United States and the Government of Panama have signed one or more agreements that provide for mutual and timely access to records of financial transactions for purposes of investigations relating to illicit drug trafficking and money laundering.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. KOSTMAYER] will be recognized for 10 minutes, and a Member opposed will be recognized for 10 minutes.

Mr. KOSTMAYER. Mr. Chairman, I yield myself such time as I may consume.

Mr. FASCELL. Mr. Chairman, will the gentleman yield?

Mr. KOSTMAYER. I yield to the gentleman from Florida.

Mr. FASCELL. Mr. Chairman, as I understand the amendment of the gentleman from Pennsylvania [Mr. KOSTMAYER], it is the same language as the language in the bill except it eliminates the Presidential waiver. Am I correct on that?

Mr. KOSTMAYER. Mr. Chairman, the gentleman is correct.

Mr. FASCELL. We have examined the amendment, Mr. Chairman, and have no objection to it on this side.

Mr. KOSTMAYER. Mr. Chairman, I would yield to the distinguished gentleman from Michigan [Mr. BROOMFIELD] in order that he may accept my amendment, which I know is something he wants very much to do.

Mr. BROOMFIELD. Mr. Chairman, we are trying to put together two amendments, one involving the Kostmayer amendment and the other the Dreier amendment.

Mr. KOSTMAYER. Mr. Chairman, I ask unanimous consent that the Kostmayer amendment and the Dreier amendment be considered en bloc and be accepted.

The CHAIRMAN. The Chair will state that it is in order to consider a unanimous request only to modify a pending amendment.

Mr. FASCELL. Mr. Chairman, may I suggest that we act on the Kostmayer amendment first and then act on the Dreier amendment next. I will say to the gentleman from Michigan [Mr. BROOMFIELD] that we have examined the Dreier amendment and when we get to it, we are prepared on this side to accept it.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. KOSTMAYER].

Mr. KOSTMAYER. Mr. Chairman, the President has asked us to provide about a billion dollars in assistance to Panama; $470 million of that is in cash assistance in the bill before us, the rest is indirect assistance such as the restoration of the United States sugar quota, trade credits, and housing guarantees.

A billion dollars is a lot of money—some of us think that it is too much, Mr. Chairman. Nonetheless, I am prepared to recognize our obligation and responsibility to Panama and support the President's request, but not without a signed agreement between the two countries in which Panama shares money laundering information with the United States. That's just what this amendment does.

Under the committee bill, one half of the cash assistance is held back until such an agreement is signed, but the President is empowered to release all of the assistance if he certifies that Panama is negotiating an agreement in good faith on money laundering. My amendment strikes the provision in the bill allowing the President to release the assistance based only on this certification of good faith. Good faith is not enough, Mr. Chairman. The American taxpayer wants an agreement, signed, sealed and delivered.

Mr. Chairman, my amendment would not injure Panama's chances to rebuild itself. The

administration is committed to not seeking a waiver until November—surely a signed agreement can be reached by then, but if one has not been, something is terribly wrong and the remaining half of this assistance should not be released. In other words, Mr. Chairman, they have 6 months to reach an agreement.

Mr. Chairman, I believe that we have an obligation to help Panama to its feet, and I think that we should do so with all deliberate speed. But we have other critical concerns, including the need to stop money laundering in Panama. This amendment will help to do that.

□ 1800

Mr. BROOMFIELD. Mr. Chairman, if the gentleman will yield, we accept the Kostmayer amendment.

Mr. TORRES. Mr. Chairman, I rise today in support of the Kostmayer amendment to H.R. 4636, the Supplemental Assistance for Emerging Democracies Act. We need the Kostmayer amendment to ensure, once and for all, that an agreement is finalized with Panama to stop the laundering of billions of dollars of drug money through their banks. Without the Kostmayer amendment, we only have assurances that more talks will be held, that more time will pass before a serious effort to combat money laundering becomes law in Panama.

As a member of the Banking Committee, I have, for a number of years, been actively working to strengthen our domestic banking laws to curb money laundering through U.S. banks. I am equally distressed by drug money-laundering transactions in Panama, which are to a large extent, facilitated by Panama's current bank secrecy laws.

It is estimated that as many as one-third of all Panama's banks are involved in money laundering. Yet, not a one has been prosecuted for money laundering and all of them remain in operation today. Unfortunately, money laundering remains big business in Panama. This is just not acceptable as we in this country are undertaking an all-out war on drugs and drug-related crime. The American people are committed to ending the drug scourge and we should expect no less of a commitment from those countries to whom we extend our taxpayers' dollars.

While I am pleased to see the bill before us today withholds half of the aid to Panama until an agreement is signed, it allows the administration to release these funds upon certification that the Panamanians are negotiating in good faith. Unfortunately, good faith does not guarantee an agreement any time soon. It could take months, even years, before an agreement is reached. If, indeed, the negotiations are currently proceeding well, the Kostmayer amendment provides a terrific incentive to spur them along to completion.

The Kostmayer amendment allows us to secure from the Panamanians positive, measurable progress in the war on money laundering in exchange for our aid dollars. I urge my colleagues to support this amendment.

Mr. ANNUNZIO. Mr. Chairman, drugs are an international scourge. Drug-producing plants are grown in one country, processed in another and consumed in yet another. The profits are laundered through banks and shell corporations in other countries. No war against drug dealers can be won without international cooperation.

An amendment will be offered by Mr. KOSTMAYER to encourage the Panamanian government to join in the international effort against drugs and drug money laundering. I will support that amendment and urge Members to do likewise.

Panama earned a reputation as the money laundering capital of the world during the 1980's. Last fall, the Financial Institutions Subcommittee heard forma Federally-protected witness who worked for the Medellin drug cartel. He told about how easy it was to launder money in Panama. He told the Subcommittee that he dealt with the official in charge of drug interdiction and that the official reported directly to General Noriega.

Last December, American troops went to Panama to remove the regime of Manuel Noriega. Twenty-three young American men died to clean out the rat-infested corrupt government that provided both a pipeline for cocaine and a conduit for cash.

Now the new Panamanian government is dragging its feet on cooperating in tracking down money laundering. Apparently the Panamanian bankers are out to protect their profits from laundering dope money for cocaine killers.

Holding back half the $420 million in U.S. aid until a money laundering information sharing agreement is actualy signed will give the new government a powerful incentive to disregard the bleating of the corrupt bankers.

The responsible governments of the world have repeatedly expressed their concern for the need for a coordinated effort against money laundering. The G–7 Financial Action Task Force on Money Laundering released its report last month, including 40 action recommendations that the governments of the world should implement. In a letter to me on April 19, Treasury Secretary Brady pointed out that the recommendations "will facilitate greater cooperation in international investigations, prosecutions and forfeiture actions."

Recommendation 32 calls for nations "to improve * * * international information exchange relating to suspicious transactions, persons and corporations involved in those transactions."

In effect, the Kostmayer amendment requires Panama to implement this important G–7 Money Laundering Task Force recommendation with the United States. Surely, this is not too much to ask of a country with a previously shameful money laundering record that seeks to receive our aid.

Help fight money laundering by supporting the Kostmayer amendment when it is offered.

Mr. KOSTMAYER. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. Does any Member seek time in opposition to the amendment?

If not, the question is on the amendment offered by the gentleman from Pennsylvania [Mr. KOSTMAYER].

The amendment was agreed to.

The CHAIRMAN. It is now in order to consider amendment No. 3 printed in House Report 101–489.

AMENDMENT OFFERED BY MR. DREIER OF CALIFORNIA

Mr. DREIER of California. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. DREIER of California: Page 9, line 23, strike out "and"; page 10, line 2, strike the period and insert in lieu thereof "; and"; and after line 2, insert the following:

(C) commends the Endara Government for—

(i) signing a counter-narcotics agreement;

(ii) taking the initiative to establish legal requirements to ensure the availability of currency and other financial transaction information to regulatory and law enforcement authorities; and

(iii) signing the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances.

(2) UNITED STATES POLICY.—It is the policy of the United States to support the efforts of the Government of Panama to ensure that abuse of Panama's private and public institutions by drug traffickers and money launderers will not again be permitted to occur. To this end, the United States should—

(A) pursue to a prompt conclusion the discussions initiated by the Government of Panama concerning arrangements for information sharing and other law enforcement agreements with a view toward formalizing appropriate arrangements to include—

(i) a mechanism for exchanging adequate records (as defined in section 4702(f)(2) of the International Narcotics Control Act of 1988) on international currency transactions in connection with narcotics investigations and proceedings;

(ii) mutual access to records of financial transactions for purposes of law enforcement investigations; and

(iii) efficient mechanisms for each government to obtain from the other country, in judicially admissible form, bank records and other evidence for use in criminal proceedings;

(B) utilize funds appropriated under this and other Acts to provide appropriate training, materials, and equipment requested by the Government of Panama to facilitate implementation of such agreed arrangements;

(C) utilize funds appropriated pursuant to this and other Acts to provide appropriate training, materials, and equipment requested by the Government of Panama to ensure effective implementation of its recently adopted financial transaction requirements; and

(D) utilize funds appropriated pursuant to this and other Acts to assist the office of the Attorney General of Panama in obtaining appropriate training, materials, and equipment requested by the Government of Panama to ensure effective implementation of its declared policy of prosecuting drug traffickers and money launderers, and seizing their assets.

Page 10, line 3, strike out "(2)" and insert in lieu thereof "(3)"; line 10, strike out "(3)" and insert in lieu thereof "(4)"; page 11, line 3, strike out "(4)" and insert in lieu thereof "(5)"; and page 12, line 5, strike out "(5)" and insert in lieu thereof "(6)".

The CHAIRMAN. Under the rule, the gentleman from California [Mr. DREIER] is recognized for 30 minutes.

Mr. DREIER of California. Mr. Chairman, I yield myself such time as I may consume.

Mr. FASCELL. Mr. Chairman, will the gentleman yield?

Mr. DREIER of California. I am happy to yield to the distinguished gentleman from Florida, the chairman of the full committee.

Mr. FASCELL. Mr. Chairman, we have examined the gentleman's amendment on this side, and we are prepared to accept it.

Mr. DREIER of California. Mr. Chairman, I thank my friend.

Mr. BROOMFIELD. Mr. Chairman, will the gentleman yield?

Mr. DREIER of California. I am happy to yield to my friend, the gentleman from Michigan.

Mr. BROOMFIELD. Mr. Chairman, we also are in accord with the amendment and we support it on this side.

Mr. Chairman, one of the greatest challenges this country faces is the fight against the drugs that are wasting an entire generation of American youth.

That is not an easy challenge. Drugs is a big money business. As long as the money comes easy, America wouldn't be able to get the upper hand on the drug problem.

For too long, Panama has served as a money laundering point for the drug lords. Today, with a democratic government in Panama, we have a chance to close down this illegal operation.

That is why I support the Dreier amendment. It is the best chance we have to get at the source of the drug problem. The Dreier amendment has two advantages: It gets at the root of the problem, yet it recognizes the sovereignty of the Panamanian Government.

The Dreier amendment encourages the newly elected government of Panama to work with American officials to solve the money laundering problem. It includes mechanisms for exchanging information on currency transactions and for facilitating the use of evidence in criminal proceedings.

The Dreier amendment also calls on the administration to use funds in this legislation to provide training, material and equipment that Panama needs to close down the drug traffic.

The Dreier amendment offers the democratic government of Panama a hand, not a hammerlock. It is a constructive way to handle a very difficult problem.

I encourage my colleagues to support this amendment.

Mr. GILMAN. Mr. Chairman, I support the Dreier-Gilman amendment which refines the language in H.R. 4636, the bill before us. Our language is constructive, extending a helping hand to a friend willing to work with us in the war on drugs. It also leaves much of the committee-approved language on money laundering intact and has the support of the administration.

Our amendment encourages our government to work closely with Panamanian officials in formalizing arrangements concerning the exchange of records on currency transactions, and an efficient mechanism for obtaining evidence for use in criminal proceedings.

The Dreier-Gilman amendment also calls upon the administration ot utilize funds in this legislation to provide training, material and equipment to Panama to assist that country in carrying out these agreements designed to end money laundering. We need to do everything possible to help Panama rid itself of money launderers and drug traffickers. This amendment provides the help so desperately needed by the new democratic government of Panama.

Accordingly, I encourage my colleagues to support this amendment.

Mr. DREIER of California. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California [Mr. DREIER].

The amendment was agreed to.

The CHAIRMAN. It is now in order to consider amendment No. 4 printed in House Report 101-489.

AMENDMENT OFFERED BY MR. BROOMFIELD

Mr. BROOMFIELD. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. BROOMFIELD: Page 65, beginning on line 11, strike all through page 78, line 11, and insert in lieu thereof the following:

SEC. 501. SHORT TITLE.

This title may be cited as the "El Salvador Peace, Security, Justice, and Democracy Act of 1990".

SEC. 502. STATEMENT OF POLICY.

It shall be the policy of the United States—

(1) to support the Government of El Salvador in order to strengthen democratic institutions and promote economic development, conditions of security, and efforts to achieve a lasting negotiated settlement to the armed conflict in that country;

(2) to support the Government of El Salvador's implementation of free and fair electoral practices as demonstrated by national, local, and municipal elections carried out in that country since 1984;

(3) to support the December 12, 1989, Declaration of San Isidro in which the Central American presidents back the Government of El Salvador in its efforts to find a solution to the Salvadoran conflict by "peaceful and democratic means", call on the Farabundo Marti National Liberation Front (hereinafter in this title referred to as the "FMLN") to "effectively and immediately cease hostilities" and to "reincorporate itself into the process of dialogue already undertaken", and emphatically demand that the FMLN "renounce all forms of violent action that directly or indirectly affects the civilian population";

(4) to support the efforts to achieve an end to hostilities and a lasting negotiated settlement of the armed conflict;

(5) to work with Latin American governments; the Organization of American States, and the United Nations to press the Soviet Union, Nicaragua, Cuba, and other countries to terminate support, both material and logistic, to the FMLN and to use the good offices of such governments and organizations to press the FMLN to negotiate seriously and in good faith with the Government of El Salvador;

(6) to promote greater respect for human rights by both sides in the conflict in El Salvador and to condition United States assistance on the commitment of both sides to investigate thoroughly and hold accountable those funds to be responsible for the murders of prominent Salvadorans, such as Jose Rodriquez Porth, Francisco Guerrero, elected municipal officials, and those murdered at the University of Central America and at San Sebastian among others;

(7) to support the separation of all police functions from the command and control of the armed forces of El Salvador and to reconstitute the police force as a civilian force directly responsible to, and under the control of, a civilian authority;

(8) to support the reorganization of the structure and reduction of the size of the armed forces of El Salvador after the completion of successful negotiations with the FMLN which establish a lasting political settlement to the armed conflict in that country;

(9) to support the reform of the system of justice in El Salvador emphasizing judicial training, court administration, and the revision of the legal code, among other activities, ultimately leading to the establishment of a strong, responsible, independent justice system; and (10) to take those steps necessary to ensure that United States development assistance for El Salvador is administered efficiently and effectively for the purposes for which it was intended.

SEC. 503. CONDITIONS ON MILITARY ASSISTANCE FOR EL SALVADOR.

(a) IN GENERAL.—The President shall ensure that military assistance for El Salvador for fiscal year 1991 is furnished in a manner which fosters demonstrated progress toward strengthening democratic institutions, economic development, and security of that country. To this end, the President in every appropriate instance shall impose conditions, in addition to those specified in subsection (c), on the furnishing of such assistance in order to achieve those goals, including the objectives described in subsection (b)(4).

(b) REPORTS.—Not later than November 1, 1990, and not later than May 1, 1991, the President shall submit to the Congress a detailed report covering the previous 6-month period (April 1 to September 30, 1990, and October 1, 1990, to March 31, 1991, respectively) that—

(1) specifies whether the President has made the determination described in subsection (c)(3);

(2) fully describes the policies of the Government of El Salvador for achieving strengthened democratic institutions, economic development, conditions of security, and a negotiated settlement to the conflict in that country;

(3) reviews comprehensively the factors contributing to the political, economic, and security situation in that country, including such factors as human rights, land reform, the economy of the country, refugees and displaced persons, the military situation, and guerrilla activity; and

(4) includes the President's detailed assessment of the strengths and weaknesses of the policies of the Government of El Salvador in protecting and advancing the human rights, in particular the right to security of person, of all persons in El Salvador during the period covered by the report with respect to each of the following objectives:

(A) An end to the involvement in or support for acts of unlawful violence, secret de-

tention, abduction, torture, and murder by members of military, security, or police forces.

(B) The establishment of an effective judicial system, operating under fair and efficient procedures, in which those charged with crimes are brought to timely justice and private disputes and grievances are resolved on the basis of respect for the rule of law, free from the taint of corruption and intimidation; and in particular, the taking of necessary measures to investigate, and prosecute those responsible for the 8 murders at the University of Central America on November 16, 1989.

(C) Effective freedom of the press and freedom of association, including the enforcement of measures against intimidation of the press and labor and peasant union members and leaders.

(D) Participation by the Government of El Salvador in negotiations with the FMLN, in good faith, for the purpose of achieving an end to hostilities and an equitable political settlement, based upon free and fair elections and conditions which will assure the physical security of all participants before, during, and after those elections.

(E) Full implementation of the land reform program, including the taking of necessary measures against illegal evictions and the furnishing of necessary credits, administrative support, technical assistance, and services to beneficiaries.

(F) In the event of continued hostilities perpetuated by the FMLN to which the Government of El Salvador responds, compliance by the Government of El Salvador with applicable rules of international law, in particular humanitarian principles the protection of civilians.

(c) LIMITATIONS ON MILITARY ASSISTANCE.—Military assistance for fiscal year 1991 may be provided for El Salvador only as follows:

(1) AMOUNT OF ASSISTANCE.—No more than $85,000,000 in such assistance may be provided for El Salvador.

(2) TERMINATION OF ASSISTANCE.—No such assistance shall be obligated for the Government of El Salvador if the President determines that—

(A) that government is declining to participate in good faith in negotiations with the FMLN leading to an end to hostilities and a permanent settlement to the armed conflict;

(B) that government is failing to support an active role for the Secretary General of the United Nations in those negotiations; or

(C) the duly-elected head of that government has been deposed by unconstitutional means, including a military coup or decree.

(3) WITHHOLDING OF ASSISTANCE.—The President shall withhold up to 25 percent of the military assistance funds allocated for El Salvador if he determines, and reports to the Congress pursuant to subsection (b), that—

(A) the Government of El Salvador has not made demonstrated progress in protecting and advancing internationally recognized human rights;

(B) the Government of El Salvador is failing to conduct a thorough and professional investigation into, and prosecution of those responsible for, the eight murders at the University of Central America on November 16, 1989;

(C) the Government of El Salvador is failing to separate all police functions from the command and control of the armed forces of El Salvador and to reconstitute the police force as a civilian force directly responsible to, and under the control of, a civilian authority;

(D) the Government of El Salvador has not taken steps to reform the system of justice aimed at the establishment of a strong, independent, and responsible judicial system; or

(E) upon the successful completion of a negotiated settlement agreement with the FMLN, the Government of El Salvador is failing to reorganize the structure and reduce the size of the armed forces of El Salvador in a manner consistent with such an agreement.

(4) WAIVER BASED ON FMLN CONDUCT.—Paragraphs (2) and (3) shall not apply if the President determines, at any time, and reports to Congress that—

(A) the FMLN is declining to participate in good faith in negotiations for an end to hostilities and a permanent settlement to the armed conflict in El Salvador;

(B) the FMLN is failing to support an active role for the Secretary General of the United Nations in those negotiations;

(C) the FMLN is continuing to acquire or receive lethal military equipment from outside El Salvador;

(D) the FMLN is conducting acts of terrorism and economic sabotage, including attacks on civilians or government officials or violent actions which directly or indirectly affect the civilian population of El Salvador, including attacks on public transport systems of personnel, commercial establishments, telephone communications, or the electrical power system; or

(E) the FMLN is conducting sustained offensive military operations which increase the risk to noncombatants in El Salvador.

(5) FMLN HUMAN RIGHTS ABUSES.—In considering the determination in paragraph (4), the President shall take into account the extent to which the FMLN is conducting a thorough and professional investigation into and is holding accountable those members of the FMLN responsible for human rights abuses and politically motivated crimes in El Salvador, including the murder of prominent Salvadorans, such as Jose Rodriguez Porth, Francisco Guerrero, and elected municipal officials, among others.

(6) CIVILIAN APPROVAL OF MILITARY ASSISTANCE.—To ensure effective and efficient administration of such military assistance and to strengthen internal oversight over the use of such assistance in El Salvador, the President shall require that no military assistance provided for fiscal year 1991 shall be made available for use by the armed forces of El Salvador without the prior approval of the democratically elected President of El Salvador.

(d) FUNDS SUBJECT TO JOINT RESOLUTION.—Funds obligated or available for obligation under this section shall be subject to any joint resolution with respect to a report the President submits pursuant to subsections (b) or (c)(4).

(e) EXPEDITED CONGRESSIONAL REVIEW PROCEDURES.—

(1) DEFINITION OF PRIVILEGED JOINT RESOLUTION.—For purposes of this subsection, the term "privileged joint resolution" means a joint resolution—

(A) which—

(i) in the case of the House of Representatives, is reported by the Committee on Foreign Affairs, and

(ii) in the case of the Senate, is reported by the Committee on Foreign Relations, during the 30-day period beginning on the date of submission of a report described in subsection (b) or (c)(4);

(B) which is being considered during that 30-day period;

(C) which would place conditions or limitations, on both, on expenditures of military assistance funds for El Salvador for fiscal year 1991;

(D) which does not contain any provision which is not related to the conditions and limitations provided for in the joint resolution; and

(E) the title of which is as follows: "Joint resolution relating to military assistance for El Salvador for fiscal year 1991.".

(2) MOTION FOR FLOOR CONSIDERATION.—On or after the third calendar day (excluding Saturdays, Sundays, and legal holidays) after the day on which a priviledged joint resolution is reported by the Committee on Foreign Affairs or the Committee on Foreign Relations (as the case may be), it shall be in order (even though a previous motion to the same effect has been disagreed to) for the chairman of that committee (or his designee) to move to proceed to the consideration of that joint resolution. In the House of Representatives the motion shall be that the House resolve itself in to the Committee on the Whole House on the State of the Union for the consideration of the joint resolution. The motion may be made in the Senate notwithstanding any rule or precedent of the Senate, including Rule 22. The motion to proceed to the consideration of the joint resolution is highly privileged in the House of Representatives and is privileged in the Senate and is not debatable. The motion is not subject to amendment, to a motion to postpone, or to a motion to proceed to the consideration of other business. A motion to reconsider the vote by which the motion is agreed to or disagreed to shall not be in order. If a motion to proceed to the consideration of the joint resolution is agreed to by a House of Congress, that House shall immediately proceed to the consideration of the joint resolution without intervening motion, order, or other business, and that joint resolution shall remain the unfinished business of the respective House until disposed of.

(3) *Debate time.*—Debate on a privileged joint resolution, and on all debatable motions and appeals in connection therewith (other than amendments made in order in the House of Representatives under paragraph (4) and a motion to recommit in the House under paragraph (7)), shall be limited to not more than 4 hours, which shall be equally divided and controlled by the Chairman and Ranking Minority Member of the committee reporting the joint resolution. A motion further to limit debate is in order and not debatable.

(4) AMENDMENTS IN THE HOUSE OF REPRESENTATIVES.—In the House of Representatives, it shall be in order to consider amendments to a privileged joint resolution under the five-minute rule in the Committee of the Whole.

(5) AMENDMENTS IN THE SENATE.—Amendments to a privileged joint resolution are not in order in the Senate.

(6) CERTAIN MOTIONS NOT IN ORDER.—A motion to postpone or to proceed to the consideration of other business is not in order. A motion to reconsider the vote by which a privileged joint resolution is agreed to or disagreed to is not in order.

(7) FINAL PASSAGE IN THE HOUSE OF REPRESENTATIVES.—In the House of Representatives, at the conclusion of debate on a privileged joint resolution and consideration of any amendments to the joint resolution, the Committee on the Whole shall rise and

report the resolution back to the House, and the previous question shall be considered as ordered on the joint resolution, together with any amendments adopted thereto, to final passage without intervening motion except one motion to recommit, with or without instructions.

(8) FINAL PASSAGE IN THE SENATE.—In the Senate, immediately following the conclusion of the debate on a privileged joint resolution, and a single quorum call at the conclusion of the debate if requested in accordance with the rules of the Senate, the vote on final passage of the joint resolution shall occur.

(9) APPEALS FROM DECISION OF THE CHAIR NOT DEBATABLE IN THE SENATE.—Appeals in the Senate from the decisions of the chair relating to the application of the rules of the Senate to the procedure relating to a privileged joint resolution shall be decided without debate.

(10) CONGRESSIONAL RULEMAKING POWERS.—This subsection is enacted by the Congress—

(A) as an exercise of the rulemaking power of the Senate and House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of a privileged joint resolution, and it supersedes other rules only to the extent that it is inconsistent with such rules; and

(B) with full recognition of the constitution right of either House to change its rules at any time, in the same manner, and to the same extent as in the case of any other rule of that House.

(f) DEFINITION OF MILITARY ASSISTANCE.—For purposes of this section, the term "military assistance" means assistance under section 23 of the Arms Export Control Act (22 U.S.C. 2763; relating to the foreign military financing program) or assistance with funds under chapter 2 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2311 and following; relating to the grant military assistance program).

SEC. 504. ASSISTANCE FOR HUMAN RIGHTS AND DEMOCRATIC INITIATIVES

(a) ADMINISTRATION OF JUSTICE.—

(1) OBJECTIVES.—The President may use funds made available under this subsection to support the programs and activities for El Salvador described in paragraph (2) in order to—

(A) promote increased adherence to internationally recognized human rights, as set forth in the Universal Declaration of Human Rights;

(B) improve the performance of institutions of democracy; and

(C) otherwise promote pluralism in El Salvador.

(2) PROGRAMS AND ACTIVITIES WHICH MAY BE SUPPORTED.—Funds made available under this subsection shall be available to support the following:

(A) Programs and activities to enhance the independence and performance of institutions of democratic governance, including support for judicial, electoral, and legislative processes.

(B) Programs and activities—

(i) to encourage the growth of independent associations by strengthening professional, civic, trade union, business, community, and other organizations, and

(ii) to enhance the organizational and leadership skills of the members of such organizations in order to increase citizen participation in democratic processes.

(C) Programs and activities to increase awareness of internationally recognized human rights (including by increasing the availability of information concerning the status of respect for internationally recognized human rights), improve the effective exercise of those rights, and strengthen respect for the rule of law.

(D) Programs and activities.—

(i) to support victims of abuses of internationally recognized human rights, including the direct provision of legal services, and

(ii) to support organizations and institutions seeking to bring to justice those responsible for perpetrating such abuses.

(E) Programs and activities to support a free and independent press.

(F) Programs and activities—

(i) to provide specialized professional training, scholarships, and exchanges for continuing legal education;

(ii) to promote the role of the bar in judicial selection, enforcement of ethical standards, and legal reform; and

(iii) to increase the availability of legal materials and publications.

(G) Programs and activities to support the revision and modernization of legal codes and procedures, including support for legislative bodies to assist them in accomplishing those ends.

(3) ELIGIBLE RECIPIENTS OF ASSISTANCE.—Assistance under this subsection may be furnished to the Government of El Salvador and to organizations, both public and nongovernmental, including national, regional, and international organizations. A portion of the funds made available to carry out this subsection shall be used for assistance provided to nongovernmental organizations.

(4) PROHIBITION RELATING TO ELECTIONS.—Assistance under this subsection may not be used to influence the outcome of any election.

(5) SUPPORT FOR DEMOCRACY PROGRAM.—The President, through an agreement with the National Endowment for Democracy or other qualified organizations, shall establish and carry out a program of education, training, and dialogue for the purpose of strengthening democratic political and legal institutions in El Salvador. The program shall be designed to—

(A) assist and involve all predemocratic sectors in El Salvador in efforts to strengthen civilian control over the armed forces;

(B) establish an effective judicial system;

(C) facilitate the free and open exchange of political views;

(D) provide for monitoring and other activities in support of free and fair elections; and

(E) increase respect for basic civil and human rights.

(6) FUNDING.—To carry out this subsection, there are authorized to be appropriated $10,000,000 for fiscal year 1991 under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund).

(b) POLICE TRAINING.—

(1) AUTHORITY.—In order to encourage the separation of the law enforcement forces from the armed forces of El Salvador and to promote the professional development of the security forces of El Salvador, assistance made available under section 503(c) or under paragraph (3) of this subsection may, notwithstanding section 660 of the Foreign Assistance Act of 1961, be provided to El Salvador for fiscal year 1991 for purposes otherwise prohibited by section 660 of that Act; if the following conditions are met:

(A) The training provided with such assistance is provided by United States civilian law enforcement personnel.

(B)(i) The assistance is to be used for the purposes of professional development and training of the security forces of El Salvador in such areas as human rights, civil law, investigative and civilian law enforcement techniques, and urban antiterrorist training.

(ii) Any such assistance that is made available for equipment for these forces is intended to be used for the purchase of such equipment as communication devices, transportation equipment, forensic equipment, crime control and detection equipment, and personal protection gear. No such assistance may be used for the purchase of firearms.

(iii) Clause (ii) does not preclude the provision of consumables and spare parts for existing inventories of firearms.

(C) at least 30 days before obligating such assistance, the President certifies to the Committee on Foreign Affairs and the Committee on Appropriations of the House of Representatives and the Committee on Foreign Relations and the Committee on Appropriations of the Senate that the Government of El Salvador has made significant progress during the preceding 6 months in eliminating any human rights violations including torture, incommunicado detention, detention of persons solely for the nonviolent expression of their political views, or prolonged detention without trial. Any such certification shall include a full description of the assistance which is proposed to be provided and of the purposes to which it is to be directed.

(2) DEFINITION.—For the purposes of this subsection, the term "civilian law enforcement personnel" means law enforcement personnel who are not members of the United States Armed Forces.

(3) AUTHORIZATION OF APPROPRIATIONS.—To carry out this subsection, there are authorized to be appropriated $2,000,000 for fiscal year 1991 under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; related to the economic support fund).

SEC. 505. SUPPORT FOR NATIONAL RECONCILIATION.

(a) AUTHORIZATION OF APPROPRIATIONS.—In order to promote the process of national reconciliation in El Salvador, there are authorized to be appropriated $100,000,000 for fiscal year 1991 under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund) for use in accordance with this section.

(b) USE OF FUNDS.—

(1) ESCROW ACCOUNT.—Funds authorized under this section shall be placed in an escrow account subject to release only if the President determines and reports to Congress that an agreement between the Government of El Salvador and the FMLN for a political settlement to the conflict has been achieved.

(2) SUPPORT FOR RECONCILIATION PROCESS.—If the President makes the determination described in paragraph (1), funds authorized by this section shall be used to support the national reconciliation process, including programs—

(A) allowing for the monitoring and verification of the provisions of the agreement, including support for the involvement of the United Nations, the Organization of American States, and other appropriate international organizations;

(B) facilitating the demobilization, repatriation and relocation of FMLN and furthering their reintegration into Salvadoran civilian society;

(C) providing civilian retraining for members of the Salvadoran Armed Forces; and

(D) supporting the economic reconstruction of El Salvador necessary as a result of the war.

The CHAIRMAN. The gentleman from Michigan [Mr. BROOMFIELD] will be recognized for 30 minutes in behalf of his amendment, and a Member opposed will be recognized for 30 minutes.

The Chair recognizes the gentleman from Michigan [Mr. BROOMFIELD].

Mr. BROOMFIELD. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the amendment before the House is a bipartisan alternative to the Studds amendment contained in title V of H.R. 4636. I wish to thank the gentlelady from Maryland [Mrs. BYRON] for her work on behalf of the Broomfield-Byron amendment.

Our amendment is a measured and balanced approach to the situation in El Salvador. The amendment contains incentives for the democratically elected government to pursue necessary reforms. The amendment also contains disincentives for the FMLN to continue their campaign of terrorism and murder.

Our amendment requires that the President withhold up to 25 percent of military assistance unless the Government of El Salvador takes certain actions. This incentive for positive change is completely absent from the Studds and Moakley approach.

The Broomfield-Byron amendment would waive withholding requirements if the FMLN continues to engage in the terrorist conduct which has been denounced by the Central American Presidents as recently as last December.

Our amendment recognizes the need for consolidation of democracy in El Salvador but does not reward the FMLN for undertaking their November offensive, and does not undermine the peace negotiations that began last week.

There are nine major differences between our amendment and the Studds language in title V of H.R. 4636.

First, Broomfield-Byron has clear policy language supporting democratic reforms and the Central American peace process. Title V does not.

Second, Broomfield-Byron does not punitively slash fiscal year 1990 funds which have already been authorized and appropriated by bipartisan majorities in Congress.

Third, our conditions on the government of El Salvador create incentives for crucial changes, including the separation of the police from the military, judicial reform, and the reorganization of the military. Title V is silent on these key issues.

Fourth, our conditions on the FMLN include real accountability for terrorist actions, including assassinations, economic sabotage and violent killings of civilians. Title V is silent on these issues and would waive withholding only in the most extreme cases on FMLN footdragging.

Fifth, our amendment authorizes $10 million for democratic initiatives, including the administration of Justice program and the police training program which are critical for "civilianizing" the security forces and reforming the judicial process.

Sixth, our amendment requires that all military assistance be channeled through the office of the democratically-elected President. Title V contains no such requirement.

Seventh, our amendment authorizes $100 million in escrow for national reconciliation programs in the event a negotiated settlement is reached. Title V offers no incentives for national reconciliation.

Eighth, our reporting requirements extend far beyond title V, to include the status of land reform, judicial reform and human rights compliance by both sides of the conflict. The reports required by title V are limited in scope and ignore these key issues.

Finally, our amendment provides for more Congressional review than title V by subjecting any determinations regarding FMLN conduct to Congressioal review under expedited procedures. The expedited procedures in title V are expedited in name only; our amendment corrects those flaws.

Frankly, there is no reason for us to be debating this issue on the Floor today. The Secretary of State has offered repeatedly to work toward a bipartisan agreement on United States policy on El Salvador. Unfortunately, instead of pursuing a bipartisan policy, we are pursuing partisan politics.

I hope the House will choose the bipartisan course and endorse the Broomfield-Byron amendment.

Mr. Chairman, I reserve the balance of my time.

Mr. HAMILTON. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. The gentleman from Indiana [Mr. HAMILTON] is recognized for 30 minutes.

Mr. HAMILTON. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in opposition to the Broomfield substitute for the El Salvador provisions in H.R. 4636, and in support of the substitute that will be offered later by Congressmen MOAKLEY and MURTHA.

I support the Moakley-Murtha substitute's proposal to reduce military assistance to El Salvador because our present 10-year policy has not worked, and will not work.

El Salvador's decade-long conflict has taken 70,000 lives, uprooted one-fourth of its population, and left its economy in ruin.

Despite some $4 billion in U.S. assistance over the past 10 years, the Salvadoran Government has made little progress in: halting or investigating killings and abuses by security forces; addressing the social and economic roots of the conflict; or conducting negotiations to end the war.

No one can be satisfied with this record. Surely it is time to reject our failed policy and try a new approach.

TWO PROPOSALS

The proposals before us require us to choose between two fundamentally different approaches in El Salvador: The Moakley-Murtha substitute calls for an immediate 50-percent reduction in military assistance. Subsequent changes in assistance would depend upon progress on negotiations and human rights; and the Broomfield substitute would allow full military assistance to flow at this time. If the Salvadoran Government fails to make progress on human rights and reform, up to 25 percent of our assistance could be withheld later on.

The two proposals would send very different up-front signals to El Salvador.

MOAKLEY-MURTHA SUBSTITUTE

Mr. Chairman, the Moakley-Murtha proposal signals a departure from the policies of the past 10 years. Its cut in military assistance would get the attention of those in charge in El Salvador. It would convey to both sides our seriousness about a negotiated settlement and an end to human rights abuses. And it would not limit the Salvadoran Government's ability to protect itself or the civilian population.

Supporting the Salvadoran Government and armed forces with virtually unconditional aid has not worked. The government has believed that no matter what it did, our check would always be in the mail.

The immediate 50-percent cut in military assistance called for in the Moakley-Murtha substitute is a strong but reasonable response to the record of the Salvadoran armed forces over the past decade. For the first time, it would back up our stated policy with action.

The message of the Moakley-Murtha substitute is that: Both sides must stop fighting now, and start negotiating seriously; the United States will not tolerate a government that has failed during the past decade to convict a single ranking military officer for human rights crimes; and the level of our assistance will depend upon the ability of the government and the FMLN to halt human rights abuses and to pursue a negotiated settlement.

In short, the Moakley-Murtha substitute will strengthen the hand of those—on both sides—who want to negotiate.

BROOMFIELD SUBSTITUTE

The Broomfield substitute would send a message of "business as usual" to El Salvador. It would signal the continuation of current policy. It would say that nothing that happens in El Salvador will affect the level of U.S. assistance, but may only bring warnings of possible consequences. These warnings have long since lost their punch.

The substitute would give the Salvadoran Government 6 more months to clean up its act. The conditions are the same we have demanded for the past 10 years. Why should we expect the Salvadoran Government and armed forces would be willing to do in 6 months what they have not done in 10 years?

The Broomfield substitute does not change present policy in any substantial way. Enacting it would mean continuing a policy that has failed despite a 10-year trial and more than $4 billion in assistance.

ARGUMENTS AGAINST THE MOAKLEY-MURTHA SUBSTITUTE: RESPONSES

There are three major objections to a cut in military assistance at this time.

NEGOTIATIONS

First, supporters of the Broomfield substitute say that a cut in military assistance will upset the new U.N.-mediated negotiations between the Salvadoran Government and the FMLN.

On the contrary, the Moakley-Murtha proposal will improve the prospects for negotiations because it creates strong incentives for both sides to negotiate in good faith and avoid further armed conflict: If the government negotiates seriously and makes progress on human rights, it will continue to receive a substantial quantity of military assistance in fiscal years 1900 and 1991; if the FMLN fails to negotiate seriously, takes steps to improve its military position, or attacks civilians, full assistance to the government will be resumed; and if the FMLN does none of these things, the Salvadoran Government will not need the military assistance that is withheld.

The Moakley-Murtha substitute starts from the view that a military solution to the conflict is not possible, and that a negotiated settlement is in the interest of all Salvadorans. This substitute is tough on both sides. It uses the level of aid to support U.S. policy. It uses real carrots and real sticks to increase the interest of both sides in successful negotiations.

PUNITIVENESS

Second, supporters of the Broomfield substitute say that the Moakley-Murtha proposal's up-front cut in military assistance would be punitive. They say Salvadoran authorities should be given a chance to make progress on human rights, reform, and negotiations. They argue that a cut unfairly punishes all Salvadorans for the misdeeds of a few.

The Moakley-Murtha proposal supports those Salvadorans who want to end the war. It encourages negotiations. This is not punitive; rather it opens the door to a political solution. Could anything be more punitive to the people of El Salvador than a continuation of their present agony?

We have given the Salvadoran Government many chances over many years. It has failed to deliver. U.S. assistance is not an entitlement program. We are under no obligation to continue supporting governments that consistently ignore our concerns.

We should also keep in mind that progress on human rights and negotiations will help, not hurt, the Salvadoran Government. Such progress will undermine, not strengthen, the FMLN.

ABANDONING EL SALVADOR

Finally, proponents of the Broomfield substitute say that if we reduce military assistance, we will abandon El Salvador.

The provisions of the Moakley-Murtha substitute do not endanger the government of El Salvador: So long as the FMLN remains at the bargaining table, does not conduct offensive operations or attack civilians, and does not receive significant quantities of arms, the Salvadoran government will continue to receive all the military assistance it will need; if the FMLN threat grows, full military assistance can be restored; and the current military assistance pipeline for El Salvador totaled more than $100 million at the end of April. These unspent funds are ample to defend against any threat.

CONCLUSION

Mr. Chairman, a foreign assistance program that never changes, even when its objectives are not achieved, eventually loses its ability to influence events. This describes our policy toward El Salvador over the past decade.

We have consistently provided high levels of military and economic assistance. We have said that the continuation of this assistance depends upon demonstrated progress in a number of areas.

When progress did come, we repeated the conditions, but allowed assistance to flow.

Still no progress.

We have been very patient, but our message has not gotten through to those who hold power in El Salvador.

Our bluff has been called. It is time to change our policy. We want to see a negotiated settlement and an end to human rights abuses. The Moakley-Murtha substitute sends that clear and unambiguous message to El Salvador.

The Broomfield substitute does just the opposite. It says steady as you go. Continue current policy. Don't change a thing.

I urge my colleagues to vote now against the Broomfield substitute and to support the Moakley-Murtha substitute.

□ 1810

The CHAIRMAN. The gentleman from Indiana [Mr. HAMILTON] has consumed 10 minutes and has 20 minutes remaining.

Mr. HAMILTON. Mr. Chairman, I reserve the balance of my time.

Mr. BROOMFIELD. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from California [Mr. LAGOMARSINO].

Mr. LAGOMARSINO. Mr. Chairman, if you truly want to have the power of the Armed Forces of El Salvador subordinated to the control of the elected civilian government, you must support the Broomfield-Byron amendment.

The Broomfield-Byron amendment mandates the separation of the police forces from the army, requires the reduction and reorganization of the Armed Forces following a negotiated settlement to the armed conflict and requires all military aid to be approved by the civilian President.

The Studds language is silent on these three objectives, and its approach offers no incentive for the military to submit to civilian authority.

The Studds language punishes a democratically-elected government and rewards Marxist Guerrilla terrorists.

The Studds language forces the United States to cut in half its commitment to a valued ally which has carried out Democratic elections that have unequivocally expressed the will of the Salvadoran people. Salvadorans have elected Democratic Presidents for the first time in decades and carried out a peaceful transition from the party in power to the opposition for the first time in its history. By the Studds language, we punish Democratic institutions and reward terrorism by the FMLN guerrillas.

While we all condemn the brutal slayings of the six Jesuit priests and two others last November, the number of innocent Salvadorans killed as a result of the FMLN guerrilla offensive last fall was much greater than those eight at the university. The cause of human rights in El Salvador will not be enhanced by making the Salvadoran military feel less secure by cutting their aid in half. We all certainly expect justice in the Jesuit murders, but we also expect justice for all Salvadorans who freely elected a Democratic government and rejected the terrorist tactics of the FMLN guerrillas.

I urge you to support the Broomfield-Byron amendment.

Mr. HAMILTON. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from California [Mr. LEVINE], a member of the committee.

Mr. LEVINE of California. Mr. Chairman, I thank the gentleman for yielding.

Mr. DICKS. Mr. Chairman, will the gentleman yield?

Mr. LEVINE of California. I yield to the gentleman from Washington.

Mr. DICKS. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I rise in opposition to the Broomfield amendment and in support of the Murtha-Moakley amendment.

Mr. Chairman, for the past 10 years the United States has provided nearly $4 billion in foreign assistance to El Salvador. The purpose for this assistance is to promote democracy and encourage human rights in this small agrarian country of roughly 5 million people. Unfortunately, this foreign assistance has not brought the reforms I consider mandatory for El Salvador to break from its long history of repression and violence. It is for this reason I am urging my colleagues to support this 50 percent reduction of military assistance to the Government of El Salvador. The amendment will provide the necessary leverage that I believe will bring about productive negotiations, and an end to the violence. This legislation was carefully constructed to provide incentives and disincentives to compel both sides to negotiate in good faith, and remain at the bargaining table until an agreement is reached. This policy is not the abandonment of an ally, but rather a long-overdue commitment to working toward a peaceful resolution of this civil war.

I am pleased that the Secretary General of the United Nations will oversee peace negotiations between the Salvadoran Government and the FMLN, and believe that this legislation will further encourage a peaceful settlement to the 10-year-old war. I recognize that many obstacles exist between the Government of El Salvador and the FMLN, both the reforming of the Salvadoran military and disarming the FMLN pose significant problems. However, these obstacles are not insurmountable. If the United States commitment to ending the war is to be effective, American aid must be conditioned. We in the Congress should take advantage of this historic opportunity to reunify Salvadoran society, because if we do not, the situation in El Salvador is likely to deteriorate. The United States must do everything in its power to bring about a peaceful conclusion to the civil war in El Salvador, and I encourage my colleagues to support this amendment.

Mr. LEVINE of California. Mr. Chairman, I rise today in strong opposition to the Broomfield substitute amendment and in support of the Moakley-Murtha substitute.

For 10 years, Congress has pleaded, cajoled, and threatened aid cutoffs to encourage human rights progress in El Salvador. The Broomfield amendment is yet another one of these empty exhortations, and not a very powerful one at that.

It is totally devoid of substantive effect on U.S. aid to the Salvadoran military. It makes no change in U.S. policy whatsoever. If anything, it will serve only to reassure the officer corps that it can continue its barbaric human rights abuses with impunity.

For 10 years, this has essentially been our message as we have permitted military aid to proceed unimpeded. Yet, the Salvadoran military has not heard, or has chosen not to believe, our threats, pleas, and exhortations. It has repeatedly called our bluffs, and we have never restricted aid.

No wonder, then, that the Salvadoran military now believes it has been given carte blanche to murder and brutalize anyone in El Salvador who disagrees with its policies. The vicious murder of Father Ellacuria and his colleagues last November tragically illustrates this view.

Clearly, those reponsible for this atrocity assumed business would proceed as it always has in the past. Indeed, Mr. Chairman, the Broomfield amendment would give these murderers precisely the solace they are seeking.

The speaker's task force on El Salvador, of which I am a member, released it's interim report on the Jesuit slayings several weeks ago. I urge my colleagues to review the findings of this report if they are considering casting their vote for the Broomfield amendment.

The report clearly describes the complete lack of remorse or moral condemnation within the Salvadoran military for the murder of the priests. it identifies the Salvadoran justice system as an oxymoron—neither systematic, nor just. It suggests the strong possibility that no arrests whatsoever would have been made had not an American officer come forward with confidential information that had been divulged to him privately. It condemns the failure of the investigation to make obvious inquiries of senior military officials. It concludes that it is increasingly unlikely that justice will be done in this case.

At a minimum, Members who think they support the Broomfield amendment should read pages 18-19 of the El Salvador Task Force Report, in which the night of the murders is recreated, and reflect upon the last decade of U.S. military support, training and assistance which has gone to support the very battalion responsible for these cold-blooded assassinations.

The central and most inescapable conclusion of the report is that these murders were not an isolated incident. I quote from the report:

We are convinced that the military's contribution to the problems of human rights and a paralyzed judicial system are not caused by a few renegade officers; they reside at the heart of the armed forces as an institution. Decades of power, tempered only by the need to maintain a working alliance with wealthy landowners and businessmen, have created an upper echelon within the armed forces that too often finds deference to civilian authority neither necessary nor desirable . . . as a result, the armed forces remain unwilling to police themselves, and only accept the right of other to do so when enormous pressure is applied.

The Broomfield amendment doesn't apply any pressure at all. Not only does it not tighten up the inconsequential certification requirements in existing law, it actually makes it even less likely an aid cut would ever be considered by making such consideration entirely dependent on FMLN actions.

The Broomfield amendment expresses laudable concern for the indirect effect FMLN military activities might have on civilians, but shows a shocking disregard for the civilian impact of murdering clergy, rule without law, and the violation of basic human rights by the military in El Salvador.

The Moakley-Murtha alternative changes American policy—appropriately expressing American outrage over the tragic lack of progress on human rights and judicial reform. The committee legislation is already a compromise. A number of us and a number of our constituents would prefer tougher provisions.

Most importantly, the language in the bill will support negotiations under way and will encourage both sides to stay at the negotiating table and make a sincere effort to achieve national reconciliation peacefully.

A vote for peace in El Salvador is a vote against Broomfield and for Moakley-Murtha.

□ 1820

Mr. BROOMFIELD. Mr. Chairman, I yield 3 minutes to the gentleman from New York [Mr. GILMAN].

Mr. GILMAN. Mr. Chairman, I have ruminated over this issue for the last week. It is an extremely difficult issue and one which I have considered with close scrutiny equal to any measure that has come before us during the 101st Congress.

The civil war in El Salvador has tragically killed 70,000 people and has ripped an already poor country to shreds. The FMLN has used terrorist tactics and at times indiscriminately violent methods to inflict an extraordinary amount of chaos and suffering on the Salvadoran people. On the other hand, the extreme right in El Salvador continues to perpetrate acts of barbarism. The most recent example is the killing of the Jesuit priests.

It is of utmost importance that we send a strong signal to the government of El Salvador, but I do not believe the language currently in the bill is appropriate, nor do I feel it will help to achieve the goal of placing a moratori-

um on the violence that plagues the beleaguered nation of El Salvador.

The Broomfield substitute seeks important objectives that the current language fails to address:

The Broomfield amendment: seeks to separate the police from the military; serves to improve the administration of the justice system; is conditioned upon the reorganization and reduction of the size of the Salvadoran armed forces if a settlement is reached; it requires all military aid to be approved by the Salvadoran President; and establishes a fund for reconciliation, reintegration, and reconstruction following a negotiated settlement.

The current language would cut off military assistance just as the Salvadoran government has agreed to participate in negotiations with the FMLN. The conditions set forth in the bill would send the wrong signals at the wrong time, undermining the peace initiatives now underway.

Mr. Chairman, I want to commend the gentleman from Michigan, the distinguished ranking Republican on the Committee on Foreign Affairs, Mr. BROOMFIELD for his extensive work on this difficult issue. I know he shares my concerns for the human rights violations in El Salvador, and I believe his measure will help to improve the quality of life of the Salvadoran people.

Mr. HAMILTON. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. SOLARZ], a member of the committee.

Mr. SOLARZ. Mr. Chairman, I thank the gentleman for yielding me this time. Today's debate has illustrated, I think, the existence of a widespread feeling on both sides of the aisle that our policy toward El Salvador is not working, and that the time has come for a new approach in an effort to bring the killings to an end, and get the kind of negotiations under way which provide the only real hope for a lasting solution to the problem of El Salvador.

We have before Members this evening, two different approaches to the achievement of that objective. One is embodied by the substitute offered by the gentleman from Michigan [Mr. BROOMFIELD]. The other comes in the form of a substitute offered by the gentleman from Massachusetts [Mr. MOAKLEY] and the gentleman from Pennsylvania [Mr. MURTHA]. Both substitutes, in my judgment, represent an improvement over existing policy.

However, for a variety of reasons, I believe that the Murtha-Moakley substitute is substantially more desirable and far more likely to achieve our objectives than the Broomfield substitute. There are, it seems to me three significant and fundamental differences between these two approaches.

The Murtha-Moakley approach would apply to both the 1990 and 1991 fiscal years. The Broomfield substitute, by comparison, only takes effect in the 1991 fiscal year. Now, I would submit that if a new policy makes sense on October 1, 1990, when the next fiscal year begins, then it surely makes sense on June 1, 1990, when this legislation will be enacted into law. If it does not make sense on June 1, then it should not make sense on October 1. In other words, if we need a new approach to El Salvador, it ought to take effect immediately, rather than postponing its effect until the beginning of the next fiscal year.

Second, the Murtha-Moakley amendment would cut off all aid, or at least all military assistance to the Government of El Salvador if they are not pursuing the investigation into the murder of the Jesuits, or if there is not a significant improvement in the human rights performance of the security forces.

Under the Broomfield substitute, by comparison, if the Government is not pursuing the case of the Jesuits, or if its security forces have once again gone on a rampage, the Government would still be eligible to receive up to 75 percent of the aid they are slated to get, which means that even if the Government walks away from the investigation of the Jesuits, even if the security forces go out and kill another 5 Jesuits, or 50 Jesuits, or go back to killing 1,000 innocent people a month as they were in the beginning of the 1980's, we would still be providing them with over $63 million in military assistance a year.

□ 1830

Mr. Chairman, I would submit that after all of the killing in El Salvador the time for us has come to say to the Government of El Salvador, "If you don't pursue the investigation of the killing of the Jesuits, if you don't bring your security forces under control, we are not going to give you any more military assistance."

Finally, the Murtha-Moakley substitute provides real incentives to both the Government and the FMLN to stop the killing and begin the process of negotiations, whereas the Broomfield substitute, while it purports to offer incentives to both, really offers only limited incentives to the Government and no real incentives whatsoever to the FMLN to begin the process of negotiations. To the FMLN the Broomfield substitute says that only if the Government refuses to negotiate will we refrain from restoring the full amount of aid promised to the Government if they agree to negotiate themselves. But what good does it do for the FMLN to demonstrate a willingness to negotiate in good faith if the Government is not willing to negotiate in good faith?

We are not playing games here. We are trying to get both sides to the negotiating table, and that is exactly what the Murtha-Moakley substitute does. It says to the Government, "If you are not willing to negotiate, you don't get any military assistance." It says to the guerrillas, If you are willing to negotiate in good faith and meet the other conditions in this legislation, we will then reduce by 50 percent the level of military assistance the Government would otherwise receive." That is a real incentive to both sides.

So, Mr. Chairman, I urge rejection of the Broomfield substitute, however well-intended it may be, and approval of the Murtha-Moakley substitute.

Mr. BROOMFIELD. Mr. Chairman, I yield 3 minutes to the gentleman from Illinois [Mr. HYDE].

Mr. HYDE. Mr. Chairman, I really do not understand the last gentleman who spoke. He said the Government will not negotiate. They have been negotiating and negotiating until they are blue in the face. As a matter of fact, they were engaged in negotiations while the FMLN was planning and plotting its uprising, its bloody insurgency in San Salvador last November 11.

When I think of the distinguished sponsorship of this amendment—and I am speaking not of the studds amendment, because I assume that is by the boards and we are beyond that and we are talking about the Moakley-Murtha amendment—when I think of the distinguished sponsorship of that amendment, I am reminded of an old Italian saying: "Though you may dress the shepherd in silk, he will still smell of the goat." This amendment smells of the goat, if I may say it, although I am not an old Italian.

The difficulty of getting any money for the Government of El Salvador is similar to solving Rubik's cube; you just cannot do it. It is there on the surface, but you cannot get to it.

The gentleman from Indiana says there can be no military solution. Well, six elections have been held. Democracy is not a military solution. Democracy is a process. There have been six elections in El Salvador. Our policy must be working pretty well with these elections, with two of these elections being presidential elections, and the FMLN just does not hack it. They got about 4 percent of the popular support. They spend their time, while democracy is attempting to exercise itself, shooting people who want to go to vote, threatening people, and intimidating people.

You negotiate from strength. This amendment forces the elected constitutional government to negotiate from weakness. That is a sure-fire scenario for a bloody civil war. We should bring the killing to an end? We cannot bring

the killing to an end by disarming one side while the other side continues to be armed. You provide no incentives at all to the FMLN to stop its insurgency.

The harsh restrictions on military aid are only waived if the survival of the Government is jeopardized.

We have to read this amendment. This guarantees incentives to the FMLN to prolong the insurgency, and it guarantees that any help to the Government will come too late if it ever comes.

Now, we talk about neither side being blameless as though there is some moral symmetry. I would say that every killing by the FMLN has been authorized by the FMLN. But no killing by the right-wing death squads was authorized by Duarte to whom your support was mighty limpwristed, if you will pardon the expression, and your support to Mr. Cristiani is much in the same way. Cristiani did not authorize the murders of the Jesuits. That is the last thing he would want.

There are sociopathic people around, even on the West Bank, as there are in El Salvador, and we do not ruin a government and cut the legs out from under them because of the aberrational acts of a group.

Let me explain what we are doing here. Perception is everything, and the perception is to undercut the elected government, provide incentives to the FMLN, prolong the insurgency, while they nibble around the edges, and keep it going and give them a victory they could not win at the negotiating table and that, God knows, they cannot win in the election booth. And for what? What kind of a friend are we? You hold Mrs. Chamorro hostage until you ram this piece of work down the President's throat, you hold Panama hostage until you ram this piece of work down the President's throat, and you call yourselves reliable allies? God save us from such help.

Mr. BROOMFIELD. Mr. Chairman, I yield 5 minutes to the distinguished gentlewoman from Connecticut [Mrs. JOHNSON].

Mrs. JOHNSON of Connecticut. Mr. Chairman, I thank the gentleman very much for yielding time to me.

Mr. Chairman, this is a very important time in the history of El Salvador and for the people of that war-torn nation. Both the Government and the FMLN have agreed to negotiations under the auspices of the United Nations, to try to bring the civil war that has so anguished that country to an end. Any action we take at this critical time must be deliberate, must be balanced, and must bring the same pressures to bear on both sides.

I rise in support of the Broomfield-Byron amendment because it holds both sides to higher standards than does the bill or Studds-Moakley amendment. Both the Studds-Moakley amendment and the Broomfield-Byron amendment require both sides to negotiate in good faith and require both sides to accept the role of the United Nations. Both amendments would waive any limits on aid if there is a military coup, and both amendments require that El Salvador continue to make progress on the Jesuit case.

The Broomfield-Byron amendment, however, requires that the Salvadoran Government make progress on three critical fronts on which the Studds-Moakley amendment is silent. The Studds-Moakley amendment does not require that there be progress on judicial reform, does not require that there be progress separating the police powers from the military powers, and does not require that there be progress on military reorganization and force reduction. It is only the Broomfield-Byron amendment that requires progress on these fronts.

It is the Broomfield-Byron amendment that takes a broader view and sets higher standards for the Salvadoran Government, and when we look at what has happened in Nicaragua after the elections, we can see how desperately important it is that these young countries reduce their military, separate the police power, and establish a strong judiciary. So it is only the Broomfield-Byron amendment that sets the high standards that will serve peace and human rights in El Salvador in the future.

Let us look at how the two amendments treat the FMLN. Why is it that Studds-Moakley is silent on economic sabotage? Blowing up powerplants, destroying roads, and not allowing people to market their crops are activities that are every bit as warlike and every bit as destructive of people's lives as many other acts of violence. Yet the Studds-Moakley amendment would allow those to go on without penalty during this peace period of negotiations.

We must remember that it was during the period of negotiations, when both sides were at the table, that the FMLN staged the most aggressive, the bloodiest, and the most brutal offensive of this civil war. We will recall that it was during a period of negotiations that the FMLN forward-deployed tons and tons of armaments in civilian neighborhoods, in the cities where the war had never been fought, where people in the past had been sheltered.

1840

So, Mr. Chairman, why is it that the Studds-Moakley amendment is silent on penalties for economic sabotage, and look at the policy that the Studds amendment takes toward violence. What it says is that "it's O.K., folks; a little violence, just not a lot."

Mr. Chairman, we have been through that in the past. They are very good at a little violence, just not a lot.

The Studds-Moakley amendment says, "If your violence is not targeted at civilians, it's OK." But how about the car bomb that was meant to get the general, but got 45 mothers, kids, adults, civilians, innocent people at the same time?

Lastly, Mr. Chairman, what about this business of arms? Why is it OK. to import a few new arms, just not a lot? Why is it OK for the FMLN to engage themselves in offensives but not substantial offensives? Are little skirmishes which perpetuate the terror and intimidation of the civil war during negotiations OK? Are little actions that terrorize, little ways that paralyze a society, little actions that erode the trust that negotiations depend on, OK. While one is supposed to be committed to negotiating peace? That is OK?

Mr. Chairman, the Broomfield-Byron amendment prevents that kind of violence, punishes economic sabotage, holds the FMLN to the kinds of high standards, as well as the El Salvadoran Government to the high standards that are essential, if there is to be trust; successful negotiations, peace and, ultimately, a government that supports human rights and economic opportunity in El Salvador.

Mr. HAMILTON. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Wisconsin [Mr. OBEY].

Mr. DEFAZIO. Mr. Chairman, will the gentleman yield?

Mr. OBEY. I yield to the gentleman from Oregon.

Mr. DEFAZIO. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Michigan [Mr. BROOMFIELD].

Mr. Chairman, the United States may finally be awakening from a 40-year nightmare—a national paroxysm of paranoia. The American people were told that Communists in Russia, in China and Eastern Europe, in Central America, and even in the State Department threatened our very existence. I didn't buy that line 10 years ago, and I certainly don't buy it today. I have more faith in the strength and vitality of our Nation than that.

It was only a few short years ago that the President of the United States tried to heap more fuel on the fires of fear by describing the menace of Communist hordes from Nicaragua sweeping through Mexico and across our borders. The citizens of Harlingen, TX, were advised that the most formidable threat to civilization since Attila the Hun lay in wait a mere day's drive south of their city limits.

Our policy in El Salvador is a relic from those years of fear. It's time we discarded the relic.

In El Salvador, the United States is supporting a corrupt oligarchy whose only ambition is the maintenance of power through terror. We hear about the most notorious murders—Archbishop Romero, the American churchwomen,

human rights leader Herbert Anaya, and the six Jesuit priests. But for most of the American people, the tens of thousands of Salvadorans killed and tortured by the military death squads are faceless statistics, at best.

Let us not mince words—the ARENA party in El Salvador is a fascist political movement—a movement whose credo is corruption, murder, and fear. Our hands are stained by the blood of tens of thousands of poor peasants and workers whose only crime was to aspire to a better life. We cannot begin to remove that spot by mere washing. A little water will not clear the stain of this body's support for the deeds of the army death squads.

But we can begin to make amends here today by supporting, for once, the aspirations of the common people of El Salvador by supporting peace and dialog. Oppose Broomfield and support the Moakley-Murtha substitute and cut aid to the Government of El Salvador.

Mr. OBEY. Mr. Chairman, reference has been made to partisanship and bipartisanship. I think I have demonstrated a great deal of cooperation with the administration in moving their Panama and Nicaragua supplemental forward.

However, Mr. Chairman, on this occasion I support the committee bill. I support the substitute of the gentleman from Massachusetts [Mr. MOAKLEY]. I oppose the amendment of the gentleman from Michigan [Mr. BROOMFIELD] because, after 10 years, it is time to say to the pathological thugs who have systematically slaughtered bishops, priests, and nuns, and any other civilians who call for decency, that we have had enough.

The amendment of the gentleman from Michigan [Mr. BROOMFIELD] is very simply a wimpout. It sends money without a message.

The amendment of the gentleman from Massachusetts [Mr. MOAKLEY] sends the right message because it cuts the military aid by 50 percent contingent only upon the behavior of the FMLN. It sends the following message; "Reform, or, boy, you're going to be on your own," and that is the message we ought to send.

Mr. Chairman, I will never forget a conversation which I had with a businessman in Salvador, a very important businessman who served as an adviser to President Duarte. When I was in Salvador, he said to me one evening, "I don't know what things are like in your Rotary Club, but in my Rotary Club, when I sit down, I see across the table two people who took a contract out on me." He said, "That's what our Rotary Club meetings are like."

Mr. Chairman, I suggest to my colleagues that is largely what Salvadoran society is like, and we are not going to help change it if we continue to send money without a message.

Mr. Chairman, the message ought to be, "Yes, we understand President Cristiani is a fine man, just as President Duarte was a fine man, but he will never gain control of his own society and his own military unless we send the message that the money faucet is going to stop," and this is the way we start that message today.

The FMLN in my judgment cannot defeat the Salvadoran Government or society. Only Salvador, in their behavior, only the misguided action of the Salvadoran elite, can do that.

We have a responsibility to people that we have tried to help for the last 10 years to be effective in the messages we are sending. I cannot think of a more ineffective message than to pass the amendment of the gentleman from Michigan [Mr. BROOMFIELD], and I urge my colleagues to support the committee bill and the substitute of the gentleman from Massachusetts [Mr. MOAKLEY].

Mr. BROOMFIELD. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Florida [Mr. Goss].

Mr. GOSS. Mr. Chairman, we are having this debate at the very time when the press is reporting good progress on talks in Caracas between the warring parties in Salvador. I think that those steps are going to play out if we give them a chance.

However, Mr. Chairman, there is a problem, and the problem was referred to earlier today on this floor, and it will continue to be referred to because it is a real problem, and the problem is this: that the FMLN is watching very, very closely what we are doing in the U.S. Congress with regard to aid. We are sending a signal by having this debate, and, when we sent that signal after the foreign affairs vote a few weeks ago, we had a wave of terrorism throughout the country of El Salvador. In fact, the FMLN in a communique on their attack on San Salvador specifically referred to the 50-percent cut that the Studds amendment called for.

So, think for a moment. If we are going to send a signal by failing to pass the amendment of the gentleman from Michigan [Mr. BROOMFIELD], the Broomfield version of how to approach this, if we fail to send that, we possibly run the risk of the FMLN misreading our intentions again and starting another wave of violence, as they have said they will do if they are not sure that the Cristiani government can deliver what they are asking at the negotiating table.

Mr. Chairman, suppose we lose the Cristiani government? What have we lost? We have lost a democratic government in a neighboring country, a duly elected, democratic government. What have we gained? We have gained chaos.

We seek peace and democracy for the people of Salvador. We do not seek chaos.

Consequently, Mr. Chairman, I think it is extremely important for us to remember that our vote here will be reported in more than the Washington Post. It will be reported among the players in the Salvador negotiations. It will also be reported downtown, and we have a message from downtown that this Studds language is not acceptable to the administration and that it will lead to a veto, and one has to ask the question: How then have we served the emerging democracies we seek to serve if we have put ourselves in stalemate with regard to the assistance so desperately needed?

Mr. Chairman, I believe there is a solution out there. I believe that we are on the path to negotiation, and I believe those negotiations have a better chance of coming to a desirable solution if there is relative harmony in Salvador during that negotiations process, and the way to achieve that relative harmony is to pass the version of the gentleman from Michigan [Mr. BROOMFIELD] that we are discussing. It provides tough conditions on the FMLN including terrorist attacks, assassination, economic sabotage, and so forth. It provides for 10 million for democratic initiatives and successful administration of justice, other human rights, other administration of justice provisions, and civilian control over the military.

Mr. BROOMFIELD. Mr. Chairman, I reserve the balance of my time.

Mr. HAMILTON. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Washington [Mr. MCDERMOTT].

Mr. MCDERMOTT. Mr. Chairman, the vote on the amendment of the gentleman from Michigan [Mr. BROOMFIELD] should be no. It has one defect that will not withhold money, military assistance. We are continuing to delude ourselves if we think our military aid is the magic that will tame the Salvadoran military. Our aid did not protect the six Jesuit priests. Our aid cannot even insure that their killers are brought to justice.

When the Moakley task force traveled to El Salvador in February, I visited a village in Chalatenango in which four children had just been killed by the Salvadoran military—with rockets and shrapnel stamped with the letters "USA." Just 3 months after the slaying of the priests—after worldwide condemnation of the Salvadoran military, their behavior did not change one bit.

For 10 years, we have seen these acts of terrorism go unpunished again and again—and yet we continue to throw our money at the Salvadoran military responsible for them. I cannot accept this.

The administration thinks that we should be patient and stay the course—that our aid will improve the human rights situation. But we have been patient; 70,000 Salvadorans have died for patience. We must tell the

Salvadoran military our patience has run out. Out outrage will not be tempered by idle promises that we have seen broken again and again.

Some say this is not the time to cut aid—that we should use it as the carrot to ensure the Salvadoran Government continues negotiations. But our aid is no longer an enticement to change. It is an endorsement of brutality and terrorism. Our silence is an endorsement as well, and I urge my colleagues to end this complicity and support the 50 percent cut in aid.

□ 1850

Mr. BROOMFIELD. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from California [Mr. DREIER].

Mr. DREIER of California. Mr. Chairman, I thank the distinguished ranking member for yielding me this time.

You know, at the end of my statement during general debate, Mr. Chairman, I said what some people thought might be slightly ironic, that while we have seen the Soviet Union, we have seen Nicaragua, we have seen Cuba cut off aid to the FMLN, it seems that they are looking to the United States Congress for their support now.

President Cristiani said just yesterday that it is very apparent that any kind of signal that the FMLN would receive from the U.S. Congress would in fact encourage the further attrocities which we saw last November and have been seeing recently.

There is a lot of talk about the degree of military assistance and how horrendous it is. Well, since 1985, Mr. Chairman, we have seen a 60-percent cut in military aid from the United States to the Government of El Salvador. That is from $226 million in 1985 to $88 million today.

Also, I think it is very important for us to look—now, the gentleman from California [Mr. DORNAN] loves to show these great charts here. I have a small graph here, Mr. Chairman, which shows the dramatic reduction in human rights violations in El Salvador from a high of 800 in 1980 down to an extraordinarily low number in 1988. We have seen continued improvement.

I think it is also very important, Mr. Chairman, for us to recognize that just last week the Washington Post had an editorial which addressed this issue very well, and I am going to read from it. It said:

> To imagine that the army would quietly absorb an aid cut and support the elected government in new negotiations is to live in a dream world. A vote for an aid cut is, perversely, a vote to fuel the war and burden negotiations.

We also know, Mr. Chairman, that we have seen this pattern back and forth. The FMLN have said time and time again, they have acknowledged to us that when they cannot win through a military offensive they move to the negotiating table. When they are at the negotiating table, they are planning their next military strike.

We saw great negotiations taking place last October. Then on November we saw this huge urban assault.

Mr. Chairman, it is very important that we maintain this consistent policy, because we do not want to, as the Washington Post has said, send this very perverse signal to the FMLN.

Mr. HAMILTON. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Indiana [Mr. MCCLOSKEY].

Mr. McCLOSKEY. Mr. Chairman, I thank the distinguished gentleman from Indiana for yielding me this time.

Mr. Chairman, It is all very well and good to talk about democracy in El Salvador and say that President Cristiani is its best hope.

That may very well be, but the simple fact is that the Salvadoran military is not.

As one Jesuit Priest at the University of Central America said, "Cristiani is elected, the military is not."

How can we talk of a successful ongoing democracy when 6 priests and two women are brutally murdered in a blatant military foray with evident, strong links to the high command.

As members of the speaker's task force on El Salvador, we met recently with dozens of Salvadorans in all walks of life, including military, church, and campesinos, and others.

The interim report of that task force reveals a very flawed investigation, and even that problematic effort has been made possible only because of international outrage and hopes for continued military aid.

Meanwhile murders and disappearances of numerous others go uninvestigated. As our State Department readily, if informally, admits, El Salvador has no criminal justice system.

In the meantime, two bishops, their staff and numerous church workers report pervasive fear of the military. In fact the afternoon after the Jesuit murders, a military sound truck blared around the neighborhoods boasting of the crime and called for more killings.

One Salvadoran officer after another in talking about the church denies persecution of the church. They say they are Catholics or Christians themselves and that the military has chapel and religious services.

Such answers, Mr. Chairman, are an outrage, given the reality of life in El Salvador.

The Salvadoran military thinks, as one Jesuit asserted, that the United States will continue business as usual with military aid, regardless of atrocities.

Let us break this habit. Vote for the Moakley-Murtha substitute. It is a balanced incentive for both sides to begin to stop the killings.

Mr. BROOMFIELD. Mr. Chairman, to close the debate, I yield our remaining time to the gentlewoman from Maryland [Mrs. BYRON], the cosponsor of this amendment.

Mrs. BYRON. Mr. Chairman, I rise to support the Broomfield-Byron amendment because I think it will provide the better conditions under which a lasting peace can be achieved. It is peace, Mr. Chairman, that should be the goal of this legislation. The Speaker's Special Task Force on El Salvador concluded above all, "El Salvador must have peace." We all agree that peace could lead to major restructuring of El Salvador's political, military, and judicial systems.

I would like to focus on three specific conditions which Broomfield-Byron includes but the committee language omits. First, under our amendment the President shall withhold up to 25 percent of military aid if the Government does not take steps for judicial reform.

The task force states. "Unfortunately, the Salvadoran justice system flat out does not work." The judicial system is in shambles. The Jesuit case is stalled in part by the judicial system and in part by Judge Zamora proceeding very slowly. Second, under our amendment, the President shall withhold up to 25 percent of military aid if the Government does not separate the police from the military. For all intents and purposes they have no police as we know them. The task force states, "the need for reform within the military is obvious and admitted by the civilian leadership of El Salvador."

Third, under Broomfield, the President shall withhold up to 25 percent of military aid if the Government does not reduce and reorganize the Salvadoran military after a peace settlement has been reached. The existing committee language makes no mention of these issues and does not place any pressure on the Cristiani government to reform these institutions.

I would like to remind my colleagues that the Broomfield amendment implements the findings of the Speaker's Special Task Force on El Salvador in these areas.

□ 1900

Mr. Chairman, we should be just as interested in pursuing peace and promoting democracy in El Salvador as we are in every other emerging democracy in the world.

This amendment brings the best chance of peace. With peace comes substantial reforms that we all agree should occur.

In this country, sometimes we should be ashamed. In 1988, in our Presidential elections, only 55 percent of the voting-age population voted. The people in El Salvador have cried

out for democracy, and in that same year, 70 percent of the Salvadorans, many of them for the first time, voted in municipal elections. This was during a period of when the FMLN had knocked out 80 percent of the electricity, of the water, the communications, and all public transportation.

I watched the faces going to the polls, many for the first time, only to ask for what we already have, a vote for freedom. They now need our assistance more than ever to make political, military, and judicial reforms that they so desperately need, a reality for that freedom.

I urge the support of the Members for the Broomfield amendment to help this process along.

Mr. HAMILTON. Mr. Chairman, to conclude debate, I yield 3 minutes to the distinguished gentleman from Pennsylvania [Mr. KOSTMAYER].

Mrs. BOXER. Mr. Chairman, will the gentleman yield?

Mr. KOSTMAYER. I am happy to yield to the gentlewoman from California.

Mrs. BOXER. Mr. Chairman, I thank the gentleman so much for allowing me to correct the record which occurred during the general debate. I want to report that, according to Americas Watch, the charges against the individual arrested by the government for the murder of Herbert Anaya were dropped in April. The judge said his confession was coerced after a line bag torture tool was put over his head, another example, Mr. Chairman, of why we should defeat the Broomfield-Byron amendment.

Mr. KOSTMAYER. Mr. Chairman, this is last week's Christian Science Monitor, May 16:

> Salvadoran judges during the past 2 weeks have dropped charges against most of those accused despite strong evidence, U.S. officials say.

They are speaking of the 10 peasants who were murdered in San Sebastian.

Members may be wondering why they did not read this on page one, despite the fact it was in the newspaper. The reason they did not read it, the reason they did not see it on television, is because it is not news. It is not news anymore when the military in Salvador get away with murdering innocent people.

Mr. Chairman, from 1979 to 1989, we spent in Salvador $5,008,558,000; $5 billion over the last decade, and not one single military officer convicted of one single crime.

For 10 years we have tried this solution, and for 10 years it has failed. The death squads are still immune from justice.

We now have a choice. We are now at a crossroads deciding whether we should continue the war or whether we can end the war. The amendment offered by my fellow Pennsylvanian [Mr. MURTHA] and by the gentleman from Massachusetts [Mr. MOAKLEY] can help us to resolve this dilemma. It applies pressure to both sides.

Do not the Members see that the Broomfield amendment only applies pressure to the left? Listen to this, the Broomfield amendment allows up to 25 percent of the aid to be withheld. That means 1 percent; that means 2 percent; that means possibly 5 percent. How is the Government in Salvador going to react if we withhold 2 percent or 3 percent? We are already withholding 10 percent for existing human rights violations.

The Broomfield amendment allows the aid to continue even if the case of the Jesuits is not resolved. The Broomfield amendment does not even apply to money this year. It waits until next year.

We have already spent $5 billion. Why do we have to wait until next year?

The Broomfield amendment will not work. We need to recognize that the only way to solve this problem is to end the war.

The problems will not be solved in that country until the war is ended. The only way to end the war is to make a reduction in military assistance. That is what Murtha-Moakley does. I urge its adoption.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from Michigan [Mr. BROOMFIELD].

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. BROOMFIELD. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 175, noes 243, not voting 14, as follows:

[Roll No. 126]

□ 1924

The Clerk announced the following pairs:

On this vote:

Mr. Craig for, with Mr. Nelson of Florida against.

Mr. Robinson for, with Mr. Stokes against.

Mr. Thomas of California for, with Mr. Hawkins against.

Mr. Kolbe for, with Mr. Jones of North Carolina against.

Mrs. LOWEY of New York and Mr. MOODY changed their vote from "aye" to "no."

So the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. It is now in order to consider amendment No. 5 printed in House Report 101-489.

AMENDMENT OFFERED BY MR. MOAKLEY

Mr. MOAKLEY. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will designate the amendment.

The text of the amendment is as follows:

Amendment offered by Mr. MOAKLEY:

Page 65, strike out line 10 and all that follows through line 11 on page 78 (title V of the bill) and insert in lieu thereof the following:

TITLE V—EL SALVADOR

SEC. 501. ASSISTANCE FOR EL SALVADOR.

(a) STATEMENT OF POLICY.—It shall be the policy of the United States—

(1) to support the Central American Presidents' Agreement of December 12, 1989, calling upon the Farabundo Marti National Liberation Front (hereafter in this section referred to as the "FMLN") to cease its hostilities and renounce all types of violent actions that may directly or indirectly affect the civilian population of El Salvador;

(2) to support an active role for the Secretary General of the United Nations and the Secretary General of the Organization of American States in negotiations between the Government of El Salvador and the FMLN for the purpose of achieving a ceasefire and a permanent settlement to the conflict in El Salvador; and

(3) to review the level of military assistance for El Salvador on a periodic basis, taking into account both—

(A) the demonstrated willingness of the Government of El Salvador and the FMLN to negotiate seriously and in good faith for the purpose of achieving a ceasefire and a permanent settlement to the conflict in El Salvador; and

(B) the actions of each side that affect the basic human rights of the Salvadoran people.

(b) INCENTIVES FOR PEACE: AMOUNTS OF MILITARY ASSISTANCE AVAILABLE FOR EL SALVADOR.—

(1) FISCAL YEAR 1990; CONDITIONAL WITHHOLDING OF HALF OF REMAINING MILITARY ASSISTANCE.—Half of the funds allocated for military assistance for El Salvador for fiscal year 1990 that are unexpended on the date of enactment of this Act shall be withheld from expenditure for military assistance unless and until the President submits to the Congress a report containing the determination regarding the FMLN described in subsection (c).

(2) FISCAL YEAR 1991.—

(A) MAXIMUM LEVEL OF MILITARY ASSISTANCE.—The amount allocated for military assistance for El Salvador for fiscal year 1991 may not exceed $85,000,000.

(B) CONDITIONAL WITHHOLDING OF HALF OF MILITARY ASSISTANCE.—Half of the funds allocated for military assistance for El Salvador for fiscal year 1991 shall be withheld from obligation for military assistance unless and until the President submits to the Congress a report containing the determination regarding the FMLN described in subsection (c).

(C) TRANCHING OF ASSISTANCE.—Not more than half of the amount allocated for military assistance for El Salvador for fiscal year 1991 that is not being withheld from obligation pursuant to subparagraph (B) may be obligated before March 1, 1991. In order to provide time for congressional review of the report required to be submitted on that date by subsection (g), funds that become available for obligation under this subparagraph as of that date may not be expended during the 30-day period beginning on that date.

(3) USE OF FUNDS IF DETERMINATION REGARDING FMLN NOT MADE.—

(A) DEVELOPMENT ASSISTANCE.—At the end of fiscal year 1990 and at the end of fiscal year 1991, the President shall transfer any military assistance funds then being withheld pursuant to paragraph (1) or paragraph (2)(B) to appropriations accounts for development assistance under chapter 1 of part I of the Foreign Assistance Act of 1961 (22 U.S.C. 2151 and following) for use in providing assistance for child nutrition, health, housing, education, or other programs serving the basic human needs of the people of El Salvador. Funds so transferred shall remain available until expended notwithstanding any other provision of law. Section 634A of the Foreign Assistance Act of 1961 (22 U.S.C. 2394-1; relating to reprogramming procedures) applies with respect to the obligation of any funds so transferred.

(B) EXCEPTION.—Notwithstanding subparagraph (A) and paragraph (1), fiscal year 1990 funds withheld from expenditure pursuant to paragraph (1) may be used for cancellation expenses for military assistance programs for El Salvador, so long as such use does not result in the delivery of any military assistance to El Salvador.

(4) TERMINATION OF MILITARY ASSISTANCE.—If the President submits to the Congress a report containing the determination regarding the Government of El Salvador described in subsection (d), all military assistance for El Salvador for fiscal year 1990 and fiscal year 1991 shall be terminated, including deliveries of previously obligated military assistance. All military assistance shall be terminated pursuant to this paragraph without regard to whether a report is submitted containing the determination regarding the FMLN described in subsection (c).

(5) RESUMPTION OF MILITARY ASSISTANCE.—If, after submitting to the Congress a report containing the determination regarding the Government of El Salvador described in subsection (d), the President finds that the facts giving rise to that determination no longer prevail, the President may submit to the Congress a report describing the reasons for such finding. If the President submits such a report under this paragraph, military assistance for El Salvador may be resumed, subject to the requirements of this section.

(c) CONDUCT OF THE FMLN RESULTING IN A RELEASE OF WITHHELD ASSISTANCE.—The determination described in this subsection is a determination by the President that—

(1) the representatives of the FMLN—

(A) are declining to participate in good faith in negotiations for a ceasefire and a permanent settlement to the armed conflict in El Salvador, or

(B) are rejecting or otherwise failing to support an active role for the Secretary General of the United Nations in those negotiations;

(2) the United States Government has proof that the FMLN is continuing to acquire or receive significant shipments of lethal military equipment from outside El Salvador, and this proof has been shared with the Congress;

(3) the survival of the constitutional Government of El Salvador is being jeopardized by substantial and sustained offensive military actions or operations by the FMLN; or

(4) the FMLN is assassinating or abducting civilian noncombatants, is engaging in other acts of violence directed at civilian targets, or is failing to control such activities by elements subject to FMLN control.

(d) CONDUCT OF THE GOVERNMENT OF EL SALVADOR RESULTING IN A TERMINATION OF ASSISTANCE.—The determination described in this subsection is a determination by the President that—

(1) the duly-elected Head of Government of El Salvador has been deposed by military coup or decree;

(2) the Government of El Salvador is declining to participate in good faith in negotiations for a ceasefire and a permanent settlement to the armed conflict, or is rejecting or otherwise failing to support an active role for the Secretary General of the United Nations in those negotiations;

(3) the Government of El Salvador is failing to conduct a thorough and professional investigation into, and prosecution of those responsible for, the 8 murders at the University of Central America on November 16, 1989; or

(4) the military or security forces of El Salvador are assassinating or abducting civilian noncombatants, are engaging in other acts of violence directed at civilian targets, or are failing to control such activities by elements subject to the control of those forces.

(e) SUBMISSION OF REPORTS CONTAINING DETERMINATIONS.—The President may

submit to the Congress at any time a report containing the determination regarding the FMLN described in subsection (c) or containing the determination regarding the Government of El Salvador described in subsection (d). If the President determines that any of the conditions described in subsection (c) or subsection (d) exist, the President shall immediately report that determination to the Congress.

(f) STRENGTHENING CIVILIAN CONTROL OVER THE MILITARY.—In order to strengthen the control of the democratically elected civilian government of El Salvador over the armed forces of that country, military assistance for fiscal year 1991 may be delivered to the armed forces of El Salvador only with the prior approval of the President of El Salvador.

(g) REPORTS ON SITUATION IN EL SALVADOR.—Thirty days after the date of enactment of this act and on March 1, 1991, the President shall submit to the Congress a report describing—

(1) the willingness or unwillingness of the Government of El Salvador and the FMLN to negotiate seriously and in good faith for the purpose of achieving a ceasefire and a permanent settlement to the conflict in El Salvador;

(2) the status of the negotiations;

(3) the criteria that the President will use in deciding whether to make the determinations described in subsections (c) and (d) with respect to negotiations and other issues; and

(4)(A) any actions of the Government of El Salvador (including the armed forces) and the FMLN that are having an adverse impact on the basic human rights of the Salvadoran people;

(B) progress made by the Government of El Salvador toward—

(i) the establishment of an effective judicial system, including the establishment of an independent, civilian investigative service;

(ii) ensuring freedom of the press and assembly; and

(iii) military reform, including the establishment of an officer promotion system based on merit and professional competence, respect for human rights, and respect for civilian control over the armed forces;

(C) the effects on the civilian population of El Salvador of economic sabotage and other acts of violence committed against civilian targets by the FMLN; and

(D) the status of investigations into the politically motivated murders of prominent political, religious, labor and other officials in recent years, and the extent to which the armed forces of El Salvador and the FMLN are each cooperating in those investigations.

(h) SUPPORT FOR DEMOCRACY PROGRAM.—

(1) ESTABLISHMENT OF PROGRAM.—The Secretary of State, through agreement with the National Endowment for Democracy or other qualified organizations, shall establish and carry out a program of education, training, and dialogue for the purpose of strengthening democratic political and legal institutions in El Salvador. The program shall be designed to—

(A) assist and involve all prodemocratic sectors in El Salvador in efforts to strengthen civilian control over the armed forces;

(B) establish an effective judicial system;

(C) facilitate the free and open exchange of political views;

(D) provide for monitoring and other activities in support of free and fair elections; and

(E) increase respect for basic civil and human rights.

(2) ELECTION MONITORING.—Of the amount made available to carry out this subsection, not less than $2,000,000 may be used only for support for monitoring the 1991 municipal and National Assembly elections in El Salvador, and for monitoring the registration and campaign processes leading up to those elections, by appropriate organizations such as Secretary General of the United Nations, the Organization of American States, the Carter Center, the National Democratic Institute for International Affairs, the National Republican Institute for International Affairs, and the Center for Electoral Assistance and Promotion (CAPEL) of San Jose, Costa Rica.

(3) AUTHORIZATION OF APPROPRIATIONS.—To carry out this subsection, there are authorized to be appropriated $10,000,000 for fiscal year 1991 under chapter 4 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2346 and following; relating to the economic support fund).

(i) EXPEDITED CONGRESSIONAL REVIEW PROCEDURES.—

(1) DEFINITION OF PRIVILEGED JOINT RESOLUTION.—For purposes of this subsection, the term "privileged joint resolution" means a joint resolution—

(A) which—

(i) in the case of the House of Representatives, is reported by the Committee on Foreign Affairs, and

(ii) in the case of the Senate, is reported by the Committee on Foreign Relations,

during the 30-day period beginning on March 1, 1991;

(B) which would place conditions or limitations, or both, on expenditures of military assistance funds for El Salvador for fiscal year 1991;

(C) which does not contain any provision which is not germane to the conditions and limitations provided for in the joint resolution; and

(D) the title of which is as follows: "Joint resolution relating to military assistance for El Salvador for fiscal year 1991.".

(2) MOTION FOR FLOOR CONSIDERATION.—On or after the third calendar day (excluding Saturdays, Sundays, and legal holidays) after the day on which a privileged joint resolution is reported by the Committee on Foreign Affairs or the Committee on Foreign Relations (as the case may be), it shall be in order (even though a previous motion to the same effect has been disagreed to) for the chairman of that committee (or his designee) to move to proceed to the consideration of that joint resolution. In the House of Representatives the motion shall be that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution. The motion may be made in the Senate notwithstanding any rule or precedent of the Senate, including Rule 22. All points of order against the joint resolution (and against consideration of the joint resolution) are waived. The motion to proceed to the consideration of the joint resolution is highly privileged in the House of Representatives and is privileged in the Senate and is not debatable. The motion is not subject to amendment, to a motion to postpone, or to a motion to proceed to the consideration of other business. A motion to reconsider the vote by which the motion is agreed to or disagreed to shall not be in order. If a motion to proceed to the consideration of the joint resolution is agreed to by a House of Congress, that House shall immediately proceed to the consideration of the joint resolution without intervening motion, order, or other business, and that joint resolution shall remain the unfinished business of the respective House until disposed of.

(3) DEBATE TIME.—Debate on a privileged joint resolution, and on all debatable motions and appeals in connection therewith (other than amendments made in order in the House of Representatives under paragraph (4) and a motion to recommit in the House under paragraph (7)), shall be limited to not more than 4 hours, which shall be divided equally between a Member favoring and a Member opposing the joint resolution. A motion further to limit debate is in order and not debatable.

(4) AMENDMENTS IN THE HOUSE OF REPRESENTATIVES.—Amendments to a privileged joint resolution shall be in order, and shall be debatable, in the House of Representatives to the extent ordered by the House.

(5) AMENDMENTS IN THE SENATE.—Amendments to a privileged joint resolution are not in order in the Senate.

(6) CERTAIN MOTIONS NOT IN ORDER.—A motion to postpone or to proceed to the consideration of other business is not in order. A motion to reconsider the vote by which a privileged joint resolution is agreed to or disagreed to is not in order.

(7) FINAL PASSAGE IN THE HOUSE OF REPRESENTATIVES.—In the House of Representatives, at the conclusion of debate on a privileged joint resolution and consideration of any amendments made in order to the joint resolution, the Committee of the Whole shall rise and report the resolution back to the House, and the previous question shall be considered as ordered on the joint resolution, with any amendments adopted in the Committee of the Whole, to final passage without intervening motion except one motion to recommit.

(8) FINAL PASSAGE IN THE SENATE.—In the Senate, immediately following the conclusion of the debate on a privileged joint resolution, and a single quorum call at the conclusion of the debate if requested in accordance with the rules of the Senate, the vote on final passage of the joint resolution shall occur.

(9) APPEALS FROM DECISION OF THE CHAIR NOT DEBATABLE IN THE SENATE.—Appeals in the Senate from the decisions of the Chair relating to the application of the rules of the Senate to the procedure relating to a privileged joint resolution shall be decided without debate.

(10) CONGRESSIONAL RULEMAKING POWERS.—This subsection is enacted by the Congress—

(A) as an exercise of the rulemaking power of the Senate and House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of a privileged joint resolution, and it supersedes other rules only to the extent that it is inconsistent with such rules; and

(B) with full recognition of the constitutional right of either House to change its rules at any time, in the same manner, and to the same extent as in the case of any other rule of that House.

(j) DEFINITION OF MILITARY ASSISTANCE.—For purposes of this section, the term "military assistance" means assistance under section 23 of the Arms Export Control Act (22 U.S.C. 2763; relating to the foreign military financing program) or under chapter 2 of part II of the Foreign Assistance Act of 1961 (22 U.S.C. 2311 and following; relating to the grant military assistance program).

The CHAIRMAN. The gentleman from Massachusetts [Mr. MOAKLEY] will be recognized for 30 minutes in support of his amendment, and a Member opposed will be recognized for 30 minutes.

The Chair recognizes the gentleman from Massachusetts [Mr. MOAKLEY].

Mr. MOAKLEY. Mr. Chairman, this amendment is really the Moakley-Murtha amendment. I yield 10 minutes to the cosponsor of the amendment, the gentleman from Pennsylvania [Mr. MURTHA].

Mr. MURTHA. Mr. Chairman, let me talk for a minute about my experiences in El Salvador and the trips that I have made to El Salvador and tell Members why I think this Moakley amendment is so important.

Mr. Chairman, I took my first so-called junket to El Salvador in 1982, at the request of President Reagan. Our delegation monitored an election. When we landed we got into a bullet-proof, armored car with glass that was about 2 inches thick. We could hear explosions all around. Every one of us had a bodyguard, and the Government was in disarray.

I went to visit at that time Mr. Duarte. He had not been elected under the new constitution at that time. I met with him for a short period of time, and then they sent me over to see the person who really ran the country, General Garcia.

General Garcia proceeded to tell me what was going on in El Salvador and the problems and the aid that they would need. At that time they were in the process of having a constitutional election. The new media predicted that there would be a turnout of about 25 or 30 percent because the FMLN had promised that anybody that voted would have their fingers cut off.

□ 1930

Many people had no doubt that violence would occur and there was tremendous violence.

The FMLN did everything they could to keep people from voting. Father Hesburgh was on that same Presidential delegation to monitor the election I was on, and we flew out in a helicopter to a land in areas where there had not been any Americans for years. We landed in areas where there was heavy fighting. As a matter of fact, Father Hesburgh gave the last rites to a soldier, a Salvadoran soldier who had just been killed in the fighting.

But the people came out to vote in droves, even with the threat of violence. One lady—and I told this story to President Reagan, who later reported it on national television—said, "They can kill us, they can kill my family, but they can't kill us all."

Eighty percent of the people voted in that constitutional election.

They had a Presidential election and President Duarte was elected. I returned to El Salvador, and the only thing that changed as far as the violence goes is that we did not each have a bodyguard. They had one bodyguard for two people. We still had the armored cars, we still had the bombings and at nighttime the water was shut off in the hotel and the electricity went off and on all the time because the FMLN blew up the power stations continually.

So the country was still in disarray. Duarte was elected president. He did the best he could. He had an earthquake, a devastating earthquake. I flew down with Secretary Shultz, and we saw bodies still squeezed in between buildings that had fallen down.

In the middle of the turmoil, President Duarte tried to reform the agricultural system, President Duarte addressed the judicial reforms that were necessary, and he tried to take charge of the military, no easy matter.

Duarte fought, in addition to the economic conditions and the political situation, cancer.

Finally, he succumbed to cancer.

President Cristiani was elected. Now I am not a person who wants to interfere with the elected government of another country. I feel very concerned about that. I feel very strongly when there is a democratically elected president we should be very careful in giving them advice.

But when we pour $4 billion into a country in order to help them get established, I think we as a Congress, representing the American people, have every right to put some restrictions on that aid.

I have struggled for the past 6 months to take over $4 billion of previously appropriated funds out of the U.S. defense budget requested by the President, requested by the Secretary of Defense. Many of these funds have gone to foreign aid, in order to go to Poland, in order to go to Panama, in order to go to Nicaragua.

We have taken money out of our own defense in order to help these countries. We have a right to adjust aid to a country with institutions that are not adhering to democratic principles.

I say that President Cristiani is doing as good a job as any elected president could do under the circumstances. But let me tell you this, he needs help. He needs our moral support. He needs us to say to him, "We will not accept the killing that just went on." And if you remember the first reports about the killing was that it was the FMLN that had caused the killing, well, it turned out not to be true.

JOE MOAKLEY will tell you, I sat in his investigation and I said before it became public there was no question in my mind it was the military that perpetrated the killing.

We have charged two people in Panama with murder in our military. When you are in a war, that does happen. But that does not make an excuse for it and it does not mean there should not be reform and it does not mean that the United States should not stand behind that reform and take some action that forces the El Salvadoran Government to reform their judicial system and to reform their military.

Now are we doing anything to make sure that the FMLN adheres to those same principles? We certainly are. There is nobody who abhors the violence of both sides more than I do.

What we are trying to do today, we are trying to say to El Salvador, "Reform your military, reform your judicial system." We are also saying to the FMLN, "Stop the killing, stop the violence, stop the confrontation, and stop it soon."

Again I say we have every right to send that message because we have been depleting our own military resources by cutting $4 billion out of the defense of this Nation and sending it to these foreign countries. And the American people believe a democracy should adhere to the human rights principles that are so idolized by countries throughout the rest of the world.

You know, when I went down to El Salvador, nobody looked at the United States with more awe than the people of El Salvador, the president of El Salvador. I was so conscious of their idolization of the United States, I was so conscious of them believing in the principles of democracy and that that would solve their problems. What I am saying today is it has not worked up to this point. We have made progress. President Cristiani has done everything that he could.

In this amendment we say give the aid through Cristiani, let him get control of the military. Then, in addition to that, we are saying to the FMLN, "If you continue to perpetrate these atrocities, we will give the Government the full amount of aid."

If the war ends, they will not need the aid and there is no question that we can use that money in the United States for a number of reasons; for infrastructure and for other programs.

So my feeling today, my request is that we send a bipartisan message to the FMLN, to the extremists on the right and on the left to stop the killing, come to an agreement, end the fighting, and the United States will try to help in the long run.

So I ask you to vote for the Murtha-Moakley amendment which will stop the killing in El Salvador.

Mr. BROOMFIELD. Mr. Chairman, I rise in opposition to the Moakley amendment.

The CHAIRMAN. The gentleman from Michigan [Mr. BROOMFIELD] is recognized for 30 minutes.

Mr. BROOMFIELD. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I oppose the Moakley amendment to title V. The Moakley amendment is identical to the Studds amendment with several provisions from the Broomfield-Byron amendment thrown in for superficial appeal.

Unlike the sponsors of this amendment, I did not have the opportunity to revise the substance of my amendment.

My amendment was filed with the Rules Committee on May 7. The language of the Moakley amendment was not made available to Republicans until May 16.

However, the merely cosmetic changes from the Studds language do not alter the fact that his amendment is every bit as objectionable, every bit as detrimental to peace, and every bit as likely to strengthen extremists as the original Studds language in title V.

The Moakley amendment contains only five changes from the Studds language. First, military aid must be channeled through the democratically elected President's office—an idea proposed in my amendment.

Second, the reporting requirements are expanded to incorporate areas which my amendment calls for.

Third, $2 million of the $10 million of democratic assistance is earmarked for monitoring the 1991 elections—a nice addition but one which has little real meaning since much of the funds would be devoted to that purpose with or without an earmark.

The final two changes deal with conditions on assassinations—providing for the termination of aid if Government forces carry out assassinations, and providing for a waiver of military aid withholding if the FMLN carries them out.

I am pleased to see the sponors have decided to place some restrictions on FMLN terrorism—but they have not gone nearly far enough. Their amendment still sanctions external arms aid to the FMLN, in direct violation of the Esquipulas II accord. Their amendment still sanctions virtually all offensive military action by the FMLN. Their amendment sanctions FMLN economic sabotage—sabotage which does more harm to the lives of poor Salvadorans then any conceivable or alleged governmental action.

Even the new assassination clause in the Moakley amendment comes into force only if killing or maiming attacks are directed at civilian targets. As I read that clause, it seems to mean that a car bomb killing children would not meet that standard as long as the car bomb was placed near a military barracks. That is hardly the way to discourage FMLN terror.

I urge the House to see the Moakley amendment for what it is: a baltant rejection of hope for bipartisan cooperation in the United States and an undermining of hope for a negotiated solution in El Salvador.

Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Oklahoma [Mr. MCCURDY].

Mr. MOAKLEY. Mr. Chairman, I yield 1 additional minute to the gentleman from Oklahoma [Mr. MCCURDY].

Mr. MCCURDY. Mr. Chairman, it is with great reluctance that I rise today in opposition to both the Broomfield-Byron amendment and the Moakley-Murtha amendment to the fiscal year 1990 supplemental authorization bill.

My reluctance stems not out of opposition to the essential assistance that we are providing to the new Governments of Panama and Nicaragua. I support those provisions, as well as those which offer much-needed aid to countries in southern Africa and the Caribbean, and the housing loan guarantees to Israel.

Rather, I oppose these amendments on the grounds that the amendments before us today have little to do with the important question of United States policy toward El Salvador. They reflect, Mr. Chairman, what has become the standard procedure for debates on foreign policy questions in the House of Representatives. Unable to reach a consensus and their partisan passions inflamed, liberals and conservatives on both sides of the aisle ram their proposals to the floor for a few hours of partisan debate and make it virtually impossible for the United States to conduct a coherent foreign policy.

These amendments have little to do with U.S. policy because we all know their ultimate fate. They will either be dropped in conference or vetoed by the President. Since the appropriations bills contain authorizations waivers, the money will eventually make its way to Panama and Nicaragua and render the authorization process obsolete.

I do not like either of the options. But if we must vote today, Mr. Chairman, let me explain briefly why I must oppose the amendments which concern El Salvador.

The Broomfield-Byron amendment contained some constructive language concerning the need to promote military and judicial reforms in El Salvador, and it strengthens the conditions on the behavior of the FMLN. But given that the President could only withhold up to 25 percent of United States military assistance after he certified that the Government of El Salvador was not in compliance with our conditions, the impact of this language on the Salvadoran military would be minimal at best.

With all due respect to its authors, the amendment would have done little to alter our present policy toward El Salvador. That in itself was reason enough to oppose the Broomfield-Byron amendment.

Conversely, the Moakley-Murtha amendment attempts to perfect language on El Salvador as reported by the Foreign Affairs Committee. Having served on the Speaker's Special Task Force on El Salvador with the distinguished chairman of the Rules Committee, the gentleman from Massachusetts [Mr. MOAKLEY], and the gentleman from Pennsylvania [Mr. MURTHA], I can certainly appreciate the sincerity in their efforts.

But in my view, the language adopted by the Foreign Affairs Committee contains serious flaws which are not addressed in the Moakley-Murtha amendment. At the very moment when the Government of El Salvador and the FMLN are negotiating, I agree with the Washington Post when it argued last week in an editorial that this is an inopportune moment to withhold 50 percent of the remaining fiscal year 1990 and 50 percent of the fiscal year 1991 military assistance to El Salvador. Indeed, today's Post reports that the Government and the FMLN have tentatively agreed to reach a cease-fire by mid-September.

By adopting this, the Moakley-Murtha amendment, we place at risk the delicate momentum toward negotiations that presently exists in El Salvador.

Furthermore, while I support a negotiated settlement to the war in El Salvador, the committee's language places all our efforts and pressures on what is bound to be a fragile and uncertain process that could last for months. Given the deep mistrust between the Government of El Salvador and the FMLN, and the violent nature of Salvadoran society, it is very possible that these talks could be derailed at some point. Should that occur, either the Government or the guerrillas will be blamed, military aid will be restored or eliminated completely, and the war in El Salvador could explode once again.

In the meantime, we will have accomplished nothing to encourage the types of military, judicial, and economic reforms that must take place if El Salvador is to strengthen its fragile democracy and respond to the needs of its people.

Mr. Chairman, like most of my colleagues in this body, on both sides of the aisle, I believe that our assistance to El Salvador should contain conditions. But those conditions should be aimed at strengthening democratic institutions, reforming the military and judicial systems, improving human rights, and supporting the views of our Central American allies, who have called upon the FMLN to lay down its weapons and join the political process in El Salvador.

Our policy toward El Salvador should not be based on the emotions of the moment. John Kennedy once said that: "The purpose of foreign policy is not to provide an outlet for our own sentiments of hope or indignations; it is to shape real events in a

real world." Too often the United States has ignored this counsel, particularly in Central America.

The odious murder of the Jesuit priests last November by members of the Salvadoran military enraged all of us who are concerned about the abuse of human rights in El Salvador. Continuing reports of corruption in the military and an officer promotion system that rewards incompetence and refuses to discipline members of the Armed Forces who commit human rights abuses simply cannot be tolerated any longer.

There is also the glaring need for El Salvador to overhaul its present judicial system, which breeds corruption among judges who work for menial wages, allows criminals to escape justice with relative ease, and is unworthy of a functioning democracy.

But neither of the amendments before us today will do anything to alter that situation. Change must occur, or the tenuous bipartisan consensus that now exits in favor of providing assistance to El Salvador will rapidly disappear. If the Cristiani government proves incapable of enacting and implementing military and judicial reform, following economic policies which will reach the impoverished people of El Salvador, and building a society based on the rule of law, then at that point I will be the first to argue that the United States should reconsider its interests in that troubled country.

But let us not delude ourselves about the situation on the ground in El Salvador. There are two sides to the violence that afflicts Salvadoran society. The FMLN has been instrumental in bringing El Salvador to its present state of near collapse.

Some cling to the fantasy that the FMLN is a revolutionary organization fighting for the rights of the Salvadoran people. Yet there is little reason to believe that the FMLN is a force for democracy in El Salvador. Indeed, for years they have espoused a rigid Marxist doctrine which, if ever brought to power, would only worsen El Salvador's misery.

The FMLN has murdered government officials, civilians, and destroyed much of the country's infrastructure. The day after I met with a former FMLN commander who had defected, the guerrillas murdered him in the streets of San Salvador and called it revolutionary justice.

Last year, while they were negotiating with the Government the guerrillas launched a massive offensive which resulted in the needless deaths of some 3,500 people.

So we should not be swayed by those who claim great expertise in human rights that United States military assistance is the only obstacle to a negotiated settlement in El Salvador.

Ten years ago the United States began its involvement in El Salvador. Some believe that nothing has changed in El Salvador since and that the United States should walk away from El Salvador.

But no one has ever argued that building a democracy in a country with El Salvador's violent past would be a simple endeavor. It is not easy in any country. Yet a candid look at the country should lead sensible people to conclude that there has been some positive change during the last 10 years. The people of El Salvador have expressed, through five free and fair elections, a clear desire to live under a democratic government. By authorizing $10 million for the National Endowment for Democracy to Strengthen Democratic Institutions in El Salvador, both of these amendments take an important step in building a sustainable democratic center.

Finally, Mr. Chairman, once the posturing on this vote is concluded, I hope that Congress and the administration will take advantage of the opportunity to reach a bipartisan accord that, for the first time, will place effective conditions on our assistance to El Salvador—conditions which will provide incentives for change and result in a positive outcome for the people of El Salvador.

This is not the last vote on El Salvador, and it is not likely to be the most important. The debate about El Salvador has so far focused on military aid and human rights. But building a democratic society in which all Salvadorans can participate freely and with a sense of security is equally important. Mr. Chairman, I will vote "no" on the substitute and "no" on final passage.

□ 1940

Mr. GILMAN. Mr. Chairman, I yield 3 minutes to the gentleman from Illinois [Mr. HYDE].

Mr. HYDE. Mr. Chairman, the Moakley-Murtha amendment which has a third sponsor who is unnamed—Rube Goldberg, I believe, because he must have dreamed up this amendment—it is an impenetrable maze. It is not going to end the fighting, it will prolong the fighting.

My good friend, the gentleman from Pennsylvania [Mr. MURTHA] talked about his trip down there, but he did not talk about the amendment. I can understand why. I do not think many people realize what this amendment does. Permit me to share the information with Members.

In fiscal 1991, the bill authorizes $85 million in such assistance, but withholds half, unless the President makes certain determinations regarding the FMLN. Moreover, on the half that is not withheld, only half of that may be made available prior to March 1, 1991, at which time the President must report to Congress on the reactions of the Government and the FMLN toward achieving a negotiated peace. The remaining withheld funds shall be made available at that time, but may not be expended, until the expiration of the 30-day congressional review period of the President's report. Any joint resolution reported from the Committee on Foreign Affairs or the Senate Committee on Foreign Relations during the 30-day review period, which places conditions or limits on fiscal 1991 military aid for El Salvador shall be privileged, for consideration on the third day after it is reported or at any time thereafter.

Now, any joint resolution reported prior to March 31, 1991, would remain privileged through September 30, 1991. It need not be considered during the 30-day review period, 7 months.

So, that is what we are dealing with. That is this amendment. It tilts the playing field in favor of the urban terrorists known as the FMLN. We are told there is no military solution. Well, there is a military solution, and the military solution is to aid the constitutionally elected government of Mr. Cristiani. The FMLN does not want a negotiated solution unless the Government shares power. They want to share power. They cannot win power at election time through the ballot box, because they do not have any popular support. They rise up in San Salvador and kill a couple of thousand people, and they do not have any popular support. So now we will help them along, by cutting 50 percent of the military aid to the duly elected government because they have not solved the Jesuits' murder yet.

□ 1950

Mr. Chairman, I know we have allies around the globe that have not solved all of their problems, too, but we do not demand of them satisfactory solutions or else we will cut their aid in half.

We speak of democratic principles. Why do we impose on the people of El Salvador more tyranny from the FMLN?

Mr. Chairman, I ask the Members to vote no on this amendment.

The CHAIRMAN. The Chair will state that the gentleman from Michigan [Mr. BROOMFIELD] has 22 minutes remaining and the gentleman from Massachusetts [Mr. MOAKLEY] has 19 minutes remaining.

The Chair recognizes the gentleman from Massachusetts [Mr. MOAKLEY].

Mr. MOAKLEY. Mr. Chairman, I yield 2 minutes to the gentlewoman from Connecticut [Mrs. KENNELLY].

Mrs. KENNELLY. Mr. Chairman, tonight I rise to support the Moakley-Murtha amendment. This debate proposes cutting this aid by 50 percent.

My only disappointment is that it is not a total cut.

I can only say this evening that the road to hell is paved with good intentions and the United States has meant well in El Salvador but to no avail. And unfortunately, our good intentions seem recently to be resulting in just the opposite of what we originally intended—democracy in El Salvador.

Our hope has always been that human rights would mean something in El Salvador. And yet, continuing evidence shows that this just has not been the case. All signs point to the fact that this won't be the case in the future. Unfortunately there is a persuasive mentality, especially by the military, that the end justifies the means. This was brutally made clear in the murder of the Jesuits and the two women last year.

It diminishes us as a nation to continue to send aid to El Salvador—to allow the trampling of people's rights exactly how the U.S. taxpayer would not want his money spent.

How ironic that this bill is called aid to emerging democracies—nations that have moved away from repressive rule and human rights violations and toward peace, and freedom. Yet included in this bill is more military aid to El Salvador—aid that throughout the years has fueled the military which has repeatedly demonstrated its disregard for human rights, peace and freedom.

I'm afraid the Moakley task force report says it best: "The Salvadoran judicial system is an oxymoron, neither systematic nor just." I believe supporting any more aid to the Salvadoran military to promote peace in El Salvador is an oxymoron—it will not buy peace, it is not just, nor moral.

Mr. BROOMFIELD. Mr. Chairman, I yield 5 minutes to the gentleman from Louisiana [Mr. LIVINGSTON].

Mr. LIVINGSTON. Mr. Chairman, we have heard a great deal of condemnation directed at the Government of El Salvador. Let us remember how that government came into being:

March 1989: For the sixth time in 7 years, democratic elections are held throughout El Salvador. These were free, fair and monitored by observers from throughout the world. The winner, with 54 percent of the vote, was the current President, Alfredo Cristiani.

Three things stand out about that election. First, over 85 percent of the eligible voters actually turned out to vote. They did so because, in the words of a 60-year-old housewife, as quoted in the New York Times.

I'm not afraid of bullets. We have to vote to make a change in this country and show that El Salvador has guts.

Second President Cristiani won this election thanks to his support from the civilian population. Although permitted by law, the military does not vote in El Salvador's elections—let me repeat that: Although permitted by law, the military does not vote in El Salvador's elections. This is the decree from the Chief of El Salvador's Armed Forces, who wants to ensure that there is not even the illusion of partisanship within the military. So the fact that Christiani won is due entirely to his support within the Civilian population.

The third thing that stands out is the Cuban and Sandinista directed FMLN rebels wanted no part of this democratic process. The fact is, on that day, they launched sabotage raids in 10 of the country's 14 Provinces. Ten government soldiers were killed that day and 44 were wounded—all by the FMLN rebels, grand guardians of the people.

Now, this body is poised to hand over to the Communist rebels the very power they could not win at the ballot box. That is the travesty being discussed there today.

Consider this: According to a commission by USIA in March 1990 of this year, only 1 in 10 El Salvadorans have a favorable opinion of the FMLN—70 percent of the people view them unfavorably and 55 percent view them very unfavorably.

It gets more interesting: When asked whether the army or the FMLN has less respect for human rights, only 12 percent said the Army; 55 percent said the FMLN.

This poll was conducted by CID, the Gallup affilite in Costa Rica, and the poll takers bent over backward to ensure that people would give their honest opinions.

The El Salvadorans, I believe, gave their honest opinion to these pollsters because the results track so closely with that country's actual election results.

Now, here we sit, safely insulated from the horrors of guerrilla war, and some Members prepare to undercut the very democratic foundations we've been trying to nurture these last 10 years. We owe the Salvadorans our support—not the butchers who murdered the Jesuit priests—but the 5 million people who have continually voted against the FMLN in every single election held since that country became a democracy.

The FMLN rebels say they want negotiations. The problem is—you cannot negotiate democracy. Democracy means free elections and it means that all parties involved agree to settle their differences by forces of ideas—not force of arms.

FMLN rebels know only the force of arms and they wield that force with deadly accuracy. No amount of sugar-coated peace proposals covers the blood of the dozens of mayors and other government officials the FMLN has butchered.

Mr. Chairman, totalitarians always have a reason why you can't trust the people and why elections should not be held. Adolf Hitler called the Germans "voting cattle." The FMLN is no different.

Let us not do what the vast majority of El Salvadorans refuse to do—hand power over to the FMLN—and that is exactly what passage of H.R. 4636, in its current form, would help do.

SALVADORANS OVERWHELMINGLY REJECT FMLN GUERRILLAS; SOLIDLY SUPPORT CURRENT GOVERNMENT

(This report is based on the results of both USIA-commissioned and contractor questions placed on an omnibus survey of public opinion in El Salvador. A nationally representative sample of 1274 Salvadorans, age 18 and older, residing in 12 regional departments was interviewed in person. Two departments (with 10% of the population) were not surveyed due to FMLN/army activity. Fieldwork took place March 9-21, 1990, prior to the late March agreement between the government and the FMLN to renew peace talks. Special precautions were taken to minimize respondents' fear of repercussions from Salvadoran authorities and/or FMLN.)

MOST SALVADORANS VIEW FMLN WITH DEEP DISFAVOR

The continued sabotage of the economy and attacks on civilians have left the guerrilla umbrella organization, "Farabundo Marti de Liberacion Nacional" (FMLN), with little support among the Salvadoran public. Barely one Salvadoran in ten has a favorable opinion of the FMLN; seven-often have an unfavorable view. The public's rejection of the FMLN is of notable intensity; 55 percent have a "very unfavorable" opinion of the rebel organization (table 1). [1] However, more Salvadorans now blame Nicaragua and Cuba (49%) than the FMLN (15%) for the war's continuation, reflecting both the recent offers by the FMLN to negotiate for peace and the local media emphasis, in conjunction with the Nicaraguan elections, on the high levels of aid given the FMLN by the Sandinista government.

U.S. VIEWED WITH FAVOR BY ALMOST ALL; PLURALITY APPROVES AID AMOUNTS

The extent of U.S. involvement in El Salvador over the past decade has not compromised the traditionally high level of favorable Salvadoran opinion of the United States. Four-of-five Salvadorans have a favorable opinion of the U.S., with support extending across the Salvadoran political spectrum (table 3). A solid plurality (43%) of the Salvadoran public believes that the U.S. economic and military aid to the country is "about right," while 29 percent think the U.S. should provide more (table 4).

EARLY EXPECTATIONS OF CRISTIANI AND ARENA GOVERNMENT ARE UNFULFILLED

A non-USIA poll in September, 1989 indicated that Salvadorans had high expecta-

[1] Similar attitudes were found in a nationwide poll conducted in December 1988 by the Catholic University-affiliated Instituto Universitario de Opinion Publica (IUDOP), directed by Fr. Ignacio Martin-Baro, one of the Jesuit priests assassinated in December of 1989. Of that sample, which overrepresented women and the more educated, 60 percent had a "bad" or "very bad" view of the FMLN, while 11 percent had a "fair," "good," or "very good" opinion.

tions for Cristiani and the ARENA government at that time (three months after his inauguration): 69 percent thought that it was at least somewhat probable that spiraling inflation would be brought under control and 43 percent believed it likely that the ten-year war would end.[2] Nine months into President Cristiani's term, neither has been accomplished in the view of his countrymen. Many think not only that the cost of living has increased "a great deal" (78%), but that Cristiani has done little or nothing to ameliorate the situation (54%). This contrasts markedly with the opinion which prevailed in September, 1989 that the government had done "a great deal" (62%) or "a fair amount" (20%) to limit cost-of-living increases (tables 5,6). Next to the ongoing war (37%), most Salvadorans think that the deteriorating economy (28%) is the most serious problem they face today (table 7).

DISAPPROVAL OF CRISTIANI'S JOB PERFORMANCE IS MINIMAL

Although Salvadorans have yet to see their expectations met by the ARENA government, support for President Cristiani continues virtually unchanged from the high levels of six months ago. Salvadorans who believe he is doing a good job exceed those who say he is doing a bad job by a 4-to-1 margin (44%-10%). Approval is highest among ARENA supporters and diminishes leftward across the political spectrum. Even among supporters of the FMLN-affiliated Democratic Convergence (CD), more believe he is doing a good or "neither good nor bad" job than a bad one (table 8).

CRISTIANI'S POPULARITY REMAINS WIDESPREAD

Cristiani's personal popularity has remained as solid as his job performance levels: 72 percent have a favorable opinion of the president, more than any other Salvadoran politician (in September his favorable rating was 71%). Public support for ARENA politicians is not limited to Cristiani. Armando Calderon Sol, president of the party and mayor of San Salvador, is the nation's second most popular politiciana with a 65 percent approval level. However, approval for Roberto D'Aubuisson, founder of ARENA and long linked to death-squad activity in the early 1980s, declined substantially during the period, from 37 percent in September to 23 percent today (table 9).

ARMY HELD IN HIGH REGARD BUT FEW EXPECT CONVICTION OF OFFICERS ACCUSED OF JESUIT MURDERS

The Salvadoran army is viewed favorably by almost three-quarters of the Salvadoran public (72%). Only among the very small number of CD-party members does an unfavorable opinion prevail, reflecting the long conflict between members of the armed forces and radical groups in El Salvador (table 10).[3] Asked which group—the army or the FMLN—has less respect for human rights, a solid majority of respondents (55%) select the FMLN guerrillas, while a small minority (12%) cite the Salvadoran army (table 11).

Nevertheless, when it is stated that "the FMLN has insisted that it will only agree to negotiations if the armed forces are restructured and purged" at least one-third of the surveyed population (36%) favor a restructuring and purging of the armed forces. However, an equal number (36%) is opposed to such a reorganization.[4] Relatively few Salvadorans (28%) have any confidence that the military men accused of the murders of six jesuit priests in November will, if they are guilty, actually be convicted and sentenced by the courts. A large majority (72%) are either not very confident or do not have an opinion on the outcome of the judicial process (table 13).

Asked which conclusion to the war would be best for the Salvadoran people, respondents select a negotiated settlement between the FMLN and government (68% by a three-to-one margin over a military victory by the armed forces (20%) and by a better than 30-1 margin over a military victory by the FMLN (2%; table 14).

However, few Salvadorans are optimistic about the ultimate outcome of such negotiations. Less than one-in-five (17%) expects the war to end within three years; most can not say how long they believe it will continue (49%) while another 27 percent believe that it will go on for more than six years (table 15). These attitudes prevail despite the fact that most Salvadorans (54%) expect the FMLN to be "much weaker militarily" once the Sandinistas are out of power in Nicaragua and unable to provide current levels of logistical and advisory support (table 16).

CHAMORRO'S VICTORY IS APPLAUDED

Over two-thirds of the Salvadoran public believe that it is "good" (69%) rather than "bad" (3%) that Violeta Chamorro won the recent presidential elections in Nicaragua and most of those who support the electoral results that the Sandinistas will turn over full control of all government institutions to UNO (tables 17, 18).

HOW THE SALVADORAN POLL WAS TAKEN

This public opinion survey is based on face-to-face interviews with 1274 adults in El Salvador. Fieldwork took place March 9-21, 1990. Sample construction and fieldwork were performed by CID, the Gallup affiliate located in Costa Rica, in accordance with that firm's standard omnibus procedures. The USIA Office of Research developed and placed 15 questions on the survey, which were translated into Spanish by CID with review by the Office of Research. USIA received the tabulated findings the week of April 2, 1990.

The sample was selected by a modified probability method, and covered both urban and rural populations. Twelve of El Salvador's fourteen regional departments entered into the sample; two departments, Chaletanango and Morazan, with a population of approximately 545,000 (10% of El Salvador's estimated 1990 total) were not surveyed due to the high probability of conflict in these areas. Isolated very low-density areas in other departments were also excluded. One primary sampling point (psu), La Union city, had to be substituted when the local army commander refused to permit interviewing to take place. No more than ten households were contacted at each urban psu and twenty households, in two segments of ten each, were contacted at each rural psu. Respondents were selected by quotas for age, sex, education, and region, according to estimated population distributions. Due to the difficulty of returning to selected households if the indicated respondent was not available, immediate substitutions were made. Approximately 20% of each interviewer's work was verified through personal reinterviews.

To minimize respondents' potential fears of repercussions from either the armed forces or the FMLN if true opinions were expressed, interviewers wore clearly visible cards identifying themselves as working for a Costa Rican firm. This strategy mitigates against respondents giving false answers, and was successfully used in CID's pre-election polling in Nicaragua, where CID correctly found opinion favoring Chamorro over Ortega.

Ninety-five times out of one hundred, results from samples of this size will yield results which differ by no more than about 3 percentage points in either direction from what would have been obtained were it possible to interview everyone in the target population. However, the clustering technique increases this margin of error somewhat, as does the comparison of smaller subgroups. In addition, the practical difficulties of conducting any survey of public opinion in Central America may introduce other sources of error.

Results of the CID questions on the survey have been released in Central America by that firm.

*Question.* And the FMLN—do you have a favorable or unfavorable opinion of the FMLN? Is that somewhat favorable/unfavorable or very favorable/unfavorable?

TABLE 1.—SALVADORANS REJECT FMLN

[In percent]

| | Total public | Political affiliation[1] | | | |
|---|---|---|---|---|---|
| | | Arena | PDC | CD | Other/none |
| Date—March, 1990: | | | | | |
| Sample size | (1274) | (519) | (260) | (39) | (456) |
| Very favorable | 4 | 4 | 5 | 21 | 3 |
| Somewhat favorable | 7 | 7 | 6 | 23 | 6 |
| Total favorable | 11 | 11 | 11 | 44 | 9 |
| Somewhat unfavorable | 15 | 14 | 18 | 10 | 15 |
| Very unfavorable | 55 | 63 | 54 | 36 | 47 |
| Total unfavorable | 70 | 77 | 72 | 46 | 62 |
| Do not know/no response | 19[2] | 12 | 17 | 10 | 29 |
| Total | 100 | 100 | 100 | 100 | 100 |

[1] Ruling rightist party (54 percent of March presidential vote). PDC—Opposition Christian Democrat Party (37 percent of vote). CD—Democratic Convergence Party, newly formed left-wing party founded by members of FMLN's political arm (3 percent of vote). Due to the small number of respondents in this subgroup, results may vary by as much as 20 percent in either direction. Other—47 respondents expressed as support for other small parties. None—354 responents did not voice a party affiliation. These were relatively evenly distributed across geographical, age, and education subgroups, with no statistically significant concentration in any one subgroup.

[2] Unless otherwise noted, respondents giving "No response" did not exceed 5 percent of the sampled population. For this question "No response"—6 percent (6 percent for PDC, 9 percent for Other/none).

Source: USIA—commissioned question.

*Question.* In general, do you have a favorable or unfavorable opinion of the United States? Is that somewhat favorable/unfavorable or very favorable/unfavorable?

TABLE 3.—SALVADORANS HAVE HIGH OPINION OF THE UNITED STATES

[In percent]

| | Total public | Political affiliation | | | |
|---|---|---|---|---|---|
| | | Arena | PDC | CD | none |
| Date—March, 1990: | | | | | |
| Sample size | (1274) | (519) | (260) | (39) | (456) |

[2] Data are from a comparable nationwide survey of 1216 Salvadorans also conducted by CID.

[3] A December, 1988 IUDOP survey, cited above, found that 45% believed that the armed forces were doing a good job, while 33% thought they were doing neither a good nor bad job, and 10% believed they were doing a bad job.

[4] A May, 1989, IUDOP/UCA poll similar to that cited above found that most Salvadorans (76%) favored "cleaning up the Army" if it was a pre-condition to negotiations, but a large plurality (45%) was opposed to "reducing the army to its 1979 size."

TABLE 3.—SALVADORANS HAVE HIGH OPINION OF THE UNITED STATES—Continued

[In percent]

| | Total public | Political affiliation | | | |
|---|---|---|---|---|---|
| | | Arena | PDC | CD | none |
| Very favorable | 44 | 50 | 42 | 23 | 40 |
| Somewhat favorable | 36 | 33 | 36 | 36 | 38 |
| Total favorable | 80 | 83 | 78 | 59 | 78 |
| Somewhat unfavorable | 7 | 8 | 8 | 10 | 5 |
| Very unfavorable | 7 | 5 | 10 | 31 | 6 |
| Total unfavorable | 14 | 13 | 18 | 41 | 11 |
